Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency euro. The data of value for the previous period will continue to be published in tolars, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolars by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: http://www.bsi.si/en/financial-data.asp?Mapald=64.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- · The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

Further growth in oil prices on world markets in September and tighter financing conditions led to a slight decrease in the forecast projections for this year's economic growth in the euro area to around 2.5%. Lower economic growth can also be expected in the USA, as the majority of economic indicators in August were beneath expectations. The ECB left its interest rates unchanged in September, while the Fed lowered its key interest rate by 0.5 percentage points. The Euro appreciated further against the US dollar by about 3%, to reach USD 1.40 by mid-September.

Economic activity remains relatively high in Slovenia. According to the SORS's initial estimates, economic growth stood at 5.9% in the second quarter of this year, and 6.5% in the first half of the year. Growth in gross investment remains high, while growth in household consumption remains moderate. According to the initial figures, government spending in the second quarter was actually lower than in the same period last year, having fallen by 0.7%. Spending on intermediate consumption and social security benefits in kind was particularly low. The contribution of the trade balance remains negative. The current account deficit had reached EUR 401 million by the end of July, which is EUR 150 million higher than in the same period last year. Financial transactions with the rest of the world continue to increase on both the inflow and outflow sides, with the former rising more in recent months. The strong net outflow from the private sector in the first quarter, which was primarily the result of repayments of Bank of Slovenia bills, slowed in the following months.

The high economic growth continues to be reflected on the labour market. The persons in employment are continuing to grow, while both the registered and surveyed unemployment rates continue to fall. The excess in labour demand is also being seen in wage growth, which is gradually but persistently rising. Year-on-year growth in the average gross wage stood at 5.7% in the first seven months of the year, while growth in the average net wage was 2.2 percentage points higher as a result of changes in personal income tax legislation. Wage growth is increasing in particular in sectors with high value-added growth, namely construction, financial intermediation, trade and real estate.

Year-on-year inflation as measured by the HICP remained significantly above three percent in September, and was up 0.2 percentage points from August, at 3.6%. The core inflation indicators also remained unfavourable. Growth in the HICP excluding energy and unprocessed food rose to 3.9%. Thus, there is still a danger of an increase in inflationary pressure as a result of high growth in domestic economic activity exceeding the potential output growth. Year-on-year growth in producer prices exceeded 5% for the fourth consecutive month, and points to an additional risk of passing-through into consumer prices.

In the context of booming economic growth, the public finances should also improve this year. According to Ministry of Finance estimates, the general government deficit will be lower than originally anticipated, and should stand at 0.6% of GDP according to ESA95 methodology. Despite tax rates cuts due to tax reforms, general government revenues recorded solid growth of approximately 4% in the first half of the year. On the other side, expenditures recorded similar growth, with investment expenditures recording the fastest growth. Slovenia's net position against the EU budget remained negative according to the figures up to August.

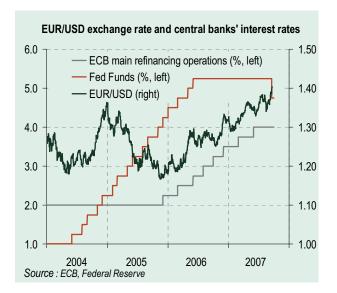

1 International Environment

The forecasts for economic growth in 2007 in the euro area were revised downwards, while the figures released for August in the USA point to a potential slowdown in economic growth. The forecasts for this year's economic growth in the euro area were lowered by 0.1 percentage points by both Consensus (to 2.6%) and the European Commission (to 2.5%). The ECB's economic growth forecast range was also lowered by 0.1 percentage points, to stand at 2.2% to 2.8% in September. The lowering of the ECB's forecast was the result of an increase in the forecast for the oil price this year, and the tightening of terms of financing as a result of the increased uncertainty on financial markets caused by investments in the sub-prime mortgage market in the USA. One of the main factors in the downward revision of the forecasts by Consensus and the European Commission was GDP growth in the second quarter, which was lower than expected. The European Commission also warned of lower economic growth in the euro area as a result of the tightening of conditions on the financial markets. The estimated economic growth in the USA in the second quarter was raised slightly to 1.9% year-on-year and 1.0% quarterly, the previous estimates having been 1.8% and 0.8%. However, some of the figures for August in particular were lower than expected. Most notable among these was employment in the non-farm sector, which in August fell for the first time in four years, leading

Sources: Bloomberg, Eurostat, * Consensus (September 07')

to a depreciation in the dollar and a stock market fall in September. August's growth in industrial production and retail trade was also lower than expected in the USA. In addition, the persisting uncertainty over sub-prime mortgages represents another risk of lower economic growth in the future.

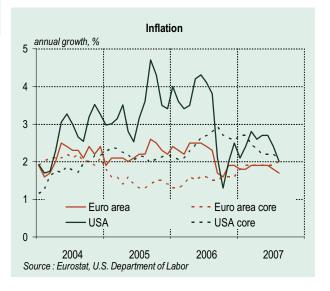

In September the ECB left its key interest rate unchanged, while the Federal Reserve cut its interest rate. The key euro area interest rate remained at 4.0% following the ECB's meeting at the beginning of September. The tight liquidity conditions on the euro area interbank market have not yet eased, and the ECB therefore continued to inject liquidity. The sub-prime mortgage crisis in the USA led to a deterioration in bank liquidity in the UK. At its ordinary meeting in September, the American system of central banks, the Federal Reserve, cut the key interest rate by 0.5 percentage points to 4.75%, more than was expected by the financial markets. The cut was intended to curb the impact of the crisis in the real estate market on other sectors.

The euro rose by approximately 3% against the dollar between the middle of August and the middle of September. By the second half of September it had surpassed the level that it had stood at before the financial crisis hit at the beginning of August. The reasons for the return to appreciation lie in the better figures released for the euro area economy, the slightly weaker figures for the USA, and, above all, the cut in interest rates in the USA. After the cut, there was a slight renewed increase in the

BANKA SLOVENIJE bank of slovenia eurosystem

appetite for risk, which brought renewed growth in trading in currencies offering higher returns. In addition, concern strengthened over a potential rise in inflation in the USA.

Inflation rates continued to fall in the euro area and the USA in August. The main factor in the further decline in year-on-year inflation in the euro area (by 0.1 percentage points) was the negative year-on-year growth in energy prices, as a result of the high basis from last year. Year-on-year growth in prices of unprocessed food also declined. Core inflation was up 0.1 percentage points as a result of increases in prices of tobacco products in France and dairy products in Germany. In its forecasts for this year's inflation, the ECB remained in the range that it forecast in June, but narrowed the upper and lower limits by 0.1 percentage points, the new range thus standing at 1.9% to 2.1%. The ECB estimates that this year's rises in indirect taxation will contribute 0.5 percentage points to annual inflation. Inflation in the USA fell to 2.0% in August, down from 2.4% in July. The decline in inflation was primarily the result of lower energy prices. Core inflation also continued to fall. There are potential pressures for a rise in core inflation in the future, originating mainly in a rise in labour costs and import prices of Chinese goods.

Oil prices began to rise quickly at the end of August.

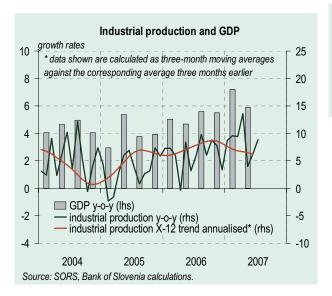

The price of a barrel of Brent crude had reached USD 78 by the middle of September. The rise in prices happened despite September's decision by Opec to increase the daily pumping quota by 0.5 million barrels in November, as the market felt that this was insufficient. The rise in oil prices was linked to the easing of tensions over the financial crisis, while in addition the USA still has low stocks of oil, geopolitical tensions in oil-producing areas (Israel, Syria, Mexico, Iran) have increased, and there have been problems at refineries in the USA, and bad weather in the Gulf of Mexico.

Economic Activity and Labour Market

The SORS revised its economic growth figures for 2000 to 2006 upwards. At the beginning of September 2007 the SORS released revised figures for economic growth between 2000 and 2006. The methodological revision of the figures now includes the illegal sector (prostitution, drugs) and deliberately unregistered activities (study, alternative healthcare, etc.), which led to an increase in estimated GDP growth. There was an increase of 0.5 percentage points in last year's figure, taking it to 5.7%. The GDP growth figures were revised from 2.7% to 3.1% for 2001, 3.5% to 3.7% for 2002, 2.7% to 2.8% for 2003, and 4.0% to 4.1% for 2005. The 2004 figure was unchanged. It is evident from the new figures that the largest correction came last year, which could indicate an expansion in illegal and deliberately unregistered activities in the economy.

According to the SORS's initial estimates, economic growth stood at 5.9% in real terms in the second quarter of this year. The main factor in this growth was the high growth in gross capital formation, and the continuing high growth in construction. Economic growth in the second quarter was slightly lower than in the first quarter, while the year-on-year rate was 6.5% overall in the first half of the year. Alongside the negative contribution made by net trade, there was again a large contribution by gross fixed capital formation, which has been recording high year-on-year growth since the second half of last year. Gross capital formation recorded year-on-year growth of 25.2% on average during the second quarter, 5.2 percentage points more than in the first quarter. Growth in household spending was 3.4% during this period, while general government spending recorded negative year-on-year growth and was significantly lower than in the previous period. After the final quarter of last year, when growth in general government spending stood at 4.2% year-on-year, the rate fell to 1.1% in the first guarter and to -0.7% in the second guarter of 2007. The breakdown of GDP by activities reveals still-high growth in value-added in the construction sector, which slowed slightly from the first quarter to year-on-year growth of 25.7% in the second quarter. There was also a slight decline in year-on-year growth in the manufacturing sector and the trade and motor vehicle repair sector, the rate for manufacturing falling from 10.9% in the first quarter to 9.0% in the second quarter, and that for the retail sector falling from 8.1% to 7.8% over the same period. Meanwhile, year-on-year growth in value-added in the financial intermediation sector increased from 7.5% to 8.1%. Growth in exports of goods and services in the second quarter of this year was higher than in the same period last year at 13.6%. Growth in imports of goods and services increased further over the same period, to 17.0% year-on-year. The contribution made by the net trade to GDP growth was negative in the second quarter. The SORS will release the GDP growth figures for the third quarter at the beginning of December 1

There was again a slight improvement in year-on-year growth in industrial production in July, but the current rate of growth continued to slow. Year-on-year growth in industrial production rose to 8.9% in July, surpassing the rates in May and June, but the current rate of growth continued to slow. Year-on-year growth in industrial production averaged 8.6% over the first seven months of the year. The largest year-on-year growth in July and overall in the first seven months of the year was recorded by the production of capital goods, the main factors in this being the high activity in the construction sector and the increased exports of capital goods to new EU members. The largest cumulative increases in output in the manufacturing sector in the first seven months of the year were recorded by the manufacture of wood and

BANKA SLOVENIJE bank of slovenia eurosystem

wood products, the manufacture of basic metals and fabricated metal products, and the manufacture of chemicals, chemical products and manmade fibres. Most noteworthy in July were the year-on-year rates of growth recorded by the manufacture of transport equipment (30.4%) and the manufacture of chemicals (26%). Turnover in industry was up 8.5% in year-on-year terms during the first seven months of the year, and by 11.4% in July alone. The greatest contribution to this growth came from sales revenues from capital goods.

Construction also recorded relatively high year-onyear growth in July, although both the current and year-on-year rates are slowing. Sales revenues in the food retail sector recorded negative year-on-year growth in July, while the tourism sector continued to perform well in August. Growth in the value of construction put in place continued to slow in year-onyear terms to a rate of 19.7% in July, and to a cumulative rate of 30.2% over the first seven months of the year. Having outpaced the construction of buildings over the first seven months of the year, civil engineering construction recorded year-on-year growth of 19.2% in July, compared with 20.4% for the construction of buildings. Sales revenues in the retail sector recorded year-on-year growth of 1.2% in July, with sales of food, beverages and tobacco products declining by 10.8%, and sales of nonfoodstuffs rising by 15.6%. The tourism sector performed well in August, as it had in the whole of the year, with the

¹ The comparison with last year's quarterly performance has been made with unrevised figures, the SORS having revised.

number of foreign visitors recording a year-on-year increase of 8% and the number of overnight stays an increase of 6%.

The sentiment indicator declined in September, primarily as a result of consumer pessimism and declining confidence in the service sector. Confidence also fell in the construction and manufacturing sectors. The seasonally adjusted sentiment indicator was down 2 percentage points in September in year-on-year terms, but was still 10 percentage points higher than the longterm average. Consumer confidence was down 5 per-

centage points from August, at 2 percentage points below its last year's average. To a great extent the decline was the result of consumers' pessimism regarding their financial standing in the coming 12 months, which in September reached its lowest level since surveying began. The services confidence indicator in September was down 2 percentage points in both year-on-year terms and monthly terms. The confidence indicator in manufacturing declined by 1 percentage point in monthly terms, and by 3 percentage points year-on-year, but nevertheless remained 14 percentage points above its long-term average. Despite the decline in the construction confidence indicator of 3 percentage points in monthly terms and 1 percentage point year-on-year, it stood 19 percentage points above its long-term average.

The high economic growth has been reflected on the labour market since the beginning of the year. There was a further increase in the persons in employment in July, while the level of registered and surveyed unemployment declined. The labour force increased by 1.5% in July, and by an average of 1.2% over the first seven months of the year. This growth came from the high increase in the persons in employment, which was up 3.5% year-on-year in July, and by 3.4% on average over the first seven months of the year, 2 percentage points more than last year's average increase. In line with the strong economic activity, the largest year-on-year increases in employment in July were recorded by the sectors of construction (10.7%), transport, storage and communications (8.5%), and business services and real estate (8.7%), while within the manufacturing sector there were notably high year-on-year increases in employment in the manufacture of transport equipment (12.7%) and the manufacture of wood and wood products (8.7%). The pace of the fall in unemployment slowed slightly in July. Seasonally adjusted registered unemployment was 18.1% lower in July than in the same month last year. The registered unemployment rate fell to just 7.6% in July, down 1.8 percentage points from a year earlier. The surveyed unemployment rate (ILO methodology) in the second quarter was down 1.3 percentage points in yearon-year terms at 4.6%.

Wages grew sharply in July as a result of the latest public sector wage settlement. Year-on-year growth in the average gross wage stood at 6.9% in July, 3.0% in real terms. This high nominal growth was primarily the result of new wage increases and a new wage settlement in the public sector for the period of January to July 2007, which was paid out in full in July. Year-on-year growth in the average gross wage stood at 5.7% in the first seven months of the year, 2.8% in real terms. Growth in the average net wage over the same period was 2.2 percentage points higher, as a result of changes in personal income tax policy. Wages in the public administration, defence and social security sector recorded a year-on-year increase on 8.7% in July, taking the year-on-year increase over the first seven months of the year to 4.4%. Other high year-on-year increases in average gross wages in July were recorded by the sectors of financial intermediation (8.5%, compared with 8% over the first seven months of the year), construction (8.5%, compared with 7.2%), real estate, leasing and business services (8.4%, compared with 6.1%), and trade and motor vehicle repair (7.8%, compared with 7.7%).

The nominal effective euro exchange rate as measured against a basket of foreign currencies depreciated by 0.1% in August, the year-on-year appreciation declining by 0.3 percentage points from July to 1.1%. August's decline in the nominal effective exchange rate of the euro against a basket of foreign currencies came as a result of falls of 0.7% against the dollar and 1.1% against the Swiss franc, while the euro rose against the pound sterling by 0.5%. Over the first three weeks of September, the euro rose by 1.4% against the dollar, by 1.2% against the pound sterling, and by 0.4% against the Swiss franc.

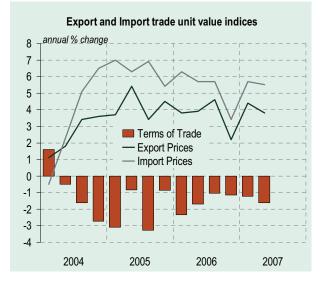

* Domestic currency was the tolar until the end 2006, then the euro. ** Owing to a change in statistics, labour costs are now calculated solely on the basis of gross wages in manufacturing

The price competitiveness of the Slovenian economy as measured by consumer prices deteriorated slightly further in July and August. The real effective exchange rate as measured by consumer prices appreciated by 0.2% in monthly terms on average over July and August. Price competitiveness as measured by consumer prices deteriorated by 0.4% during these two months. Domestic consumer prices outstripped growth in the basket of foreign prices by just 0.1 percentage points between June and August. The main factor in the deterioration in current price competitiveness in the last three months was the appreciation of 0.4% in the nominal effective exchange rate of the euro in July. This was also the primary factor in the year-on-year appreciation in the real effective exchange rate as measured by consumer prices rising to 3.3% in July, the highest figure this year, and then falling to 2.8% in August (as a result of the high basis from the same month last year).

Price competitiveness as measured by producer prices remained unchanged overall in the last three months. In the context of no change in the real effective exchange rate as measured by producer prices in June, appreciation of 0.3% in July and depreciation of 0.25% in August, price competitiveness remained virtually unchanged overall between May and August. As a result of

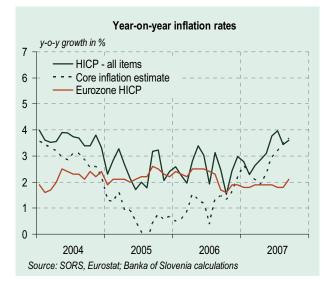

the depreciation in the same months of last year, yearon-year growth in the real effective exchange rate rose from 3.5% in June to 4.3% in July, then declined slightly to 4.2% in August, despite this stagnation overall in the last three months.

The terms of trade of Slovenian exporters have been gradually deteriorating since the third quarter of 2006. The index of the average value of Slovenian exports recorded a year-on-year increase of 4.2% in the first half of the year, compared with 5.9% for the import index. As a result of these movements in import and export prices, the negative terms of trade of 1.9% in the first half of last year improved slightly by 0.2 percentage points to 1.7% in the first half of this year. The main factor in the terms of trade of Slovenian exporters remaining negative in the first half of this year was the movement of prices of consumer goods and intermediate goods. The terms of trade deteriorated by 2.7% year-on-year in the first half of the year for consumer goods and by 0.6% year-on-year for intermediate goods, while those for capital goods actually improved by 0.9%.

3 Price Developments

Year-on-year inflation as measured by the HICP stood at 3.6% in September, up 0.2 percentage points from August. In addition, there was a rise in the 12-month moving average inflation rate, from 2.9% in August to 3.0% in September. It is evident from the structure of the price index that the main factor in the rise in inflation was the increase in the contribution made by growth in prices of both processed and unprocessed food, from 0.9 to 1.3 percentage points and from 0.5 to 0.6 percentage points respectively. In contrast to food, the contribution made by growth in prices of services was down 0.1 percentage points from August at 1.7 percentage points in September. The contribution made to inflation by prices of manufactured goods other than energy prices also declined, from 0.2 to 0.1 percentage points. The contribution made by energy prices was down 0.2 percentage points from August, at -0.1 percentage points.

The trend of unfavourable movements in the core inflation indicators continued in September. Growth in prices excluding energy, seasonal food and tax effects was up 0.2 percentage points on August at 3.7% in September. Inflation excluding energy prices and unprocessed food prices stood at 3.9% year-on-year. The main

contribution to the further increase in core inflation came from growth in prices of processed food, which rose again in year-on-year terms in September. The rise in prices of processed food was mainly the result of a rise in the price of bread and other cereal products, which stood at 11.6% in September alone. There was also a rise in prices of clothing and footwear, by 9.6% on average.

Year-on-year growth in prices of manufactured goods stood at 5.3% in August. Producer prices of manufactured goods recorded year-on-year growth of more than 5% over the four most recent months, taking the 12-month average year-on-year growth in producer prices of manufactured goods on the domestic market from 3.5% in May to 4.2% in August. Year-on-year growth in prices of consumer goods stood at 2.7% in August. Within this category, prices of durables recorded year-onyear growth of 8.7%, compared with 1.7% for nondurables. Year-on-year growth in prices of capital goods was down 0.6 percentage points from July at 1% in August. The price rises for the aforementioned categories of goods and the increase in commodities prices and energy prices were both factors in the increase in year-onyear growth in prices of manufactured goods in August. In the euro area prices of manufactured goods were 0.3% higher in July than June, as a result of rises in energy prices, prices of consumer durables and non-durables, prices of capital goods and prices of intermediate goods. Year-on-year growth in producer prices of manufactured goods in the euro area stood at 1.8% in July.

In the coming months year-on-year inflation is likely to exceed 4%, partly as a result of statistical basis effects connected with last year's decline in prices of refined petroleum products. However, the macroeconomic indicators suggest that the rise in inflation could be more sustained. A moderate rise in inflation is in line with the spring forecasts, although the mediumterm risks to price stability have increased. Economic activity in the first quarter was significantly greater than forecast, and could trigger greater pressure on inflation, particularly from the demand side or in the context of rising labour costs as a result of greater exploitation of capacity on the labour market. In the event of wider realisation of these internal risks to price stability, inflation could

Sources: SORS, Eurostat, Bank of Slovenia calculations. Figures may not sum up to official figures due to rounding.

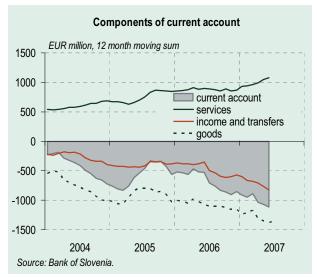

exceed the price stability criterion and euro area inflation in a more sustained and deeper manner. And not least, year-on-year growth in producer prices, which is exceeding 5% for the fourth consecutive month, points to an additional risk of feed-through into consumer prices. A wider excess gap than is normal from the point of view of the gradual convergence in price levels could threaten the competitiveness of the economy in the medium term.

Balance of Payments

There was a deficit of EUR 57 million in the current account in July, taking the total deficit in the first seven months of the year to EUR 401 million. The provisional figures for the period to June showed a current account deficit of EUR 562 million. The main factor in the change in the current account results, as seen in the relative improvement in this year's results, was the annual revision of statistics and methodological changes (for more, see box). The largest changes were made in the estimates of imports and exports of tourism services. Revenues were revised upwards, and expenditure downwards, both of which brought an improvement in this year's current account compared with the provisional figures for the first half of the year.

The trend of a slowdown in the current rate of growth merchandise trade continued in July on the import side only. The current rate of growth in merchandise

BANKA SLOVENIJE bank of slovenia eurosystem

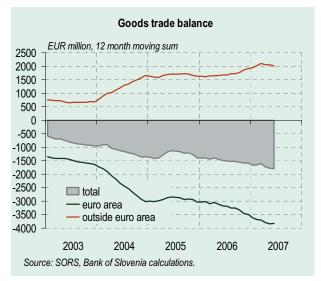

exports¹ in July remained at the level seen in June, while the current rate of growth in merchandise imports declined by just under 2 percentage points to 10%. In the context of these current rates of growth in merchandise trade, year-on-year growth also remained relatively high, persisting at its average level of the first half of the year. Merchandise exports amounted to EUR 1.7 billion in July, up 19.6% on the same month last year, while imports were up 18.4% at EUR 1.8 billion.

The deficit in merchandise trade in the first seven months of the year was up more than one-third in year-on-year terms. July's deficit in merchandise trade of EUR 72 million took the cumulative deficit in the first seven months of the year up to EUR 619² million, just over one-third higher than in the same period last year,

Box: Annual revision of the balance of payments

This September saw the annual revision of the balance of payments figures and the release of the final figures for 2005 and 2006. The statistical resources were also updated, with new methodologies for monitoring current account transactions being partly introduced. Minor changes were made to the majority of items in the current account. The largest change, which was methodological in nature, was in tourism services. This was primarily the result of a new methodology that uses a survey of spending by foreign tourists in Slovenia and domestic tourists abroad to estimate revenues and expenditure. On the basis of this methodology, the figure for exports of tourism services in the first seven months of last year was EUR 70 million less than originally estimated, while

with the level of coverage of imports declining by just under 1 percentage point to 95%.

Demand for Slovenian manufactured goods from EU members remained good in the early part of the second half of the year. Exports to EU members were up 21% year-on-year in July, while exports to non-EU countries were up one-third less (14%). The reverse dynamic was seen in merchandise imports, with imports from members up 14%, and imports from non-EU countries up 34%. The trend of faster growth in merchandise exports to EU members and merchandise imports from non-EU countries is being reflected in the cumulative figures for the first seven months of the year. Merchandise exports to EU members were up 19% year-on-year in the first seven months of the year, 3 percentage points more than

the figure for imports was EUR 20 million lower. This year's correction on the import side shows another decrease this year of approximately EUR 20 million in imports of tourism services from the provisional figure, while there was an improvement of EUR 174 million in the figure for exports. The changes in the other current account items from the figures previously released were minimal. They were slightly larger for 2006, the largest being the net outflow of factor income (an increase of EUR 50 million), and the increase of EUR 30 million in the merchandise trade deficit, which together with the changes in other items brought an increase in last year's current account deficit from EUR 756 million to EUR 857 million, or from 2.6% of GDP to 2.9% of GDP.

¹Technical problems in the transfer of data from the customs authorities to the statistical database meant that July's update in figures for merchandise trade with non-EU countries for the month of June was slightly larger than usual. There were upward changes on both the import and export sides, which had an impact on the current and year-on-year rates of growth in merchandise trade in June.

² According to the SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix to the bulletin), the trade deficit in the first seven months of this year stood at EUR 855 million.

exports to non-EU countries, while at 16% the increase in merchandise imports from EU members was just under half of that in imports from non-EU countries (32%). As a result of these movements, Slovenia's trade deficit with EU members was unchanged in year-on-year terms at EUR 1.5 billion, while its trade surplus with non-EU countries is showing a declining trend, contracting by EUR 190 million year-on-year to EUR 670 million in the first seven months of the year.

The largest year-on-year increase in exports in the first half of the year was recorded by consumer goods. There was a year-on-year increase of 21% in exports of consumer goods in the first six months of the year in volume terms, while exports of capital goods were up 18%, and exports of intermediate goods recorded the smallest increase. The main factor in the high growth in exports of capital goods and consumer goods was the favourable climate and good demand for Slovenian products from new EU members, with whom the Slovenian economy has retained and improved its price competitiveness in recent years.

Merchandise imports recorded year-on-year increases of 19% in nominal terms and 12% in volume terms in the first half of this year. The largest year-onyear increases in volume terms were recorded by imports of consumer goods (23%) and of capital goods (20%), both under the influence of economic growth and growth in domestic spending in the first half of the year. Growth in imports of intermediate goods was relatively low at just 7% year-on-year, despite the high growth in exports in the first half of this year.

In the first seven months of this year exports of services grew by 28% year-on-year, and imports by 19%. With imports of services growing more slowly than exports, the surplus in trade in services increased by EUR 252 million year-on-year to EUR 733 million. The largest year-on-year increase on the revenue side of 78% was recorded by other business services, within which there were increases of more than 200% in revenues from intermediation services, 68% in revenues from financial services, and 43% in revenues from construction and assembly work. Transport revenues recorded an increase just over half that of the average (15%). In line with the heavy investment activity in the construction sector, the largest increase on the expenditure side was recorded by construction and assembly work performed in Slovenia, which doubled. Year-on-year increases of more than 50% were also recorded by expenditure on operating leasing and financial services, the latter thus virtually reaching the figures recorded over the whole of last year on both the import and export sides. Expenditure on transport services recorded an above-average increase of 23%, in line with the large volume of merchandise trade.

The figures for tourism services have improved this year. With a new methodology for estimating tourism spending being used, exports of tourism services were up 21% year-on-year in the first seven months of the year, while imports were up 10%, taking the surplus up by EUR 120 million to EUR 472 million. The new methodology also meant that tourism revenues and expenditure were lower than originally estimated in both 2005 and 2006, although the surplus remained unchanged, and had no impact on the current account. The main impact from the change in the methodology for estimating tourism spending was on this year's current account, with the higher growth in tourism revenues (under the old methodology there was actually a year-on-year decline in the first six

months of the year) leading to an improvement in the current account of more than EUR 200 million.

The deficit in net factor income in the first seven months of the year increased by EUR 140 million year-on-year to EUR 358 million. With labour income recording a net surplus of EUR 55 million, only capital income recorded a net outflow, of EUR 414 million. In line with the high growth in the external debt n the last few years and rises in interest rates on world markets, the main factor in the rising outflow of net factor income was the year-on-year increase of EUR 134 million in outward interest payments. Here the largest increase of EUR 120 million was recorded by interest payments to banks, which is a reflection of the financial account in recent years. There was a net outflow of EUR 38 million in current transfers in July, with half of the increase in the deficit coming from official transfers, and half from other private transfers. This brought a year-on-year increase of one-quarter in the cumulative deficit in the first seven months of the year to EUR 157 million.

The strong net outflow from the private sector in the first quarter, which was primarily the result of repayments of Bank of Slovenia bills, slowed in recent months. The net outflow of EUR 3.3 billion from the pri-

Source: Bank of Slovenia

vate sector in the first quarter turned into a net inflow in the following months. The net inflow into the private sector totalled EUR 0.5 billion between April and July. The increase in the Bank of Slovenia' financial liabilities to the rest of the world, which totalled EUR 3.7 billion in the first seven months of the year, came in the first quarter, as a result of the repayment of bills and the consequent increase in liabilities to the Eurosystem. There was a net financial inflow of EUR 0.9 billion into the government sector in the first seven months of the year, primarily as a result of March's release of government bonds on the single European market.

Outward private sector financial investments reached EUR 4.9 billion in the first four months of the year, but totalled just EUR 0.9 billion between May and July. Portfolio investments (EUR 2.8 billion) were prevalent during the first four months of the year, in particular portfolio investments by domestic banks. These investments were primarily made as a result of maturing Bank of Slovenia bills and the investment of the liquidity thus released in foreign securities. Outward portfolio investments totalled just EUR 0.7 billion between May and July.

Other outward private sector investments also increased in the first seven months of the year, in particular FDI and loans to the rest of the world. Outward FDI totalled EUR 680 million in the first seven months of the year, almost more than twice in excess of that in the same period last year. Financing of the rest of the world via loans was also strong, totalling EUR 995 million in the aforementioned period (compared with EUR 394 million in the same period last year), particularly between May and July, when it totalled EUR 599 million. The majority of these loans to the rest of the world were placed by banks. Trade credits granted were approximately at the level of last year.

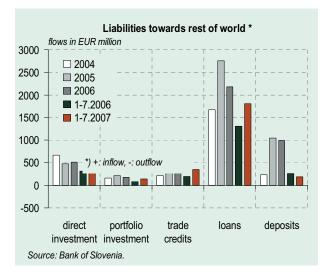

Financial inflows into the private sector from the rest of the world in the first seven months of this year totalled EUR 3.1 billion, EUR 0.8 billion more than in the same period last year. Inflows via FDI, loans and trade credits in the first seven months of the year were significantly larger than in the same period last year, while only inflows via deposits by non-residents were significantly smaller. Deposits by non-residents at banks

increased by EUR 189 million in the first seven months of the year, EUR 67 million less than in the same period last year.

Bank borrowing abroad continues to increase, while borrowing abroad by corporates is slowing. In the first seven months of the year corporates borrowed EUR 315 million in the rest of the world, EUR 117 million less than in the same period last year. Banks borrowed EUR 1,493 million during the same period (compared with EUR 875 million in the same period last year), of which approximately two-thirds was the result of a single transaction by one bank. The majority of borrowing via trade credits comes from the first quarter. FDI by non-residents is recording a faster current rate of growth this year than last year, having totalled EUR 464 million in the first seven months of the year, EUR 147 million more than in the same period last year.

The next external debt increased by EUR 2.7 billion in the first seven months of the year to EUR 6.0 billion, with the private sector recording a decrease in net external debt, and the net external debt of the government and the Bank of Slovenia increasing. The largest contribution to this year's increase in the net external debt came from the Bank of Slovenia's debt to the Eurosystem of EUR 3.5 billion, which appeared as part of the external debt when Bank of Slovenia bills were repaid. During the same period the general government sector's debt increased by EUR 0.6 billion, primarily as a result of March's eurobond release and other portfolio investments in government securities by non-residents. The private

sector's net external debt declined by EUR 1.4 billion. The gross external debt stood at EUR 30.5 billion at the end of July, while gross external claims stood at EUR 24.4 billion.

D Public Finance

This year the Ministry of Finance estimates that the general government deficit will be smaller than originally forecast. The government has drafted its budget amendments for 2008 and its budget for 2009. The Ministry of Finance estimates that the general government deficit according to the ESA95 methodology will stand at 0.6% of GDP this year, compared with the forecast of 1.5% of GDP in the Stability Programme and April's Report on the General Government is primarily expected to come from revenues being higher than forecast. The government has drafted the budget amendments for 2008, the state budget for 2009, and other budget documents, from which the focus of public finance policy in the next two years will be more evident.

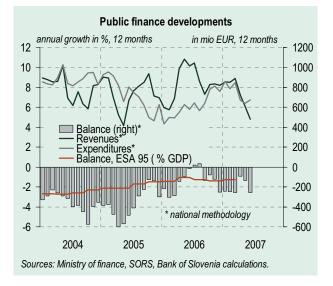

According to the national cashflow methodology, the general government sector recorded a deficit of EUR 76 million in the first half of the year, compared with a deficit of EUR 69 million in the same period last year. The second quarter saw low growth in both revenues

and expenditure, with the available figures indicating strong growth in revenues in the third quarter. The state budget deficit in the first six months of the year was larger than last year, while by contrast there was a corresponding increase (of approximately EUR 40 million) in the surplus of the Health Insurance Institute. The latter is partly a reflection of the impact of the economic cycle on revenues, and also on health insurance contributions. Local government and the Pension and Disability Insurance Institute recorded similar results to those in the same period last year. Alongside the decline in revenues from payroll tax and personal income tax seen all year, the main factor in the low growth in revenues in the second guarter was the earlier payment of personal income tax rebates this year. In addition, this year's settlements for corporate income tax in April were lower than last year's. Year-on-year growth in expenditure was also low in the second quarter, particularly on goods and services, and on subsidies. The available figures for revenues in July and August point to a renewed increase, particularly in social security contributions and revenues from tax on corporate earnings.

Despite the tax reform, general government revenues are recording solid growth in the context of the good economic climate, having increased by 4.1% year-onyear in the first half of the year, with growth increasing further in July and August according to the available figures. Some figures on tax inflows are available for the first eight months of the year. Revenues from payroll tax and labour tax were down 12.1% year-on-year

Source: Ministry of finance; Bank of Slovenia calculations.

during this period, while revenues from personal income tax were down 3.8%. The largest increase was recorded by social security contributions, in August in particular, as a result of the higher year-on-year increase in wages in July. The fastest growth among taxes on goods and services was recorded by excise duties, in particular those on fossil fuels. Excise duties on fossil fuels and tobacco in the first eight months of the year were up in year-onyear terms. In September the government cut excise duties on fossil fuels, as a result of which excise duty revenues were slightly lower in the month than in the same month last year.

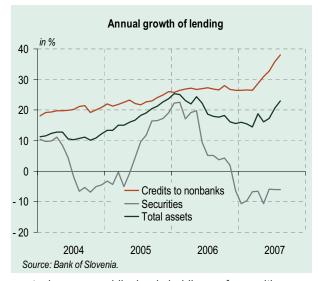

General government expenditure recorded similar growth as revenues in the first half of the year. Expenditure on goods and services and on subsidies recorded low growth in the second quarter, while investment expenditure in particular recorded aboveaverage growth. Having not been high in the first quarter, growth in investment expenditure rose sharply in the second quarter. Investment expenditure in the state budget increased more than that of local government, and consisted mostly of new build, reconstruction and adaptations. Investment expenditure and transfers in the second quarter were one-quarter higher than in the same period last year.

Transfers to individuals and households accounted for just over one-third of consolidated expenditure, but declined as a proportion of GDP by 0.8 percentage points over the last five years. Last year transfers to individuals and households were equivalent to 16% of GDP, with the trend of a decline in the ratio of this expenditure to GDP seen in the last five years continuing this year. In the first half of the year they grew by 4.2% yearon-year, with family benefits, parental allowances and sick pay prominent. Expenditure on the unemployed and transfers for social security are declining. Expenditure on pensions was up 5.1% year-on-year in the first half of the year, with the number of pensioners increasing by 1.2% on the same period last year (the number claiming oldage pensions rose by 3.1% and the number claiming widow's pensions rose by 11.6%, while the number claiming farmer's pensions and family pensions in particular declined).

In the first eight months of the year more than onethird of the projected EU funds were disbursed, but Slovenia's net position against the EU budget was negative. The main shortfall in disbursement was in the structural and cohesion funds, primarily as a result of the changeover to the new financial perspective. Payments into the EU budget are being made in line with forecasts, with the exception of the payments based on traditional own funds (customs duties). It is estimated that on this basis it will be necessary this year to pay in almost double the projected amount, as the amount of customs duties collected has recorded above-average growth as a result of the payment of customs duties on imports via the Port of Koper.

6 Banking System*

Growth in total assets continued to increase in August. Growth in total assets strengthened for the third consecutive month. It increased by 2.5 percentage points in August to 23% year-on-year. Two-thirds of August's high increase in total assets came from lending to nonbanking sectors, while the remainder came from an increase in claims against banks. Lending activity contin-

ues to increase, while bank holdings of securities continue to decline. The ratio of securities to total assets has fallen by 3.5 percentage points this year to 19%. However, the ratio of secondary liquidity in the banking system (including Slovenian government securities and foreign marketable securities rated BBB or higher) to total assets is up slightly from the beginning of the year at 14.2%.

Despite a slight decline in the accessibility of resources abroad, banks primarily financed themselves in August via an increase in liabilities to foreign banks. Several factors have coincided within the banking system for some time now: an increase in lending growth, a decline in the proportion of bank assets accounted for by securities, slow domestic saving in the form of bank deposits, and the replacement of these sources of financing by borrowing abroad.

Growth in lending to non-banking sectors remains high. Growth in lending to non-banking sectors rose to 38% year-on-year in August, up 2.2 percentage points

* The book figures for banks are used in this section, and differ in methodology terms from the published statistics.

from the previous month. This was a reflection of high economic growth and investment activity, although to a certain extent there are other factors affecting lending, such as the relatively high lending to non-residents and other financial institutions, and the financing of corporates for mergers and acquisitions. The largest increase in loans to non-banking sectors in August was recorded by loans to non-financial corporations, the rate approaching 36%. The spread between Slovenian interest rates and those of the euro area on both new corporate loans of up to EUR 1 million and new corporate loans of more than EUR million 1 remained similar to that in the previous months.

Year-on-year growth in lending to households is not showing signs of significant increase. The proportion of foreign currency lending is increasing, having risen by 1.6 percentage points from January to 8.7%. The current rate of growth in housing lending slowed slightly to stand at close to 39%, while that of consumer lending rose to 18.4%. The spread between Slovenian interest rates and euro area interest rates on new home loans narrowed to 1 percentage point in July, while the negative spread in interest rates on new consumer loans declined by 0.5 percentage points to 1 percentage point.

Despite the slightly tougher conditions on international financial markets, in August banks secured most of their resources from banks abroad. There was a net increase of EUR 488 million in borrowings from banks abroad in August, while deposits by non-banking sectors increased at the same time, primarily as a result of an increase in deposits by non-financial corporations and by the general government sector.

The increase in household deposits was negligible in August. There was slightly higher increase in liabilities to domestic banks compared with previous months. These accounted for one-fifth of August's increase in total assets, and there was a notable increase in interbank transactions. With deposits increasing modestly and access to resources at foreign banks having been made more difficult, banks will probably need to target an increase in deposits by non-banking sectors via a more active interest rate policy. Slovenian interest rates on deposits of up to 1 year, which account for the vast majority of deposits

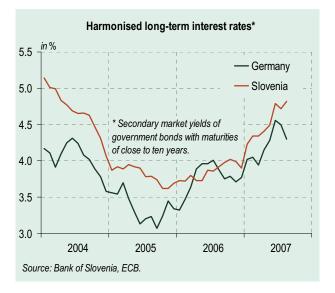

by non-banking sectors, remain about 0.5 percentage points below the euro area average. Interest rates realised on deposits of more than 1 year exceeded 4% in August, the premium over the euro area average increasing to just over 0.7 percentage points.

The banking system's profit in the first eight months of the year surpassed that recorded over the whole of last year. Growth in the banking system's net interest income remains favourable. Growth in non-interest income continues to decline, but remains relatively high at almost 32%. In August there were no major changes in the movement of the interest margin, while the noninterest margin declined slightly, which meant that the banking system's financial intermediation margin again fell below 4%. The ratio of provisioning and impairment costs to the banking system's gross income remains stable at just under 9%, as does the ratio of operating costs to gross income, at a level just under 49%. This is facilitating the generation of profit, which by the end of August had exceeded last year's figure at EUR 410 million. The profitability indicators (ROE, ROA) are better than for the same period last year.

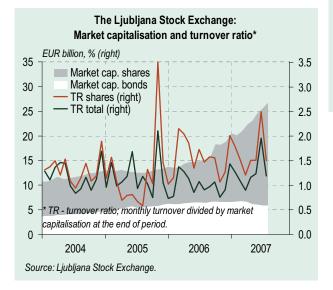

7 Domestic Financial Markets

The spread between the yields on long-term Slovenian and German government securities increased by 50 basis points in August. The uncertainty on the financial markets, which was the result of the crisis on the American sub-prime mortgage market and the credit instruments market, was reflected in a decline in investors' appetite for risk and a retreat to government securities. As a result the yield on long-term German bonds fell by 20 basis points in August.

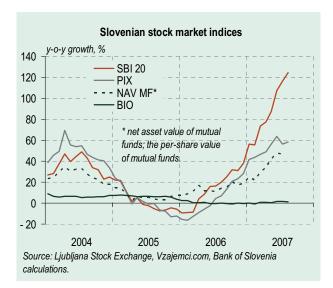

The market capitalisation of shares on the Ljubljana Stock Exchange increased by EUR 1.13 billion in August. This increase, despite the delisting of shares in Delo and Droga Kolinska (in the total amount of EUR 312 million) was the result of a high gain in the SBI20. The market capitalisation of shares listed on the official market has risen by 164.8% in the last year, as a result of a gain of 124.6% in the SBI20, and the flotation of Telekom.

The volume of trading in shares (excluding block trades) amounted to a high EUR 221 million. The prime market accounted for 81% of the volume, market concentration thus increasing further. The volume of secondary trading in bonds on the TUVL market was very

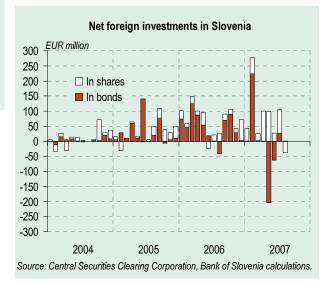

low at EUR 3.1 million. The volume of trading in bonds on the official market and the semi-official market remained modest at EUR 6 million (including block trades).

In August the SBI20 passed the 12,000 mark for the first time. The SBI20 recorded a gain of 7% in the last month (the American S&P index gained 1.3% in August, while the DJ EuroStoxx index for Western Europe fell 0.9%). Other factors in the high growth in prices of shares in domestic corporates in August were certain acquisitions and concentrations of ownership at individual firms, the government's continuing withdrawal from the commercial sector, and expectations regarding the Krka stock split.¹ The P/E ratio for shares on the official market had almost reached 34 by the end of August.

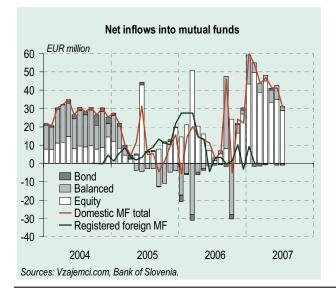

¹ Krka carried out a 10-for-1 stock split in August.

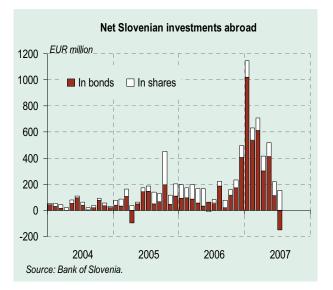

BANKA SLOVENIJE bank of slovenia eurosystem

The proportion of total market capitalisation on the Ljubljana Stock Exchange accounted for by nonresidents had risen to 6.17% by the end of August. In contrast to the preceding months, non-residents made net sales of domestic securities in August², in the amount of EUR 38.1 million. They also retreated from domestic shares: the net flow into domestic shares was negative for the first time in 13 months, in the amount of EUR 38.5 million. Prominent among the net sellers of domestic shares were investors from the Netherlands, Cyprus and the USA.

Residents' demand for foreign debt securities eased slightly in July. There were net sales of foreign debt securities in the amount of EUR 149 million. This was

caused by domestic banks, which made net sales of EUR 166 million in securities, those of euro area issuers in particular. By contrast, the demand for foreign equities strengthened slightly further. The net flow into foreign equities amounted to EUR 151 million. The other financial intermediaries sector was most active here, accounting for 41%, followed by banks, insurers and households. Other financial intermediaries (59% of their total net flow into foreign equities) and insurers (70%) invested primarily in equities of issuers from the euro area, while banks (87%) and households (67%) focused on equities of issuers in former Yugoslav republics.

The assets of mutual funds increased by EUR 85 million in July to almost EUR 2.8 billion, partly as a result of net inflows of EUR 30 million, but primarily as a result of a weighted monthly return of 2.1%. The net flow into mutual funds declined in July, to reach its lowest level this year. Net inflows into equity funds accounted for the majority (EUR 29 million). The proportion of net inflows accounted for by the four funds with an investment strategy focusing on Balkan markets, which was just 19% in June as a result of the negative returns on the capital markets of the former Yugoslavia, increased to 32.5% in July in the context of positive returns. There were no significant outflows from individual funds in July. The proportion of mutual fund investments held in liquid assets³ increased to almost 10%.

² Includes transactions on both the regulated market and the non-regulated market, and also transactions between non-residents. ³ Liquid assets include cash, deposits and money-market instruments.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (nonresidents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad:
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-ofperiod middle exchange rate.
 - Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary. The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (*http://www.bsi.si/en/*).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's
 methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new
 tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procuration and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- · loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- · deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

BANKA SLOVENIJE BANK OF SLOVENIA EUROSYSTEM

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procuration, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-r-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procuration, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1,1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

Table 1.4.: Balance Sheet of other Monetary Financial Institutions

The table summarizes data on assets and liabilities of other Monetary Financial Institutions, i.e. banks, savings banks, savings and loans undertakings and money market funds, at the end of the month. Detailed survey of assets and liabilities of the monetary financial institutions is in the tables 1.5. and 1.6.

Table 1.7.: Balance sheet of the Bank of Slovenia - by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB an differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1-2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A penalty rate is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – "Euribor®" – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

том

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolars and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from May 2003-April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolars vis-ŕ-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

NK OF SLOVENI EUROSYSTEM

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Ljubljana Stock Exchange (Tables 2.6 to 2.8)

General

Data prior to 2007 are published in tolars; from 2007, data are published in euros.

Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities

Shares – investment fund shares are not included. IF – investment fund shares.

Turnover is measured with a single counting.

Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

- SBI Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO Bond Index
- SBI, BIO value of SBI and BIO at the end of period
- dT change of index value by points
- d% change of index value in percentage
- Min, Max minimum and maximum value of index in a period

Exchange rates (Tables 2.9.1-2.9.2)

Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

As of 1 January 1999, with the introduction of the European Monetary Union, the European currency unit (XEU) was replaced by the euro (EUR) at an exchange rate of 1:1. Fixed exchange rates between the euro and the national currencies of the EMU member states (valid from 1 January 2001):

1EUR = 40.33990 BEF = 1.95583 DEM = 340.75000 GRD = 166.38600 ESP = 6.55957 FRF = 0.78756 IEP = 1936.27000 ITL = 40.33990 LUF = 2.20371 NLG = 13.76030 ATS = 200.48200 PTE = 5.94573 FIM

Due to the introduction of the euro in January 2002, the exchange rates of some members of EMU currencies (ATS, FRF, DEM, ITL) have been replaced by the exchange rates of some EU accession countries (CZK, HUF, PLN, SKK).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish złoty was denominated on 1 January 1995 at the exchange rate of 1 new złoty for 10,000 old złotys.

Table 2.9.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Payment systems (Tables 2.10 to 2.15)

General

Data prior to 2007 are published in tolars; from 2007, data are published in euros.

Table 2.10: TARGET and Giro Clearing transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for

BANKA SLOVENIJE BANK OF SLOVENIA

EUROSYSTEM

domestic Slovenian RTGS system (values in billion Slovenian tolars). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

<u>Note 3:</u> As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

Table 2.11 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.12 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.13 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.14 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/ or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.15 Debit Transfers and Simply book-entry

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Simple book entry is credit to or debit from the account of a non-MFI customer by simple book entry without the use of a payment instrument. Transactions are usually based on a contract /an agreement between a customer and the bank.

Table 2.16: Network of Commercial Banks

<u>Note 1</u>: In the number of head offices, two banks with licenses for operation pursuant to the Constitutional Law only are included (Kreditna Banka Maribor d.d. and Ljubljanska Banka d.d. Ljubljana).

<u>Note 2</u>: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31March 2000. Data up to the year 2000 are presented according to the Standard Classification of Territorial Units – Statistical Regions of the Republic of Slovenia, 1 January 1999. The Surveying and Mapping Institute of Slovenia has produced a map of Slovenia with new municipality borders and statistical regions.

Note 3: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets. Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in monthly data are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

BANKA SLOVENIJE BANK OF SLOVENIA EUROSYSTEM

Revisions in quarterly data are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- The external trade statistics (Statistical Office of the Republic of Slovenia) is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (SAD).
- Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):
 - report on account balances at domestic banks PPV (until 31 December 2004),
 - report on account balances abroad C (until 31 December 2006),
 - report on transactions through accounts at domestic banks PPT,
 - report on transactions through accounts abroad C.

All banks which conduct international payment transactions and all residents with open accounts abroad are obliged to report. The resident issuer/beneficiary of the payment is obliged to forward data on the type of transaction.

- Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD) are the sources of portfolio investments (debt and equity securities) and financial derivates since 2004.
- Reports on purchased/sold foreign debt securities without domestic brokers (DVP) are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR) are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- Reports on monetary financial institutions (PORFI) are the source for data on loans, cash and deposits of the banking sector since 2005.
- Reports on credits received and granted and deposits with non-residents (KRD) are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- Reports on short-term receivables and liabilities from operations with non-residents (SKV) are the source for short-term trade credits since 2002.
- · Reports on investments (SN) are the source for reinvested earnings of direct investments.
- Accounting data of the Bank of Slovenia
- Accounting data of banks (KNB)
- Budget data on the transactions of government sector between the Republic of Slovenia and EU
- Estimates and other sources
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) until 2004,
 - estimate of expenditures on travel abroad including purchases of goods abroad until 2004
 - estimate of Italian pensions (UMAR) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households,
 - estimate of labour income (SURS),
 - data on pensions paid to non-residents (ZPIZ),
 - survey on the write-downs of debt from trade in goods and services abroad,
 - estimates for exports and imports of travel from 2005 onwards (detailed explanation under item Travel).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations and for which data are available from ITRS or from the reports of duty free shops and consignment warehouses. Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

The source of records on transportation services is the ITRS.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolars from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolars to non-residents abroad.

The data on sales of tolars to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists; three-year's survey last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the import of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health related travel,
- Education,
- Other,
- Same day travelers.

Construction services

The source of data is the ITRS. All construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures).

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated (from a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes, paid in the current month). The estimate is replaced by actual data only when these data are available. Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-tern commercial credits) and cash reserves have been managed according to the same principle. Since 2004, the accrual principle is used for income from other investments on ther investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates. From 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data).

Capital and financial account

Capital account

Capital transfers

Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. Data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad.

Financial account

Direct investment

Direct investment is recorded on the basis of reported payments through domestic banks and data from customs declarations. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies.

EUROSYSTEM

Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans.

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents.

Financial derivatives

Since 2004, these types of transactions are included in VRP and KDD sources.

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]

- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]

Since 2002, short-term commercial credits are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

The foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- EUR currency is no longer included in the item currency and deposits/ claims,

- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.

- net position of the Bank of Slovenia to the Eurosystem (tranxactions booked on the account number 188000 showing net result of incoming and outgoing payments conducted in EUR currency thorugh TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

BANKA SLOVENIJE BANK OF SLOVENIA EUROSYSTEM

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

<u>Note 2</u>: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)
- March 2007 (EUR 1000.0 million)

<u>Note 4</u>: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

<u>Note 7</u>: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: http://www.bsi.si/en/financial-data.asp?Mapald=64.

Note 8: The data on reinvested earnings for 2007 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2004 to 2006 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2008, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2007 shall take into consideration the new three year average (2005 to 2007).

<u>Note 9</u>: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2006 are provisional.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments. However, there are differences in some items and data sources as follows:

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR),
- short-term commercial credits with non-residents (SKV), and
- reports on accounts abroad (C).

The source for the balance of payments is the International Transaction Reporting System (ITRS); this category reports on loans granted to or received from non-residents and reports on short-term commercial credits to non-residents.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are valued at book value according to accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment-other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital respresenting a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). Other discrepancies in sources and criteria are explained in methodological notes that refer to the balance of payments.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portofolio investment.) From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003.

BANKA SLOVENIJE BANK OF SLOVENIA EUROSYSTEM

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial instruments

Since 2003, the data are included in VRP and KDD sources.

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Sources for long-term trade credits and loans are credit registration forms and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items. From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments, those being the accounting data of commercial banks (KNB), the account balances of banks in original currencies (PPV), the account balances abroad of companies (C) and the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: *http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm*.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial instruments are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolars; from 2007, data are published in euros.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia. The data on financial accounts are compiled by the Bank of Slovenia.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can

EUROSYSTEM

be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Debt of the Republic of Slovenia

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.4)

Tables 5.1 to 5.4. show the balance of transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

The general principle of valuation at the current market price as at the cut-off date applies to the balances of financial assets and liabilities. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.

EUROSYSTEM

- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.
- Securities, excluding shares, are comprised of the following:
- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
 - long-term debt securities (with an original maturity of more than one year: bonds);
 - financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic of foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision.
- methodological differences in financial instrument classification and
- other methodological differences

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 2/2002) and is in line with the classification of activities NACE Rev.1 (Nomenclature statistique des activités économiques dans la Communanté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 3 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, hunting and forestry
- B Fishing
- C Mining and quarrying
- D Manufacturing
- E Electricity, gas and water supplyF Construction
- G Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods
- H Hotels and restaurants
- I Transport, storage and communications
- J Financial intermediation
- K Real estate, rental and business activities
- L Public administration and defence; compulsory social security
- M Education
- N Health and social work
- O Other community, social and personal service activities
- P Activities of private households as employers and undifferentiated production activities of private households

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: www.stat.si.

General

Data prior to 2007 are published in tolars; from 2007, data are published in euros.

Non-financial accounts and general economic statistics (Tables 6.1 to 6.8)

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.5 and 6.6: Industrial Production Index and Productivity Index in Industry

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production. Indices on industrial production are provisional from February 2004 on.

The productivity index is defined as the ratio between the industrial production index and the index of persons in employment.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2006 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 - self-employed persons include family-member assistants as well.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1–ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Effective exchange rate - nominal/real

The growth of the index value represents the growth of the value of domestic currency and vice versa. In the index of the real effective exchange rate, measured through the cost of labour per unit, the cost of labour is calculated based on gross salary only due to a change of statistical data source.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products (intermediate goods, capital goods and consumer goods), as well as by main divisions of activities.

BANK OF SLOVENIA EUROSYSTEM

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: http://www.ecb.int/pub/mb/html/index.en.html.

| Tabels in Monthly Bulletin of the Bank of Slovenia | Tabels in Monthly Bulletin of the ECB |
|--|---|
| 1.2 Consolidated Balance Sheet of Monetary Financial Institutions | 2.2 Consolidated balance sheet of euro area MFI s |
| | 2.3 Monetary statistics |
| 1.4. Balance Sheet of Other Monetary Financial Institutions or | 2.4 MFI loans, breakdown |
| 1.5. Selected Assets of Other Monetary Financial Institutions by Sector | 2.6 MFI holdings of securities, breakdown |

* The period to which data to be released relate is shown in parentheses. NLT stands for no-later-than.

Financial and external sector data (except Merchandise trade) are first disseminated on the Bank of Slovenia Internet website, and later in the Bank of Slovenia Monthly Bulletin. Advance Relese Calender is updated monthly and published on the Bank of Slovenia Internet website - http://www.bsi.si/iskalniki/pregled-financnih-podatkov-en-vsebina.asp?Vsebinald=4931&Mapald=87.

1 The data on interest rates are published by the Bank of Slovenia and Ministry of Finance separately.

2 Data are disseminated daily on Bank of Slovenia Internet website - Financial Data/ Bank of Slovenia exchange rates and on Archive of financial data. Links are given in column Additional data.

Note: "Special Data Dissemination Standard" - SDDS is a special standard for statistical data disemination established by the International Monetary Fund in 1996. Relevant information on the standard are available on - http://dsbb.imf.org/Applications/web/sddshome/#introduction. Data for Slovenia are published on - http://www.bsi.si/imf/.
