Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

As a result of the continuing deterioration in economic conditions, in January the European Commission again cut its economic growth forecasts for major global economies. Economic growth in 2009 is forecast at -1.9% in the euro area and -1.6% in the US. The forecasts for Slovenia's most important euro area trading partners were also cut. Industrial production in the euro area in November was down 7.7% in year-on-year terms, while new manufacturing orders also fell sharply. The effects of the turmoil are also being seen in rising unemployment; November's rate was up to 7.8% in the euro area, and 7.2% in the US. Commodity prices continued to decline in December, while the price of a barrel of Brent crude rose slightly in early January under the influence of the dispute over the transportation of Russian gas to Europe. The euro fell against the US dollar in January to average USD 1.3260. Under the influence of falling oil and commodity prices and the cooling economy, year-on-year inflation fell to 1.6% in the euro area, and to 0.1% in the US. According to the first Eurostat estimate, inflation in the euro area fell again in January, to 1.1%. The ECB again cut its key interest rate in early January, by 0.5 percentage points to 2.00%.

Economic activity in Slovenia slowed sharply in the final quarter of 2008. This was reflected in November's sharp year-on-year decline of 14% in industrial production, the fall in orders and the consequent increase in inventories. Activity in the construction sector also declined significantly. There are also indications of a slowdown in the service sector, albeit to a lesser extent. The economic sentiment indicator and the consumer confidence indicator declined again, reaching new record lows since the beginning of measurement. The effects of the economic turmoil are gradually being transmitted to the labour market. There was a significant decline in the workforce in employment in November, while the seasonally adjusted registered unemployment rate rose slightly. Wage growth in the public sector remained high, but fell sharply in the private sector as a result of lower end-of-year bonuses.

The current account deficit narrowed in November, taking the 12-month cumulative deficit to 5.7% of GDP. As a result of the decline in foreign and domestic demand, the deficit in merchandise trade narrowed slightly in the context of a sharp year-on-year decline in merchandise imports and exports, while the surplus of trade in services continued to widen. The deficit in factor income continued to worsen, while the deficit in current transfers stagnated in year-on-year terms. The total net financial inflow, which was still relatively large during the first eight months of 2008, was negligible from September on.

Inflation as measured by the HICP averaged 5.5% in 2008, up 1.7 percentage points on 2007. The main factors in last year's inflation were energy prices, mainly as a result of the record high oil prices, and food prices. Core inflation averaged 3.8% in 2008, primarily as a result of internal factors such as high growth in aggregate demand in the preceding period and rising labour costs. The fall in inflation could continue in the coming months, which would be in line with the expected slowdown in economic activity, lower aggregate demand, and lower price pressures from the rest of the world.

The National Assembly passed the Partial Subsidisation of Full-Time Employment Act, which aims to mitigate the effects of the financial and economic turmoil, and the Act Amending the Corporate Income Tax Act, which raises investment relief for companies. The two laws are aimed primarily at preventing a decline in economic growth, increasing liquidity in the economy, reducing labour costs and maintaining welfare. The government approved the points for departure for drawing up the official revision of the state budget for 2009, reflecting the deterioration in the macroeconomic circumstances and the new legal obligations. Under the revised state budget, the budget deficit in 2009 is forecast at 2.7% of GDP, while the deficit in the consolidated general government sector is forecast at 3.4% of GDP.

The banking sector's total assets increased by EUR 590 million in December 2008, primarily as a result of the release of SID banka bonds. The government-guaranteed 3-year bonds worth EUR 250 million were released to mitigate the effects of the financial turmoil. The stall in lending to non-banking sectors seen in November last year continued in December. On the funding side, bank borrowing from the Eurosystem increased sharply, while the increase in deposits by non-banking sectors was relatively low. Banks made net repayments to commercial banks in the rest of the world. According to the unaudited figures, the banking system's profit in 2008 was down one-third on 2007, in which December's large increase in impairments and provisioning was a major factor.

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 5.1% in December 2008 as a result of trading commencing in three new bonds. The market capitalisation of shares on the Ljubljana Stock Exchange fell by 9.9%, as a result of the 13.9% monthly fall in the SBI 20. The assets of domestic mutual funds declined to EUR 1,513 million in December 2008.

1 | International Environment

As a result of the continuing deterioration in the financial markets and the transmission of the turmoil to the real sector, the European Commission sharply cut its economic growth forecasts for major global economies in 2009. According to the European Commission's January interim forecasts, economic growth in 2009 will stand at -1.9% in the euro area and -1.6% in the US. The economic growth forecasts for Slovenia's most important trading partners were also cut. The most recent figures from manufacturing industry and the labour market confirm the weak forecasts. Industrial production in the euro area was down 7.7% in year-on-year terms in November 2008, while new manufacturing orders were down 26.2% over the same period in year-on-year terms. Unemployment in the euro area has been rising since last August, and reached 8.0% in December 2008, compared with 7.2% a year earlier. Unemployment in the non-farm sector in the US is also rising, and reached 7.2% in December 2008, compared with 4.9% a year earlier.

The average price of a barrel of Brent crude rose slightly in January, while the average prices of other commodities fell again in December. A barrel of Brent crude averaged USD 41.71 in December, but USD 44.86 in

January. Oil prices rose in early January, primarily as a result of the dispute between Russia and Ukraine regarding gas supplies to Europe, before poor economic figures and an increase in stocks brought a reversal in the second half of the month. Year-on-year growth in the US dollar prices of other commodities (excluding oil) stood at -30.0% in December. The main factor in the negative growth was metals prices, which fell by 49.0% in year-on-year terms in December. Over the same period, prices of industrial commodities fell on average by 46.0%, and food prices by 17.2%. One of the factors in the large year-on-year fall in commodity prices was the high basis in 2007.

Inflation fell again in December in the euro area and the US as a result of a fall in commodity prices and cooling economic activity. Inflation in the euro area continued to fall in January. Year-on-year inflation as measured by the HICP stood at 1.6% in the euro area in December 2008, down 0.5 percentage points on November, and fell further to 1.1% in January. The main factors in the year-on-year inflation rate were growth in the prices of hotel and restaurant services, housing, and alcohol and tobacco products. Year-on-year core inflation as measured by price growth excluding energy and unprocessed food fell from 2.2% in November to 2.1% in December. Year-on-year inflation in the US stood at 0.1% in December, down 1.0 percentage points on November. The main factor in the fall in inflation was again lower energy prices, including oil prices. Year-on-year core inflation (excluding energy and food) stood at 1.8%

Note: Forecast for the current and previous year are stated in brackets for GDP.

2 | Economic Activity and Labour Market

in December, down 0.2 percentage points on November.

The euro fell against the US dollar during January. The euro averaged USD 1.3449 in December, and USD 1.3260 in January. The factors in the euro's fall against the US dollar were the figures released showing a further economic slowdown in the euro area, and the credit downgrading of certain euro area countries.

In January the ECB cut its key interest rate to 2.00%.

The ECB cut its key refinancing rate by 0.50 percentage points in January to 2.00%. The Federal Reserve has maintained its key interest rate at between zero and 0.25% since last December.

Industrial production in Slovenia last November was down 12.8% from the previous month, the largest fall in the euro area. This was in line with the double-digit decline in orders seen for several months. According to the seasonally adjusted figures, industrial production in November was down 12.8% on October, and down 12.0% on November 2007 according to the figures adjusted for the number of working days. After excluding the effect of the number of working days, industrial production averaged a year-on-year decline of 0.6% over the first eleven months of 2008. The seasonally adjusted figures for the product categories show that November's production was lower than October's in all the basic categories, consumer goods recording the largest decline of 18.2%, which was in line with the weaker consumer expectations. The decline of 7.2% in the production of capital goods is an indication that not only is consumer demand declining, but investment demand is also declining. Production of intermediate goods was down 6.1%. The sectors recording the largest year-on-year declines in output were the manufacture of transport equipment (32.8%), and the related manufacture of metals and fabricated metal products (16.4%). November's output

in the manufacture of transport equipment was down 27.2% from the previous month, while the figure for the manufacture of metals and fabricated metal products was -13.1%. These are sectors in which output recorded relatively high growth in recent years.

The figures for new manufacturing orders also reveal a deepening economic slowdown, with inventories increasing further. The value of new orders received in November was down 23.2% on the previous month, and down 39.6% in year-on-year terms. The value of new orders from the domestic market was down 14.3% on October, while the value of new orders from the foreign market was down 24.9%. Inventories of manufactured goods have simultaneously been increasing, partly as a result of the decline in orders, both domestic and foreign. The seasonally adjusted figures for November reveal that producer inventories of manufactured goods were up 1% on October. The largest increase of 2.8% was recorded by inventories of intermediate goods, while those of capital goods were up 0.9% on the previous month, and those of consumer goods up 0.6%. This trend is partly a reflection of the lag between the rapid decline in orders, and actual production. The lag can depend on the terms and method of the supply, production and distribution of manufactured goods, and other conditions on the market.

The construction and service sectors have also begun

to show a clear slowdown. The seasonally adjusted figures reveal that November's sales revenues in the retail sector were up 1.2% on October, which is a significant slowdown compared with the trends in the previous months. At 2.3%, November's monthly growth in sales revenues from non-food retail was faster than that of retail of food, beverages and tobacco products, where revenues were unchanged from the previous month. Having previously recorded high growth, real sales revenues from trade in motor vehicles in November were down 3.1% on October. In the tourism sector, the number of arrivals in December was up 6.0%, while the total number of overnight stays in 2008 was 2.0%

Sources: SORS, Eurostat, Bank of Slovenia calculations.
 Notes: Number in parenthesis refers to the month of last available data. Differences from official numbers are due to rounding.

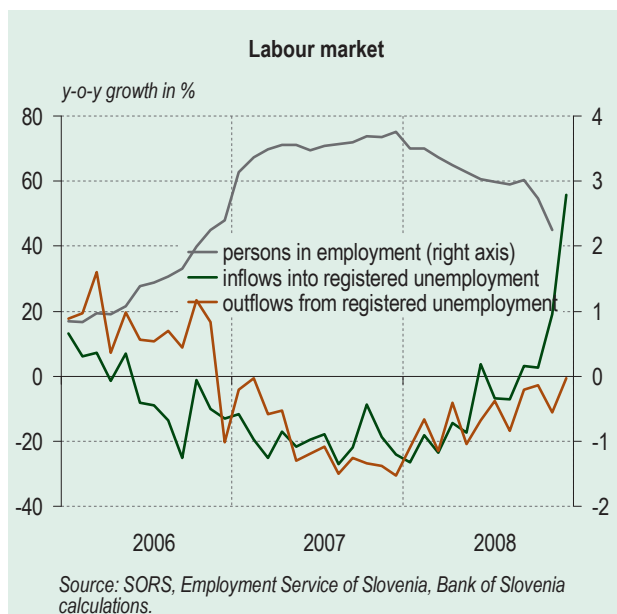

higher than in the previous year. In the construction sector there are increasing signs of a slowdown, the value of construction work performed in November declining by 29.6% from October, and by 8.1% in year-on-year terms. This was in line with the sharp year-on-year decline in the number of building permits issued for the construction of buildings in the third quarter of last year.

In January the economic sentiment indicator was down in both current and year-on-year terms, reaching a new low since measurement began in 1995. January's seasonally adjusted economic sentiment indicator was down 5 percentage points on December, and was 30 percentage points below its long-term average. The main factors in the decline were the declines in the services and consumer confidence indicators. January's seasonally adjusted manufacturing confidence indicator was down 3 percentage points on December, while the outlook for the coming months is also unfavourable, with three indicators reaching new record lows. January's construction confidence indicator was down 7 percentage points on December. Here the largest decline was in the amount of construction work completed, which was down 12 percentage points, while the indicators of expected prices and the current situation declined by 11 percentage points. The retail and services confidence indicators were down 3 and 4 percentage points respectively on the previous month. This is the third successive month that all the overall economic sentiment indicators have declined.

After a record decline in December, the consumer confidence indicator declined again in January in both current and year-on-year terms to reach a new low since measurement began in 1996. January's seasonally adjusted consumer confidence indicator was down 9 percentage points on December, and down 21 percentage points on the same month last year. Consumers are still pessimistic about unemployment, but are most pessimistic about their planned real estate purchases in the coming 12 months. This pessimism is also reflected in the major purchases suitability indicator, which was down 32 percentage points in year-on-year terms, while the suitability of saving indicator was up 14 percentage points in year-on-year terms, and up 2 percentage points on December. These assessments were similar to those by consumers in other European countries.

On the labour market, there was a significant increase in the number of newly registered unemployed at the end of 2008. The number of newly unemployed in December 2008 was 56% higher than in December 2007, and 4% higher than November 2008. By contrast, the number of unemployed has fallen in previous Decembers. Year-on-year growth in the workforce in employment declined significantly in November to 2.2%. The workforce in employment was down 1.4% on October, despite November usually seeing a rise in this figure. Year-on-year growth in the workforce declined to 1.6% in November, while the current rate of growth stood at -0.05%. There was a notable acceleration in the

year-on-year fall in employment in the manufacturing sector, from 1.3% in October to 2.1% in November. In contrast, year-on-year growth in employment remained relatively high in the construction sector (9.8%) and the real estate, renting and business activities sector (7.1%). In monthly terms, the seasonally adjusted (X12 method) registered unemployment rate rose slightly in November, to 6.7%.

Year-on-year wage growth in the public sector was high in November as a result of the new wage system,

but the current rate of growth was more moderate.

Year-on-year growth in the average gross wage stood at 12.2% in November, down just under 1 percentage point on October. Growth in net wages was slightly lower, at 10.9%. The health sector recorded the highest wage growth in the public sector in November (20.0%). In contrast to the moderate growth in previous years, the public administration and education sectors also recorded high growth of 15.9% and 9.3% respectively.

Year-on-year growth in wages in the private sector fell sharply in November as a result of lower end-of-year bonus payments. On average, these payments (Christmas bonuses and 13th month payments) amounted to EUR 307 per employee in November 2007, including employees who did not receive any bonuses, but to EUR 232 in November 2008. Growth in the average gross wage in the private sector stood at 1.0% in November, compared with 7.7% in October. Eliminating the effect of bonus payments, year-on-year growth in wages in the private sector stood at 5.4% in November. The major sector recording the highest wage growth was transport, storage and communication (7.7%), while financial intermediation recorded the lowest growth, wages in the sector falling by 6.6%. The average gross wage in Slovenia in November was up 3.9% in year-on-year terms.

Sources: Statistical Office of the Republic of Slovenia, Bank of Slovenia calculations.

Notes: * Sections of SKD classification. ** CPI deflator.

The index of the nominal effective exchange rate as measured by the harmonised competitiveness indicator appreciated in December, in both monthly and year-on-year terms. After seven consecutive months of depreciation, which from August on had primarily been the result of the euro's fall against the US dollar, the index rose again in December. The main factors in December's monthly rise of 2.0% in the nominal effective euro exchange rate against a basket of foreign currencies were the euro's rises of 5.6% against the US dollar and 8.9% against the pound sterling. The nominal effective exchange rate also rose in year-on-year terms, by 1.6 percentage points, to 0.5%, which is 0.6 percentage points less than in the same month of 2007.

The indicator of the price competitiveness of the Slovenian economy as measured by consumer prices appreciated in December in both monthly and year-on-year terms. The appreciation in the real effective exchange rate of 0.5% was primarily the result of the appreciation of the nominal effective exchange rate, while the effect of growth in domestic prices outpacing that of the basket of foreign prices was negligible. Last December also saw a similar reversal in the indicator of price competitiveness as measured by consumer prices (from depreciation to appreciation) in Slovenia's most important euro area trading partners. Viewed long-term, the gaps between the movements in the price competitiveness indicator in various countries widened somewhat. In the year to December 2008, only

the price competitiveness indicator for France remained almost unchanged. There were year-on-year depreciations of 0.1% in Austria and 0.5% in Germany, but year-on-year appreciations of 0.5% in Slovenia, and 0.9% in Italy, the largest figure. Last December's ranking of the countries in terms of the price competitiveness indicator was unchanged from a year earlier.

The harmonised competitiveness indicator as measured by the GDP deflator depreciated by 0.2% in the third quarter of last year. In the context of current depreciation, the longer-term indicators also improved. The year-on-year appreciation in the competitiveness indicator stood at 3.6% in the first quarter of last year, but had fallen by just under

1 percentage point to 2.7% by the third quarter. The main factor in the improvement in the competitiveness indicator was the decline in year-on-year growth in Slovenia's GDP deflator, from 6.2% in the first quarter to 3.3% in the third quarter of last year. In the countries under comparison the competitiveness indicator as measured by the GDP deflator declined by an average of 1.3 percentage points in year-on-year terms between the second quarter and the third quarter of last year, and ranged from 1.4% in Germany to 3.3% in Italy. There were no major discrepancies between the relative competitiveness of the Slovenian economy against the most important euro area trading partners as measured by the GDP deflator and the HICP during the observation period.

3 | Price Developments¹

Inflation began to fall in the second half of 2008, primarily as a result of lower energy prices, and stood at just 1.8% in December. Inflation as measured by the HICP averaged 5.5% in 2008, up 1.7 percentage points on 2007. Inflation averaged 6.5% over the first half of 2008, as a result of the high economic activity in the preceding period and commodity prices on international markets. The largest increase among the inflation sub-categories was recorded by energy prices, whose rise of 9.4% was primarily the result of record high oil prices, which averaged USD 98, up USD 25 on 2007. Food prices rose by 8.1%, prices of processed food rising by 9.9% and prices of unprocessed food rising by 4.6%. Services prices rose by 5.3%, while prices of non-energy industrial goods rose by 2.2%. Energy prices accounted for 0.8 percentage points of the 1.7 percentage points increase in average inflation, the increase in other prices accounting for the remainder.

Inflation in the euro area as measured by the HICP averaged 3.3% in 2008, up 1.2 percentage points on the 2007 average. The largest increases among the price

sub-categories were recorded by energy prices, whose rise of 10.3% was 7.7 percentage points higher than in 2007, and food prices, which rose by 5.1%. Services prices rose by 2.6%, while prices of non-energy industrial goods rose by 0.8%, a decline in growth of 0.2 percentage points from the previous year. Slightly stronger inflation trends were seen throughout the European Union, where average annual inflation rose from 2.3% to 3.7%. Energy prices accounted for 0.7 percentage points of the overall increase of 1.2 percentage points.

A feature of the overall inflation trend in Slovenia in 2008 was the significant deviation from the price developments in the euro area in all sub-categories other than energy prices. The higher price growth in Slovenia could to a great extent be attributed to internal factors such as high growth in aggregate demand in the preceding period and rising labour costs compared with the euro area. Core inflation as measured by growth in the harmonised index of prices excluding energy, food, alcohol and tobacco averaged 3.8% in Slovenia in 2008, compared with 1.8% in the euro area. The largest parts of this discrepancy can be attributed to prices of services and non-energy industrial goods, which rose at double the pace of those in the euro area overall. Growth in food prices averaged 8.1% in Slovenia, compared with 5.1% in the euro area overall. The gap between the 12-month average of growth in the HICP

¹ The January inflation figures are to be released by the SORS on 9 February.

in Slovenia (5.5% in December) and the Maastricht price stability criterion (computed at 4.1% in December) was also wider than a year earlier.

Growth in industrial producer prices on the domestic market continued to slow in December, and stood at 3.1% in year-on-year terms, down 0.5 percentage points on November. Price rises were most pronounced in the sectors of electricity, gas, steam and hot water supply, the manufacture of textiles, and mining and quarrying. Industrial producer prices on the domestic market rose by 5.7% on average in 2008. The largest rises were in energy prices (7.6%), prices of intermediate goods (6.3%), commodity prices (5.7%) and prices of consumer non-durables (5.7%). In the euro area industrial producer prices on the domestic

market rose by 3.3% in November, down 3 percentage points on October. The main factor in the lower growth was energy prices, whose growth of 6.3% in November was down 9.6 percentage points on October.

4 | Balance of Payments

The current account deficit narrowed in year-on-year terms in November, primarily as a result of a slightly smaller merchandise trade deficit. The monthly current account deficit stood at EUR 158 million, EUR 27 million less than in November 2007. The deficit in merchandise trade narrowed slightly in the context of a sharp decline in year-on-year growth in merchandise imports and exports, while the surplus of trade in services continued to widen. The deficit in factor income continued to worsen, while the deficit in current transfers stagnated in year-on-year terms. The current account deficit over the first eleven months of 2008 stood at EUR 1,826 million, EUR 676 million more than in the same period the previous year, while the 12-month deficit reached EUR 2,131 million or 5.7% of GDP in November.

November's year-on-year decline in the value of merchandise trade was the largest since 1992, when comparable figures were first available. According to balance of payments figures, merchandise exports were down by 13.9% and merchandise imports by 13.0% in year-on-year terms, both also recording a very sharp monthly decline. According to the SORS figures, exports to EU Member States, which account for about 70% of total merchandise exports, recorded a sharp year-on-year decline of 17.1%. Growth in exports to non-EU countries, which until October had remained relatively high, was also negative in November, exports declining by 7.2%. The decline in imports from EU Member States was even sharper, at 19.0%, and only growth in imports from non-EU countries remained high, at 9.8%. According to the balance of payments figures, year-on-year growth in merchandise trade over the first eleven months of 2008 stood at 8.5% on the import side and 3.8% on the export side, a significant decline from the same period of 2007, when the rates were 19.4% and 17.3%. These trends point to a decline in industrial production and import demand in Slovenia's most important euro area trading partners, which intensified in November. They are also related to the slowdown in the domestic economy, particularly in manufacturing, and confirm the significant deterioration in the manufacturing export orders and export expectations indicators, which began to decline sharply in the final quarter of 2008. In the context of a major decline

in imports in value terms, November's merchandise trade deficit was down slightly in year-on-year terms at EUR 181 million², the deficit over the first eleven months of the year standing at EUR 2,353 million, EUR 980 million more than in the same period of 2007.

In contrast to merchandise exports, year-on-year growth in exports of services increased further, the surplus of trade in services continuing to widen in the context of low growth in imports. According to the latest balance of payments figures, November's year-on-year growth in exports of services was significantly higher than October's at 25.4%, while the rate for imports of services was low at 0.9%. On the export side, growth in tourism exports remained high, while growth in intermediation and miscellaneous business and technical services increased.

Of the major service sectors, only construction services saw a sharp decline in growth, while growth in exports of transport services is declining from a high level, which is related to the decline in economic activity internationally. Year-on-year growth in imports of services was slightly higher than in October, but continues to slow compared with the first half of the year. Only growth in imports of transport services increased slightly in November, while imports of construction services declined sharply for the second consecutive month, which is in line with the slowdown in domestic construction. There was a year-on-year increase of EUR 76 million in November's surplus of trade in services, the increase strengthening in the second half of the year as a result a widening surplus in tourism trade and an improvement of the position in miscellaneous business services. The

² According to the SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix), the merchandise trade deficit in November 2008 stood at EUR 212 million.

surplus of trade in services over the first eleven months of 2008 amounted to EUR 1,653 million, up EUR 523 million in year-on-year terms.³

The deficit in factor income continued to widen as a result of an increase in net interest payments, and, in November, as a result of higher outward dividend payments and profit distributions. November's deficit of EUR 86 million was EUR 59 million larger in year-on-year terms. The main factor in the increase was the large outflow of dividends and profit distributions from FDI. This was up EUR 21 million in year-on-year terms to EUR 32 million, while the inflow was down one-half at EUR 5 million. Net interest payments on loans raised in the rest of the world increased further in year-on-year terms to reach EUR 67 million in November, up EUR 12 million on November 2007. The deficit in factor income over the first eleven months of 2008 stood at EUR 928 million, up EUR 259 million in year-on-year terms, almost entirely as a result of the increase in net interest payments on loans. The 12-month deficit reached EUR 967 million in November, or 2.6% of GDP.

There was no significant year-on-year change in November's deficit in current transfers. It stood at EUR 22 million. The surplus in insurance transfers continued to increase, which led to the deficit in current transfers over the first eleven months of 2008 narrowing by EUR 40 million in year-on-year terms to EUR 197 million.

The net financial inflow, i.e. the surplus of financial inflows from the rest of the world over financial outflows to the rest of the world, which was relatively large in the first eight months of 2008, was negligible from September on. The net financial inflow during the first eight months of the year amounted to EUR 1,829 million, just under half of which was into the general government sector (February's release of government bonds), and the remainder of which was into the private sector. The large net financial outflow in September and October (EUR 275 million) and large inflow in November (EUR 241 million) were primarily the result of monetary policy operations.

The net financial inflow into the private sector was negligible between June and September last year, then swung into a net financial outflow in October and November. The net financial inflow into the private sector was EUR 672 million during the first five months of the year, but totalled just EUR 220 million between June and September. This decline was primarily the result of seasonal factors. The net outflow in October and November (EUR 66 million) was connected partly with the lower demand for lending from domestic sectors and the resulting diminished need for banks to seek additional funding from the rest of the world, and partly with the financial turmoil.

Both the private sector's claims and liabilities vis-a-vis the rest of the world declined between September and November. In the first eight months of the year the private sector's liabilities to the rest of the world increased by EUR 4,271 million, while its claims against the rest of the world increased by EUR 3,455 million. The liabilities declined by EUR 635 million and the claims by EUR 645 million in total between September and November.

Prevalent among financial liabilities to the rest of the world in the first eight months of 2008 were loans to banks and deposits by non-residents, which slowed from September on partly as a result of the decline in lending demand from domestic sectors, and the deepening financial turmoil. In the first eight months of 2008 inflows via loans to banks from the rest of the world amounted to EUR 2,043 million, while inflows via deposits by non-residents amounted to EUR 511 million, but between September and November both loans from the rest of the world and deposits by non-residents recorded outflows (of EUR 719 million and EUR 276 million respectively), which can to a great extent be tied to the financial turmoil and more restricted access to funding in the rest of the world. Inflows via FDI remained at the level of previous months, while portfolio investments remained negligible.

On the claim side, the consequences of the deepening financial turmoil are primarily being seen in a decline in portfolio investments and loans to the rest of the world.

³ According to January 2009 figures from SORS surveys, spending by Slovenian tourists on travel abroad in the third quarter of 2008 was down in year-on-year terms, the number of private journeys declining by 15.8%, and the number of overnight stays by 14.0%. Taking these estimates into consideration, cumulative tourism imports in the first ten months of 2008 were down about EUR 132 million, the amount by which the total surplus of trade in services was higher than the previous provisional figures for the same period of 2008.

Outward portfolio investments declined by EUR 708 million and loans to the rest of the world by EUR 69 million between September and November. Outward portfolio investments and loans to the rest of the world increased by EUR 459 million and EUR 508 million respectively during the first eight months of the year.

The net external debt increased by EUR 2.3 billion in the first nine months of 2008, but actually declined by EUR 0.1 billion by end November. Both the gross external debt and gross external claims declined between September and November, by EUR 0.4 billion and EUR 0.3 billion respectively. The net external debt stood at EUR

5 | Public Finance

In its latest forecasts the European Commission made upward revisions to the forecasts for the general government deficit for the European Union and the euro area. For Slovenia it is estimated that there will be a deficit of 0.9% of GDP in 2008, compared with the surplus of 0.5% of GDP recorded in 2007. The European Commission is anticipating that the decline in economic activity will have a strong adverse impact on public finances in the European Union in the next two years. These are strongly linked to the general macroeconomic trends, and are also subject to high uncertainty. For this reason, when it released its latest forecasts in January the European Commission forecast increases in the general government deficit from 0.9% of GDP in 2007 to 2.0% of GDP in 2008 in the European Union, and from 0.6% of GDP to 1.7% of GDP in the euro area. It also expects a further deterioration in 2009 and 2010 to more than 4% of GDP. The forecasts for Slovenia are deficits of 0.9% of GDP in 2008 and 3.2% of GDP in 2009, before a decline to 2.8% of GDP in 2010, the general government debt reaching 25.8% of GDP by

the end of 2010.

The general government sector recorded a surplus of approximately EUR 470 million or 1.5% of GDP during the first ten months of 2008. The available figures and estimates suggest that the general government deficit in November and December exceeded this amount. The general government surplus in the first ten months of 2008 was up EUR 174 million on the same period of 2007. The majority of the surplus was generated by the state budget, while the Health Insurance Institute and the Pension and Disability Insurance Institute also recorded larger surpluses than in the same period of the previous year. Having recorded a surplus of EUR 72 million in the first ten months

of 2007, local government recorded a large deficit of EUR 90 million, primarily as a result of high growth in investment expenditure. The state budget recorded a deficit of EUR 149 million in November (compared with a surplus of EUR 60 million in November 2007), and a deficit of EUR 265 million in December (compared with a deficit of EUR 179 million in December 2007). According to the latest estimates by the Ministry of Finance, the general government sector recorded a deficit of EUR 49 million or 0.1% of GDP last year.

The economic slowdown was already being reflected in lower growth in revenues in the final quarter of last year, December in particular, the first ten months of 2008 having seen growth of 11.1%. The main factors in the high growth in revenues in the first ten months of the year were direct taxes, VAT and social contributions. Another factor in last year's high revenues from direct taxes was the previous year's developments, as corporate income tax settlements were high, while last year's rebates on personal income tax were lower than in previous years, which was part of the

reason that personal income tax revenues were high. Growth in revenues declined at the end of the year, most notably in December, to 4.5%. Growth in revenues from direct taxes declined sharply, revenues from prepayments of personal income tax on wages and corporate income tax in particular. December also saw a sharp year-on-year decline in growth in social contributions, which is primarily a reflection of smaller payments of income at the end of the year. VAT payments were particularly low in December, while this kind of payments in the second half of 2008 were up just 1.7% on the same period of the previous year. Revenues from the various types of tax during the whole of 2008 were up between 10.5% (social contributions) and 21.2% (personal income tax prepayments) on 2007.

General government expenditure in the first ten months of the year was up 9.8% in year-on-year terms, 1.3 percentage points less than the increase in revenues. Expenditure on goods and services, investment expenditure and transfers recorded above-average

Box: The government has drawn up the revision of the state budget for 2009

On 22 January 2009 the government approved the points for departure for drawing up the official revision of the state budget for 2009, reflecting the changed macroeconomic circumstances and the new legal obligations. The macroeconomic circumstances have significantly deteriorated since the adoption of the budget for 2009, and new legal obligations have been adopted since the adoption of the budget for 2009, while some obligations have been planned too low. On the expenditure side, under the revision the largest increases are in spending entitlements for wage payments, for social transfers and for subsidies. Under the revision to the state budget, the deficit in 2009 is forecast at 2.7% of GDP, while that envisaged in the previous budget as approved was just 0.3% of GDP. At the same time, according to forecasts, the health sub-sector is expected to record a deficit this year after several years of surplus, while local government is expected to remain in deficit. According to forecasts, this year's general government deficit should stand at 3.4% of GDP. The government is expected to adopt the draft revision to the 2009 budget at its session of 19 February 2009.

The National Assembly passed the Partial Subsidisation of Full-Time Employment Act, and companies will be able to make use of the money as early as February. The new Corporate Income Tax Act raises investment relief already for 2008. The Partial Subsidisation of Full-Time Employment Act and the Act Amending the Corporate Income Tax Act entered into force on 24 January 2009. EUR 230 million was earmarked for the partial subsidisation of full-time employment in the revision to the state budget for 2009. Under the aforementioned law, companies that define working hours of 36 hours a week are entitled to a subsidy of EUR 60 per month per employee for a maximum of six months. Companies that cut working hours even further as a result of lower orders (to a limit of 32 hours per week) are entitled to an additional proportionate subsidy. While receiving subsidies the companies may not release employees, and may not pay bonuses to the management board or supervisory board. The Act Amending the Corporate Income Tax Act raises investment relief for companies, for investments made on or after 1 January 2008. As a result corporate taxpayers can claim a reduction in the taxable base of 30% of the amount invested in property, plant and equipment up to a maximum of EUR 30,000 or the entire taxable base for the 2008 financial year.

growth. Expenditure on goods and services in the first ten months of 2008 was up 15.1% in year-on-year terms, while investment expenditure was up 18.9%. The largest increase was recorded by funding for new buildings, reconstructions and adaptations, which accounts for more than a half of all investment expenditure. The highest year-on-year growth was recorded by funding for the purchase of land and project feasibility studies.

Expenditure on transfers to individuals and households during the first ten months of the year was up 8.4%, the movements in the individual categories varying considerably. Pensions accounted for the majority of transfers, and were up 7.1% over the aforementioned period. The number of pensioners rose by 1.4% in 2008, the number of old age pensioners rising by 3.1%. Family benefits and parental allowances were up 13.9% in year-on-year terms, and sick pay was up 10.7%, while transfers to the unemployed rose for the third consecutive month.

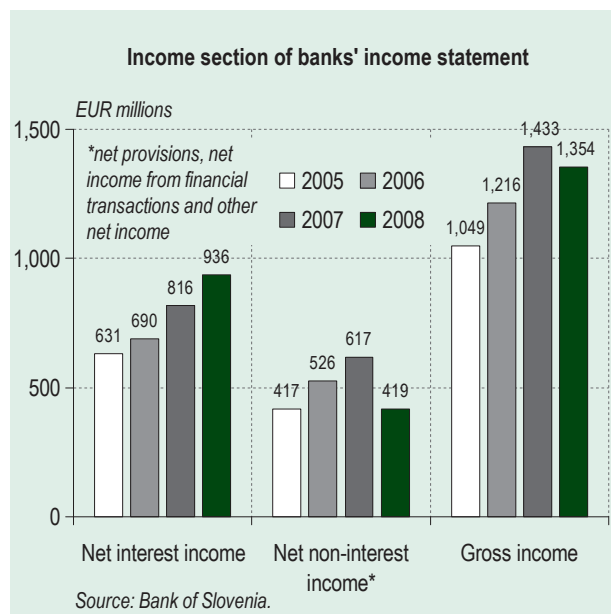

6 | Banking System⁴

The banking system's total assets increased by EUR 590 million in December 2008. Year-on-year growth in total assets thus rose to 12.3%. The increase in total assets was primarily the result of transactions related to the release of SID banka bonds. The government-guaranteed 3-year bonds worth EUR 250 million were released in December to mitigate the effects of the financial turmoil. The bonds are eligible collateral for liabilities to the Eurosystem, thus allowing banks to draw on liquid assets. The release of and subscription to the bonds led to an increase in the banking system's total assets by increasing the stock of issued debt securities within the liabilities in the banking system, and the stock of debt securities within the claims. Because the issuing bank invested a proportion of the revenue corresponding to the bond purchases in banks, on its own behalf and for its own account, SID banka's long-term claims against

⁴ The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

domestic banks and domestic banks' long-term liabilities to SID banka simultaneously increased.

The stock of securities held by banks in their portfolios increased slightly in December, but to a lesser extent than total assets. The gap between the rates of growth in total assets at the banks under majority foreign ownership and the domestic banks narrowed in December.

On the funding side, banks strengthened their financing from the Eurosystem in December, while households increased their deposits and banks again made net repayments to the rest of the world.

Corporate lending has remained stalled, while household lending by banks is weak. Year-on-year growth in lending to non-banking sectors fell below 18% in December. The net increase in loans to non-banking sectors amounted

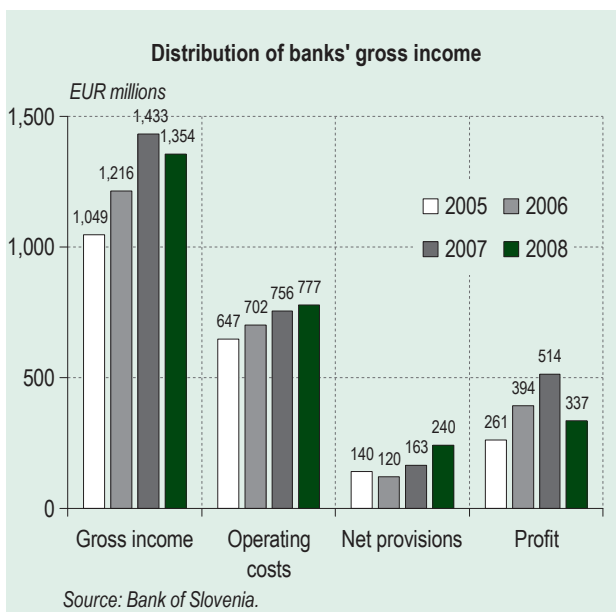

to EUR 28 million. Only non-financial corporations (NFCs) and households recorded a positive net increase, the other non-banking sectors making net repayments to banks in December of last year.

Year-on-year growth in loans to NFCs declined in December. There was a net increase in loans to NFCs at the domestic banks, while they declined at the banks under majority foreign ownership.

Year-on-year growth in loans to households rose slightly in December, primarily as a result of the stagnation in these loans in December 2007. Housing loans accounted for EUR 41 million of the increase in loans to households, while consumer loans and other household loans recorded a nominal decline. Year-on-year growth in housing loans stood at 27.3% in December 2008, down 9 percentage points on the

same month of the previous year, while growth in consumer loans was just over 5%, down almost 15 percentage points on the same month of the previous year.

The banking system made net repayments to banks in the rest of the world in December 2008, while bank borrowing from the Eurosystem increased compared with November. Liabilities to the rest of the world declined by EUR 138 million in December 2008, on account of the large domestic banks. Bank funding at the Eurosystem strengthened compared with November: the net increase stood at EUR 0.4 billion. The banking system's liabilities to the Eurosystem reached EUR 1.2 billion at the end of 2008, or 2.5% of its total assets.

December's net increase of EUR 66 million in deposits by non-banking sectors would have been significantly larger, had the government not reduced its deposits at banks. Last December's increase of EUR 159 million in household deposits was relatively high, albeit significantly lower than in the same month of the previous year, when household deposits increased primarily as a result of refunds of excess payments made into household accounts at the end of the NKBM d.d. privatisation process. The segment with maturity of between 1 and 2 years accounted for four-fifths of December's increase in household deposits. Last year's increase of EUR 1.1 billion in household deposits was comparable to that of the previous year.

According to unaudited figures, the banking system's profit in 2008 was down over one-third on the previous year's. Additional impairment and provisioning costs were the main factor in December. Growth in net interest was relatively high in December 2008, while non-interest income was down about one-third on the previous year, as in the previous months. Year-on-year growth in operating costs declined to 2.8% in December. Impairment and provisioning costs rose sharply in December. Having been lower than the previous year's as late as November, just over EUR 108 million of additional impairments and provisioning was created by banks in December 2008. According to unaudited figures, in 2008 eleven banks recorded worse operating results than in 2007. Despite the deterioration in conditions in 2008, none of the banks recorded a loss.

7

Domestic Financial Markets

In December 2008 the spread between the average monthly market yields on Slovenian and German long-term government securities widened to 151 basis points. Yields on the former declined by 5 basis points, while yields on the latter declined by 51 basis points. The ECB cut its key refinancing rate by 50 basis points on 15 January 2009 to 2.00%. A week earlier the Bank of

England had also cut its key interest rate by 50 basis points, to 1.50%. The financial markets remained risk-averse during last December and the first 20 days of January because of the discouraging economic results, rising unemployment and downgradings of some countries and corporates. By 21 January 2009 the S&P index in the US had lost 7.9% and the western European DJ EuroStoxx index 10.8%.

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 5.1% in December 2008 as a result of the listing of three new bonds. The volume of trading in bonds was just under one-half higher than the average monthly volume in 2008.

The market capitalisation of shares on the Ljubljana Stock Exchange fell by 9.9% in December 2008, as a result of the 13.9% monthly fall in the SBI 20. The market capitalisation of shares fell by 57.1% in 2008. There were eight long retail certificates issued directly on Slovenian shares and two long certificates issued on indices including Slovenian shares that reached the knock-out barrier in December. A further eight of the latter had reached the knock-out barrier by 22 January.⁵ The sale of the underlying instruments meant that the expiring retail certificates caused further falls in share prices on the stock market. The P/E ratio declined to 10.5 in December 2008, having stood at 32.5 a year earlier. The volume of trading in shares was low in December, at just over one-half of the average monthly volume in 2008. The prime market accounted for 71% of the volume of trading in shares.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents rose to 7.1% in December. Non-residents made net purchases of EUR 65.2 million in shares, and made net sales of EUR 4.9 million in bonds. Net purchases of Slovenian shares were made by residents of Austria, Germany and Italy. The major net sellers of Slovenia bonds, primarily government bonds, were residents of Austria and Germany, while residents of the UK were net purchasers. Non-residents made net purchases of EUR 14.1 million

⁵ Source: <http://www.boerse-stuttgart.de>

in Slovenian shares and EUR 864.5 million in Slovenian bonds in 2008.

Residents made net sales of EUR 103.3 million in foreign bonds and net purchases of EUR 46.8 million in foreign shares in December. The largest net seller of bonds, primarily bonds from euro area countries, the UK, Denmark and Sweden, was the banking sector, followed by the insurance sector and the general government sector. The banking sector was also the largest net purchaser of shares of issuers from the former Yugoslav republics in December, while the sector of other financial intermediaries was the largest net purchaser of shares of issuers from the euro area. Households made net sales of shares of foreign issuers. Residents made net sales of EUR 215.7 million in foreign bonds and EUR 4.1 million in foreign shares in 2008.

The assets of domestic mutual funds declined by 5.9% in December 2008 to EUR 1,513 million. The assets of domestic mutual funds declined by 48.2% in 2008, or EUR 1,411 million, of which net outward payments accounted for 21.5%, valuation effects (capital losses) accounting for the remainder. There were net outward payments of EUR 13.3 million from domestic mutual funds⁶ in December, of which EUR 8.7 million was from equity funds, EUR 3 million from balanced funds, EUR 1.3 million from bond funds and EUR 0.3 million from money-market funds. From a regional point

of view, there were net inward payments of EUR 2.4 million into "Balkan" equity funds. The proportion of mutual funds' total assets accounted for by liquid assets rose to 12.8%. The average unit price of domestic mutual funds fell by 4.6% in December, increasing the year-on-year fall to 42.8%. The monthly change in the average unit price of mutual funds investing in the Balkans was -4.4% in December, while the year-on-year change was -64.0%. The Croatian stock market index gained 7.2% in December and the Serbian index gained 4.1%, but the Macedonian index lost 13.5%. The Macedonian and Croatian indices then gained 6.4% and 3.8% over the first 20 days of January, while the Serbian

⁶ Liquid assets include cash, deposits, money-market instruments and government bonds.

index lost 13.0%. In January 2009 seven management companies established umbrella funds from existing funds, the majority incorporating all their existing mutual funds as sub-funds of the newly established umbrella funds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS
Interest rates (tables 2.1–2.4)
Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The *overnight-deposit interest rate* is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause
Interbank market
SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The **tolar indexation clause (TOM)** is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Ljubljana Stock Exchange (Tables 2.6 to 2.8)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities

Shares – investment fund shares are not included.

IF – investment fund shares.

Turnover is measured with a single counting.

Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of

individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

- SBI – Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO – Bond Index
- SBI, BIO – value of SBI and BIO at the end of period
- dT – change of index value by points
- d% – change of index value in percentage
- Min, Max – minimum and maximum value of index in a period

Exchange rates (Tables 2.9.1–2.9.2)

Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

As of 1 January 1999, with the introduction of the European Monetary Union, the European currency unit (XEU) was replaced by the euro (EUR) at an exchange rate of 1:1. Fixed exchange rates between the euro and the national currencies of the EMU member states (valid from 1 January 2001):

1EUR =	40.33990 BEF
=	1.95583 DEM
=	340.75000 GRD
=	166.38600 ESP
=	6.55957 FRF
=	0.78756 IEP
=	1936.27000 ITL
=	40.33990 LUF
=	2.20371 NLG
=	13.76030 ATS
=	200.48200 PTE
=	5.94573 FIM

Due to the introduction of the euro in January 2002, the exchange rates of some members of EMU currencies (ATS, FRF, DEM, ITL) have been replaced by the exchange rates of some EU accession countries (CZK, HUF, PLN, SKK).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish złoty was denominated on 1 January 1995 at the exchange rate of 1 new złoty for 10,000 old złotys.

Table 2.9.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Payment systems (Tables 2.10 to 2.16)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.10: TARGET and Giro Clearing transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 3: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Table 2.11 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.12 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.13 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.14 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.15 Debit Transfers and Simply book-entry

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.16: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;

- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (SAD).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
 - report on account balances at domestic banks – PPV (until 31 December 2004),
 - report on account balances abroad – C (until 31 December 2006),
 - report on transactions through accounts at domestic banks – PPT,
 - report on transactions through accounts abroad – C.

All banks which conduct international payment transactions and all residents with open accounts abroad are obliged to report. The resident issuer/beneficiary of the payment is obliged to forward data on the type of transaction.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU**
- **Estimates and other sources**
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
 - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
 - estimate of Italian pensions (UMAR) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
 - estimate of labour income (SURS),
 - data on pensions paid to non-residents (ZPIZ),
 - survey on the write-downs of debt from trade in goods and services abroad,
 - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
 - estimate of cash transactions on tourism and labour income (from 2007 onwards).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments – made for goods exported and imported without customs declarations and for which data are available from ITRS or from the reports of duty free shops and consignment warehouses. Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

The source of records on transportation services is the ITRS.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS. All construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures).

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated (from a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes, paid in the current month). The estimate is replaced by actual data only when these data are available. Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates. From 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data).

Capital and financial account

Capital account

Capital transfers

Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. Data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad.

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies.

Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment rela-

tionship (these data are included in item other investment/loans.

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

Since 2004, these types of transactions are included in VRP and KDD sources.

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

The foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (transactions booked on the account number 188000 showing net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former

Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)
- March 2007 (EUR 1000.0 million)
- February 2008 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2008 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2005 to 2007 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2009, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2008 shall take into consideration the new three year average (2006 to 2008).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2006 are provisional.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments. However, there are differences in some items and data sources as follows:

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR),
- short-term commercial credits with non-residents (SKV),
- reports on accounts abroad (C) and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds

and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial instruments

Since 2003, the data are included in VRP and KDD sources.

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Sources for long-term trade credits and loans are credit registration forms and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments, those being the accounting data of commercial banks (KNB), the account balances of banks in original currencies (PPV), the account balances abroad of companies (C) and the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial instruments are not used because these types of instruments are not included in the

balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 2/2002) and is in line with the classification of activities NACE Rev.1 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 3 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, hunting and forestry
- B Fishing
- C Mining and quarrying
- D Manufacturing
- E Electricity, gas and water supply
- F Construction
- G Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods
- H Hotels and restaurants
- I Transport, storage and communications
- J Financial intermediation
- K Real estate, rental and business activities
- L Public administration and defence; compulsory social security
- M Education
- N Health and social work
- O Other community, social and personal service activities
- P Activities of private households as employers and undifferentiated production activities of private households

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: www.stat.si.

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.
Quarterly and yearly data on Gross domestic product are not yet reconciled.

Non-financial accounts and general economic statistics (Tables 6.1 to 6.8)

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production. Indices on industrial production are provisional from February 2004 on.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2006 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1–ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exch. rate, ECB EER-42 group of currencies (AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CZ, EE, HU, LV, LT, PL, SK, BG, RO, NZ, DZ, AR, BR, HR, IN, ID, IL, MY, MX, MA, PH, RU, ZA, TW, TH, TR, IS, CL, VE) – Euro area 15 against Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs deflated, ECB EER-22 group of currencies and Euro area 15 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO) against Slovenian tolar (until 31.12.2006) from 01.01.2007 against Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data shown every three months of the year are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia: <http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products (intermediate goods, capital goods and consumer goods), as well as by main divisions of activities.

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

* The period to which data relate is shown in the parenthesis. NLT stands no-later-than.

1 The data on interest rates are published by the Bank of Slovenia and Ministry of Finance separately.

2 Data are disseminated daily on Bank of Slovenia Internet website - Financial Data/ Bank of Slovenia exchange rates and on Archive of financial data. Links are given in column Additional data.

3 Changes in weighting system will affect data for January. Delay in publishing is expected - NLT 9 February, 2009 (for Jan.09)

Note: "Special Data Dissemination Standard" - SDDS is a special standard for statistical data dissemination established by the International Monetary Fund in 1996.

Relevant information on the standard are available on - <http://dsbb.imf.org/Applications/web/sddshome/#introduction>. Data for Slovenia are published on - <http://www.bsi.si/imf/>
