Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

GDP in the third quarter was down compared to the second quarter in both the US and the euro area. The economic sentiment indicator for the euro area declined for the fifth consecutive quarter, and is now at its lowest level since 1993. International institutions are continuing to cut their forecasts for economic growth in 2009; they are now negative for both the US and the euro area. As a result of the slowdown in global economic growth and market participants' conviction that OPEC, despite a possible cut in output, will not succeed in halting the sharp fall in oil prices, the price of oil continued to fall, reaching around USD 50 per barrel (159 litres) by the second half of November. Thus the price of oil was down a half on the beginning of the year, and down a third on the October average. The euro fluctuated just under USD 1.30 in November, down just over a fifth on August, when it reached this year's high against the US dollar. Year-on-year inflation in October fell to 3.2% in the euro area and 3.7% in the US. Central banks are continuing to cut interest rates. The ECB and the Federal Reserve cut their key interest rates by 0.5 percentage points to 3.25% and 1.0% respectively, but market participants are expecting further cuts.

There are also signs of a further slowdown in economic activity in Slovenia. This is being reflected in a decline in new orders in manufacturing industry, and a consequent increase in inventories, a decline in real income in tourism, and a further slowdown in indicators of activity in the construction sector. The economic sentiment indicator in November was down 13 percentage points on October, reaching its lowest level since measurement began in 1995. The consumer confidence indicator is also deteriorating, and in November reached its lowest level since measurement began in 1996. September's industrial production was up 2.4% on August, and was up 1.5% in year-on-year terms, significantly less than the long-term average rate. By September there was yet to be any sign of the impact of the cooling economy on the labour market, either in employment growth or in the registered unemployment rate. Wage growth remains high: in September year-on-year growth in the average gross wage stood at 12.9% in the public sector and 10.7% in the private sector.

The current account deficit over the 12 months to September remained unchanged at 6.5% of GDP. The decline in domestic demand and the falling prices of oil and other commodities on international markets will act to improve the current account position in the future, while the decline in foreign demand will act to worsen it. In September the financial turmoil manifested itself in a decline in both the private sector's liabilities to and claims against the rest of the world, which was reflected in a decline in the gross external debt.

Year-on-year inflation as measured by the HICP stood at 2.9% in November, down 1.9 percentage points on October. November's fall in core inflation expressed as growth in the harmonised index of prices excluding energy, food, alcohol and tobacco was smaller, the rate falling 0.3 percentage points to 3.6%. The fall in inflation could continue in the coming months, which would be in line with the expected continuing slowdown in economic activity, lower aggregate demand, and lower price pressures from the rest of the world. The trend of decline in core inflation could be limited by the still-high growth in nominal labour costs.

Growth in the banking system's total assets and lending to non-banking sectors slowed again in October. The main factor in the decline in growth in total assets was debt securities held as assets, while on the liability side bank funding via borrowing at the ECB strengthened, as deposits declined. The banking system's pre-tax profit was down 15.5% on the same period last year. The negative developments on the domestic capital market continued in October. The market capitalisation of shares on the Ljubljana Stock Exchange declined by 12.5%, in the context of a fall of 18.7% in the SBI20. The assets of domestic mutual funds declined by 16.5% in October to EUR 1,754 million.

The National Assembly adopted updated laws on banking and public finance, thereby setting the legal basis for the measures announced to safeguard the stability of the financial system. The amendment to the Banking Act introduces an unlimited guarantee for net bank deposits as defined by law until the end of 2010. The amendment to the Public Finance Act allows for additional government borrowing for providing loans to financial institutions, for issuing guaran-

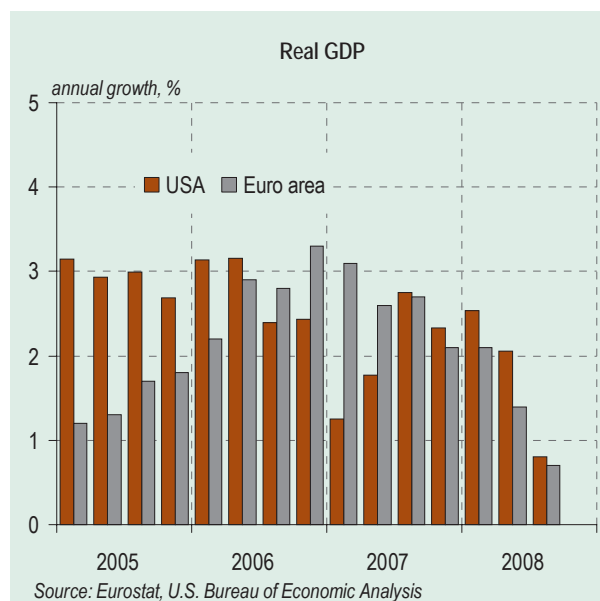

tees of up to EUR 12 billion for the funding of credit institutions, and for making capital investments by the government in financial institutions. The Ministry of Finance is also planning to release new government bonds on the basis of the amended Public Finance Act.

1

International Environment

In the third quarter GDP was down 0.2% on the previous quarter in the euro area and down 0.1% in the US. Germany and Italy recorded declines of 0.5% in economic activity over the same period. The decline in economic growth in the US was primarily the result of a decline in household consumption, which fell by 0.9% in quarterly terms, most notably spending on consumer durables. In its November report the OECD cut its economic growth forecasts for 2009 for both the euro area and the USA as a result of tightened conditions on the financial markets and weak economic growth figures. Economic growth in 2009 is expected to stand at -0.6% in the euro area, and -0.9% in the US. Negative economic growth is also forecast for the euro area's three largest economies: Germany (-0.8%), France (-0.4%) and Italy (-1.0%). Industrial production in the euro area in October was down 2.4% in year-on-year terms. The economic sentiment indicator for the euro area, which is released each quarter by the Ifo Institute, fell for the fifth consecutive quarter and is now at its lowest level since 1993. The view of the current situation was particularly pessimistic, while the expectations for the next six months were practically unchanged.

The major central banks have continued to cut their base interest rates. The ECB cut its key refinancing rate by 0.5 percentage points in November to 3.25%, while

the Federal Reserve cut its key interest rate by 0.5 percentage points at the end of October to 1.0%. Market participants are expecting new interest rate cuts by the Federal Reserve, primarily to encourage economic growth. The financial markets remain in turmoil, but inter-bank rates were showing some signs of easing in early November.

The euro gradually fell against the US dollar over the first three weeks of November, in the context of significant fluctuations. It averaged USD 1.3330 in October, and USD 1.2732 in November.

Inflation declined further in October in the euro area and in the US mainly due to falling down in commodity and food prices and cooling economic activity. Year-on-year inflation as measured by the HICP stood at 3.2% in the euro area in October, down 0.4 percentage points on September. The main factor in headline year-on-year inflation was growth in transport services prices, food prices and housing prices. Year-on-year core inflation as measured by growth in prices excluding energy and unprocessed food declined by 0.1 percentage points to 2.4% in October. Year-on-year inflation in the US stood at 3.7% in October, down 1.2 percentage points on September. The main factor in October's increase in the CPI was again energy prices, while year-on-year core inflation (excluding energy and food) was down 0.3 percentage points on September at 2.2%.

The average price of a barrel of Brent crude and the

Notes: Forecast for the current year are stated in brackets for GDP.

average prices of other commodities fell sharply in November. A barrel of Brent crude averaged USD 72.84 in October, the average price then declining to USD 53.24 in November. The main factors in the fall in oil prices were concerns over the slowdown in the global economy and the conviction on the part of market participants that OPEC would not succeed in halting the sharp fall in oil prices despite a possible cut in output. Year-on-year growth in the US dollar prices of commodities other than oil turned negative in October, reaching -17%. The main factors in the negative growth were prices of industrial commodities, which fell by 31% year-on-year in October, and prices of metals, which fell by 35% over the same period. Year-on-year growth in food prices stood at -16% in October. One factor in the large year-on-year decline in other commodity prices was the high basis from last year.

2 | Economic Activity and Labour Market

Several sectors of industry recorded positive year-on-year growth in September, while inventories also increased, both in year-on-year terms and in monthly terms. The increase in industrial production in both year-on-year and monthly terms was partly the result of the previous low basis and the decline in industrial production

in the summer. September's industrial production was up 2.4% on August, and was up 1.5% in year-on-year terms, adjusted for the number of working days. Production in manufacturing was up 1.8% in year-on-year terms in September. Only production of capital goods was down on August, by 6.1%, while there were increases in production of intermediate goods (0.6%) and consumer goods (6.5%). September's industrial production in the mining sector was up 13.8% on August, while that of the electricity, water and gas supply sector was down 1.2%. In some sectors the negative trends of the summer months continued, such as the manufacture of leather and leather products, which recorded a year-on-year decline of 9.5% according to non-seasonally adjusted figures, and the manufacture of textile and fur products, which recorded a

Differences from official numbers are due to rounding.

year-on-year decline of 8.5%. Sectors that have been relatively dynamic in recent years again recorded higher activity in September. Examples are the manufacture of transport equipment, which recorded a year-on-year expansion of 6.6% in September according to non-seasonally adjusted figures, and the manufacture of metals and fabricated metal products (a 2.1% increase). New orders in industry have also been declining for some months now in year-on-year terms, in line with economic trends in the European Union and the wider economic environment. The value of new orders received in September was down 15% year-on-year in real terms. New orders from the domestic market were down 21.5%, while new orders from the foreign market were down 13.5%. Inventories are increasing in line with the decline in domestic and foreign orders: according to figures adjusted for the number of working days, in September they were up 5.4% in year-on-year terms and up 0.1% on August. Sales revenues in industry were up 1.6% in year-on-year terms overall in September, declining by 1.1% on the domestic market, but rising by 3% on the foreign market.

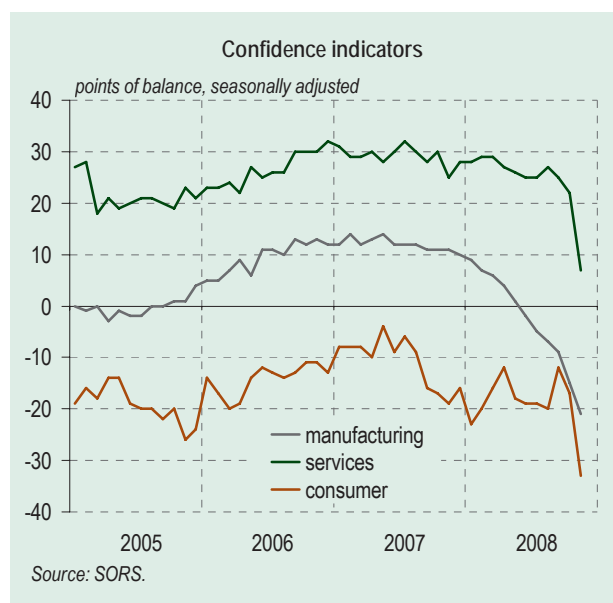

The indices of the value of construction put in place remain high, but are showing signs of a subsequent slowdown in activity. The real value of construction put in place was up 19% in year-on-year terms in September. The figure was up 12.6% on August, the value of civil engineering construction rising by 20.8% and the value of building construction by 1.9%. The number of building permits issued for buildings in the third quarter was down

16%, while the number of permits issued for residential buildings was down 39% on the same period last year.

Activity remains relatively high in the service sector, but this sector is also showing signs of a slowdown. Sales revenues in retail trade in September were up 6.1% in year-on-year terms, and up 2.6% on August. At 4.7%, monthly growth in sales revenues from non-food retail was faster than that of retail of food, beverages and tobacco products (0.8%). Trade in motor vehicles is still recording the fastest real growth in sales revenues, which in September were up 19.7% in year-on-year terms and up 6.8% on August. The transport sector was also dynamic in September, when the volume of goods carried in shipping was up 14.5% on the same month last year. Passenger transport increased as well, numbers rising by 4.2% in road transport and 3.4% in aviation. Signs of cooling activity are already being seen in tourism, where real revenues in August were down 5.7% in year-on-year terms, and the number of overnight stays in September was down 4% in year-on-year terms.

The economic sentiment indicator declined again in November, the confidence indicator in manufacturing recording the largest decline. The economic sentiment indicator was down 26 percentage points in year-on-year terms, and down 13 percentage points on the previous month, thus reaching its lowest value since measurement began in 1995. All confidence indicators recorded significant declines in both year-on-year and monthly terms. The largest decline was recorded by the confidence indi-

cator in manufacturing, which was down 32 percentage points in year-on-year terms, partly as a reflection of the current economic and financial developments, and the pessimistic outlook in the EU and in the wider economic environment. The confidence indicators in retail trade and services, which generally move similarly, recorded significant declines of 19 and 15 percentage points on the previous month, and 24 and 18 percentage points in year-on-year terms respectively. Pessimism regarding the business outlook is being seen not only in the retail trade and service sectors, but also in the construction sector, where the confidence indicator was down 27 percentage points in year-on-year terms and down 13 percentage points on October. This large decline in confidence in the sectors of construction, retail trade and services, i.e. those sectors that in recent years have been very dynamic, is a sign of the deepening negative trends in the economic cycle.

The consumer confidence indicator declined again in November, reaching its lowest level since measurement began in 1996. It was down 14 percentage points in year-on-year terms in November, and down 16 percentage points from the previous month, to reach a level 22 percentage points down on last year's average. Consumers were most pessimistic regarding unemployment in the next 12 months. This is also being reflected in the major purchases suitability indicator, which was down 39 percentage points in year-on-year terms and down 27 percentage points from the previous month. These as-

essments are similar to the expectations of consumers throughout Europe, where consumers are adjusting their behaviour to the deterioration in the economic climate and the unfavourable developments in the international economic environment by reducing spending and opting for cheaper purchases.

There were no signs of a the reversal in the economic cycle on the labour market on September, as growth in the workforce in employment remained high. As in the three preceding months, the workforce in employment was up 3.0% in year-on-year terms in September, and was up 0.6% on August, slightly above the usual seasonal rise for this month. September's year-on-year growth in the workforce was actually slightly higher than

in the previous months at 2.0%, while the current rate of growth was 0.4%, which is comparable to the rate in the same month in previous years. In line with trends in growth in value-added in the last year, the largest year-on-year increases in employment were recorded by the sectors of construction (12.0%) and real estate, renting and business activities (8.3%). The seasonally adjusted registered unemployment rate in September was down slightly from August at 6.4%. The survey unemployment rate in the third quarter of 2008 was down slightly on the second quarter at 4.1%.

Year-on-year growth in public sector wages was high in September, as a result of the new wage system, but was lower than in August as a result of one-off factors. The public sector changed over to a new wage system with its August wage payments, and the payment also included a partial wage settlement backdated to May, when the changeover to the new wage system was originally to have been made. Because the settlement was fully included in the payment of August's wages, the average gross wage in the public sector in September was 2.9% lower than in August. Year-on-year growth in

the average gross wage remained high in September at 12.9% (compared with 16.6% in the previous month), while growth in the net wage was slightly lower at 11.5%. The health sector recorded the highest wage growth in the public sector in September (21.2%). Compared with the moderate growth in previous years, the other branches of the public sector also recorded high growth: public administration recorded wage growth of 13.3%, other services growth of 10.5% and the education sector growth of 7.3%.

Wage growth also remains high in the private sector. Year-on-year growth in the average gross wage in the private sector stood at 10.7%, while the rate for the net wage was 10.0%. The average gross wage in Slovenia was up 11.2% in year-on-year terms in September. The fastest wage growth in the private sector was recorded by the sectors of construction (11.5%) and financial intermediation (11.1%), while utilities recorded the lowest rate of 7.4%.

The index of the nominal effective exchange rate as measured by the harmonised competitiveness indicator depreciated in October, in both monthly and year-on-year terms. October's decline of 0.6% in the nominal effective exchange rate of the euro against a basket of foreign currencies came primarily as a result of the record falls of 7.8% against the US dollar, 12.8% against the yen, and 4.7% against the Swiss franc, while the euro also fell against the pound sterling by 1.6%. After six con-

 ** CPI deflator.

secutive months of depreciation, which strengthened over the last three months primarily as a result of the euro's fall against the US dollar, the index returned to its level of June 2007. The year-on-year appreciation has been in decline since April, and in October the nominal effective exchange rate moved into depreciation on a year-on-year basis for the first time in two and a half years, with the depreciation measuring 0.5%.

The price competitiveness of the Slovenian economy as measured by consumer prices depreciated sharply in October. The real effective exchange rate in October was down 1.4 percentage points on September, of which 0.7 percentage points was the result of the nominal effective exchange rate, and 0.7 percentage points was the result of growth in domestic prices declining faster than growth in the basket of foreign prices. In the context of favourable current movements, the year-on-year appreciation declined from 1.6% in September to 0.2% in October, to reach the same level as in May 2006. Domestic prices growing faster than the basket of foreign prices contributed 0.7 percentage points of appreciation in the real effective exchange rate, while the nominal effective exchange rate reduced this by 0.5 percentage points.

Over the last four years the movement in the price competitiveness indicator in Slovenia has been similar to that in the most important euro area trading partners (Austria, Germany, Italy and France). Although the real effective exchange rate depreciated in

both Slovenia and the comparable countries in October, there has been an appreciation since the second half of 2006. The decline in the price competitiveness indicator in October had a major impact on the year-on-year rate of growth, which declined by 1.4 percentage points in Slovenia to 0.2%, while the year-on-year decline in the partner countries averaged 1.7 percentage points. This meant that the aforementioned trading partners moved into depreciation. Here it should be noted that year-on-year growth in the indicator for Slovenia in the last year has slightly outpaced the rates in the other countries, which is primarily the result of inflation being higher than in other euro area countries.

The harmonised competitiveness indicator as measured by the GDP deflator reveals an increase in the Slovenian economy's competitiveness relative to euro area countries in the second quarter. While the indicator has displayed a trend of increase since the end of 2005, this trend came to an end in the second quarter, with the indicator declining by 1.2 percentage points in year-on-year terms to 2.7%. This is an indication of Slovenia's GDP deflator growing faster than those of the countries of the euro area, where the indicator has risen or remained the same in the majority of countries. Within the euro area, Slovenia is ranked fourth in terms of the 10-year average of its competitiveness as measured by the GDP deflator, behind Germany, Austria and Finland. This is an indication of the improvement in the competitiveness of the Slovenian economy compared with other

euro area countries.

The movement in the harmonised competitiveness indicator in terms of unit labour costs in the economy as a whole was relatively favourable for Slovenia in the second quarter compared with the euro area countries. The cost competitiveness indicator in the second quarter was down 1.5 percentage points on the first quarter at 1.3%, while it rose in the other euro area countries. The rise of 4.9% in unit labour costs, the rise of 2.8% in gross wages, the decline of 0.9% in productivity and the rise of 0.3% in employment were factors in the year-on-year appreciation. The change since the final quarter of 1998 reveals Slovenia to be ranked third in the euro area in terms of cost competitiveness, behind Germany and Austria, which had lower unit labour costs on average over this period.

3 | Price Developments

Year-on-year inflation as measured by the HICP stood at 2.9% in November, down 1.9 percentage points on October. In the inflation breakdown there was a decline in year-on-year growth in November in all price sub-categories other than food. Year-on-year growth in energy prices declined from 9.8% to -3.5% in November, taking the contribution made to annual inflation by this sub-category from 1.3 percentage points to -0.3 percent-

Price Developments	Year on Year		Average of last 12 months	Monthly

Sources: SORS, Eurostat, Bank of Slovenia calculations. Figures may not sum up to official figures due to rounding.

age points. In addition, growth in services prices declined from 5.0% to 4.8%. Year-on-year growth in non-energy industrial goods prices declined from 2.6% to 2.3%. The main factor in the decline in growth of non-energy industrial goods prices was lower growth in prices of clothing and footwear comparing with the same period last year. Growth in food prices increased from 4.5% to 4.7% in November due to higher prices of processed food.

Core inflation also decline in November in line with the slowdown in domestic economic activity, but because of still high growth in nominal labour costs, the decline was less significant. Year-on-year growth in the harmonised index of prices excluding energy, food, alcohol and tobacco in November was down 0.3 percentage points on October, reaching 3.6%. The slowdown in the index is primarily attributable to slower growth in non-energy industrial goods and services prices. Core inflation expressed as the index of growth in prices excluding energy and unprocessed food remained unchanged at 4.1% in November.

Growth in industrial producer prices on the domestic market is still slowing gradually, and stood at 4.8% in year-on-year terms in October, down 0.9 percentage points on September. The lower monthly growth was the result of slower growth of prices in all sub-categories than in the same period last year. The main factor in the lower year-on-year growth in manufactured goods prices was commodity prices, which recorded growth of 3.6% in

October, down 2.1 percentage points on September. Prices of intermediate goods recorded year-on-year growth of 4.6%, down 1.4 percentage points on September, while growth in consumer goods prices declined from 5.3% to 5.1%. The largest contribution to the decline came from prices in the manufacture of metals and fabricated metal products, and the manufacture of machinery and equipment. Prices of capital goods recorded year-on-year growth of 4.7% in October, down 0.9 percentage points on September. As in Slovenia, year-on-year growth in manufactured goods prices also declined in the euro area in September, to 7.9%. The fastest growth in the euro area continues to be recorded by energy prices (20.3% in September), and prices of intermediate goods

(5.8%).

The expected cooling of the economy could accelerate the further decline in inflation in the medium term, but still-high growth in nominal labour costs could retard decline in core inflation in the short term. Year-on-year inflation also decline in the euro area in November, to 2.1%. The gap narrowed between the 12-month average of growth in the HICP in Slovenia (5.9% in November), and the Maastricht price stability criterion of 4.2% calculated in October. Given the cooling industrial production and the slowdown in economic activity and aggregate demand, core inflation can be expected to continue falling gradually in the future. The still-high growth in nominal labour costs remains the main risk of a short-term slowdown in the fall in core inflation.

4 | Balance of Payments

September's current account deficit was below-average, the year-on-year deterioration in the current account position ceasing temporarily. At EUR 0.15 billion, September's current account deficit was EUR 0.01 billion less than in the same month last year, and took the cumulative deficit over the first nine months of the year to EUR 1.7 billion. Despite September's year-on-year de-

cline, the current account deficit over the last 12 months remained unchanged at EUR 2.3 billion or 6.5% of GDP, which is just over 2 percentage points more than in 2007. With the trade deficit narrowing, the main contribution to September's deficit came from the net outflows of capital income and transfers.

The current rate of growth in exports in September slowed slightly from August, while merchandise imports accelerated. Only in August and September has the current rate of growth in exports outpaced the current rate of growth in imports this year. The current rate of growth in merchandise exports stood at 7.5% annualised in September, just under 1 percentage point higher than the current rate of growth in merchandise imports of 6.6%. Merchandise exports amounted to EUR 1.9 billion in September, up 12.1% on the same month last year, while imports were up 9.6% at EUR 2.1 billion. The result of these movements in merchandise trade was a deficit of EUR 0.17 billion,¹ down one-sixth on that recorded in the same month last year. This September's relatively high year-on-year growth in merchandise trade can to a great extent be attributed to its larger number of working days compared with the previous September. There were two more working days in this September, or 10% more work hours than in the same month last year, which had a profound impact on both output and merchandise exports to the rest of the world.

The gap by which year-on-year growth in merchandise exports to non-EU countries outpaces growth in exports to EU Member States widened further. Year-on-year growth in merchandise exports to non-EU countries was 20.3% in September, compared with 7.4% for exports to EU Member States. The situation was reversed for merchandise imports, with imports from EU Member States recording year-on-year growth of 13.7%, compared with a decline of 4.3% in merchandise imports from non-EU countries. Total merchandise exports in the first nine months of the year were up 5.8% in year-on-year terms, while merchandise imports were up 11.4%. Merchandise trade with EU Member States recorded below-average year-on-year growth: 3.5% for exports, and 11.0% for imports. The economic slowdown in Slovenia's most important EU trading partners, some of which are already officially in recession, was a factor in the relatively low growth in merchandise exports. It is expected that they will soon be followed by Slovenia's other important trading partners inside and outside the euro area. The decline in sales on EU markets is currently being compensated for by increased sales on and merchandise exports to markets outside the EU, but it will also be impossible to avoid stagnation in exports to these markets should the economic crisis prove sustained. Year-on-year growth in merchandise exports to non-EU countries is three times that of exports to EU Member States at 11.2%, while growth in merchandise imports stands at 12.7%.

The sole deficit in merchandise trade is with EU Member States. The merchandise trade deficit over the first nine months of the year was up EUR 1 billion in year-on-year terms at EUR 2.2 billion, or 6.4% of GDP. Only the deficit with EU Member States widened, from EUR 2.1 billion last year to EUR 3.1 billion over the first nine months of this year, while the surplus with non-EU countries remained at the level generated in the same period last year of EUR 0.9 billion. Coverage of merchandise imports by exports fell by 4.5 percentage points compared with the same period last year to stand at 87%.

A recession reduces foreign demand, but also re-

¹ According to the SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix to the bulletin), the merchandise trade deficit in September stood at EUR 222 million.

duces energy prices, commodity prices and food prices, which has an overall impact on the current account position. Lower foreign demand will lead to a decline in output and exports of merchandise and services. Lower import costs mean that falls in energy prices and commodity prices lead to lower imports in value terms, and a more favourable current account position. The fall in energy prices and commodity prices began in the middle of the third quarter, and continued in the first two months of the final quarter. Assuming that prices remain at their October levels in the remaining months of the final quarter (in fact they have continued to fall), the lower prices are expected to have beneficial effects on the value of merchandise imports. Given the aforementioned price assumptions, and no change in the volume of imports, the terms of trade effect in the final quarter would lead to an improvement of around EUR 0.2 billion in the current account position.

Year-on-year growth in trade in services is slowing gradually, but is still strongly outpacing growth in merchandise trade. Year-on-year growth in exports of services stood at 16.3% in September, just over one-third more than the simultaneous growth of 11.4% in imports of services. The cumulative gap by which exports outpace imports widened by 1.5 percentage points from August to 2.8 percentage points in September. With exports of services up 19.8% and imports of services up 17.0% in year-on-year terms over the first nine months of the year, the surplus of trade in services rose by EUR 0.2 billion in

year-on-year terms to EUR 1.3 billion. On the export side, above-average increases have been recorded this year by revenues from operating leasing (205.5%), financial services (98.6%), foreign trade intermediation (61.0%) and construction and assembly work in the rest of the world (41.3%). The financial and economic turmoil will have a profound impact, via an economic slowdown, resulting in more moderate future growth in revenues from these services. Revenues from transport services are also expected to decline sharply in the future, as they are closely correlated with the dynamics in merchandise trade. Tourism revenues in the first nine months of the year were up 12.2% in year-on-year terms, just over half of the simultaneous increase of 24.9% in expenditure by resident tourists in the rest of the world. The recession means that the risk of unemployment and uncertainty on the domestic and foreign labour markets is rising, consequently revenues from and expenditure on tourism can be expected to decline in the future.

The net deficit in factor income in September more than doubled in year-on-year terms to reach EUR 0.1 billion, taking the cumulative deficit in the last 12 months to EUR 0.9 billion, or 2.5% of estimated GDP. The deficit in labour income widened further by EUR 7

million in September, but despite this year's poorer results the cumulative position over the last 12 months remained at a surplus of EUR 12 million. The deficit in capital income over the last 12 months widened by EUR 0.1 billion in September to EUR 0.9 billion, or 2.5% of GDP during the period. Alongside a smaller surplus from investments in securities, the net outflow in FDI contributed EUR 40 million to the deficit in factor income, while the largest contribution of EUR 75 million came from net interest payments to the rest of the world. Interest payments on the external debt were up 50.3% in year-on-year terms, banks accounting for 62.7% of this, and households for 36.3%. September's deficit in transfers was down just over one-third in year-on-year terms at EUR 25 million, thereby leaving the cumulative deficit over the last 12 months at EUR 0.4 billion for the third consecutive month, or 1.1% of estimated GDP during the period.

The net financial inflow, i.e. the surplus of financial inflows from the rest of the world over financial outflows to the rest of the world, which was relatively large in the first half of the year, declined in the third quarter. The net financial inflow amounted to EUR 0.8 billion in the first quarter, and to EUR 0.7 billion in the second quarter, but to just EUR 0.3 billion in the third quarter. The inflow was primarily into the general government sector in the first quarter, but primarily into the private sector in the second and third quarters. The large net financial inflow into the general government sector in the first quarter was primarily the result of February's release of government bonds in the amount of EUR 1.1 billion.

In September the financial turmoil was reflected in a decline in both the private sector's liabilities and claims vis-à-vis the rest of the world. In the first eight months of the year the private sector's liabilities to the rest of the world increased by EUR 4.2 billion, while its claims against the rest of the world increased by EUR 3.3 billion. As a result of the financial turmoil there is less opportunity to borrow and also greater investment risk, which in September brought a decline in the private sector's liabilities (EUR 0.2 billion) and claims (EUR 0.3 billion).

The net financial inflow into the private sector increased over the first five months of the year, but was negligible between June and September. The net financial inflow into the private sector was EUR 0.7 billion over the first five months of the year, but totalled just EUR 0.3 billion between June and September. The smaller net financial inflow into the private sector was partly the result of seasonal factors, and partly the result of lower demand for loans, and the consequent diminishing need for banks to seek additional funding from the rest of the world.

Loans to banks from the rest of the world and deposits by non-residents were again prominent among financial liabilities to the rest of the world in the second quarter, but actually declined in the third quarter primarily as a result of the deepening financial turmoil. Of the total increase of EUR 2.7 billion in financial liabilities to the rest of the world in the second quarter, inflows via loans to banks from the rest of the world accounted for EUR 1.3 billion, and deposits by non-residents for EUR 0.5 billion. Of the inflows via loans from the rest of the world, June's figure amounted to EUR 1.1 billion, primarily as a result of two major transactions.

Signs: inflows or increases in liabilities (+), outflows or increases in claims (-). Increases in foreign exchange reserves (-), increases in debt (+).

Source: Bank of Slovenia.

Thus inflows via loans to banks from the rest of the world in the second quarter were more than double those in the first quarter. Liabilities via loans to banks from the rest of the world and deposits by non-residents at domestic banks actually declined in the third quarter, partly as a result of seasonal effects, and partly in association with the financial turmoil. Liabilities from loans to banks from the rest of the world and deposits by non-residents declined by EUR 0.4 billion in September. FDI amounted to EUR 0.9 billion in the first nine months of the year, these inflows having remained unchanged in the last two years at around 3.5% of GDP. Inflows of trade credits were negligible between June and August as a result of seasonal factors, but increased in September.

Corporate borrowing in the rest of the world increased in the third quarter, and was approximately three times higher than in the previous quarters. Corporates borrowed EUR 0.2 billion in the first half of the year, and EUR 0.3 billion in the third quarter, thereby bringing an end to the trend of declining direct corporate borrowing in the rest of the world in recent months.

Portfolio investments and loans to the rest of the world were prevalent on the claim side in the second quarter, but declined in the third quarter, primarily as a result of the financial turmoil. Of the total increase of EUR 1.9 billion in claims against the rest of the world in the second quarter, portfolio investments and bank loans to the rest of the world each accounted for EUR 0.5 bil-

lion. Portfolio investments declined by EUR 0.3 billion in the third quarter, and bank loans to the rest of the world by EUR 0.2 billion. Outward FDI in the second quarter was double that in the first quarter, and remained at this level in the third quarter.

The net external debt increased by EUR 2.8 billion in 2007, and by EUR 2.6 billion over the first nine months of 2008. Both the gross external debt and gross external claims declined in September, as a result of the effects of the financial turmoil. The net external debts of the banking sector and the general government sector increased by EUR 2.0 billion and EUR 0.5 billion respectively in the first nine months of the year, while the net external debt of other sectors increased by EUR 0.1 billion. The net external debt stood at EUR 8.8 billion at the end of August, the gross external debt standing at EUR 39.8 billion, and gross external claims at EUR 31.1 billion. Both the gross external debt and gross external claims declined in September, by EUR 0.5 billion and EUR 0.2 billion respectively.

5 | Public Finance

In its autumn forecasts the European Commission made upward revisions to the forecasts for the general government deficit for the European Union and the euro area. For Slovenia it is estimated that this year there will be a deficit of 0.2% of GDP, a surplus of 0.5% of GDP having been recorded last year. The European Commission is anticipating that the decline in economic activity will have a strong adverse impact on public finances in the next two years. These are strongly linked to the general macroeconomic trends, and are also subject to high uncertainty. For this reason, in its autumn forecasts in early November the European Commission predicted a widening of the deficit in the EU from 0.9% of GDP in 2007 to 1.6% of GDP in 2008, and an increase in the deficit in the euro area from 0.6% of GDP in 2007 to 1.3% of GDP in 2008. It is also expecting further deterioro-

rations in 2009 and 2010. For Slovenia it is forecasting deficits of 0.2% of GDP in 2008 and 0.7% of GDP in 2009, and further decline in the public debt to 20% of GDP by 2010.

The general government sector recorded a surplus of EUR 445 million or 1.8% of GDP in the first eight months of the year. The available figures indicate that

Box: The National Assembly has adopted Acts Amending the Banking and Public Finance Act

The National Assembly adopted the Act Amending the Banking Act, which has introduced an unlimited guarantee for the net bank deposits of entitled persons pursuant to Article 310 of the Banking Act until 31 December 2010. The law entered into force on 20 November 2008. Banks established in Slovenia guarantee the payment of a deposit at a bank against which bankruptcy proceedings have been initiated, up to a net deposit balance of EUR 22,000, while the state guarantees the remainder above this amount in the manner set out by law. Should banks established in Slovenia be unable to secure sufficient funds to pay out the guaranteed deposits, the state also guarantees these deposits on the basis of a proposal by the Bank of Slovenia. The unlimited guarantee applies until 31 December 2010 at the latest.

At the same session the National Assembly adopted the Act Amending the Public Finance Act. This law stipulates that in order to mitigate the effects of the global financial turmoil and to maintain the stability of the domestic financial system the state may undertake additional borrowing for:

- loans to credit institutions as defined by the banking act, and insurance corporations, reinsurance corporations and pension companies established in Slovenia,
- government guarantees for the refinancing of credit institutions established in Slovenia up to a total amount of EUR 12 billion;
- capital investments by the government in credit institutions, insurance corporations, reinsurance corporations and pension companies established in Slovenia.

The Ministry of Finance is also planning to release new government bond on the basis of the amended Public Finance Act. The new bond is expected to be a 5-year bond with a total release value of EUR 1 billion, although the maturity will not be predetermined, but will depend on the market conditions at release. The release date of the new bond is not known, but it is expected at the earliest opportunity, and thus like the maturity depends on the current conditions on the financial markets.

the general government sector again recorded a surplus in September. The general government surplus in the first eight months of the year was EUR 301 million higher than in the same period last year. The majority of the surplus was generated by the state budget, while the Health Insurance Institute is also disclosing a larger surplus than last year. It can be concluded on the basis of the available figures for the realisation of the state budget that the general government sector again recorded a surplus in September, compared with a deficit last year. The Health Insurance Institute recorded a surplus of EUR 71 million over the first nine months of the year, up slightly on the same period last year. Local government recorded a surplus over the first eight months of the year, albeit less than in the same period last year. This was primarily the result of rapid growth in investment expenditure and transfers, which is typical for August.

General government revenues recorded high growth in the first eight months of the year, direct taxes in particular. Tax inflows based on total wages were high in September and October. Revenues in the consolidated general government accounts in the first eight months of the year were up 11.3%, mostly as a result of personal income tax, VAT and social contributions. Revenues from personal income tax in the first ten months of the year were up one-third, tax revenues from employment income recording year-on-year growth of 14% in the last two months. Revenues from corporate income tax in the first ten months of the year were up 15% on the same period last year. Growth in VAT revenues in the last three

months declined slightly, but the year-on-year rate remains around 13%. Revenues based on wages and employment continue to record year-on-year growth of more than 10%. Social contributions and personal income tax prepayments were up in year-on-year terms in September and October, leading to the conclusion that with growth in employment unchanged, the main factor in September's increase was wage increases, particularly in the public sector. Revenues from payroll tax were down by 40%, in line with the cuts in tax rates. The expected economic slowdown will also have an impact on revenues.

General government expenditure in the first eight months of the year was up 8% in year-on-year terms, 3.3 percentage points less than the increase in revenues. Expenditure on goods and services, investment expenditure and transfers recorded above-average growth. Expenditure on goods and services in the first eight months of the year was up 15% in year-on-year terms, less than in the first half of the year. Investment expenditure grew strongly again in August, particularly in local government. The largest increase was recorded by funding for new build, reconstructions and adaptations, which accounts for more than a half of all investment expenditure. The highest year-on-year growth was recorded by funding for the purchase of land and project feasibility studies. With the payment of August's wages, the first of four public sector wage increases aimed at gradually eliminating wage discrepancies was made in September. The figures for the movement of average wages in the public sector are already showing the effects of the new wage system.

Expenditure on transfers to individuals and households recorded year-on-year growth of 8% in the first eight months of the year, while growth in expenditure on pensions was 1 percentage point less. The movements of the different categories varied considerably. Pensions accounted for the majority of transfers, and were up 7% over the aforementioned period. Year-on-year growth in the number of old age pensioners has been around 3.2% in recent months, while the total number of pension claimants during the first nine months of the year was up around 1.6% in year-on-year terms. sions were increased by 4.6% in November, wage trends having been taken into consideration. Social security transfers increased by 113% in August, as a result of the adoption of a law on a one-off bonus, payments of which amounted to around EUR 31 million. They increased by 15% overall in year-on-year terms during the first eight months of the year. Family benefits and parental allowances were up 13% in year-on-year terms, and sick pay was up 9%, while year-on-year growth in unemployment payments remained negative.

6 | Banking System*

Growth in total assets continues to decline. Year-on-year growth in total assets fell by a further 1.3 percentage points in October to 16.7%. The gap between the current rates of growth in total assets at the banks under majority foreign ownership and the domestic banks widened. The trend of decline in growth in loans to non-banking sectors continued in October. The main factor in the decline in total assets was again (debt) securities held among banks' assets, which is a reflection of the decline in the proportion of total assets that they account for and a decline in the banking system's secondary liquidity. Financing via the ECB strengthened further as a source of bank funding.

Lending growth is declining. Year-on-year growth in lending to non-banking sectors declined slightly in October to 23.5%, despite the relatively high net increase in

loans. The main factors in this were loans to OFIs and households, which were higher than this year's average. The gap between growth in lending at the banks under majority foreign ownership and the domestic banks narrowed slightly in October, but remains relatively large. At 18.5%, lending growth at the domestic banks is 15 percentage points less than that at the banks under majority foreign ownership. In contrast to previous months, long-term loans were prevalent in October's lending to non-banking sectors.

Year-on-year growth in loans to non-financial corporations (NFCs) declined to 24.9%, and October's increase in these loans was less than this year's average. The large domestic banks accounted for more than half of October's net increase in loans to NFCs. Growth in loans at the large domestic banks has almost halved since the beginning of the year to 16.4%. Growth in loans at the small domestic banks and the banks under majority foreign ownership was at least double this rate in October. Year-on-year growth in household lending declined, but is still in excess of 19%. There was a sharp increase in household lending in October compared with the other months of this year, to a figure of EUR 140 million. Housing loans accounted for almost four-fifths of October's increase in loans to households. Growth in loans to households at the banks under majority foreign ownership was double that at the domestic banks.

Income statement	2008			y.o.y growth
	2006	2007	Jan.-Oct.

* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

Bank funding via the ECB is increasing. The net increase in liabilities to foreign commercial banks accounted for 43% of October's net increase in total assets. Two-thirds of the total net funding from foreign commercial banks went to the banks under majority foreign ownership. Bank funding via the ECB strengthened further in October, although the increase in liabilities to the ECB was reflected in a simultaneous increase in cash held at banks and claims against the ECB. The latter indicates that a portion of the funding obtained has not been placed by banks on the interbank market or within the economy, but has instead been recycled to the ECB. Deposits by non-banking sectors declined in October, with corporates the largest factor in the decline. In terms of maturity, there was an increase in deposits in the 1 year to 2 years category, while deposits with other maturities declined.

The banking system's profit remains behind that in the same period last year. With non-interest income down on that in the same period last year, the solid growth in net interest means that the breakdown of the banking system's gross income has changed significantly since last year, banks having generated more than two-thirds of their gross income via interest income. October's losses from trading were greater than September's, as a result of which this year's net income from this source is down significantly on last year, which is reducing the banking system's non-interest margin. This has fallen to 1%, calculated on the basis of total assets over the last

12 months. The overall financial intermediation margin has thereby approached 3%. Growth in operating costs remains moderate, with provisioning and impairment costs down on last year, although the gap has been narrowing in recent months.

7 | Domestic Financial Markets

The average monthly market yield on German long-term government securities declined by 21 basis points in October, while that on Slovenian government securities declined by 2 basis points, the spread thus widening to 78 basis points. On 29 October 2008 the Federal Reserve cut its key interest rate by 50 basis points to 1%, the ECB following suit on 6 November 2008 to cut its key refinancing rate by the same amount to 3.25%. On the capital markets, there was great volatility in share prices, as a result of the discouraging economic figures. The European Commission and the IMF cut their official forecasts for economic growth, commodity prices falling as a result. The American S&P index lost 16.8% in October, and a further 11.3% by 18 November. The DJ EuroStoxx index for western Europe lost 15.9% in October, and a further 7.8% by 18 November.

The market capitalisation of bonds on the Ljubljana Stock Exchange declined by 1% in October. The monthly volume of trading in bonds was the highest this year, and accounted for more than one-third of the total volume to date in 2008.

The market capitalisation of shares on the Ljubljana Stock Exchange declined by 12.5% in October, in the context of a fall of 18.7% in the SBI20. The decline in share prices continued in October. The international agreement to coordinate the response for the financial sector brought a short-term increase in share prices in the middle of the month, but risk aversion subsequently prevailed again, and was followed by a decline in share

² Source: <http://www.boerse-stuttgart.de>

prices. There were 15 long retail certificates issued directly on Slovenian shares and 21 long certificates issued on indices including Slovenian shares that reached the knock-out barrier during October and the first 18 days of November, which added momentum to the fall in share prices.² The SBI20 had lost a further 11.3% by 18 November, falling to its level of May 2006. The P/E ratio stood at 13.4 in October. October's volume of trading in shares was slightly above this year's monthly average, and just under one-fifth higher than in September. The majority of trading was in shares on the prime market, Krka accounting for more than half of the total.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents rose by 19 basis points in October to 6.49%. Non-residents, those from Germany and Croatia in particular, made net sales of EUR 1.1 million in domestic shares, but the figure becomes a net purchase of EUR 37 million if the takeover of Ljubljana Stock Exchange by Wiener Börse is included. Non-residents made net sales of EUR 20.4 million in Slovenian bonds. Residents of Germany, Luxembourg and Austria were prominent among the net sellers of bonds, while residents of the UK made net purchases of Slovenian bonds. The heaviest trading was again in government bonds.

Residents made net sales of EUR 53.6 million in foreign shares and EUR 388.9 million in foreign bonds in

October. The main net sellers of shares were the banking sector and the household sector, which sold shares from euro area countries, the former Yugoslav republics and the US. The banking sector also made net sales of bonds, primarily those of issuers from euro area countries, while the insurance corporations and pension funds sector made net purchases of bonds from these countries and from the UK, Sweden and Denmark.

The assets of domestic mutual funds declined by 3.8% in September and by 16.5% in October to EUR 1,754 million. There were net outward payments from domestic mutual funds of EUR 56.3 million in September and EUR 72.8 million in October. Over the two months the largest net outward payments were from equity funds (EUR 84 million) and balanced funds (EUR 43 million). The net outward payments from bond funds amounted to EUR 3 million, while the relative importance of money-market funds is increasing, investors having made net inward payments of EUR 1.3 million. The proportion of mutual fund assets held in liquid assets³ increased by 30 basis points in September to 11.2%. The average unit price of domestic mutual funds fell by 14.0% in October, taking the year-on-year change in the average unit price down to -38.9%. November's negative monthly change in the average unit price of mutual funds investing in the Balkans was the largest to date, at -23.4%, taking the year-on-year change down to -59.6%. The Croatian stock market index lost 26.7% in October, the Macedonian in-

dex lost 32.5%, and the Serbian index lost 34.3%. The fall in prices continued during the first 18 days of November. The Croatian index fell by a further 14.7%, the Macedonian index by 15.8%, and the Serbian index by 5%. Mutual funds investing in countries with their own currency are additionally exposed to foreign-exchange risk, this being reflected in the calculation of the average unit price in euros. By 19 November, the Serbian dinar had fallen by 7.3% against the euro this year, the Macedonian denar by 2.1%, the Hungarian forint by 10.1% and the Polish zloty by 7.1%. The Infond Dynamic equity fund and Infond Global balanced fund were admitted to trading on the stock market in October.

³ Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS**Interest rates (tables 2.1–2.4)****Table 2.1: Bank of Slovenia Interest Rates**

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A penalty rate is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause**Interbank market****SIONIA/SITIBOR**

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The **tolar indexation clause (TOM)** is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Ljubljana Stock Exchange (Tables 2.6 to 2.8)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities

Shares – investment fund shares are not included.

IF – investment fund shares.

Turnover is measured with a single counting.

Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of

individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

- SBI – Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO – Bond Index
- SBI, BIO – value of SBI and BIO at the end of period
- dT – change of index value by points
- d% – change of index value in percentage
- Min, Max – minimum and maximum value of index in a period

Exchange rates (Tables 2.9.1–2.9.2)

Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

As of 1 January 1999, with the introduction of the European Monetary Union, the European currency unit (XEU) was replaced by the euro (EUR) at an exchange rate of 1:1. Fixed exchange rates between the euro and the national currencies of the EMU member states (valid from 1 January 2001):

1EUR = 40.33990 BEF
 = 1.95583 DEM
 = 340.75000 GRD
 = 166.38600 ESP
 = 6.55957 FRF
 = 0.78756 IEP
 = 1936.27000 ITL
 = 40.33990 LUF
 = 2.20371 NLG
 = 13.76030 ATS
 = 200.48200 PTE
 = 5.94573 FIM

Due to the introduction of the euro in January 2002, the exchange rates of some members of EMU currencies (ATS, FRF, DEM, ITL) have been replaced by the exchange rates of some EU accession countries (CZK, HUF, PLN, SKK).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.9.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Payment systems (Tables 2.10 to 2.16)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.10: TARGET and Giro Clearing transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 3: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Table 2.11 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.12 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.13 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.14 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.15 Debit Transfers and Simply book-entry

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.16: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;

- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (SAD).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
 - report on account balances at domestic banks – PPV (until 31 December 2004),
 - report on account balances abroad – C (until 31 December 2006),
 - report on transactions through accounts at domestic banks – PPT,
 - report on transactions through accounts abroad – C.

All banks which conduct international payment transactions and all residents with open accounts abroad are obliged to report. The resident issuer/beneficiary of the payment is obliged to forward data on the type of transaction.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU**
- **Estimates and other sources**
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
 - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
 - estimate of Italian pensions (UMAR) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
 - estimate of labour income (SURS),
 - data on pensions paid to non-residents (ZPIZ),
 - survey on the write-downs of debt from trade in goods and services abroad,
 - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
 - estimate of cash transactions on tourism and labour income (from 2007 onwards).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments – made for goods exported and imported without customs declarations and for which data are available from ITRS or from the reports of duty free shops and consignment warehouses. Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

The source of records on transportation services is the ITRS.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS. All construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures).

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated (from a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes, paid in the current month). The estimate is replaced by actual data only when these data are available. Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates. From 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data).

Capital and financial account

Capital account

Capital transfers

Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. Data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad.

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies.

Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment rela-

tionship (these data are included in item other investment/loans.

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

Since 2004, these types of transactions are included in VRP and KDD sources.

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

The foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (transactions booked on the account number 188000 showing net result of incoming and outgoing payments conducted in EUR currency thorough TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former

Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)
- March 2007 (EUR 1000.0 million)
- February 2008 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2008 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2005 to 2007 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2009, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2008 shall take into consideration the new three year average (2006 to 2008).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2006 are provisional.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments. However, there are differences in some items and data sources as follows:

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR),
- short-term commercial credits with non-residents (SKV),
- reports on accounts abroad (C) and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds

and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial instruments

Since 2003, the data are included in VRP and KDD sources.

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Sources for long-term trade credits and loans are credit registration forms and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments, those being the accounting data of commercial banks (KNB), the account balances of banks in original currencies (PPV), the account balances abroad of companies (C) and the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment"; and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial instruments are not used because these types of instruments are not included in the

balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 2/2002) and is in line with the classification of activities NACE Rev.1 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 3 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, hunting and forestry
- B Fishing
- C Mining and quarrying
- D Manufacturing
- E Electricity, gas and water supply
- F Construction
- G Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods
- H Hotels and restaurants
- I Transport, storage and communications
- J Financial intermediation
- K Real estate, rental and business activities
- L Public administration and defence; compulsory social security
- M Education
- N Health and social work
- O Other community, social and personal service activities
- P Activities of private households as employers and undifferentiated production activities of private households

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: www.stat.si.

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.
Quarterly and yearly data on Gross domestic product are not yet reconciled.

Non-financial accounts and general economic statistics (Tables 6.1 to 6.8)

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production. Indices on industrial production are provisional from February 2004 on.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2006 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1–ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exch. rate, ECB EER-42 group of currencies (AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CZ, EE, HU, LV, LT, PL, SK, BG, RO, NZ, DZ, AR, BR, HR, IN, ID, IL, MY, MX, MA, PH, RU, ZA, TW, TH, TR, IS, CL, VE) – Euro area 15 against Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs deflated, ECB EER-22 group of currencies and Euro area 15 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO) against Slovenian tolar (until 31.12.2006) from 01.01.2007 against Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data shown every three months of the year are quarterly.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products (intermediate goods, capital goods and consumer goods), as well as by main divisions of activities.

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.
