Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

The forecasts for this year's euro area and USA economic growth have been raised in the last month, primarily as a result of the favourable economic growth in the first quarter. Consensus raised its economic growth forecasts for 2008 by 0.2 percentage points, to 1.5% for the USA and to 1.7% for the euro area. Inflation rose in May, to 3.7% in the euro area and 4.2% in the USA. The main factor in this year's rise in inflation has been growth in energy prices and food prices. The decline in oil stocks in the USA, the high demand from emerging Asian countries and speculation by investors brought a sharp rise in oil prices in June, a barrel of Brent crude averaging USD 131.3 over the first three weeks of the month. At a meeting in Saudi Arabia at the end of last week, several Gulf states indicated their readiness to increase the supply of crude oil, which could ease the price slightly during the summer.

After a slowdown in the second half of last year, economic growth in Slovenia picked up in the first quarter, to 5.4% year-on-year according to initial estimates. The main factor in the GDP growth in the first quarter was gross investment, particularly in buildings, which recorded a year-on-year increase of 25.1%, while growth in investment in machinery and equipment was less pronounced. Household spending and government spending recorded year-on-year growth of 3.4%, growth in household spending thus remaining at its level of last year, while growth in government spending was slightly higher than last year. With imports increasing faster than exports, the contribution made to economic growth in Slovenia by net trade was negative, as it was on average over last year.

Industrial production slowed on average over the first four months of the year, recording year-on-year growth of 3.6%. Growth in industrial production was high in April, primarily as a result of the larger number of working days this year. Year-on-year growth in gross wages was also high in April, at 9.5%, while wages recorded relatively small changes in terms of the current rate of growth. The current rate of growth could pick up in the coming months as a result of the wage agreements signed between the social partners. The trend of moderate growth in the number of persons in employment continued in April.

Inflation as measured by the HICP stood at 6.8% in June. The further rise in year-on-year inflation was primarily the result of continuing growth in oil prices on global markets, which also brought a rise in year-on-year inflation in the euro area, to 4.0% in June, according to Eurostat's flash estimate. Core inflation as measured by the index of prices excluding energy, food, alcohol and tobacco remained unchanged in June at 4.0%. The pace of the slowdown in core inflation nevertheless remains uncertain, as both economic growth and growth in demand are still relatively high. In addition, there have been some discernible secondary effects on wages, year-on-year growth in which is already fluctuating around 10%.

The trend of increase in the current account deficit slowed slightly in April, while the cumulative deficit over the last 12 months remained at a level of approximately 6% of estimated GDP. Alongside the merchandise trade deficit, other major factors contributing to the current account deficit were the net outflow in factor income and the net outflow in transfers. In addition to the decline in new orders from the rest of the world, the terms of trade will also have an adverse impact on the current account in the future. Under the impact of growth in energy prices, commodities prices and food prices, these recorded a year-on-year deterioration of 3.9% in the first quarter of this year.

Growth in the banking system's total assets declined again in May. This was partly the result of balance sheet consolidation resulting from the takeover of three subsidiaries by Nova Ljubljanska banka, and partly the result of the continuing decline of the growth rate in lending to non-banking sectors. In May banks primarily secured their resources for financing lending growth by borrowing in the rest of the world, and, to a lesser extent, by increasing deposits by non-banking sectors. The banking system's pre-tax profit in the first five months of the year was down 11.3% on the same period last year. Despite a fall of 0.4% in the SBI 20, the market capitalisation of shares on the Ljubljana Stock Exchange increased by EUR 312 million in May, as a result of a slight rise in certain share prices. The total assets in domestic mutual funds increased by 9.5% in April to EUR 2,383 million, while the average unit price of mutual funds increased by 3.5%.

1 | International Environment

The forecasts for this year's economic growth in the euro area and the USA have been raised in the last month, as a result of economic growth in the first quarter, which was above expectations. However, a slowdown in growth in the second quarter is being forecast for both economies. Consensus's June forecast for economic growth in the euro area in 2008 stood at 1.7%, up 0.2 percentage points on the May forecast. The June forecast for this year's economic growth in the USA is also up 0.2 percentage points, at 1.5%. The main factor in the higher forecasts for this year in the two economies was the economic growth recorded in the first quarter of this year, which was higher than expected. Despite good results in the first quarter, a slowdown in growth is being forecast for the second quarter in both economies. The main indications of this are the decline in April's retail indicator in the euro area, the decline in production orders in Germany in April as a result of low demand in the euro area, the decline in investment in real estate in the USA, and the decline in private consumption in the USA. The uncertainty on the financial markets remains, and indicators of business and consumer confidence are declining. In the USA consumer confidence fell

to its second-lowest level since measurement began, primarily as a result of higher fuel prices and higher unemployment, which also brought a decline in household spending.

The ECB left its key interest rate unchanged in June, and the Federal Reserve is also expected to do so. The ECB's key refinancing rate thus remains at 4%, but after the latest speech by Jean-Claude Trichet, the president of the ECB, the financial markets have been anticipating a rise in July.

The euro/dollar exchange rate was relatively volatile in June, the euro depreciating overall against the US dollar during the first three weeks of the month. The euro averaged USD 1.5512 over the first three weeks of June, down approximately 0.3% from May's average of USD 1.5557. The main factors in the euro's depreciation were the decline in German imports in April, the release of better-than-expected figures in the USA, and Ireland's rejection of the Lisbon Treaty.

Inflation rose in both the euro area and the USA in May. Year-on-year inflation as measured by the HICP reached 3.7% in the euro area in May, up 0.4 percentage points on April. The main factor in May's inflation was growth in energy prices and food prices. Core inflation as measured by growth in prices excluding energy and unprocessed food was also up, at 2.5%. Year-on-year inflation in the USA stood at 4.2%, up 0.3 percentage points on April. The main factor in the increase was energy prices, while core inflation (excluding energy and food) remained unchanged from the previous month at 2.3%.

Oil prices rose sharply again in June to record levels, while growth in commodities prices slowed for the

Notes: Forecast for the current year are stated in brackets for GDP.

second consecutive month in May. Oil prices rose sharply in June, the price of a barrel of Brent crude averaging USD 131.3 over the first three weeks of the month. The main factors in the price increase were the depreciation of the dollar, the decline in oil stocks in the USA, high demand in Asia, and speculation by investors. Year-on-year growth in other commodities prices (excluding oil) slowed slightly to 26.3% in May. The main factor in this was April's negative year-on-year growth of -6.5% in prices of metals, primarily as a result of the high basis from last year. The base effect should begin to gradually fade in the coming months. Year-on-year growth in food prices dropped below 60% in April to 58.7%, but food prices are expected to continue rising rapidly in the future.

2 | Economic Activity and Labour Market

According to the SORS's initial estimates, year-on-year economic growth increased to 5.4% in real terms in the first quarter of this year. The main factor in this growth was again the high growth in investment, and the strong activity in the construction sector. After a slowdown in the second half of 2007, economic growth in the first quarter of this year was again high, the year-on-year rate increasing by 0.7 percentage points on the pre-

vious quarter. The current dynamic reveals that GDP in the first quarter of this year was 2.2% higher than in the final quarter of 2007. According to the expenditure method, the highest growth in the first quarter of 2008 was recorded by gross investment, which was up 17.6% in year-on-year terms, thus outpacing growth in the previous quarter by 10 percentage points. This high growth was again driven by strong activity in the construction sector, which recorded year-on-year growth of 25.1%. Investments in housebuilding were up 16.3%, while investments in other construction were up 28.5% year-on-year. At 7.5%, year-on-year growth in investment in machinery and equipment was relatively less pronounced. Year-on-year growth in imports and exports slowed in the first quarter of this year, partly as a result of the slowdown in economic activity in the rest of the world. The contribution made to economic growth by net trade was negative because import growth outpaced export growth. While exports of goods and services in the first quarter of 2008 were up 6.3% in year-on-year terms, imports were up 9.4% over the same period. Year-on-year growth in household spending in the first quarter was almost unchanged at 3.4%, both in current terms and in comparison with last year's average. Year-on-year growth in government spending was up 2 percentage points on last year's average at 3.4%. According to the production method, the highest growth in value-added in the first quarter was recorded by the construction sector, at 27.4%, which repeated the high growth seen in the first

quarter of last year following a slowdown in the final quarter of last year. Meanwhile year-on-year growth in value-added in manufacturing declined significantly, from 6.2% in the final quarter of last year to 1.9% in the first quarter of this year. This was the lowest growth in value-added since 2005, partly as a result of the distribution of working days last year. In addition to construction, year-on-year growth in value-added in other service sectors was also high in the first quarter of this year. Year-on-year growth in value-added in the electricity, gas, water and steam sector was up 10 percentage points on last year's average at 12.9%. The financial intermediation sector recorded year-on-year growth of 14.0% during the same period, while trade and motor vehicle repair recorded growth of 9.0%, similar to last year's average.

Sources: SORS, Slovenian Electricity Authority, Bank of Slovenia calculations.
Number in parenthesis refers to the month of last available data.

Despite recording high growth in April, industrial production slowed on average over the first four months of the year, recording year-on-year growth of 3.6%. Year-on-year growth in industrial production over the first four months of the year declined to 3.6%, down from 9.6% in the same period last year, despite high growth in April. It increased to a high 9.0% in April, with only the manufacture of food, beverages and tobacco products and the manufacture of wood and wood products recording negative growth during the month. One of the main factors affecting this movement in industrial production was the number of working days, as this year April had three more working days than last year. The current rate of growth in industrial production over the first four months of the year points to a slight improvement compared with the end of last year, but the limiting factors and manufacturing confidence indicators nevertheless reveal deterioration and pessimism. The expectations for the coming months are also unfavourable in this sector. Inventories of manufactured goods recorded a year-on-year increase of 9.4% in April, after adjustment for the number of working days. Similarly, sales revenues in industry recorded a year-on-year increase of 5.1% in April. The year-on-year growth in revenues on the foreign market continued to outpace revenues on the domestic market. By contrast, new orders declined by a high 10.4% in year-on-year terms in April, the value of domestic orders recording a year-on-year increase of 9.0% and the value of foreign orders recording a year-on-year decline of

14.6%, which is already an indication of the slowdown in economic activity in the rest of the world and thus of a decline in foreign demand.

According to April's results, the services indicators point to high year-on-year growth in revenues in the majority of service sectors. Only the tourism sector recorded a decline in revenues in April. The services indicator for the first four months of the year reveals high growth in revenues from services, the largest contributions coming from trade in motor vehicles and retail. Trade in motor vehicles recorded high growth of around 30% on average over the first four months of the year. Activity in the construction sector increased sharply in all four months, despite the high basis from the early part of last year. Year-on-year growth in revenues in the construction sector averaged over 30% during the first four months of the year, with both the construction of buildings and civil engineering work recording improvements in year-on-year and monthly terms. Revenues in the retail sector recorded a year-on-year increase of 5.3% in real terms in April. In the tourism sector there was a year-on-year decline both in April and on average over the first four months of the year in the number of arrivals and the number of overnight stays.

The indicator of economic sentiment declined in June in both year-on-year terms and current terms. Confidence deteriorated in year-on-year terms in all sectors, manufacturing and construction recording the largest declines. Consumers were also more pessi-

mistic in June in year-on-year terms. June's seasonally adjusted indicator of economic sentiment was down 9 percentage points on the previous June. The seasonally adjusted confidence indicators recorded year-on-year declines in all sectors in June, the manufacturing sector recording the largest decline of 13 percentage points. The lowest values were recorded by the production indicator and the total orders indicator. Manufacturing firms' expectations for the next three months are unfavourable, primarily as a result of limiting factors such as a lack of trained workers, insufficient domestic and foreign demand, and the uncertain economic climate. The service sector is also citing a lack of labour as a limiting factor, in addition to financial obstacles. The services confidence indicator was down 4 percentage points in June in year-on-year terms. Despite the high activity in the construction sector, the confidence indicator was down 13 percentage points in year-on-year terms in June. Most construction firms are citing a lack of trained labour, fierce competition, high labour costs and high material costs as limiting factors. Consumer confidence was unchanged from May, but was down 9 percentage points on last year's average.

The trend of moderate growth in the workforce in employment continued in April. The workforce in employment was up 3.3% in year-on-year terms, and up 0.3% on March, which is in line with the current dynamic in April in recent years. Year-on-year growth in the workforce was high in April at 1.9%, but the current rate of

Sources: Statistical Office of the Republic of Slovenia, Bank of Slovenia calculations.

* sections of SKD classification

growth is slowing, reaching 0.1%. In line with trends in the last year, the largest year-on-year increases in employment were recorded by the sectors of construction (12.7%) and real estate, renting and business activities (7.6%). These sectors contributed 1.1 percentage points and 0.7 percentage points respectively to the year-on-year increase in employment of 3.3%. The registered unemployment rate in April was down 0.2 percentage points on March, a larger decline than usually seen in April, at 6.6%. The surveyed unemployment rate (ILO) stood at 5.1%, according to the latest figures relating to the first quarter of 2008.

Year-on-year growth in gross wages was again high in April at 9.5%. The average gross wage in the private sector was up 10.7%, compared with an increase of 7.0% in the public sector. Year-on-year growth in net wages was slightly lower at 8.8%, as a result of basis effects. Year-on-year growth in gross wages in the public sector was slightly higher than in the previous month, while the rate in the private sector declined. The average wage recorded a change of less than 0.1% in current terms. Growth is expected to be high in the coming months, as a result of the wage agreements concluded between the social partners. The highest year-on-year growth in gross

wages in April was recorded by mining (12.3%), electricity, gas and water supply (12.1%), financial intermediation (12.0%) and public administration (12.0%). The construction sector, which has been a significant factor in GDP growth in recent quarters, also recorded above-average year-on-year growth in gross wages in April, at 11.8%. By contrast, year-on-year growth in wages in the health sector was relatively low at 3.8%.

The index of the nominal effective exchange rate as measured by the harmonised competitive indicator depreciated in May, but has still recorded appreciation over the longer term. The main factor in the current depreciation of 0.2% in May was the euro's fall of 1.2% against the dollar and 0.3% against the pound sterling, which took the index back to its level of this March. The year-on-year appreciation in the nominal effective exchange rate nevertheless remained at 1.6%, up 1 percentage point on the same period last year.

The price competitiveness indicator of the Slovenian economy as measured by consumer prices (the HICP) depreciated slightly in May. The index declined slightly for the second consecutive month, but has still displayed a trend of appreciation over the longer term. The year-on-year appreciation in the indicator stood at 3.7%, compared with 1.5% at the same time last year, which is also by how much it has appreciated over the last six months. In the year to May the appreciation in the nominal effective exchange rate accounted for just over 40% of the growth in the index, the remainder coming

from domestic prices growing faster than the basket of foreign prices.

A comparison with Slovenia's four most important trade partners in the euro area (Austria, France, Germany and Italy) reveals that a trend of appreciation has been seen in all the countries, and the movement of the index has been similar. Nevertheless, it should be noted that year-on-year growth in the indicator for Slovenia in the last year has outpaced that of the other countries for practically the whole of this period. Only this May did the gap narrow, but year-on-year growth remained the highest among all the countries.

Sources: SORS, Eurostat, Bank of Slovenia calculations. Figures may not sum up to official figures due to rounding.

Year-on-year inflation as measured by the HICP stood at 6.8% in June, up 0.6 percentage points on May. In the inflation breakdown, year-on-year growth in energy prices was higher in June, while growth in food prices and non-energy industrial goods declined, growth in services prices remaining the same as in May. Year-on-year growth in energy prices increased again in June from 10.3% to 16.1%, taking the contribution made to annual inflation by this sub-category from 1.3 to 2.1 percentage points. In contrast to energy prices,

growth in food prices declined from 10.2% to 9.6%. The decline in growth in food prices came primarily from falls in prices of vegetables, milk, dairy products and eggs, bread and other cereal products, and fruit. Alongside food prices, year-on-year growth in non-energy industrial goods also declined slightly, from 2.6% to 2.5%. Year-on-year growth in services prices remained unchanged from the previous month at 5.3%. In the service sector there were rises in prices of package holidays, while prices of telephone and internet services fell.

Core inflation improved for the second consecutive month in June, but nevertheless remained high, in line with the slightly slower but still high pace of recent economic growth. The harmonised index of prices excluding energy, food, alcohol and tobacco was unchanged from May in year-on-year terms at 4.0%. The slowdown in the index remains a reflection of both the decline in growth in prices of non-energy industrial goods, and the slower growth in services prices. Core inflation expressed as the index of price growth excluding energy and unprocessed food stood at 5.5% in June, down from 5.7%.

Year-on-year growth in producer prices of manufactured goods on the domestic market remained high at 6.3% in May. As in the previous month, the high monthly growth is primarily a result of faster growth in prices of capital goods, while growth in prices of intermediate goods was slower than in the same pe-

riod last year. The main factor in the higher year-on-year growth in prices of manufactured goods was commodities prices, which recorded growth of 7.2% in May. Prices of intermediate goods recorded year-on-year growth of 7.0%, while prices of consumer goods recorded growth of 6.4%. The main factors in the increases were higher prices for food, beverages and animal feed, printing products, and electricity, and higher prices in the manufacture of metal products other than machinery and equipment. Prices of capital goods increased by just 3.0% in year-on-year terms in May. As in Slovenia, year-on-year growth in prices of manufactured goods increased in the euro area, to 6.1% in April, and averaged 5.6% over the first four months of the year. The largest increases in the euro area were in energy prices (14.3%), and prices of con-

sumer non-durables (4.8%).

June's rise in inflation in Slovenia was in line with the movement of inflation in the euro area, and indicates the strong impact of external factors. Year-on-year inflation in the euro area rose from 3.7% in May to 4.0% in June. There was no increase in the gap between the 12-month average of growth in the HICP in Slovenia (5.5% in June), and the Maastricht price stability criterion of 3.6% calculated in May. The future decline in inflation could be a more gradual process than indicated at the beginning of the year. Core inflation could remain at the current high level until the end of the year. The macro-economic environment is not providing sufficient anti-inflationary pressure. Economic growth and growth in demand remain very high. In addition, there have been some discernible secondary effects on wages, year-on-year growth in which is already fluctuating around 10%.

4 | Balance of Payments

The trend of a widening current account deficit slowed in April, when the deficit was just one-third of the average monthly deficit recorded in the first quarter of this year. There was a current account deficit of

EUR 75 million in April, one-quarter less than that generated in the same month last year. The cumulative deficit in the first four months of the year increased to EUR 729 million, twice as large as that recorded in the same period last year. The cumulative deficit over the last 12 months remained around EUR 2 billion, although it declined by 0.1 percentage point in terms of estimated GDP, to 5.8%. In the context of April's favourable movements in merchandise trade, the balance of trade (merchandise and services) was actually in surplus. The main factors in the current account deficit were the net outflow in factor income, and the slightly smaller net outflow in transfers.

After deteriorating in March, the current rates of growth in merchandise imports and exports increased sharply in April. The number of working days was a major factor in the fluctuation in merchandise trade dynamics. The main upturn in April was in merchandise exports, which recorded growth of 17.6% annualised, just over 1 percentage point more than the current rate of growth in merchandise imports, which increased from a relatively high 15% in March to 16.5% annualised in April. This March had two fewer working days than last March, while this April had three more working days than the same month last year, which to a great extent ex-

plains the volatility in merchandise trade figures over the two months. Merchandise exports amounted to EUR 1.87 billion in April, up 18.6% on the same month last year, while imports were up 15.8% at EUR 1.99 billion. The result of these movements in merchandise trade was a deficit of EUR 0.12 billion,¹ one-fifth lower than that recorded in the same month last year.

Increased exports of Slovenian manufactured goods to non-EU countries had a major impact on April's merchandise exports. Merchandise exports to the EU27 were up 16.4% year-on-year in April, while exports to non-EU countries were up 22.4%. Conversely, imports from the EU27 were up 18.2% in year-on-year terms, more than double the growth in imports from non-EU countries. The regional breakdown of merchandise trade remained unchanged over the first four months of the year. Growth in merchandise trade with the EU27 is being outpaced by growth in merchandise trade with non-EU countries. As a result of these import and export movements, Slovenia's merchandise trade deficit with the EU27 increased by EUR 0.3 billion year-on-year to EUR 1.2 billion, which in the context of a small increase in the trade surplus with non-EU countries led to a widening of the merchandise trade deficit to EUR 785 million.

The terms of trade with the rest of the world have been deteriorating rapidly since the third quarter of last year. The movement of the indices of the average value of merchandise imports and exports showed a consistent improvement in the terms of trade until the third quarter of last year. The terms of trade were even positive,² both overall, and measured separately for trade with euro area member-states and countries outside the euro area. Since the final quarter of last year the terms of trade with the rest of the world have been deteriorating rapidly, as a result of the rapid growth in prices of food, oil and commodities. A feature here is that the terms of trade with euro area member-states are deteriorating faster than average (partly because 65% of imports of oil and refined petroleum products come from the euro area). The deterioration in the terms of trade with euro area member-states also means that since the second half of last year the regional breakdown in Slovenia's trade has shifted slightly more quickly towards trade with countries outside the euro area.

The terms of trade recorded a year-on-year deterioration of 3.9 percentage points in the first quarter of this year. The index of the average value of Slovenian exports recorded a year-on-year increase of 2.1% in the first quarter, compared with 6% for the import index. A major factor in the growth in the index of the average value of merchandise trade was the rise in the value of animal and vegetable oils and fats, which recorded year-on-year increases of 24.6% on the export side, and 44.1% on the import side. Another factor in the high growth in the index of the average value of imports was the high year-on-year growth of 32.2% in the index of the average value of imports of mineral oils and lubricants (primarily oil). The price movements on the food and commodities markets slowed slightly in the second quarter, but the movement of oil prices in global markets indicates that the terms of trade will remain favourable in the second quarter.

The current rate of growth in trade in services also slowed slightly in April, more notably on the import

¹ According to the SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix to the bulletin), the trade deficit in April stood at EUR 163 million.

² Another factor in the positive terms of trade was the sharp increase in exports of products with high value-added, road vehicles in particular.

side than the export side, which alongside the smaller deficit in merchandise trade meant that the balance of trade recorded a surplus of EUR 14 million. An export of services recorded a year-on-year increase of 20% in April, and imports an increase of 13.3%. Exports of services in the first four months of the year were up 21% year-on-year at EUR 1,405 million, while imports were up 20.8% at EUR 1,034 million. The surplus of trade in services increased by EUR 66 million year-on-year (of which EUR 36 million was in April alone) to EUR 371 million.

In April again there was an above-average increase in growth in trade in other business services (primarily operating leasing and intermediation in foreign trade), while on the export side revenues from construction and assembly work performed in the rest of the world and revenues from intellectual property rights recorded even larger increases of more than 50%. Exports of transport services recorded a year-on-year increase of 21.5%, double that of merchandise exports, an indication that Slovenian freight operators are expanding their services to clients outside the country. Revenues from tourism in the first four months of the year recorded a year-on-year increase of 13%, despite year-on-year declines of 4% in the number of arrivals and 5% in the number of overnight stays by foreign visitors. The increased revenues could be related to Slovenia's presidency of the European Union, and the arrival of visitors with greater inclination to spend.

There was a year-on-year increase of EUR 94 million in the net deficit in factor income and transfers in the first four months of the year to EUR 478 million, which accounted for two-thirds of the current account deficit, or 4% of estimated GDP during this period. Labour income recorded the only surplus in factor income, of EUR 21 million. The deficit in capital income increased by EUR 72 million year-on-year in April to EUR 306 million. Until 2006 the main factor in the deficit in factor income was the net outflow of income from FDI. As a result of the rapid growth in borrowing in the rest of the world and interest rates in the last year and a half, the main factor in the deficit in factor income is now net payments of interest on loans raised in the rest of the world. At EUR 234 million the latter accounted for three-quarters of the total deficit in factor income in the first four months of the year. The majority, or EUR 150 million, consisted of net interest payments by banks. Investments in securities generated a net surplus of EUR 83 million, of which more than half was from Bank of Slovenia bonds and debentures. The deficit in transfers increased by EUR 19 million in April, less than the monthly average over the first quarter, to stand at EUR 192 million over the first four months of the year. Transfers consisting primarily of private trans-

fers recorded a net outflow of EUR 19 million, while official transfers recorded a net outflow of EUR 173 million. The majority of the net outflow in official transfers derives from transactions related to the EU budget.

This year's net financial inflow, i.e. the surplus in financial inflows from the rest of the world over financial outflows to the rest of the world, is similar to that at the end of last year, with increasing flows into the general government sector and declining flows into the private sector. The net financial inflow amounted to EUR 1.3 billion in the final four months of last year, which went entirely into the private sector, and to EUR 1.0 billion in the first four months of this year, which went almost entirely into the general government sector. The large net financial inflow into the general government sector was primarily the result of February's release of government bonds.

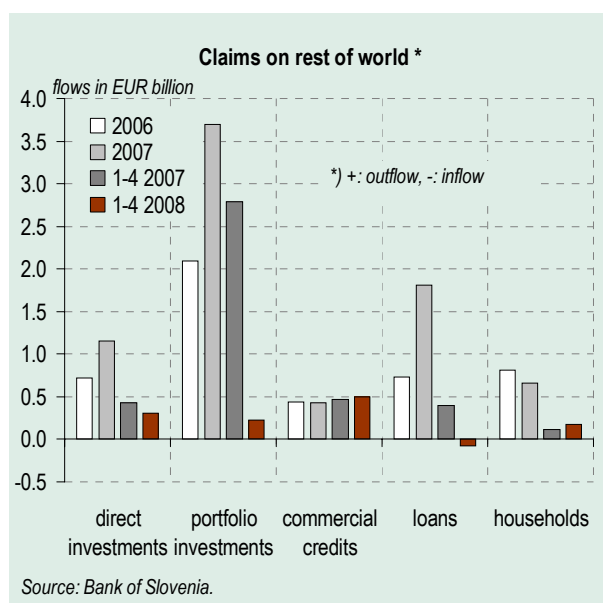

The large net financial inflow into the private sector, which amounted to EUR 1.3 billion in the final four months of 2007, has declined this year, and stood at just EUR 0.2 billion in the first four months of the year. This decline is the result of the smaller increase in liabilities to the rest of the world, in the context of a slightly smaller increase in claims against the rest of the world. Thus in the first four months of the year the private sector's liabilities to the rest of the world increased by EUR 1.5 billion (compared with EUR 3.4 billion in the final four months of 2007), while its claims against the rest of the world increased by EUR 1.4 billion (compared with EUR 2.1 billion).

Among the financial liabilities, the main declines in inflows compared with the final months of last year were recorded via loans to banks from the rest of the world, and to a lesser extent via trade credits and deposits by non-residents. Inflows via loans to banks from the rest of the world declined from EUR 1.7 billion in the final four months of last year to EUR 0.4 billion in the first four months of this year. The slight decline in bank borrowing in the rest of the world is probably the result of the slight decline in the domestic private sector's demand for lending, and thus the banking system's lower demand for financing, and of the deterioration in financing conditions in the rest of the world, while the decline is also

partly seasonal in nature. Of the total increase of EUR 1.5 billion in the private sector's liabilities in the first four months of the year, EUR 0.5 billion was the increase in deposits by non-residents, EUR 0.4 billion was the increase in loans to banks from the rest of the world, and EUR 0.4 billion was FDI. There was a net inflow of FDI in the first four months of the year, compared with a net outflow of EUR 0.15 billion in the same period last year. Inflows of trade credits have strengthened since the final quarter of last year, while inflows via portfolio investments remain negligible.

Corporates recorded borrowing of less than EUR 0.1 billion in the rest of the world in the first four months of the year, one-third the level in the same period last

year, but approximately at the same level as the previous months. Last year corporates borrowed EUR 0.4 billion in the rest of the world, down significantly on the previous year's figure of EUR 0.7 billion. The proportion of total borrowing accounted for by corporate borrowing in the rest of the world declined from almost 20% in the previous year to less than 10% last year, the figure declining further to 3% in the first four months of this year.

The main increases on the claim side in the first four months of the year were recorded by trade credits, FDI and portfolio investments. Of the total increase of EUR 1.4 billion in claims against the rest of the world in the first four months of the year, trade credits accounted for EUR 0.5 billion, FDI for EUR 0.3 billion, and portfolio investments for EUR 0.2 billion. The relative strength of trade credits was partly seasonal in nature, but was partly tied to the slightly lower economic activity in the rest of the world. Portfolio investments are approximately at the level of the second half of last year, while FDI has declined slightly.

The net external debt increased by EUR 2.9 billion in 2007, approximately one-fifth more than in 2006. In the first four months of this year the net external debt increased by EUR 0.8 billion. The net external debts of the general government sector and the banking sector each increased by EUR 0.7 billion in the first four months of the year, while the net external debt of other sectors declined by EUR 0.6 billion. The general government sector's net external debt increased as a result of February's release of 11-year government bonds in the amount of EUR 1 billion, with a yield of 4.375%. The net external debt increased to EUR 7.1 billion at the end of April, the gross external debt standing at EUR 36.6 billion, and gross external claims at EUR 29.5 billion.

General government revenues according to the ESA95 methodology continued to record strong nominal growth in the first quarter, while the deficit was down on the same period last year at 0.5% of GDP. Growth in revenues accelerated in the first quarter to 9.6%. The fastest growth in revenues was recorded by current taxes on income and assets, and social security contributions. The high growth is partly conditioned by trends on the labour market. Year-on-year growth in employment remains high, but wage growth is also high overall. Growth in general government expenditure is also higher than last year, particularly on intermediate

consumption. Growth in employee expenditure is a reflection of wage growth in the public sector also being slightly higher than previously, and of the year-on-year increase of 1.3% in the number of employees in the first quarter. In the context of these movements, the general government deficit in the first quarter amounted to EUR 40 million or 0.5% of GDP, compared with EUR 135 million or 1.8% of GDP in the same period last year. The cumulative general government position over the last year has moved into surplus.

According to the national cashflow methodology, the government in the wider sense recorded a deficit of EUR 17 million in the first quarter, compared with a deficit of EUR 138 million in the same period last year. During the aforementioned period the main improvement was in the position of the state budget. The Health Insurance Institute (HII) and local government recorded a surplus in the first quarter, similar to the same period last year. Growth in certain categories of tax was very high in the aforementioned period, as was growth in social security contributions, the HII recording a surplus of EUR 43 million over the first four months of the year, compared with EUR 32 million in the same period last year.

General government revenues grew by 9.5% in year-on-year terms in the first quarter, tax revenues increasing by one-tenth. The available figures indicate that the high growth in revenues continued in April in

particular, and also in May. Several categories of tax recorded growth of more than 10% in the first five months of the year, including corporate income tax and VAT, which recorded year-on-year growth of approximately 15%, personal income tax (approximately 12%), and social security contributions (approximately 11%). Revenues from payroll tax declined in line with the rate cuts, and the tax will be finally abolished at the beginning of next year.

General government expenditure from the consolidated position grew by 5.3% in the first quarter. There was above-average growth in expenditure on goods and services and in investment expenditure, while expenditure on subsidies was particularly low compared with the same period last year. The last strengthened again in April according to the available figures. Growth in wage expenditure increased slightly in the first quarter, and, in light of the agreements reached, a larger increase still is expected in the autumn when the new public sector wage system is introduced. Growth in investment expenditure remains strong, while payments into the EU budget were also high in the early months of this year.

Expenditure on transfers to individuals and households grew by 6.9% year-on-year in the first quarter, and pension expenditure by slightly more. Pensions accounted for the majority of transfers, and were up 7.9% over the aforementioned period. The number of old-age pensioners is rising at approximately 3% per annum, while the total number of pensioners recorded year-on-year growth of 1.4% in the early months of the year. Pensions are next due for adjustment in November. A law on a one-off pension supplement for pensioners is being drafted. The supplement would go to all those receiving a pension of less than EUR 500, at a total estimated cost of EUR 32 million. Among the other categories of transfer, payments of family benefits and parental allowances recorded year-on-year growth of almost 10%, while sick pay also recorded high growth. Year-on-year growth in unemployment payments and social security transfers remained negative.

6

Banking System*

Year-on-year growth in total assets in April and May was lower than in the previous months, at 21.8% and 21.3% respectively. While April's decline was mostly the result of a decline in investments in securities among banks' assets and a decline in government deposits, May's decline was partly the result of institutional factors. The takeover of three subsidiary banks by Nova Ljubljanska banka and the consolidation of their balance sheets at the level of the banking system led to a decline in loans to banks and capital investments on the investment side, and to interbank liabilities and equity on the financing side. In addition to this institutional change, the continuing decline in lending growth was another factor in the decline in growth in total assets. Investments in securities increased in May, among which investments in government securities were prevalent.

The slowdown in the current rate of growth in lending to non-banking sectors continued in May. Year-on-year growth in loans to non-banking sectors declined to 32.2%. The increase in short-term loans to non-banking sectors has exceeded the increase in long-term loans in

every month this year other than February. The increase in foreign currency loans has declined sharply in the last two months, particularly in loans to non-financial corporations and OFIs, but also in household loans to a lesser extent. While foreign currency loans accounted for 13% of the increase in loans to non-banking sectors on average over the first quarter, the proportion fell to less than 2% in April and May (excluding loans with a foreign currency clause).

Year-on-year growth in loans to non-financial corporations declined to 31.1% in May, down just over 5 percentage points on the beginning of the year. The increase in loans to non-financial corporations of EUR 292 million was lower than last May's. The current rate of growth in these loans at the domestic banks is slowing more rapidly than at the banks under majority foreign ownership. May's year-on-year growth in loans at the domestic banks stood at 25.3%, down 7.1 percentage points from the beginning of the year. At the banks under majority foreign ownership year-on-year growth in May was down 1.6 percentage points on January at 43%.

May's lending to households was the lowest this year. Year-on-year growth in household loans declined to 24.5% in May, down 3.6 percentage points on the beginning of the year. In household loans too the banks under majority foreign ownership recorded significantly higher year-on-year growth (33.9%) in May than the domestic

*The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

banks (18.1%). The gap between the rates of growth between the two bank groups is widening slightly more slowly than that for loans to non-financial corporations.

In May banks primarily secured sources of financing by increasing their borrowing in the rest of the world.

Liabilities to foreign banks increased by EUR 400 million in May. In contrast to previous months, when it was predominantly the banks under majority foreign ownership that borrowed in the rest of the world, in May it was mostly the domestic banks that raised foreign loans. Financing at the ECB declined by EUR 162 million in May, and by EUR 92 million in total during the first five months of the year.

Deposits by non-banking sectors grew more slowly in May than in the previous months, primarily as a result of a decline in corporate deposits and government deposits. Year-on-year growth in deposits by non-banking sectors declined to 12.5% in May. Household deposits increased by EUR 185 million, primarily as a result of seasonal factors (payment of the pension recreation bonus and other benefits). The maturity structure of household deposits has shifted towards long-term deposits in the last two months: in particular there was an increase in deposits of 1 to 2 years, at the expense of deposits of up to 90 days.

The banking system's pre-tax profit in the first five months of the year was down 11.3% on the same period last year. Growth in net interest income remained favourable in May at 15.9%. Growth in non-interest income still remained behind last year's comparable rate at 25.7%. The banking system's results from assets held for trading, which this year have been the decisive factor of negative growth in non-interest income, were moderately positive in the last two months. On the expense side, net

impairments and provisioning have increased in the last two months, which reduced the gap by which expenses in the first five months of the year trailed those in the same period last year to 13%.

7

Domestic Financial Markets

The average monthly market yield on German long-term government securities increased by 16 basis points in May, compared with 14 basis points for Slovenian government securities. There was no significant change in the spread, which stood at 41 basis points. The key interest rates of the ECB and the Fed remained unchanged at 4% and 2% respectively. Expectations of a rise in the key interest rates strengthened in May as a result of the announcement of poor performance by financial institutions, the record oil prices, inflationary pressures, and statements by the president of the ECB and the chairman of the Fed. As a result there was a rise in market yields on government securities, particularly those in the shorter maturity segment. Risk aversion temporarily declined slightly at the end of May. The fall in share prices gained momentum again in June as a result of the strengthening negative disposition of investors. This was brought on by the downgrading of American investment banks and monoline insurers, high

growth in oil prices, a speech by the chairman of the Fed about inflationary pressures and the weak dollar, and a statement by the president of the ECB about the possibility of an interest rate rise of 25 basis points as early as July. The American S&P index gained 1.1% in May, but then lost 4.6% by 11 June. The DJ EuroStoxx index for western Europe lost 0.4% in May, and had lost a further 7% by 11 June.

The market capitalisation of bonds on the Ljubljana Stock Exchange declined by 0.6% in May. The decline in the market capitalisation of bonds was primarily the result of the maturity of two bonds, and a fall of 0.14% in the BIO. After a large increase in April, the volume of trading in bonds declined sharply in May, and was well below the monthly average in the last 12 months.

Despite a fall of 0.4% in the SBI20, the market capitalisation of shares on the Ljubljana Stock Exchange increased by EUR 0.31 billion in May, as a result of a slight rise in certain share prices. Share trading on the Ljubljana Stock Exchange in May was affected by diminished liquidity. There was a sharp decline in the volume of trading in shares, which was less than one-third of the average monthly volume in shares in the last 12 months. Two-thirds of the volume of trading in shares was in shares listed on the prime market, primarily Krka shares. The P/E ratio declined to 16.9 in May. Trading on the Ljubljana Stock Exchange in June continued to reflect the low liquidity and the slide in share prices. The SBI20 had

lost 3.4% by 11 June. The IPO for Pozavarovalnica Sava was also held in May, having been extended because of the original insufficient demand from investors. The final share price was at the lower boundary of the range published in the prospectus, at EUR 28. The shares were listed on the stock market on 11 June.

New rules for the Ljubljana Stock Exchange entered into force at the end of May, launching a new segmentation of the stock market on 30 June 2008. The stock market will be divided according to types of security into the share market, the bond market, the investment coupon market, the market for shares in investment companies, and structural products.

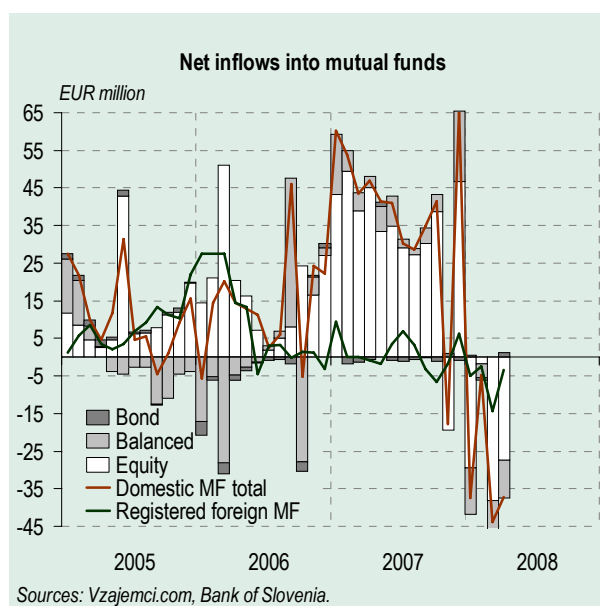

The proportion of the market capitalisation on the Ljubljana Stock Exchange accounted for by non-residents declined in May to 6%. Non-residents made net purchases of EUR 80.3 million in bonds and EUR 26.4 million in domestic shares.³ Residents of Belgium and the UK were prominent among the net purchasers of bonds, while residents of Austria and Germany were the main net sellers of bonds. Net purchases of Slovenian government bonds were prevalent. Residents of the Netherlands were prevalent among the net purchasers of shares, followed by residents of Austria, Liechtenstein and Cyprus.

In April residents made net purchases of EUR 58.3 million in foreign bonds, and net sales of EUR 38.4 million in foreign shares.⁴ The banking and insurance sectors were prominent among the net purchasers of bonds, particularly those of euro area, while the most notable net sellers of foreign shares were other financial intermediaries, the insurance sector and households.

Residents recorded sales of shares in issuers from the EU27, the USA, the former Yugoslav republics and Switzerland.

The total assets in domestic mutual funds increased by 1.4% in April to EUR 2,383 million, while the average unit price of mutual funds increased by 3.5%. There was a net outflow of EUR 37 million from domestic mutual funds. The heaviest outflows were from equity funds (EUR 27 million) and balanced funds (EUR 10 million), while bond funds recorded a net inflow of EUR 1 million. There was no significant change in the proportion of mutual fund assets held in liquid assets⁵ in April, which stood at 11%. In May domestic mutual funds recorded monthly growth of 1.4% in the average unit price, while year-on-year growth in the unit price was negative at the end of May, at -6.3%. Monthly growth in the average unit price of mutual funds with an investment strategy focused on Balkan markets was positive in May, while there were notable increases in the Serbian (up 11.2%) and Croatian (up 5.2%) stock market indices.

³ Includes transactions on both the regulated market and the non-regulated market, and also transactions in domestic securities between non-residents.

⁴ The figures for net residents' investments in the rest of the world for April are provisional, and differ from those published in the previous issue of Economic and Financial Developments.

⁵ Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%
2	1.3.	liabilities/ 4		Liabilities/ Deposits/ Domestic sectors/ Other MFIs/ Foreign currency	100%	100%	-

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS**Interest rates (tables 2.1–2.4)****Table 2.1: Bank of Slovenia Interest Rates**

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The *overnight-deposit interest rate* is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause**Interbank market****SIONIA/SITIBOR**

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The **tolar indexation clause (TOM)** is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Ljubljana Stock Exchange (Tables 2.6 to 2.8)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities

Shares – investment fund shares are not included.

IF – investment fund shares.

Turnover is measured with a single counting.

Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of

individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

- SBI – Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO – Bond Index
- SBI, BIO – value of SBI and BIO at the end of period
- dT – change of index value by points
- d% – change of index value in percentage
- Min, Max – minimum and maximum value of index in a period

Exchange rates (Tables 2.9.1–2.9.2)

Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

As of 1 January 1999, with the introduction of the European Monetary Union, the European currency unit (XEU) was replaced by the euro (EUR) at an exchange rate of 1:1. Fixed exchange rates between the euro and the national currencies of the EMU member states (valid from 1 January 2001):

1EUR =	40.33990 BEF
=	1.95583 DEM
=	340.75000 GRD
=	166.38600 ESP
=	6.55957 FRF
=	0.78756 IEP
=	1936.27000 ITL
=	40.33990 LUF
=	2.20371 NLG
=	13.76030 ATS
=	200.48200 PTE
=	5.94573 FIM

Due to the introduction of the euro in January 2002, the exchange rates of some members of EMU currencies (ATS, FRF, DEM, ITL) have been replaced by the exchange rates of some EU accession countries (CZK, HUF, PLN, SKK).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish złoty was denominated on 1 January 1995 at the exchange rate of 1 new złoty for 10,000 old złotys.

Table 2.9.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Payment systems (Tables 2.10 to 2.15)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.10: TARGET and Giro Clearing transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 3: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Table 2.11 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.12 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.13 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.14 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A **non-paper-based credit transfer** is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A **standing order** is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.15 Debit Transfers and Simply book-entry

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A **special money order** is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.16: Network of Commercial Banks

Note 1: In the number of head offices, two banks with licenses for operation pursuant to the Constitutional Law only are included (Kreditna Banka Maribor d.d. and Ljubljanska Banka d.d. Ljubljana).

Note 2: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000. Data up to the year 2000 are presented according to the Standard Classification of Territorial Units – Statistical Regions of the Republic of Slovenia, 1 January 1999. The Surveying and Mapping Institute of Slovenia has produced a map of Slovenia with new municipality borders and statistical regions.

Note 3: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;

- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (SAD).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
 - report on account balances at domestic banks – PPV (until 31 December 2004),
 - report on account balances abroad – C (until 31 December 2006),
 - report on transactions through accounts at domestic banks – PPT,
 - report on transactions through accounts abroad – C.
- All banks which conduct international payment transactions and all residents with open accounts abroad are obliged to report. The resident issuer/beneficiary of the payment is obliged to forward data on the type of transaction.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits since 2002.
- **Reports on investments (SN)** are the source for reinvested earnings of direct investments.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU**
- **Estimates and other sources**
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
 - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
 - estimate of Italian pensions (UMAR) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
 - estimate of labour income (SURS),
 - data on pensions paid to non-residents (ZPIZ),
 - survey on the write-downs of debt from trade in goods and services abroad,
 - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
 - estimate of cash transactions on tourism and labour income (from 2007 onwards).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations and for which data are available from ITRS or from the reports of duty free shops and consignment warehouses. Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

The source of records on transportation services is the ITRS.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS. All construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures).

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated (from a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes, paid in the current month). The estimate is replaced by actual data only when these data are available. Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates. From 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data).

Capital and financial account

Capital account

Capital transfers

Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. Data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad.

Financial account

Direct investment

Direct investment is recorded on the basis of reported payments through domestic banks and data from customs declarations. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no

longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents.

Financial derivatives

Since 2004, these types of transactions are included in VRP and KDD sources.

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

The foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

Since 2002, the category “Accounts Abroad of Other Sectors” also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (transactions booked on the account number 188000 showing net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in “Other sectors”.

Note 2: For 1988 through 1990, “Statistical errors” include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)
- March 2007 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2007 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2004 to 2006 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2008, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2007 shall take into consideration the new three year average (2005 to 2007).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2006 are provisional.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments. However, there are differences in some items and data sources as follows:

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR),
- short-term commercial credits with non-residents (SKV), and
- reports on accounts abroad (C).

The source for the balance of payments is the International Transaction Reporting System (ITRS); this category reports on loans granted to or received from non-residents and reports on short-term commercial credits to non-residents.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are valued at book value according to accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). Other discrepancies in sources and criteria are explained in methodological notes that refer to the balance of payments.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003.

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial instruments

Since 2003, the data are included in VRP and KDD sources.

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Sources for long-term trade credits and loans are credit registration forms and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments, those being the accounting data of commercial banks (KNB), the account balances of banks in original currencies (PPV), the account balances abroad of companies (C) and the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial instruments are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.
Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.

- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 2/2002) and is in line with the classification of activities NACE Rev.1 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 3 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, hunting and forestry
- B Fishing
- C Mining and quarrying
- D Manufacturing
- E Electricity, gas and water supply
- F Construction
- G Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods
- H Hotels and restaurants
- I Transport, storage and communications
- J Financial intermediation
- K Real estate, rental and business activities
- L Public administration and defence; compulsory social security
- M Education
- N Health and social work
- O Other community, social and personal service activities
- P Activities of private households as employers and undifferentiated production activities of private households

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: www.stat.si.

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.
Quarterly and yearly data on Gross domestic product are not yet reconciled.

Non-financial accounts and general economic statistics (Tables 6.1 to 6.8)

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production. Indices on industrial production are provisional from February 2004 on.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2006 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1–ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Effective exchange rate - nominal/real

The growth of the index value represents the growth of the value of domestic currency and vice versa. In the index of the real effective exchange rate, measured through the cost of labour per unit, the cost of labour is calculated based on gross salary only due to a change of statistical data source.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products (intermediate goods, capital goods and consumer goods), as well as by main divisions of activities.

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tabels in Monthly Bulletin of the Bank of Slovenia	Tabels in Monthly Bulletin of the ECB
1.2 Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
	2.3 Monetary statistics
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
1.5. Selected Assets of Other Monetary Financial Institutions by Sector	2.6 MFI holdings of securities, breakdown
