Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

The international environment saw further cuts in the 2008 economic growth forecast in the euro area and, in particular, in the USA, where the risk of recession again brought a strong response from monetary and fiscal policy. In January the Consensus economic growth forecasts were reduced to 1.8% for the euro area and 2% for the USA, while the IMF's forecasts were even more pessimistic at 1.6% for the euro area and 1.5% for the USA. The large difference between the USA growth forecasts reflects the high level of uncertainty regarding the current state of the American economy compared with the euro area. Aiming to reduce the risk of recession, the Federal Reserve cut its key interest rate by 0.75 percentage points in an extraordinary meeting held at the end of January, and by a further 0.5 percentage points at its scheduled meeting to 3.0%. Fiscal policy is aiming in the same direction, and is set to offer further tax breaks of USD 150 billion to the private sector.

There are also signs of a gradual slowdown in economic activity in Slovenia. Year-on-year growth in industrial production averaged just under 8% between January and November, with production of capital goods recording the largest increase. The main factors in this increase were the high activity in the construction sector and the increase in exports of capital goods to newer EU member-states. Some of the confidence indicators and the indicator of economic sentiment point to a gradual slowdown in economic activity, but conditions on the labour market remained favourable at the end of last year. November's high growth in the workforce in employment, which was a reflection of the high recent economic growth, was increasingly accompanied by faster wage growth. Nominal year-on-year growth in gross wages in the private sector has exceeded 8% in recent months. The agreement concluded at the end of January between employers and the public- and private-sector unions envisages nominal wage increases, in line with inflation in the previous year, of 3.4% in the public sector and 4.7% in the private sector, with smaller increases at companies where the agreed adjustment was made last August. In the context of a sharp slowdown in economic activity, both could increase the risk of declining competitiveness and rising unemployment.

The current account deficit widened further in November, to reach EUR 1.5 billion over the preceding 12 months, or 4.6% of estimated GDP. More than two-fifths of the deterioration came from the trade deficit, the remainder coming primarily from the net outflows in factor income and current transfers. The slowdown in trade since August has increased the risk of further deteriorations in the current account. Financial inflows into the private sector from the rest of the world have increased in recent months, and are exceeding financial outflows from the private sector to the rest of the world.

Average inflation as measured by the HICP stood at 3.8% in 2007, 1 percentage point in excess of the Maastricht criterion. The largest contributions to inflation came from the categories of services and food. In the latter, sharp price growth was first seen in April, with prices of unprocessed food, while prices of processed food have also risen sharply since September. The average growth in the harmonised index of prices excluding energy, food and tax effects was 2.7%, up from 1.3% in 2006, thus recording a larger increase than headline inflation. This is also an indication of the strong impact of domestic macroeconomic factors. Growth in producer prices of manufactured goods on the domestic market was also high last year, averaging 5.4%.

The public finance position improved last year under the conditions of good economic growth. According to the Ministry of Finance's estimate in the Stability Programme, the government sector deficit stood at 0.6% of GDP last year. The Slovenian government will draw up a revision of the budget for 2008 to include the financial consequences of the legislative changes adopted in January in the areas of personal income tax, child benefit and income support. The budget revision is also expected to cut defence spending.

Lending to non-banking sectors slowed slightly in December 2007, having increased for several months. Short-term household deposits were a significant source of finance for lending growth. According to the initial figures, the banking system's profit in 2007 stood at EUR 513 million, up approximately 30% on 2006.

The main development on the capital markets in December was the increase of EUR 1.81 billion in the market capitalisation of shares on the Ljubljana Stock Exchange, more than half of which came from the listing of Nova kreditna banka Maribor. January's negative developments on the capital market were reflected by the SBI20, which had lost 12.6% by 23 January.

1

International Environment

The 2008 economic growth forecasts for the euro area and the USA have been declining since the final quarter of last year as a result of the uncertainty on the financial markets. In January the Consensus economic growth forecasts were reduced to 1.8% for the euro area and 2% for the USA, while the IMF's forecasts were even lower at 1.6% for the euro area and 1.5% for the USA. The large difference between the USA growth forecasts reflects the risk of a more significant slowdown in economic growth in the USA than in the euro area. Growth in industrial production and the retail sector continued to slow in the final quarter in the euro area, while consumer and business confidence indicators also declined. The Consensus forecast for economic growth in 2008 stood at 1.8% in January, down 0.1 percentage points from December. The Consensus estimate of economic growth in 2007 is unchanged since September at 2.6%. In the USA the slowdown in industrial production continued, particularly at the end of the year, partly as a result of a decline in consumer spending, and partly as a result of shrinking inventories. The decline in inventories was seen in both manufacturing and in trade. Particularly notable in the retail sector was the decline in inventories of cars. The contraction on the real estate market continued at the end of the year, while there was also a deterioration in conditions on the labour market, where unemployment rose in December. The Consensus estimate of economic growth in the USA in

2007 was unchanged in January at 2.2%, but the forecast for 2008 was revised downwards to 2.0%.

In January the ECB left its key interest rate unchanged, while in the USA the Federal Reserve made a rate cut at an extraordinary meeting, then cut the rate again at its scheduled meeting. The ECB's key refinancing rate remained at 4.0% in January. The majority of analysts were expecting another cut in the Federal Funds rate in January primarily owing to the slowdown in economic growth. The Federal Reserve cut its key interest rate by 0.75 percentage points in an extraordinary meeting held at the end of January, and by a further 0.5 percentage points at its scheduled meeting to 3.0%. This took the key interest rate in the USA below that in the euro area. The Japanese central bank left its key interest rate unchanged in January at 0.5%. Given the slowdown in the Japanese economy, the rate is expected to remain at this level until the end of this year.

The euro rose significantly against the dollar in January.

The euro averaged USD 1.4708 over the first four weeks of the month, up 0.96% from December's average of USD 1.4568. The main factors in the euro's rise against the dollar were the figures pointing to a slowdown in economic growth in the USA, the deterioration in the results of financial institutions in the USA in the final quarter, a lower-than-expected output index and the expectations of cuts in the key Federal Reserve interest rate.

Inflation remained relatively high in December in both the euro area and the USA.

Inflation in the euro area was unchanged in December at 3.1%. Core inflation was also unchanged from November's rate of 2.3%. Within the volatile inflation components, growth in energy prices declined slightly in December, while growth in food prices rose. The contribution of 0.9 percentage points made towards headline inflation by energy prices remained higher than the corresponding figure for food prices (0.7 percentage points), as a result of the low basis of energy prices in 2006. Year-on-year inflation in the USA was down slightly from November's figure of 4.3%, but remained relatively high in December at 4.1%. There were slightly rises in year-on-year core inflation (to 2.4%) and growth in food prices, while growth in energy prices declined slightly, which brought down the headline inflation rate.

After reaching extreme highs at the beginning of January, oil prices gradually declined over the month. Having hit the USD 100 mark in early January, the price of a barrel of WTI fell to around USD 90 by the end of the month. The average price of Brent crude over the first four weeks of January was USD 91.9 per barrel, a significant rise on last year's January average of USD 53.6 per barrel. The main factor in the decline in oil prices during January was the slowdown in economic growth in the USA, while additionally a slowdown is also expected in other major world economies such as the euro area, Japan and the UK. The International Energy Agency has already reduced its forecast for demand for oil during 2008. Year-on-year growth in other commodities prices (excluding oil) in December was unchanged from November at 16%. Growth in metals prices declined again to -12% y-o-y, which compensated for the higher growth in food prices, which leapt to 38% y-o-y.

Certain stock markets fell sharply in January. The Dow Jones lost 6.7% in the first four weeks of January, the DAX 15.4%, the Shanghai 10.3% and the Nikkei 14.5%. These developments were primarily the result of concerns over the risk of recession in the USA and the consequent slowdown in growth in other major world markets.

2 | Economic Activity and Labour Market

Year-on-year growth in industrial production was low in November, but output nevertheless remained high. Year-on-year growth in industrial production was significantly lower in November than in October at 2.4%, but averaged 7.8% over the first eleven months of the year. All the categories of goods recorded below-average growth in production, with production of intermediate goods actually recording a decline. The number of working days in November 2007 was the same as the previous November, but last year's distribution of working days was less favourable. Production of capital goods recorded a year-on-year increase of 9.4%, the year-on-year rate averaging 14.3% over the first eleven months of the year. The main factors in this increase, as in previous months, were the high activity in the construction sector and the increase in exports of capital goods to newer EU member-states. The most notable institutional sectors, those recording year-on-year growth in output of approximately 20% both in November and on average over the first eleven months of the year, were the manufacture of chemicals, chemical products and manmade fibres, and the manufacture of transport equipment. The latter again recorded high year-on-year growth in November (29.4%), primarily as a result of high growth in the automotive industry. Year-on-year real growth in industrial turnover averaged 8.2% over the first eleven months of the year, and stood at 4.7% in November, although growth in non-domestic turnover was higher at 6.1%. The greatest contribution to this growth came from the turnover in capital goods.

Year-on-year growth in the real value of work performed in the construction sector in November was also below the average for the first eleven months of the year, while there was again high growth in revenues from trade in motor vehicles, and low growth in revenues from trade in foodstuffs. As in October, the real value of construction work performed in November recorded lower year-on-year growth than the average over the remainder of the year, at 9.1%. As in the preceding two months, the lower growth in November was primarily the result of basis effects. Civil engineering work recorded its lowest year-on-year growth

of the year in November at 4.8%, while in contrast to the preceding two months growth in the construction of buildings was higher, at 17%. Real growth in sales revenues in the retail sector stood at 4.5% in November, with revenues from foodstuffs again recording negative growth (of -2.6%), and revenues from non-foodstuffs recording year-on-year growth of 11.3%. Trade in motor vehicles, motor vehicle maintenance and retail of engine fuels (18.7%) all recorded high year-on-year growth in revenues, which was in line with the figures for industrial production. The year-on-year figures in the tourism sector were better in November than in September and October. Year-on-year growth in the number of arrivals stood at 6.0%, while the number of foreign tourists was up 7.0% on November 2006. The number of overnight stays recorded year-on-year growth of 6.0%, with the number of overnight stays by foreign tourists up 11.0% on November 2006.

The indicator of economic sentiment declined again in January year-on-year, but remained slightly above its long-term average. Consumer confidence reached its lowest level since surveying began. The seasonally adjusted indicator of economic sentiment was down 5 percentage points year-on-year in January, but was still just 4 percentage points above its long-term average. Consumer confidence was down 16 percentage points in January, at 10 percentage points below its long-term average, with consumers' outlook on their financial situation over the next 12 months reaching its lowest level since surveying began. The services confidence indicator was down 3 percentage points year-on-year, while there were also declines in the construction confidence indicator (of 1 percentage point) and the manufacturing confidence indicator (2 percentage points). The retail confidence indicator was up by 8 percentage points on last January.

Conditions on the labour market were again in line with the economic climate in November. The workforce in employment recorded its highest year-on-year growth of the year in November, as it had in October, while unemployment remained low. The labour force increased by 2.2% year-on-year in November, the highest figure of the year. The main contribution to this increase came from high growth in the workforce in employment, which recorded

Number in parenthesis refers to the month of last available data.

year-on-year growth of 3.7% in November, as in October. In keeping with the strong economic climate, the largest year-on-year increases in employment both in November and in the first eleven months of the year overall were recorded by the sectors of the manufacture of transport equipment, and construction. Year-on-year growth in employment in the manufacture of transport equipment averaged 10.5% over the first eleven months of the year, primarily as a result of the new production capacity in the automotive industry. Employment in the construction sector was up 11.1% year-on-year in the same period, and by 12% year-on-year in November alone. The registered unemployment rate was down 0.1 percentage points in November at 7.3%, taking its average over the first eleven months of the year to 7.7%, down 1.8 percentage points on the same period the previous year. The surveyed unemployment rate (ILO methodology) in the third quarter was down 1.1 percentage points in year-on-year terms at 4.5%, the lowest figure to date.

Nominal year-on-year growth in gross wages reached its highest level of the year in November. Nominal year-on-year growth in the average gross wage was significantly higher in November, primarily as a result of the payment of Christmas and end-of-year bonuses in the private sector, at

7.1%. The average gross bonus payment in November was up 3.3% on 2006. The largest bonus payments in November were made in the electricity, gas and water supply sector, with the trade sector recording the lowest payments. The average gross wage over the first eleven months of the year was up 5.8% in year-on-year terms, 1 percentage point more than in the same period of 2006. Growth in the average net wage was 1.7 percentage points higher in nominal terms over the same period. The average gross wage in the private sector was up 8.3% in November, and 6.8% over the first eleven months of the year. Wages in the sector of public administration, defence and compulsory social security were up 3.9% year-on-year in November, slightly less than the 4.1% year-on-year increase that they recorded over the first eleven months of the year. The largest year-on-year growth in gross wages over the first eleven months of the year was recorded by the financial intermediation sector (7.8%) and the retail sector (7.7%), which is in line with the high growth in value-added in these sectors. The construction sector, which has been a significant factor in GDP growth over the last year, also recorded above-average year-on-year growth in gross wages over the first eleven months of the year, at 6.6%.

The nominal effective euro exchange rate as measured against a basket of foreign currencies depreciated by 0.1% in December, leaving the year-on-year appreciation down 0.6 percentage points on November at 1.9%. The euro's fall of 0.8% against the dollar, was the main factor in December's decline in the nominal effective

Sources: Statistical Office of the Republic of Slovenia, Bank of Slovenia calculations.

euro exchange rate against the basket of currencies, which came despite the euro's gains of 1.6% against the pound sterling and 0.6% against the Swiss franc. During the first three weeks of January the euro rose by 3.9% against the pound sterling and by 1% against the dollar, but fell by 1.9% against the Swiss franc.

The price competitiveness of the Slovenian economy as measured by consumer prices improved in December.

The index of the real effective exchange rate as measured by consumer prices depreciated by 0.1%. Domestic consumer prices grew at the same pace as foreign prices, and thus the depreciation in the real effective exchange rate as measured by consumer prices came from the depreciation in the nominal effective euro exchange rate. Price competitiveness deteriorated in 2007, with the year-on-year appreciation in the real effective exchange rate as measured by consumer prices reaching 4.5% in the year to December.

In contrast to the three preceding months, price competitiveness as measured by producer prices was unchanged in December. The real effective exchange rate as measured by producer prices remained unchanged in December. Growth in domestic producer prices was 0.1 percentage points higher than growth in the basket of foreign prices, but the depreciation in the nominal effective euro exchange rate acted in the opposite direction. The year-on-year appreciation in the real effective exchange

rate as measured by producer prices was down from 4.7% in November to 3.7% in December.

Cost competitiveness in manufacturing deteriorated significantly in November. After appreciating in October, the real effective exchange rate as measured by unit labour costs appreciated by 6.1% in November, taking the year-on-year appreciation rate to 1.9%. In the context of moderate productivity growth and employment growth, the main factor in the deterioration in cost competitiveness in November was the high wage growth in manufacturing of 9.2% year-on-year, mainly as a result of Christmas and end-of-year bonuses.

3 | Price Developments

Inflation in Slovenia as measured by the HICP averaged 3.8% in 2007, up 1.3 percentage points on the average rate in 2006. The largest rise among the various components of 7.1% was recorded by food prices. Prices of processed food rose by 6.3%, while unprocessed food recorded a price rise of 8.7%. Prices of services were up 4.9%, while energy prices were up 3.4%. The rise in energy prices was the result of rises in prices of refined petroleum products, with the purchase price of the best-selling refined petroleum product in Slovenia rising from an average of 47 cents in 2006 to 52 cents per litre in 2007. Prices of manufactured goods other than energy prices were up 0.3%.

Inflation in the euro area as measured by the HICP averaged 2.1% in 2007, up 0.1 percentage points on the average rate in 2006. The largest rises among the various components were recorded by food prices (2.8%) and energy prices (2.6%), but were less than in the previous year. The rise in prices of services was 2.5%, up from 2006's increase of 2.0%. Prices of manufactured goods other than energy prices rose by 1%, up from 0.6% the previous year. Inflation was slightly stronger overall throughout the European Union, where average inflation rose from 2.2% to 2.3%.

A notable feature of Slovenia's inflation trends in 2007 was the sharp discrepancy with the euro area in inflation in food prices and services. The higher growth in food prices in Slovenia was probably the result of a combination of domestic factors. Possible domestic factors are the

higher aggregate demand compared with potential growth in Slovenia, and the potential effects of the feed-through of foreign prices into the domestic market structure. The ECB also drew attention to these two factors in its December bulletin, where it compared inflation in food prices between various euro area countries. The high economic activity was also a factor in the rise in core inflation, expressed as the rise in the harmonised index of prices excluding energy, food, alcohol and tobacco, which averaged 2.7% in 2007 in Slovenia, and 1.9% in the euro area overall. The largest contribution towards this discrepancy came from prices of services, which grew at a rate almost twice that in the euro area overall. There is also a widening discrepancy in the 12-month average of the HICP in Slovenia, which stood at 3.8% in December, compared with the Maastricht criterion of 2.8% in December 2007.

Producer prices of manufactured goods on the domestic market rose by an average of 5.4% in 2007. The largest price rises were recorded by energy (11%), intermediate goods (8.1%), commodities (7.2%) and consumer durables (7%). Producer prices of manufactured goods increased by an average of 2.7% over the first eleven months of the year in the euro area. Year-on-year growth stood at 6.8% in December, unchanged from November. The rise in prices was most prominent in the manufacture of metals, the manufacture of metal products, the manufacture of food, beverages and animal feed, the manufacture of furniture, and electricity supply.

4 | Balance of Payments

The deterioration in the current account continued in November. In November the current account deficit was EUR 232 million, the largest figure in any month last year, and just under one-fifth higher than in the same month the previous year. More than half of November's current account deficit came from the trade deficit, the remainder coming primarily from the net outflows in factor income and current transfers. The cumulative current account deficit over the first eleven months of the year increased to EUR 1.3 billion or 4.1% of estimated GDP, the 12-month cumulative deficit rising to just over EUR 1.5 billion or 4.6% of estimated GDP,

up EUR 0.6 billion or 1.8 GDP percentage points on 2006, the highest figure in the last ten years.

Merchandise trade slowed in November, with year-on-year growth in merchandise imports and exports falling to the lowest monthly levels in 2007. Merchandise exports amounted to EUR 1.77 billion in November, up 10.7% on the same month last year, while imports were up 7.3% at EUR 1.93 billion. Despite the slight slowdown in import and export growth, the cumulative merchandise trade deficit over the first eleven months of the year increased by EUR 157 million to EUR 1,319 million,¹ up just over one-half on the same period in 2006. The level of coverage of imports by exports was unchanged from October, but was down 1.5 percentage points from the same period of 2006 at 93%.

The largest increase in November and overall in the first eleven months of the year was recorded by merchandise exports to EU member-states. Merchandise exports were up 16.5% year-on-year in the first eleven months of the year (17% for EU member-states and 15.2% for non-EU countries), while merchandise imports were up 18% (14.7% for EU member-states and 31.7% for non-EU countries). Although merchandise exports to EU member-states grew faster than imports, the merchandise trade deficit with these countries continued to widen. The overall merchandise trade deficit in the first eleven months of 2007 was up EUR 460 million year-on-year, of which EUR 150 million was the result of a wider deficit with EU member-states, while EUR 310 million came from the decline in the surplus with non-EU countries.

Under the influence of the favourable economic climate, merchandise trade with EU member-states outside the euro area recorded the fastest growth last year. Merchandise exports to EU member-states outside the euro area in the first ten months of the year were up 43% year-on-year, while merchandise imports were up 21.5% (compared with 12.9% and 14.7% for the euro area countries). Here the largest increases in merchandise exports were recorded by Hungary (74%) and Lithuania (52%), while Poland, Estonia and the Czech Republic all recorded increases of over one-third. Among Slovenia's most important partners in

¹ According to the SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix to the bulletin), the trade deficit in the first eleven months of this year stood at EUR 1,722 million

the euro area, only exports to Italy recorded above-average growth (of 20%), while growth in exports to Germany and France was about average, and exports to Austria recorded below-average growth of just over 5%.

There was an above-average increase in exports in the first ten months of 2007 to the countries of the former Soviet Union (21%), while the former Yugoslav republics recorded below-average growth of 15%. In the latter, only exports to Serbia recorded above-average growth, of 17%, while exports to Croatia recorded the lowest figure of 8%. After several years of decline or stagnation, merchandise exports to Macedonia and to Bosnia-Herzegovina increased by just over 12% year-on-year in the first ten months of 2007. Merchandise imports from the former Yugoslav republics are increasing faster than exports. Imports were up 19.5% year-on-year in cumulative terms over the first ten months of the year, with imports from Macedonia increasing by over one-half and imports from Serbia up 42%.

Since the middle of the second quarter of 2007 the largest year-on-year increases have been recorded by exports of consumer goods. There was a year-on-year increase of 24% in exports of consumer goods in the first ten months of 2007, while exports of capital goods were up 18%, and exports of intermediate goods recorded the smallest increase, of 10%. The main factor in the high growth in exports of consumer goods was the favourable climate and demand from new EU members, in relation to whom the Slovenian economy has retained and improved its price and cost competitiveness in recent years. Exports

of consumer goods to euro area countries have also been rising sharply since May, as a result of high exports of road vehicles. Exports of consumer goods to new EU member-states were up 62% year-on-year (compared with a rate of 64% for capital goods), while those to euro area countries were up 24% (a rate of 8% for capital goods), and those to the former Yugoslav republics were up by just 5% (20% for capital goods).

Trade in road vehicles was a major factor in the high nominal growth in merchandise trade. Exports of road vehicles increased by 35% year-on-year in the first ten months of 2007, and imports by 43%. The increase in exports of road vehicles accounted for just over one-third of the overall year-on-year increase in merchandise exports, while imports of road vehicles accounted for one-quarter of the overall year-on-year increase in merchandise imports.

The favourable economic climate and growth in domestic consumption in the first ten months of 2007 had an impact on the breakdown of merchandise imports in terms of purpose of use. The largest increase in

merchandise imports was recorded by consumer goods, at 30%. As on the export side, a major factor in the growth in imports of consumer goods was imports of road vehicles, which recorded a year-on-year increase of 43% in the first ten months of the year. In the context of high investment in construction, growth in investment in equipment was also high last year, and was reflected in the year-on-year growth of 23% in imports of capital goods. Growth in imports of intermediate goods was relatively low at just 14% year-on-year, despite the high growth in exports and production-oriented sales on the domestic market.

Despite the stagnation of trade in services in November, there was a year-on-year increase in the surplus in trade in services in the first eleven months of 2007. In the first eleven months of the year exports of services grew by 18.8% year-on-year, and imports by 20%. The result was a year-on-year increase of EUR 138 million in the surplus in trade in services to EUR 948 million. The largest increases of just under 60% in exports of services in 2007 were recorded by construction and assembly work and by financial services. Two-thirds of all revenues from financial services came from commissions and fees in banking intermediation. There was a slightly smaller increase of 47% in revenues from exports of intermediation services in the first eleven months of 2007, with revenues from intermediation in exports increasing by 55%.

On the import side, expenditure on financial services and operating leasing was up 46%. In association with the high investment activity in the construction sector, the largest increase was recorded by imports of construction and assembly work, which more than doubled year-on-year from EUR 59 million in the first eleven months of 2006 to EUR 149 million in the same period last year. Construction and assembly work accounted for two-thirds of the expenditure on imports of construction services, and non-residents' investment work in Slovenia for the remaining third. Growth in revenues from exports of transport was one-fifth behind that in expenditure on imports, but they nevertheless contributed EUR 465 million to the overall surplus in services. With tourism exports rising by 14%, and imports by 4%, the tourism sector made the largest contribution to the surplus in services, of EUR 764 million.

The net deficit in factor income widened by EUR 70 million in November, and by EUR 263 million over the first eleven months of the year to EUR 622 million. With labour income recording a net surplus of EUR 78 million, only capital income recorded a net outflow, of EUR 700 million. The year-on-year growth of 35% in outflows of factor income outpaced growth in inflows by just under one-third. The largest year-on-year increase on the revenue side of 71% was recorded by interest income. As a result of banks' heavy lending activity in the rest of the world in recent years and the rise in interest rates in 2007, interest income at banks more than doubled in year-on-year terms from EUR 87 million in the first eleven months of 2006 to EUR 186 million in the same period last year. There was below-average growth of 8% in payments of income from non-residents' equity investments, and 27% in income from investments in the securities of Slovenian issuers (primarily government securities). As for inward factor income, on the outward side the largest increase was recorded by interest payments on loans taken in the rest of the world, at 63%. As

Source: Bank of Slovenia

a result of heavy bank borrowing in recent years, from 2003 in particular, the largest increase on the expenditure side of 86% was also recorded by interest payments to banks. The net outflow in current transfers increased by EUR 91 million year-on-year in the first eleven months of the year to EUR 276 million. Two-thirds of the net deficit in transfers came from the net outflow in official transfers of EUR 188 million, of which EUR 28 million was the state budget's net position against the EU budget, while the remaining third came from private transfers to the rest of the world.

The net financial inflow, i.e. the surplus of financial inflows from the rest of the world over financial outflows to the rest of the world, has increased in recent months.

The net financial inflow into the private sector amounted to EUR 0.9 billion between June and November last year, of which EUR 0.6 billion was in October and November alone. The increase in the Bank of Slovenia's financial liabilities to the rest of the world, which totalled EUR 3.6 billion in the first eleven months of the year, came primarily in the first quarter (EUR 3.3 billion), as a result of the repayment of bills and the consequent increase in liabilities to the Eurosystem. There was a net financial inflow of EUR 0.8 billion into the government sector in this period, primarily as a result of last March's release of government bonds on the single European market.

Since June both the inward and outward financial flows in the private sector have exceeded those of a year earlier, an indication of Slovenia's greater integration into international financial flows. Financial inflows into the private sector from the rest of the world between June and November increased from EUR 1.4 billion in 2006 to EUR 4.3 billion last year, while financial outflows from the private sector increased from EUR 1.9 billion to EUR 3.4 billion over the same period. The private sector's inflows and outflows strengthened further in October and November, to EUR 2.1 billion and EUR 1.6 billion respectively.

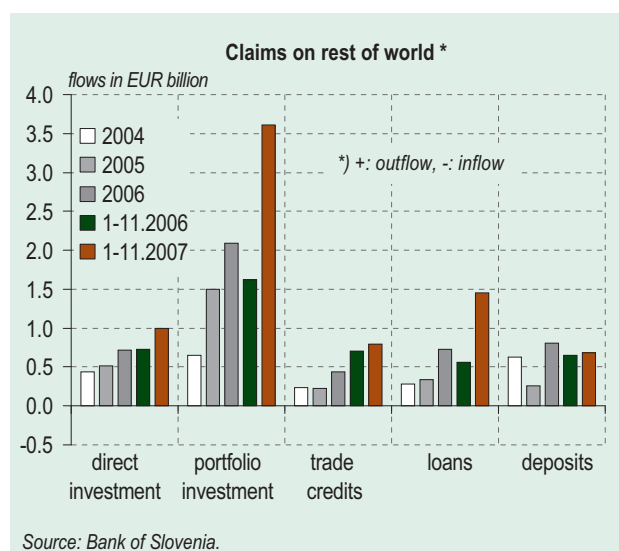

The main increases among financial inflows have been recorded by loans to banks from the rest of the world and bank deposits by non-residents. Loans from the rest of the world to banks amounted to EUR 3.1 billion in the first eleven months of the year, up EUR 1.8 billion on the same period the previous year. Deposits by non-residents at banks

actually declined in the first five months of the year, but have been rising rapidly since then, increasing by EUR 1.3 billion between June and November. The volatility on the financial markets in the rest of the world and the associated higher costs of borrowing and more difficult access to foreign sources of financing are not yet reducing borrowing in the rest of the world by domestic banks. Financial inflows via loans from the rest of the world and deposits by non-residents have actually strengthened in recent months, with those from loans from the rest of the world totalling EUR 0.9 billion over October and November, and those from deposits by non-residents EUR 0.6 billion.

Corporate borrowing abroad continues to slow, primarily as a result of a switch from foreign sources of financing to domestic sources. Corporates borrowed EUR 0.5 billion in the rest of the world over the first eleven months of the year, down slightly from the same period the previous year. The proportion of total corporate borrowing accounted for by the rest of the world declined from almost 20% during the first eleven months of the previous year to below 10% during the same period last year. The decline in corporate borrowing in the rest of the world began right at the beginning of last year, and was probably the result of the equalisation of terms of financing in Slovenia with those available in the rest of the world. Among other financial inflows, at EUR 0.8 billion in the first eleven months of the year FDI was approximately double that in the same period the previous year, while inflows from portfolio investments remained negligible.

The main increases among financial outflows are being recorded by loans and deposits, while outward portfolio investments have slowed in recent months. Financing of the rest of the world via loans was strong last year, and amounted to EUR 1.5 billion in the first eleven months of the year, almost three times as much as in the same period the previous year, with bank lending prevalent. Deposits in the rest of the world increased by EUR 1.9 billion over the same period, of which EUR 0.7 billion came in November alone. Portfolio investments, which amounted to EUR 3.5 billion in the first half of the year, slowed as expected, and totalled just EUR 0.1 billion between June and November.

The net external debt increased by EUR 2.4 billion over the first eleven months of the year to EUR 5.8 billion. This was approximately the same increase in debt as in 2006. The government sector's net external debt increased by EUR 0.5 billion, primarily as a result of March's Eurobond release and other portfolio investments in government securities by non-residents. The decrease in the private sector's net external debt and the increase in the Bank of Slovenia's net external debt were to a great extent the result of the repayment of Bank of Slovenia bills and the placement of this money by banks in foreign securities. The gross external debt stood at EUR 34.0 billion at the end of October, while gross external claims stood at EUR 28.2 billion.

5 | Public Finance

According to the national cashflow methodology, the government in the wider sense recorded a surplus of EUR 296 million in the first ten months of the last year, compared with a surplus of EUR 12 million in the same period the previous year. All the sub-sectors recorded improved positions during the aforementioned period. The largest contribution came from the state budget, which over the first seven months of the last year recorded a similar position to the previous year, and then an improvement of EUR 224 million between August and October. The favourable state budget position in the aforementioned period was the result of strong growth in revenues, primarily corporate income tax, VAT and excise duties. The provisional figures for November indicate a surplus of EUR 59 million in that month, compared with a surplus of EUR 16 million the previous year. With revenues from social security contributions growing strongly, the Health Insurance Institute is recording a larger surplus, and the transfer from the state budget required by the Pension and Disability Insurance Institute was smaller last year for the same reason.

The general government deficit for 2007 (under ESA95 methodology) stood at 0.6% of GDP according to the Ministry of Finance in its update to the Stability Programme. According to the same estimates, the structu-

ral deficit should also have improved last year. The European Commission has not yet published its assessment of the Slovenian Stability Programme, but its most recent estimate of the Slovenia's structural deficit was slightly at variance with the estimate in the Stability Programme. The two institutions agreed in their conclusions that this year's structural deficit in public finances in Slovenia would be slightly wider.

General government revenues between January and October last year were up 7.7% year-on-year. Growth was high in the third quarter, and in the final quarter according to the available figures. According to the figures for the consolidated public finance position, revenues grew by 12.7% in the third quarter and by 14.5% in October. The figures for tax revenues in November and December point to relatively high growth in those two months. The largest increases among tax revenues last year were recorded by excise duties (21.2%), corporate income tax (approximately one-sixth), and social security contributions (8.5%). Revenues from personal income tax were also slightly higher than in the previous year, but following the cut in rates at the beginning of the year there was a significant decline of 11.6% in payroll tax and labour tax. VAT revenues over the first ten months of the year were up 7.8% in year-on-year terms.

General government expenditure between January and October last year was up 5.0% year-on-year. Growth in expenditure on goods and services, wages and interest was notably low, while investment expenditure grew faster than average. Expenditure on goods and services

over the first ten months of the year was up 3.5% on the same period the previous year, having been approximately equal over the first seven months of the year. Expenditure on public sector wages over the first ten months of the year was up 3.8% on the same period the previous year. A wage increase of 3.4% was scheduled for the public sector in January 2008. The new wage system for the public sector will be introduced on 1 May, and will aim to remove wage inequalities by the end of 2010. The largest increases over the first ten months of the year were recorded by expenditure and transfers for investments, the state budget recording an increase of one-quarter, and the local government an increase of 15%.

Expenditure on transfers to individuals and households during the first ten months of the year were up 4.0%, the rates recorded by the different types of transfer varying greatly. Pensions accounted for the majority, and were up 5.4% over the aforementioned period. An increase in November and the payment of a retrospective settlement for the period from last January brought a further rise in expenditure in November, the rate over the entire year estimated at 6.3%. Expenditure on sick pay also recorded high growth during the same period last year, having increased by approximately one-tenth. As a result of the favourable economic situation, last year there were declines in expenditure on the unemployed (by 16.5%) and on social security, primarily as a result of the lower number of claimants.

Last year EUR 348 million was disbursed from the EU budget, but the state budget recorded a net deficit of EUR 8 million against the EU budget. In December Slovenia received EUR 68.3 million from the EU budget, some of which was again earmarked for the Schengen border, but significantly more than usual was for structural policy and cohesion policy. The actual revenues for the state budget from the EU budget thus reached 60% of the level forecast in the amended budget for 2007. Realisation was higher than forecast in the funds earmarked for interior policy, and was also high in the implementation of agricultural policy. Structural policy received only one-quarter of the projected funds, and cohesion policy one-third. Payments into the EU budget amounted to EUR 356 million, and were not significantly different from the forecasts, with the

exception of the payments made on the basis of traditional own funds. The state budget thus recorded a deficit of EUR 8 million against the EU budget.

At the end of January the Slovenian government released a reference bond issue in the amount of EUR 1 billion. This was Slovenia's second reference bond issue since joining the euro zone, and was in line with the programme for financing the state budget for 2008. The maturity period is 11 years, with a yield of 4.375%. Of the entire issue, 10% was sold in Slovenia, 35% in the Benelux countries, and 10% each in France and Scandinavia. The programme envisages one more bond issue in the same nominal value, should it be possible to buy back enough Slovenian debt on the market.

The government will draw up a revision to the budget for 2008 incorporating the financial consequences of the legislative changes adopted in January. On 22 January the National Assembly adopted a new personal income tax act, enacted a decision to raise child benefits, and redefined the adjustment of income support in line with growth in pensions. The first change in the new personal income tax act is an increase in the personal tax allowance for taxpayers with the lowest level of earnings (below EUR 9,000 a year). This will result in a decline of EUR 32 million (0.1% of GDP) in state budget revenues from this source. The National Assembly's second decision relates to an increase of 8.4% in child benefits, which entails an increase of EUR 30 million in general government expenditure. The final measure adopted entails a change in the adjustment of income support received by pensioners on the lowest pensions. These benefits will again be adjusted in the same way as pensions. The government stated that it will draw up a revision to the budget for 2008, the main cuts coming in defence spending.

6 | Banking System*

Growth in the banking system's total assets fell to 24.7% at the end of 2007. December's net increases of EUR 100 million in total assets and EUR 331 million in lending to non-banking sectors were significantly less than in the previous months. There was a slight increase in the proportion of bank assets accounted for by government securities. This strengthened the banking system's secondary liquidity, and brought an end to the decline in the proportion of assets accounted for by securities (17.5%).

Lending to non-banking sectors accounted for 91% of the increase in total assets in 2007. Banks financed one-half of their increase in total assets last year by borrowing in the rest of the world, and just over one-fifth through deposits by non-banking sectors.

Lending to non-banking sectors slowed in December.

Year-on-year growth in loans to non-banking sectors declined to 37.4%, primarily as a result of the net decline of EUR 121 million in the stock of loans to other financial institutions. Growth in corporate loans declined to 36% in December, while growth in household loans was down to 27.3%. After a significant increase in November, to a great extent tied to loans taken by households in order to buy shares in Nova

* The book figures for banks are used in this section, and differ in methodological terms from the published statistics

kreditna banka Maribor (NKBM), the stock of household loans declined by EUR 2.1 million in December.

There was a sharp increase in short-term household deposits at banks in December 2007. December saw the largest monthly increase in deposits by non-banking sectors (EUR 632 million) of last year, the vast majority of which came from households (EUR 573 million). The increase in deposits was reflected most evidently in sight deposits and deposits with a maturity of 3 to 6 months, while long-term deposits recorded a negligible increase. The sharp increase in deposits can be attributed to seasonal effects, and to the return of the excess money mobilised by small investors when buying NKBM shares in the first phase of privatisation. Deposits at the large domestic banks recorded the largest increases. Interest rates on new deposits of up to 1 year rose to 4% in December.

December's increase of EUR 338 million in liabilities to foreign banks was at the level of last year's average. Year-on-year growth exceeded 41% at the end of 2007. In the unrest on financial markets in the second half of the year, despite the increased uncertainty and tougher conditions making access to resources in the rest of the world more difficult, banks continued to obtain most of the money that they needed from banks abroad. However, these loans shifted more in the direction of short-term financing.

According to the initial figures, the banking system generated a profit of EUR 513.5 million in 2007. Growth in net interest, net non-interest income and gross income

ranged between 17% and 17.5% in December 2007. The growth in net interest was the result of the increase in the proportion of total assets accounted for by lending to non-banking sectors. Growth in non-interest income declined in the second half of the year, with trading income a factor in this decline. The current rate of growth in provisioning and impairment costs declined to 33.6% in December, slightly behind growth in loans. There was a decline in growth in operating costs, to 7.2% in December. The banking system's profit in 2007 according to the initial figures was up just over 30% on the previous year.

The banking system's ROE improved to 16.3% in 2007.

The financial intermediation margin was close to 3.8% last year, while the non-interest margin stood at 1.6%, and the interest margin at 2.1%.² In 2007 banks improved the coverage of operating costs by non-interest income, and reduced the proportion of gross income disposed of on operating costs. With growth in total assets significantly outstripping growth in operating costs, the ratio of operating costs to total assets also declined.

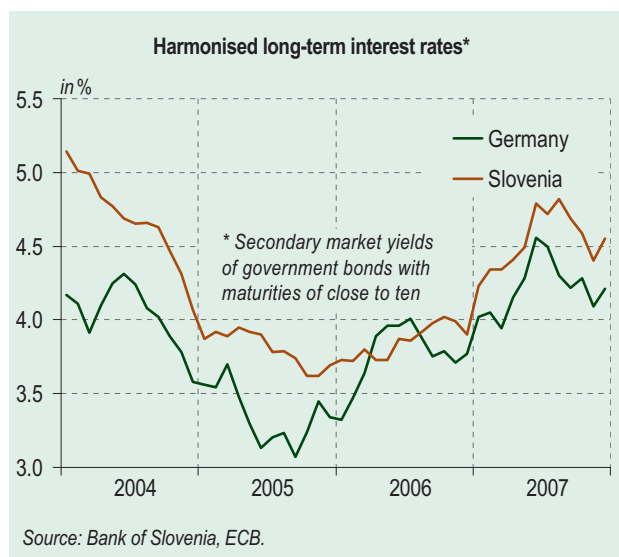

Income statement	2007			y.o.y
	2005	2006	Jan.- Dec.	growth

7 | Domestic Financial Markets

The average monthly yield on Slovenian long-term government securities increased by 15 basis points in December, compared with 12 basis points for German government securities. The announcements of new write-offs by major investment banks in the second half of December brought increased aversion to risk and a fall in stock markets. The S&P in the USA lost 0.86% in December, while western Europe's DJ EuroStoxx lost 0.57%. The increased expectation of a slowdown in the American economy and the release of poor figures for some leading world economies caused a retreat to less risky investments at the beginning of 2008. This was reflected in declining yields on government securities and significant falls in share indices. The S&P had lost 10.8% by 22 January, and the DJ EuroStoxx 14.6%. At an extraordinary meeting on 22 January the Federal Reserve cut its interest rate by 75 basis points to 3.5%. The ECB's key interest rate was unchanged at 4%.

The market capitalisation of shares on the Ljubljana Stock Exchange increased by just over EUR 1.81 billion in December. The main contributions to this came from the listing of NKBM shares (EUR 979 million), the rise of 2.3% in the SBI20, further share issues by Gorenje, Aktiva naložbe and Krona holding, and listings by Medvešek Pušnik

DZU and KS Naložbe. The market capitalisation of bonds remained almost unchanged. The ratio of the market price of listed shares to annual earnings (the P/E ratio) increased by 1.2 in December to a high 32.6.

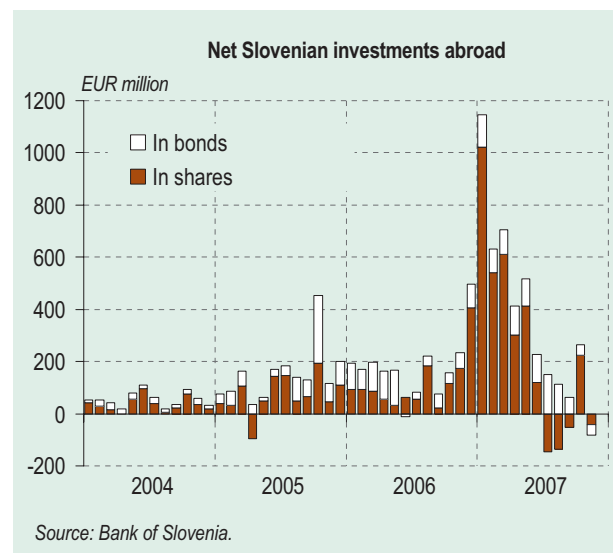

Year-on-year growth in the SBI20 stood at 78.1% at the end of December, the index finishing the year at 11,370 points. The main development at the Ljubljana Stock Exchange in the final month of the year was the listing of NKBM shares (on 10 December), which accounted for more than one-third of the month's total volume. The share price peaked on 24 December at EUR 44, and finished the year at EUR 41.9. December's volume of trading in shares (excluding block trades) amounted to EUR 201 million, above the monthly average in 2007 of EUR 174 million. Shares on the prime market accounted for 42.6% of the volume of trading. Investors in the Ljubljana Stock Exchange did not see the most successful of starts to 2008. The uncertainties over the outcome of the sell-off of the government stake in Telekom Slovenije, profit-taking, the transfer of tax liabilities to the next year and the developments on global capital markets all contributed to a fall in prices. By 23 January the SBI20 had lost 12.6%, to fall below 10,000 points. The largest falls were recorded on 21 January (4.14%) and 22 January (6.15%), the latter of which was the largest daily fall in the exchange's history. There was a strong recovery of 5.7% on the following day. Market capitalisation declined by 8.7% over this period. The fall in prices was further accelerated by knock-out certificates issued on Slovenian blue-chip shares. There were 20 cer-

tificates issued directly on Slovenian shares (14 on Monday 21 and Tuesday 22 January) and 29 issued on indices or baskets including Slovenian shares (15 on Monday 21 and Tuesday 22) that reached knock-out levels in January.³ After an unscheduled revision to the indices, shares in Lesnina were excluded from the SBI20 in the middle of January, and shares in Istrabenz were excluded from the SBITOP. NKBM shares were included in both indices.

The proportion of the Ljubljana Stock Exchange's market capitalisation held by non-residents increased by 0.22 percentage points in December to 5.87%. Non-residents made net purchases of EUR 11 million in domestic bonds and EUR 106 million in shares.⁴ Residents of Luxembourg were prevalent among the net purchasers

of government bonds, and residents of Germany were prevalent among the net sellers. The main net purchases of shares were made by residents of Luxembourg, Belgium, Italy, the USA and Sweden, while the main net sellers were residents of Austria and the UK.

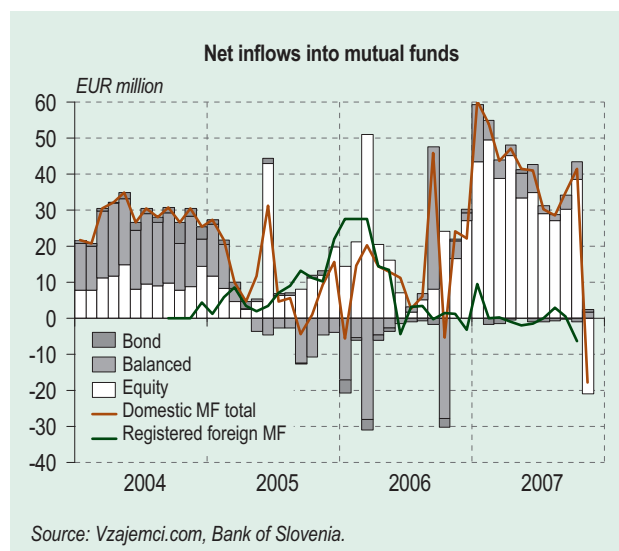

Residents made net sales of foreign shares (EUR 41.1 million) and bonds (EUR 41.5 million) in November. Banks made net sales of EUR 52.4 million in bonds of issuers from the euro area, the USA and the former Yugoslav republics. The insurance sector made net purchases of EUR 18.1 million in bonds of euro area issuers. Net purchases of foreign shares were negative for the first time on more than a year. Prevalent among the net sellers were the sectors of other financial intermediaries excluding insurers and pension funds (EUR 57.4 million) and non-financial corporations (EUR 12.9 million), while the insurance sector was a net purchaser (EUR 23 million). In November residents primarily made net sales of shares of issuers from the euro area, the BRIC countries, and the former Yugoslav republics, but made net purchases of shares of issuers from Switzerland and the USA.

³ Source: <http://www.boerse-stuttgart.de> and websites of issuing banks

⁴ Includes transactions on both the regulated market and the non-regulated market, and also transactions in domestic securities between non-residents

The net outflows from domestic mutual funds amounted to EUR 18 million in November. Equity funds recorded net outflows of EUR 21 million, the other types of fund recording small net inflows. The average unit price declined by 4.5% in November, while mutual funds' total assets declined by 5.4% to EUR 2.8 billion. The average unit price rose by 1.9% in December. The fall in prices on the capital markets of the former Yugoslavia continued in November. The mutual funds with a regional focus recorded a net outflow in November, and a decline in unit prices. Returns on the capital markets of the former Yugoslavia were positive in December, but there was a renewed downturn in prices in the first three weeks of 2008. The proportion of mutual fund assets held in liquid assets⁵ increased by 3 percentage points in November to 12.7%.

⁵ Liquid assets include cash, deposits, money-market instruments and government bonds

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS**Interest rates (tables 2.1–2.4)****Table 2.1: Bank of Slovenia Interest Rates**

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The *overnight-deposit interest rate* is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause**Interbank market****SIONIA/SITIBOR**

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The **tolar indexation clause (TOM)** is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from May 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Ljubljana Stock Exchange (Tables 2.6 to 2.8)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities

Shares – investment fund shares are not included.

IF – investment fund shares.

Turnover is measured with a single counting.

Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of

individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

- SBI – Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO – Bond Index
- SBI, BIO – value of SBI and BIO at the end of period
- dT – change of index value by points
- d% – change of index value in percentage
- Min, Max – minimum and maximum value of index in a period

Exchange rates (Tables 2.9.1–2.9.2)

Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

As of 1 January 1999, with the introduction of the European Monetary Union, the European currency unit (XEU) was replaced by the euro (EUR) at an exchange rate of 1:1. Fixed exchange rates between the euro and the national currencies of the EMU member states (valid from 1 January 2001):

1EUR =	40.33990 BEF
=	1.95583 DEM
=	340.75000 GRD
=	166.38600 ESP
=	6.55957 FRF
=	0.78756 IEP
=	1936.27000 ITL
=	40.33990 LUF
=	2.20371 NLG
=	13.76030 ATS
=	200.48200 PTE
=	5.94573 FIM

Due to the introduction of the euro in January 2002, the exchange rates of some members of EMU currencies (ATS, FRF, DEM, ITL) have been replaced by the exchange rates of some EU accession countries (CZK, HUF, PLN, SKK).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.9.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Payment systems (Tables 2.10 to 2.15)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.10: TARGET and Giro Clearing transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 3: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Table 2.11 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.12 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.13 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.14 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A **non-paper-based credit transfer** is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A **standing order** is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.15 Debit Transfers and Simply book-entry

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A **special money order** is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.16: Network of Commercial Banks

Note 1: In the number of head offices, two banks with licenses for operation pursuant to the Constitutional Law only are included (Kreditna Banka Maribor d.d. and Ljubljanska Banka d.d. Ljubljana).

Note 2: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000. Data up to the year 2000 are presented according to the Standard Classification of Territorial Units – Statistical Regions of the Republic of Slovenia, 1 January 1999. The Surveying and Mapping Institute of Slovenia has produced a map of Slovenia with new municipality borders and statistical regions.

Note 3: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;

- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (SAD).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
 - report on account balances at domestic banks – PPV (until 31 December 2004),
 - report on account balances abroad – C (until 31 December 2006),
 - report on transactions through accounts at domestic banks – PPT,
 - report on transactions through accounts abroad – C.
- All banks which conduct international payment transactions and all residents with open accounts abroad are obliged to report. The resident issuer/beneficiary of the payment is obliged to forward data on the type of transaction.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits since 2002.
- **Reports on investments (SN)** are the source for reinvested earnings of direct investments.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU**
- **Estimates and other sources**
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
 - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
 - estimate of Italian pensions (UMAR) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
 - estimate of labour income (SURS),
 - data on pensions paid to non-residents (ZPIZ),
 - survey on the write-downs of debt from trade in goods and services abroad,
 - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
 - estimate of cash transactions on tourism and labour income (from 2007 onwards).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations and for which data are available from ITRS or from the reports of duty free shops and consignment warehouses. Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

The source of records on transportation services is the ITRS.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS. All construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures).

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated (from a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes, paid in the current month). The estimate is replaced by actual data only when these data are available. Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates. From 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data).

Capital and financial account

Capital account

Capital transfers

Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. Data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad.

Financial account

Direct investment

Direct investment is recorded on the basis of reported payments through domestic banks and data from customs declarations. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no

longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents.

Financial derivatives

Since 2004, these types of transactions are included in VRP and KDD sources.

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

The foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

Since 2002, the category “Accounts Abroad of Other Sectors” also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (transactions booked on the account number 188000 showing net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in “Other sectors”.

Note 2: For 1988 through 1990, “Statistical errors” include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)
- March 2007 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2007 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2004 to 2006 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2008, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2007 shall take into consideration the new three year average (2005 to 2007).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2006 are provisional.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments. However, there are differences in some items and data sources as follows:

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR),
- short-term commercial credits with non-residents (SKV), and
- reports on accounts abroad (C).

The source for the balance of payments is the International Transaction Reporting System (ITRS); this category reports on loans granted to or received from non-residents and reports on short-term commercial credits to non-residents.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are valued at book value according to accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). Other discrepancies in sources and criteria are explained in methodological notes that refer to the balance of payments.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003.

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial instruments

Since 2003, the data are included in VRP and KDD sources.

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Sources for long-term trade credits and loans are credit registration forms and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments, those being the accounting data of commercial banks (KNB), the account balances of banks in original currencies (PPV), the account balances abroad of companies (C) and the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial instruments are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.
Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Local government data for August, September and October 2007 are preliminary, because Ministry of finance has introduced a new web application for reporting revenues, expenditures, lending, repayments and financing for local government budgets.

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

Local government data for August, September and October 2007 are preliminary, because Ministry of finance has introduced a new web application for reporting revenues, expenditures, lending, repayments and financing for local government budgets.

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Debt of the Republic of Slovenia

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circula-

tion and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.

- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 2/2002) and is in line with the classification of activities NACE Rev.1 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 3 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, hunting and forestry
- B Fishing
- C Mining and quarrying
- D Manufacturing
- E Electricity, gas and water supply
- F Construction
- G Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods
- H Hotels and restaurants
- I Transport, storage and communications
- J Financial intermediation
- K Real estate, rental and business activities
- L Public administration and defence; compulsory social security
- M Education
- N Health and social work
- O Other community, social and personal service activities
- P Activities of private households as employers and undifferentiated production activities of private households

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: www.stat.si.

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.
Quarterly and yearly data on Gross domestic product are not yet reconciled.

Non-financial accounts and general economic statistics (Tables 6.1 to 6.8)

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.5 and 6.6: Industrial Production Index and Productivity Index in Industry

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production. Indices on industrial production are provisional from February 2004 on.

The productivity index is defined as the ratio between the industrial production index and the index of persons in employment.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2006 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1-ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Effective exchange rate - nominal/real

The growth of the index value represents the growth of the value of domestic currency and vice versa. In the index of the real effective exchange rate, measured through the cost of labour per unit, the cost of labour is calculated based on gross salary only due to a change of statistical data source.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products (intermediate goods, capital goods and consumer goods), as well as by main divisions of activities.

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.
