#### Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency euro. The data of value for the previous period will continue to be published in tolars, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolars by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: http://www.bsi.si/en/financial-data.asp?Mapald=64.
- · The change in the presentation of the currency in the circulation to the standards of the euro area.
- · The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- · The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

#### I. ECONOMIC AND FINANCIAL DEVELOPMENTS

- 1. International Environment
- 2. Economic Activity and Labour Market
- 3. Price Developments
- 4. Balance of Payments
- 5. Public Finance
- 6. Banking System
- 7. Domestic Financial Markets

Economic conditions and forecasts in the international environment continue to deteriorate. According to initial estimates, economic growth in the major economies was negative in the final quarter of last year. The year-on-year rates were estimated at -1.2% in the euro area, -0.8% in the US, and -4.6% in Japan. Inflation rates continue to decline in line with the cooling of these economies and the further decline in oil prices. Inflation in February stood at 1.2% in the euro area and 0.0% in January in the US. The euro fell against the US dollar during February.

As in the international environment, economic conditions are also worsening in the domestic environment. Industrial production and activity in the service sector and construction sector continue to decline. Domestic demand is also falling in line with the decline in consumer confidence and investment activity, the economic sentiment indicator in February again reaching a record low since measurement began in 1995. The adverse climate is also being reflected on the labour market, unemployment rising by just under 12% in January alone to 74,000. With the exception of the public sector, wage growth in the private sector also declined significantly at the end of last year. The majority of economic indicators are showing that GDP in the final quarter of 2008 is likely to have fallen from the previous quarter.

The uncertainties on both the foreign and domestic markets, the initial high growth in oil prices, and the subsequent decline in first foreign demand and then domestic demand caused an increase in the current account deficit last year to 5.8% of GDP, or EUR 2.2 billion. The largest increase was in the merchandise trade deficit, which widened until the middle of the year, and narrowed slightly at the end of the year in the context of sharp declines in both imports and exports, and an improvement in the terms of trade. Factor income and transfers also recorded deficits, while there was a surplus of trade in services. The current account deficit was primarily financed by net financial inflows into the private sector, and only to a lesser extent by net financial inflows into the general government sector.

Year-on-year inflation as measured by the HICP stood at 2.1% in February, up 0.7 percentage points on January. Core inflation in February as measured by growth in the harmonised index of prices excluding energy, food, alcohol and to-bacco was down 0.2 percentage points on January at 3.0%. The fall in inflation could continue in the coming months, which would be in line with the expected continuing slowdown in economic activity, lower aggregate demand, and the expected decline in wage growth.

According to the available figures and estimates, the general government deficit amounted to around 0.25% of GDP last year. The deficit is expected to be larger this year, as a result of a decline in general government revenues and an increase in general government expenditure. Revenues are expected to decline because of the expected significant decline in economic growth, while expenditure is expected to rise because of the anti-crisis measures by which the government is aiming to mitigate the effects of the turmoil and to strengthen the economy's development potential.

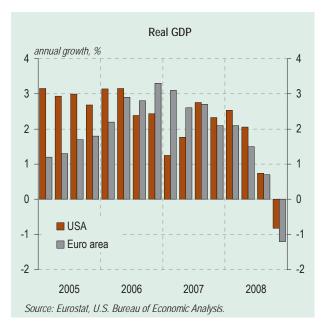

January's increase of EUR 646 million in the total assets of the banking system was again to a great extent the result of the release of SID banka bonds, the second issue in this instance. Purchases of Slovenian treasury bills by banks also contributed to the increase in total assets, while on the liability side of the banking system's balance sheet government deposits increased by a similar amount. Securities were the main source of growth in the banking system's total assets in January. Lending to non-banking sectors was limited merely to short-term corporate lending. Liabilities to banks in the rest of the world declined for the third consecutive month, while the banking system's liabilities to the Eurosystem also declined in January. The increase in deposits by non-banking sectors came primarily from the general government sector, while the increase in household deposits was relatively solid.

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 4.0% in January as a result of an expansion in trading in two new bonds. The market capitalisation of shares on the Ljubljana Stock Exchange rose by 1.5%, as a result of the 3.8% monthly rise in the SBI 20 index. The assets of domestic mutual funds declined by 0.8% in January to EUR 1,502 million.

### International Environment

Economic growth in the major economies declined sharply in 2008, to 0.7% in the euro area and 1.1% in the US. In the final quarter of last year economic activity declined by 1.2% in year-on-year terms in the euro area, by 0.8% in the US, and by 4.6% in Japan, the lowest figure in the last 35 years. In February Consensus again made sharp cuts in its economic growth forecasts for the euro area and the US. This year's economic growth is expected to stand at -2.0% in the euro area, and -2.1% in the US. The latest figures from manufacturing industry confirm these forecasts. Industrial production declined by 12.0% in year-on-year terms in the euro area in December, while new manufacturing orders were down 22.3%.

Slovenia's most important trading partners outside the euro area are also facing the effects of the financial turmoil. In February Consensus forecast a decline of 0.6% in economic activity in 2009 in both Croatia and Russia, the most important trading partners outside the euro area. According to Consensus's February forecasts, economic growth for the whole of south-eastern Europe (Albania, Bosnia-Herzegovina, Bulgaria, Croatia, Mace-

donia, Romania and Serbia) and central Europe (Czech Republic, Hungary, Poland, Slovakia and Slovenia) will stand at 0.2% in 2009. In the aforementioned countries industrial production is declining and foreign capital is leaving, while some, including Croatia and Russia, are facing devaluating pressures on their national currencies. Russia devalued the rouble in recent months, while the Croatian National Bank intervened on the foreign exchange market in January and February to ensure the stability of the kuna.

The average price of a barrel of Brent crude fell slightly in February, while the prices of other com-

I.-2 Monthly Bulletin, February 2009

modities rose in January in monthly terms. A barrel of Brent crude averaged USD 43.24 in February, compared with USD 44.86 in January. Oil prices rose at the beginning of February as a result of statements by OPEC leaders about cutting pumping, but then fell in the second half of the month, primarily as a result of market participants' disappointment with the economic stimulus plan in the US and the release of negative economic growth figures. Year-on-year growth in the US dollar prices of other commodities (excluding oil) stood at -29.1% in January. The main factor in the negative growth was the fall in metals prices, which declined by 49.6% in year-on-year terms in January. During the same month, prices of industrial commodities declined by 45.9%, and food prices by 15.8%. The year-on-year fall in commodity prices was the result of the high basis recorded in early 2008, as average commodity prices actually rose by 6.7% in January on a monthly basis.

Inflation in the euro area and the US fell again in January as a result of the fall in commodity prices and the economic slowdown, but rose again slightly in the euro area in February. Year-on-year inflation as measured by the HICP stood at 1.1% in the euro area in January, down 0.5 percentage points on December, but rose to 1.2% in February. Year-on-year core inflation as measured by growth in prices excluding energy and unprocessed food declined by 0.3 percentage points to 1.8% in January. The largest falls were in prices of transport services, communications and clothing. Year-on-year

inflation stood at 0.0% in the US in January, down 0.1 percentage points on December, again primarily as a result of a fall in energy prices, including oil. Year-on-year core inflation (excluding energy and food) stood at 1.7% in January, down 0.1 percentage points on December.

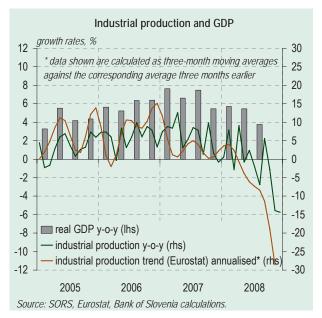

The euro fell against the US dollar during February. The euro averaged USD 1.3260 in January, and USD 1.2785 in February. The main factor in the euro's fall against the US dollar was the release of figures showing an economic contraction in the euro area.

The ECB and the Federal Reserve left their key interest rates unchanged in February. The ECB's key refinancing rate stood at 2.00%, while the Federal Reserve's key rate was in the interval from zero to 0.25%. The Bank of England again cut its base rate by 0.50 percentage points in February, to 1.00%, the lowest since its establishment.

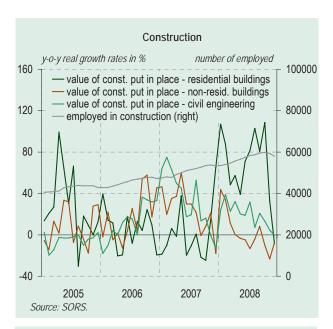

## 2 Economic Activity and Labour Market

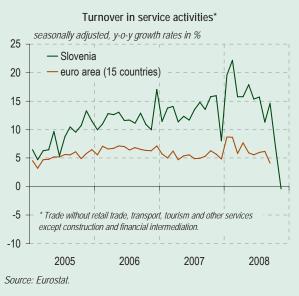

#### Real sector

After falling sharply in November, industrial production fell again in December in both year-on-year and monthly terms. According to the seasonally adjusted figures, industrial production in December was down 4.0% on November, and was down 17.5% in year-onyear terms according to the figures adjusted for the number of working days. Last year's average figure was down 1.5% on 2007. According to the seasonally adjusted figures for each category of use, December's largest decline from the previous month was recorded by production of capital goods, the decline of 23.0% reflecting the continuing decline in investment demand. Production of intermediate goods declined by 12.1% in December, while production of consumer goods was up 8.0% on the previous month. The seasonally adjusted figures for December show producer inventories of manufactured goods to have declined by 1.1% from November, al-

though the figure adjusted for the number of working days showed a year-on-year increase of 5.2%, the lowest year-on-year figure for any month of 2008. The majority of manufacturing sectors recorded a double-digit decline in output in December. This was most evident in the manufacture of transport equipment, where output was down 37.4% on November, and the manufacture of metals and fabricated metal products, which is correlated with the automotive industry, where output declined by 26.5%. The sharp decline in industrial production was also reflected in sales revenues. According to the seasonally adjusted figures, December's sales revenues in manufacturing industry were down 4.1% on November, while the year-on-year decline was 22.1% after excluding the effect of the number of working days. According to the seasonally adjusted figures for categories of use, December's largest decline in sales revenues from November was recorded by capital goods (11.4%), followed by intermediate goods (5.7%); this is a reflection of the decline in investment activity and the general decline in output. Sales revenues for consumer goods actually increased compared with November. According to the seasonally adjusted figures, December's sales revenues on the domestic market were down 5.4% on November, while those on the foreign market were down 2.4%. The value of new orders received last December was up 4.2% on November, but was down 34.3% in year-on-year terms. The value of new orders from the domestic market was down 21.0% on November, while the value of new

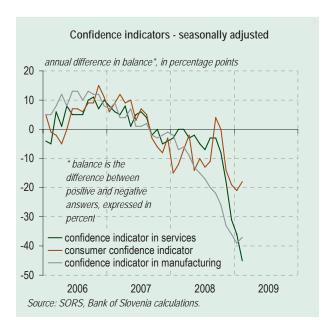

orders from the foreign market was up 10.3%.

Economic activity continued to slow in the service sector and the construction sector in December. Having risen in recent months, in December real revenues in the retail sector were down 3.2% on November according to the seasonally adjusted figures, but were up 2.2% in year-on-year terms after adjustment for the number of working days. December's real sales revenues in the sector of trade in motor vehicles and fuels were down 2.0% on the previous month, but were up 4.8% in year-on-year terms. Conditions in the construction sector are also deteriorating; the real value of construction work performed in December was down 20.5% on November, primarily as a result of a decline in civil engineering work,

I.-4 Monthly Bulletin, February 2009

and was down 4.1% in year-on-year terms. The number of building permits issued for the construction of buildings also declined in the final quarter of last year, and was down 4.0% in year-on-year terms. The main factor in this was a decline in the number of non-residential buildings planned. The number of residential buildings planned also declined, but the number of dwellings planned was up 16.2% in year-on-year terms. The quantity of merchandise moved at ports and at the airport declined in December, by 14.4% and 19.1% respectively in year-on-year terms. The number of passengers at ports and in

aviation also declined. The number of new road vehicle registrations also declined, by 21.8% in year-on-year terms.

In February the economic sentiment indicator was down in both current and year-on-year terms, reaching a new low since measurement began in 1995. February's seasonally adjusted economic sentiment indicator was down 1 percentage point on January, and was 31 percentage points below its long-term average. The main factor in the decline in this indicator was the decline of 8 percentage points in the services confidence indicator; the service sector's demand, demand expectations, employment, employment expectations and expected sales prices indicators all reaching their lowest values of the last three years. The manufacturing confidence indicator also declined in February, to reach its lowest value since measurement began; there were significant declines in the export orders, total orders and output indicators. The retail confidence and construction confidence indicators also declined, by 1 percentage point and 3 percentage points respectively from the previous month; a decline in demand was cited as a major limiting factor in both instances. The decline in the indicators of sentiment is in line with the pessimistic economic climate in the EU and the wider international environment, and the expected decline in domestic and foreign demand.

Monthly Bulletin, February 2009 5–I

After declining for four consecutive months, consumer confidence rose in February, by 6 percentage points from the previous month, but was still 18 percentage points down in year-on-year terms. There was a decline of 26 percentage points in consumers' assessment of the economic situation in Slovenia in the past 12 months, which reached its lowest level since measurement of this indicator began in 1996. However, consumers were more optimistic regarding unemployment in the next 12 months, this indicator having improved by 8 percentage points from January. This was also reflected in the major purchases suitability indicator, which was up 7 percentage points in monthly terms in February.

#### Labour market

On the labour market, there was a significant increase in the number of newly registered unemployed in January. The number of newly unemployed in January 2009 was up 78% on January 2008, and up 65% on December 2008. The total number of unemployed was up 11.6% on December 2008 at 74,000. Year-on-year

growth in the workforce in employment was down significantly in December at 1.8%, the workforce in employment declining by 0.8% from November, slightly more than the usual seasonal decline in December. Year-on-year growth in the workforce also declined in December, to 1.5%, while the current rate of growth stood at -0.4%. The year-on-year decline in employment in the manufac-

I.-6 Monthly Bulletin, February 2009

turing sector accelerated considerably from 2.1% in November to 3.1% in December, but year-on-year growth in employment remained relatively high in the construction sector, at 9.3%, and the real estate, renting and business activities sector, at 7.1%. In monthly terms, the seasonally adjusted (X12 method) registered unemployment rate rose slightly in December, to 6.9%. The surveyed unemployment rate (ILO methodology) rose to 4.3% in the final quarter of 2008.

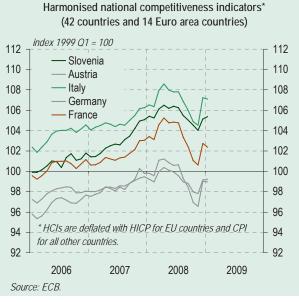

Year-on-year wage growth in the public sector was high in December as a result of the new wage system, while the current rate of growth was in line with the usual seasonal trend. Year-on-year growth in the average gross wage in the public sector stood at 13.2% in December, in line with the growth trend since August, when civil servants changed over to the new wage system. Growth in net wages was slightly lower, at 11.7%. The health sector recorded the highest wage growth in the public sector in December (21.0%). In contrast to the moderate growth in previous years, the public administration and education sectors also recorded high growth of 12.4% and 9.5% respectively.

Wage growth in the private sector continued to slow in December. The year-on-year growth rates stood at 6.7% for gross wages, and 6.2% for net wages. Ignoring the bonus payments made in December (Christmas bonuses and 13<sup>th</sup> month payments), year-on-year wage growth stood at 7.8% in December. The largest rate of 8.0% was recorded by the financial intermediation sector, while the municipal services sector recorded the lowest rate of 4.9%.

#### Selected competitiveness indicators

The index of the nominal effective exchange rate as measured by the harmonised competitiveness indicator appreciated in January, in both monthly and year-on-year terms. After seven consecutive months of depreciation, which from August on had primarily been the result of the euro's fall against the US dollar, the index rose again in January for the second consecutive month. January's monthly rise of 0.3% in the nominal effective exchange rate of the euro against a basket of foreign currencies came primarily as a result of the euro's rise of

1.5% against the pound sterling, the euro having fallen by 1.6% against the US dollar, 2.3% against the yen and 3.0% against the Swiss franc. In year-on-year terms an increase of 0.2 percentage points in the nominal effective exchange rate from 0,5% in December 2008 to 0,7% in January 2009 was noticed, a 0.7 percentage points decline compared to January 2008 figure. In 2008 the euro exchange rate appreciated by 22.9% on average against the pound sterling, but depreciated by 10.1% against the US dollar, 24.5% against the yen, and 7.8% against the Swiss franc.

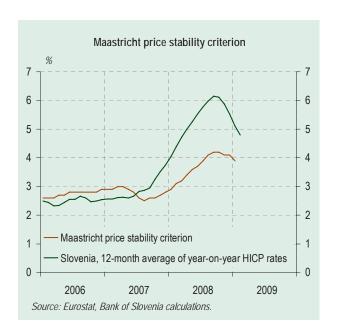

The indicator of the price competitiveness of the Slovenian economy as measured by consumer prices appreciated in January in monthly terms, but was unchanged in year-on-year terms. The appreciation in the real effective exchange rate of 0.3% was primarily the result of the appreciation of the euro's nominal effective exchange rate, while the effect of growth in domestic prices outpacing that of the basket of foreign prices was negligible. The price competitiveness indicator of the Slovenian economy was unchanged in year-on-year terms. While the gap between growth in domestic prices and growth in the basket of foreign prices contributed 0.7 percentage points of depreciation to the real effective exchange rate, the nominal effective exchange rate contributed the same amount of appreciation.

The gaps between the movements in the price competitiveness indicators between Slovenia and the main trading partners (Germany, France, Austria and Italy) are widening. Growth in the price competitiveness indicator for Slovenia was down 0.8 percentage points in January at 0.3%, the year-on-year rate remaining unchanged for the second consecutive month. There was a small decline of 0.2 percentage points on average in the partner countries, to rates ranging from -1.0% to 0.5%. Viewed long-term, the gaps between the movements in the price competitiveness indicator in partner countries widened slightly. In the year to January, only the price competitiveness indicator for Slovenia remained almost unchanged. There was year-on-year depreciation of 1.0% in France, 0.9% in Germany and 0.2% in Austria, and a year-on-year appreciation of 0.5% in Italy.

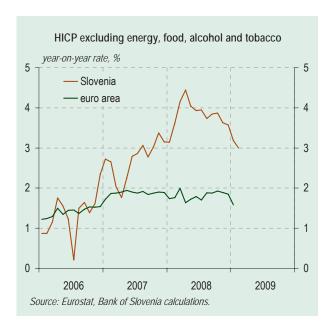

## 3 Price Developments

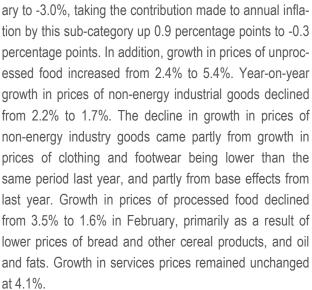

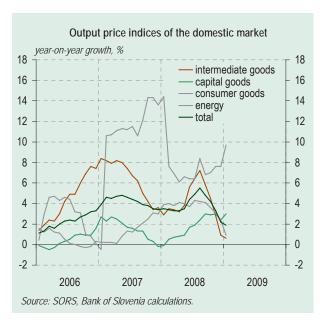

Year-on-year inflation as measured by the HICP stood at 2.1% in February, up 0.7 percentage points on January. In the inflation breakdown, February saw an increase in year-on-year growth in prices of unprocessed food and energy prices, while year-on-year growth in prices of processed food and non-energy industrial goods declined. Year-on-year growth in energy prices increased by 6.8 percentage points in Febru-

I.-8 Monthly Bulletin, February 2009

The movement in core inflation in February was in line with the slowdown in the domestic economy, in which the main factors were lower aggregate demand and lower wage growth. Year-on-year growth in the harmonised index of prices excluding energy, food, alcohol and tobacco in February was down 0.2 percentage points on January at 3.0%. The lower rate of growth in the index is primarily a reflection of the lower growth in prices of non-energy industrial goods. Core inflation expressed as the index of prices excluding energy and unprocessed food was down 0.3 percentage points in February at 2.9%.

Growth in industrial producer prices on the domestic market is continuing to slow, and stood at 2.3% in

Price Developments	Jan.09	Feb.09	Average of last 12 months	Feb.08	Feb.09
		y-o-y growth	1, %	monthly	growth, %

Monthly Bulletin, February 2009

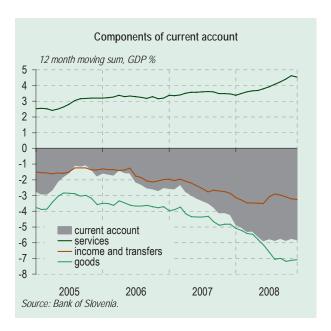

year-on-year terms in January, down 1.3 percentage points on December. The main factor in the lower yearon-year growth in prices of manufactured goods was nonenergy commodity prices, which recorded growth of -0.1% in January, down 1.4 percentage points on December. Growth in prices of consumer goods declined from 3.7% to 1.2%. The main factors in the decline were lower prices in the manufacture of metals, the manufacture of computers and electronic and optical equipment, and the manufacture of paper and paper products, printing and reproduction of recorded media. Prices of capital goods recorded year-on-year growth of 3.3% in January, down 0.9 percentage points on December. By contrast, yearon-year growth in energy prices in January was up 2.1 percentage points on December at 9.7%. As in Slovenia, year-on-year growth in prices of manufactured goods declined in the euro area in December, to 1.8%. The highest growth in the euro area in December was recorded by prices of consumer durables (2.5%), and prices of capital goods (2.2%).

The economic slowdown and the gradual decline in wage growth could further accelerate the ongoing decline in core inflation in the medium term. Year-on-year inflation in the euro area stood at 1.2% in February. The gap narrowed between the 12-month average of growth in the HICP in Slovenia (4.8% in February), and the Maastricht price stability criterion (3.9% in January). Given the cooling industrial production and the slowdown in economic activity and aggregate demand, and in line with the expected decline in wage growth, core inflation can be expected to continue falling gradually in the future.

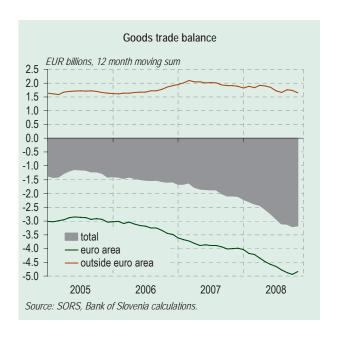

## 4 Balance of Payments

#### Current account

Last year's current account deficit stood at EUR 2,180 million or 5.8% of GDP, EUR 725 million larger than the deficit in 2007. In the context of rising energy and commodity prices, and relatively strong domestic

demand, the current account deficit widened sharply in the first half of last year. Later the widening of the current account deficit slowed significantly, as a result of the economic slowdown and the fall in energy and commodity prices under the influence of the global financial and economic turmoil. The merchandise trade deficit widened in year-on-year terms over the first eight months of the year, but actually declined slightly in the last two months of the year in the context of sharp declines in merchandise imports and exports. It was nevertheless just under EUR 1 billion larger in 2008 than in the previous year. The surplus of trade in services, which recorded a sharp year-on-year decline in December, was EUR 509 million larger in 2008 than in 2007. Apart from the decline in the deficit in

current transfers, this was the only factor acting to reduce the current account deficit. Last year there was also a sharp deterioration in the deficit in factor income, primarily as a result of an increase in net interest payments on foreign loans.

A sharp decline in merchandise trade in November and December reduced growth in merchandise imports and exports in 2008 to the lowest level since 2003. According to the balance of payments figures, December's respective year-on-year declines of 12.6% and 15.0% in merchandise imports and exports were similar to those in November, imports recording a year-on-year contraction of 6.6% in the final quarter of 2008, and exports a year-on-year contraction of 9.1%. The regional breakdown of merchandise trade shows that the financial turmoil was reflected slightly faster in the real sectors of

EU Member States than in Slovenia's trading partners outside the EU due to greater exposure to derivatives by commercial banks. According to the SORS figures, merchandise exports to EU Member States already declined slightly in the third quarter, and fell sharply by 12.5% in the final quarter of last year. Year-on-year growth in exports to non-EU countries remained high at 12.7% in the third quarter, but large falls in November and December took it to -2.2% in the final quarter. There was also a sharp contraction in merchandise imports in the final quarter, but only from EU Member States, while growth in imports from non-EU countries remained high at 13.0%. According to the balance of payments figures, merchandise exports recorded growth of 2.4% in 2008, and merchandise imports growth of 6.9%. The gap between growth in imports and exports more than doubled in year-

on-year terms, from 1.8 percentage points in 2007 to 4.5 percentage points last year, while the coverage of imports by exports declined by 3.8 percentage points to 88.4%. The merchandise trade deficit thus widened by just over EUR 1 billion to EUR 2,662 million. The current figures for new orders and industrial production in Slovenia's key trading partners and for export orders and the competitive position of Slovenian manufacturing industry on foreign markets point to a continuation of the negative trends in merchandise trade.

There was a significant year-on-year decline in the surplus of trade in services in December, but at EUR 1,703 million the 2008 surplus was up two-fifths on that recorded in 2007. According to the latest balance of payments figures, after a long period of high growth exports of services declined slightly in year-on-year terms in December, while imports strengthened after recording low growth in the second half of the year. As a result the surplus declined by EUR 25 million in year-on-year terms to EUR 38 million, the lowest figure in 2008. Among the larger service sectors, there was a year-on-year decline in exports of transport services in December, the first decline since April 2005. The slowdown in exports of transport services in the final quarter is an indication that the deterioration in economic conditions in industrial sectors in Slovenia's key trading partners is gradually spreading to the domestic service sector. Exports in the category of other services declined sharply by 13.2% in December, the largest declines among the more important sectors being recorded by construction and assembly work and by intermediation in foreign trade. Tourism exports remained at a high level. On the import side, it was imports of transport services that most notably recorded an above-average year-on-year increase in December. Growth in exports of services in 2008 was similar to that in the previous year at 18.0%, while growth in imports of services declined significantly to 8.5%. There was a sharp increase in the surplus in transport services, which was up one-third on 2007 at EUR 689 million. The surplus in tourism services also increased, to EUR 1,175 million, the increase of EUR 196 million equalling that recorded in 2007. Another significant factor in the good results in trade in services was the decline in the deficit in the sum of other services, primarily as a result of a surplus of trade in construction and assembly work and intermediation in foreign trade.

Widening by a further EUR 81 million in December, the deficit in factor income reached EUR 1,008 million in 2008, two-fifths larger than in the previous year, and stood at 2.7% of GDP. The deficit in net interest payments on foreign loans also widened by two-fifths last year, and at EUR 792 million it was the largest single factor in the widening deficit in factor income. The yearon-year widening of the deficit in net interest payments on foreign loans slowed slightly in the final quarter of last year, primarily as a result of the stalling of the increase in the net external debt, and partly under the influence of the decline in interest rates on global financial markets. The net outflow from equity declined slightly last year, while the net outflow of dividends and profit distributions and the net inflow of reinvested earnings and undistributed profits also declined. This was related to the deterioration in economic conditions, which brought a decline in the profits of corporates under majority foreign ownership in Slovenia and of Slovenian corporates in the rest of the world. Income from investments in securities remained in net surplus in 2008, and the increase of EUR 47 million in the surplus was similar to that recorded in the previous year. After several years of decline, the surplus in labour income of EUR 78 million recorded in 2007 became a deficit of EUR 14 million in 2008, the first deficit since figures first became available in 1992. This is related to the large increase in the number of foreign workers in recent years, particularly in 2008.

A surplus in private sector transfers reduced the deficit in current transfers by EUR 62 million last year to EUR 212 million. Having recorded a deficit of EUR 51 million in 2007, private sector transfers recorded a net inflow of EUR 47 million last year. This was primarily the result of net inflows from social contributions and compensation from non-life insurance. The deficit in government transfers stood at EUR 259 million, EUR 37 million larger than in 2007. The main factor in the significantly smaller widening of the deficit compared with the previous year was inflows from various product subsidies, which increased by EUR 88 million in year-on-year terms. As a result of the disbursement of less than half of the

.-12 Monthly Bulletin, February 2009

European funding, there was a sharp deterioration in Slovenia's position against the EU budget, which accounted for EUR 65 million of the increase in the deficit in current transfers. This was EUR 56 million more than in 2007.

#### Capital and financial account

The relatively large current account deficit of EUR 2.2 billion in 2008 was financed by net financial inflows of EUR 1.3 billion into the private sector and EUR 0.8 billion into the government sector. In the first half of the year, both the private sector's external claims and liabilities increased at a pace similar to that in 2007, under the influence of relatively rapid economic growth and Slovenia's increasing involvement in international financial flows. In the second half of the year, the private sector's external claims and liabilities declined as a result of the economic slowdown and, even more so, the financial turmoil from September on. The net financial inflow into the general government sector was primarily the result of February's release of government bonds in the amount of EUR 1.1 billion.

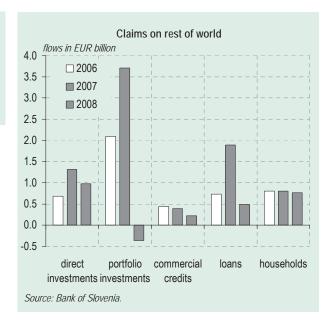

The largest increases among external claims in 2008 were recorded by FDI (EUR 1.0 billion), loans (EUR 0.5 billion) and deposits in the rest of the world (EUR 0.5 billion). The increase in claims was significantly smaller than in 2007, primarily as a result of a decline in investments from September on as the financial and economic turmoil deepened. This was most evident in loans to the rest of the world, which increased by EUR 0.5 billion in the first eight months of the year, but remained unchanged between September and December, and in currency and deposits, which increased by EUR 1.0 billion in the first eight months of the year, then declined by EUR 0.5 billion between September and December.

Most prevalent among the private sector's external liabilities in 2008 were loans from the rest of the world and FDI. Of the total increase of EUR 3.5 billion in the private sector's external liabilities, loans from the rest of the world accounted for EUR 1.9 billion and FDI for EUR 1.2 billion, two-thirds of the loans going to banks, and one-third to corporates. Of the total increase in in-

Signs: inflows or increases in liabilities (+), outflows or increases in claims (-).

ward FDI in Slovenia, investments in equity accounted for one-quarter, and investments in other capital for three-quarters, liabilities to affiliates accounting for just under EUR 0.8 billion. All classes of liabilities other than FDI declined significantly compared with 2007, primarily as a result of the lower demand for financing from the middle of the year, and the financial turmoil from September on. This was most evident in loans from the rest of the world, which increased by EUR 2.1 billion in the first half of the year, but declined by EUR 0.3 billion in the second half of the year, and deposits at banks, which increased by EUR 0.6 billion in the first half of the year, but declined by EUR 0.4 billion in the second half of the year.

The continuation of relatively strong flows with the rest of the world over the first eight months of the year, in which debt instruments were prevalent, was reflected in an increase in gross external claims and liabilities, but gross external claims and liabilities both declined from September on primarily as a result of the effects of the financial turmoil. Slovenia's gross external claims increased from EUR 28.6 billion at the end of 2007 to EUR 31.7 billion at the end of August 2008, while its gross external debt increased from EUR 33.8 billion to EUR 40.0 billion over the same period. Both external claims and liabilities declined from September, gross external claims reaching EUR 29.6 billion and the gross external debt EUR 39.0 billion.

The deterioration in the current account in the last

three years and its financing via debt instruments can be seen in the increasing pace of growth in the net external debt. The net external debt increased by EUR 2.5 billion in 2006, EUR 2.8 billion in 2007 and EUR 3.2 billion in 2008. Over the first eight months of 2008 the net external debt primarily increased on account of higher borrowing, but from September on it was primarily on account of a decline in outward investments. The net external debt stood at EUR 9.4 billion at the end of 2008. The increase in the net external debt is also increasing the financing burden, which is also causing a deterioration in the current account.

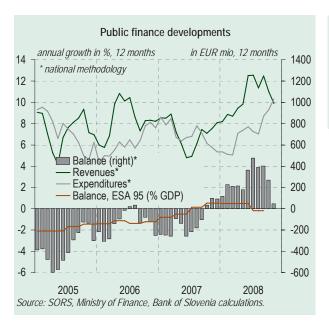

## 5 | Public Finance

According to the available figures and estimates, the general government deficit amounted to around 0.25% of GDP last year. The deficit is expected to grow significantly this year. According to provisional figures, last year the state budget recorded a surplus of EUR 65 million or 0.2% of GDP, while after a large deficit in December the health sub-sector's surplus amounted to EUR 7 million, down significantly on the previous few years. Last year's general government deficit was a reflection of the relatively large deficit in local government, which according to the available figures and estimates

.-14 Monthly Bulletin, February 2009

stood at around 0.4% of GDP, as a result of high investment growth. The trends are expected to be less favourable this year: revenues will be low, while expenditure is increasing. Under the revision to the state budget the government is forecasting a deficit in the amount of 2.9% of GDP (see box), while local government and the health sub-sector are also expected to be in deficit should additional measures not be taken.

Growth in general government revenues slowed rapidly in the final quarter of last year and the early part of this year under the influence of the deteriorating macroeconomic conditions. Having stood at around 13% over the first three quarters of last year, year-onyear growth in general government revenues fell to around 1% in the final quarter, and remained low in January of this year. The largest decline among the revenue categories was recorded by VAT, nominal payments of the tax recording a significant year-on-year decline for the third consecutive month in January. By contrast, payments of excise duties remained relatively stable over this period, and the rises in excise duties on energy products in December and January will have a beneficial impact on revenues this year. The government adopted a decree setting the level of excise duty on beer, intermediate beverages and ethanol, which raised excise duties on alcohol; revenues are expected to be EUR 20 million higher on an annual basis. It also raised excise duties on tobacco, which will generate an increase in revenues of

EUR 14 million on an annual basis. Revenues based on wages fluctuated downwards in December as a result of lower end-of-year payments, but were again relatively high in January, which is probably the result of wage trends in the public sector, while the fall in employment has only been reflected to a lesser extent in these figures. The abolition of payroll tax on 1 January 2009 has had a notable impact on this year's trend in revenues. Even last year this tax generated revenues of 0.6% of GDP.

General government expenditure rose sharply in the final months of 2008, and growth is expected to remain high this year. Year-on-year growth in general

Monthly Bulletin, February 2009

Box: The government has adopted a new package of anti-crisis measures and a revision to the state budget for 2009

The new package of government measures is aimed at encouraging bank lending and improving corporate liquidity. On 19 February 2009 the government adopted a second package of measures to mitigate the effects of financial and economic turmoil. The measures follow the European Commission recommendations to revive the economy, and cover four areas:

- In relation to finance and corporate liquidity, the most important measure is a guarantee scheme for banks for general corporate lending of up to EUR 1 billion, which reduces the credit risks of banks, which must share at least 20% of the risk. Another available measure is the provision of individual guarantees for corporate borrowing in the amount of EUR 500 million in the case of loans for investment and working capital, where the guarantee cannot exceed 50% of the loan. The aforementioned measures are in place until the end of 2010. A capital injection into SID banka is also planned. In a new de minimis aid scheme EUR 20 million will be available to companies, and the co-financing of investment in strategic projects in clean and technologically advanced industries is also envisaged.
- In relation to the labour market, lifelong learning and social security, the measures are aimed at the co-financing of education and training for employees, the unemployed and young people entering the labour market, worker retraining, self-employment and support for development projects.
- The measures to encourage sustainable development envisage the energy rehabilitation of structures under public ownership and broadband connections for public institutions.
- The exploitation of cohesion funds is to be improved.

The government also adopted economy measures relating to wages and material costs. The wage measures relate to both the number of employees and the level of the wages. The government set out an HR plan that would entail a 2% cut in the workforce from the number of employees allowed at the end of 2008, with the exception of the army, the police force, and the prison administration. The government and the public sector union representatives signed an agreement on the wage measures on 24 February 2009, under which lower wages will contribute to a stable wage policy in the public sector. The measure also envisages the retention of unchanged allowances, the non-payment of ordinary on-the-job performance bonuses (between April and November), and a cut in the performance bonus for increased workload. The third quarter of the elimination of wage discrepancies will be implemented on 1 January of next year instead of 1 September of this year. Further economies are envisaged in expenditure on goods and services.

The revision to the state budget for 2009 envisages a deficit in the amount of EUR 1,134 million or 2.9% of GDP. The government adopted the revision to the state budget for 2009 at its session of 26 February. According to the estimates, given the new macroeconomic circumstances and tax laws, revenues will be lower by about 0.6% of GDP than initially forecast when the points of departure of the revision were being drawn up. According to the latest estimates, nominal revenues this year are expected to be similar to those last year. However, it is estimated that expenditure this year will be significantly higher than last year, and approximately at the level forecast when the points of departure of the revision were being drawn up.

government expenditure over the first eleven months of last year stood at 10.6%, and strengthened in the final quarter. The largest increases over the first eleven months of the year were recorded by expenditure on goods and services, investment expenditure and transfers, and payments to the EU budget. The high wage increases in the public sector meant that expenditure on wages increased in the second half of the year. The second quarter of the adjustment to eliminate wage discrepancies was implemented in January of this year. Expendi-

tures on transfers to individuals and households strengthened in the second half of last year, the final quarter in particular. Expenditure on investment recorded significantly lower growth in the final quarter than earlier in the year. A partial subsidy for full-time employment has been available to companies since February of this year to mitigate the effects of the financial turmoil. EUR 230 million or 0.6% of GDP has been earmarked for this measure in the revision to the state budget for 2009. According to the available figures, 250 companies with a total of

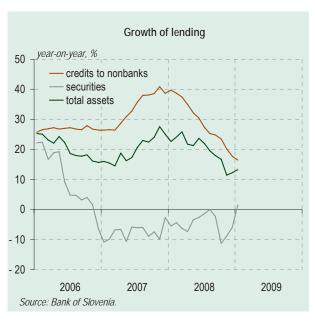

35,000 employees had applied for the subsidy by the middle of February.

Expenditure on transfers to individuals and households was up over 10% in year-on-year terms last year. After several years of decline, expenditure on the unemployed is rising again. Growth was higher in the second half of last year in all categories of transfers to individuals and households. There were several reasons for this, including the payment of a cost-of-living allowance to pensioners in August, a pension increase in November with retrospective settlements, and subsidies for school student meals. Growth in parental allowance was also high, which was the result of an increase in the number of claimants (according to initial estimates there were 10% more births in 2008 than in the previous year), and the level of the allowance itself. Expenditure on the unemployed in the final quarter was up in year-on-year terms, and was already reflecting the adverse trends on the labour market, which deteriorated further in the early part of this year. Funding for the unemployed has been raised in the revision to the state budget for 2009.

The government released a 3-year reference bond in a total amount of EUR 1 billion on international financial markets. The programme for financing the state budget for 2009 envisages the release of two bonds in the amount of EUR 1 billion. The Ministry of Finance released the 3-year reference bond in the amount of EUR 1 billion at the beginning of February. The coupon interest rate was 4.25%, while the yield at issue was 4.26%.

## 6 Banking System\*

The banking system's total assets increased by EUR 646 million in January 2009. January's increase in total assets, like December's, was again primarily the result of transactions related to the second release of 3-year SID banka bonds in the amount of EUR 250 million in January. The government-guaranteed bonds are eligible col-

lateral for liabilities to the Eurosystem, thus allowing banks to draw on liquid assets. As in December, January's release of and subscription to the bonds led to an increase in the banking system's total assets by increasing the stock of issued debt securities within the liabilities of the banking system, and the stock of debt securities within the claims. Because SID banka deposited the majority of the revenue at banks, SID banka's long-term claims against domestic banks increased, as did domestic banks' long-term liabilities to SID banka. Another factor in the increase in bank turnover in January was purchases of Slovenian treasury bills in the amount of EUR 485 million, and on the liability side a similar increase (of EUR 471 million) in government deposits.

The primary source of January's increase in the banking system's total assets was securities, the stock of which increased by almost EUR 500 million, taking the proportion of total assets that they account for up 0.9 percentage points to 15.5%.

In relation to funding, in January banks continued to make net repayments to banks in the rest of the world, while the stock of bank borrowing from the Eurosystem also declined. The government sector was the main factor in the increase in deposits by non-banking sectors.

January saw weak short-term corporate lending, and stalled household lending. Year-on-year growth in lend-

Monthly Bulletin, February 2009

<sup>\*</sup>The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

ing to non-banking sectors declined to 16.5% in January, while the net increase in loans to non-banking sectors amounted to EUR 175 million. This increase was primarily the result of the flow of money from the aforementioned securities operations into loans to non-financial corporations (NFCs), while lending to households, non-residents and OFIs was negative in January.

The net increase of EUR 182 million in loans to NFCs was almost entirely short-term. Year-on-year growth in loans to NFCs fell below 17% in January.

The stock of loans to households declined by EUR 2.5 million in January. The overall net increase in loans to households during the last three months was negative, a decline of EUR 74.5 million having been recorded in November, followed by an increase of just EUR 41 million in December. Year-on-year growth was half that recorded in January of last year at just over 13%.

The banking system made net repayments to banks in the rest of the world in January 2009 for the third consecutive month, while the banking system's liabilities to the Eurosystem were also down on December. At the end of January, the banking system's liabilities to banks in the rest of the world were EUR 860 million lower than at the end of last October. Year-on-year growth in total liabilities to foreign banks declined to just over 8% in January.

After several consecutive months of increase in the banking system's liabilities to the Eurosystem, there was a decline in such liabilities in January, taking them to EUR

935 million or 1.9% of total assets. While banks compensated for the decline in their liabilities to banks in the rest of the world in the final quarter of last year (EUR 539 million) by increasing their liabilities to the Eurosystem, in January they reduced their liabilities to the Eurosystem and to foreign banks.

The main factor in January's increase of almost EUR 500 million in deposits by non-banking sectors and the rise in year-on-year growth to 10% was government deposits. NFCs reduced their stock of deposits at banks in January, while the net increase in household deposits was solid (EUR 132 million). In the breakdown of household deposits of up to 1 year, the decline in sight deposits slightly exceeded the increase in short-term deposits. In the breakdown of long-term household deposits, almost all of January's increase was the result of a net increase in deposits with a maturity of 1 to 2 years.

The banking system's net profit in January was comparable to that in the same month last year. Growth in net interest was negative in January. The relatively high growth in net non-interest income was primarily the result of net revenues of EUR 3.5 million from the category of "gains/losses from financial assets and liabilities held for trading", a loss of EUR 31 million having been generated in the same month last year. Year-on-year growth in operating costs stood at just 1.7% in January. Banks created EUR 8.7 million of net impairments and provisioning, having recorded a net release of impairments and provisioning in January last year.

## 7 Domestic Financial Markets

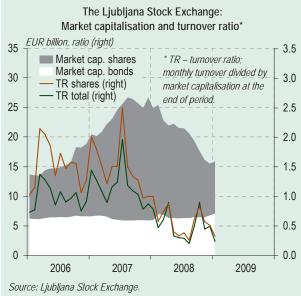

The average monthly market yield on Slovenian government securities rose by 14 basis points in January, while that on German government securities rose by 2 basis points, the spread thus widening to 163 basis points. Poor economic results continued to be announced in the rest of the world, and the reactions of market participants to government stimulation measures brought volatility on the capital markets. Demand for government securities rose in the context of greater uncertainty over the stabilisation of the situation. The S&P index in the US lost 8.6% and the western European DJ EuroStoxx index 7.1% in January. They had lost an additional 6.8% and 9.1% respectively by 20 February.

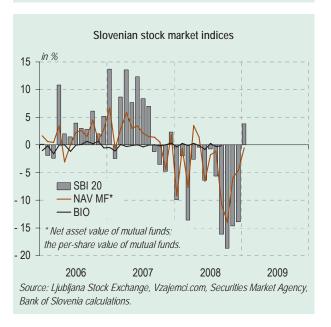

The market capitalisation of bonds on the Ljubljana Stock Exchange increased by 4.0% in January as a result of an expansion in trading in two new bonds. The volume of trading in bonds was over one-half lower than the average monthly volume in 2008.

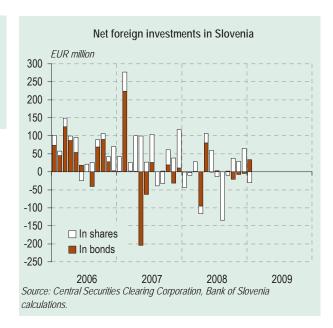

The market capitalisation of shares on the Ljubljana Stock Exchange rose by 1.5% in January, as a result of the 3.8% monthly rise in the SBI 20 index. Two long retail certificates issued on indices including Slovenian shares reached the knock-out barrier on 23 January, followed by three more on 17 February. The SBI 20 lost 1.3% over the first 20 days of February. The P/E ratio rose by 0.34 to 8.66 in January. The volume of trading in shares was low again in January, at just over one-third of the average monthly volume in 2008.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents fell to 6.9% in January. Non-residents made net sales of EUR 30.6 million in shares, and made net purchases of EUR 33.2 million in bonds. Residents of Luxembourg, the US and Austria made net sales of Slovenian shares, while residents of Cyprus and Switzerland made net purchases. The major net purchases of

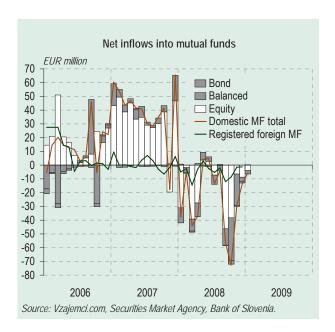

Slovenia bonds were residents of Germany and Austria, while residents of the UK were net sellers.

The assets of domestic mutual funds declined by 0.8% in January to EUR 1,502 million. There were net outward payments of EUR 5.8 million from domestic mutual funds in January, EUR 4.0 million coming from equity funds and EUR 2.5 million from balanced funds. There were net inward payments of EUR 0.2 million into bond funds and EUR 0.5 million into money-market funds, while other funds also attracted minor inward payments. The proportion of mutual funds' assets accounted for by liquid assets\* stood at 12.1% in January. The average

unit price of domestic mutual funds fell by 0.6% in January, the negative year-on-year change diminishing in magnitude to -37.7%. The monthly change in the average unit price of mutual funds investing in the Balkans was -5.0% in January, while the year-on-year change was -61.9%. The Serbian stock market index fell by 5.0% in January and the Croatian by 2.4%, while the Macedonian rose by 6.8%. All three fell over the first 20 days of February: the Croatian by 12.9%, the Macedonian by 12.3% and the Serbian by 11.2%.

I.-20 Monthly Bulletin, February 2009

<sup>\*</sup>Liquid assets include cash, deposits, money-market instruments and government bonds.

# IV. NOTES ON METHODOLOGY

### **General notes**

### **Sectors**

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, house-holds, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

# Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-ofperiod middle exchange rate.
- Data in tables are not seasonally adjusted.

### Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

### 1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

# **Change of Methodology**

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (http://www.bsi.si/en/).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's
  methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new
  tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procuration and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

### Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

### Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

### Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

### Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

### Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

### Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procuration, internal affairs.

### **Deposits**

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

### Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

### Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

### Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-r-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procuration, internal affairs is also included here.

### **Tables**

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1,1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

### **Table 1.1.: Monetary Aggregates**

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

### Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

### Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title		share of euro

## Table 1.4.: Balance Sheet of other Monetary Financial Institutions

The table summarizes data on assets and liabilities of other Monetary Financial Institutions, i.e. banks, savings banks, savings and loans undertakings and money market funds, at the end of the month.

Detailed survey of assets and liabilities of the monetary financial institutions is in the tables 1.5. and 1.6.

no.	table	column	sector	title	share of euro		
	table				31.12.2004	31.12.2005	31.12.2006

# Table 1.7.: Balance sheet of the Bank of Slovenia - by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB an differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

#### 2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

# Interest rates (tables 2.1-2.4)

#### Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A penalty rate is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

#### Table 2.2: Interbank Money Market Rates and Indexation Clause

# Interbank market

#### SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

#### **EONIA/EURIBOR**

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – "Euribor®" – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

#### Indexation clauses

#### TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

#### Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

#### Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

## Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, guoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolars and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

# 2.4: Monetary Financial Institutions Interest Rates

# Data from January 2003-April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolars vis-ŕ-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005-December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

**New business** is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

- \* Households = sole proprietorships + individuals + non-profit institutions serving households
- \*\*APRC data includes households without sole proprietorships and without non-profit institutions serving households

 $\underline{\textit{Note 1:}}$  For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

# Ljubljana Stock Exchange (Tables 2.6 to 2.8)

# General

Data prior to 2007 are published in tolars: from 2007, data are published in euros.

# Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities

Shares - investment fund shares are not included.

IF - investment fund shares.

Turnover is measured with a single counting.

# Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of

BANK OF SLOVENIA

individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

# Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

# Exchange rates (Tables 2.9.1-2.9.2)

## Table 2.9.1: Selected Bank of Slovenia Exchange Rates - Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

As of 1 January 1999, with the introduction of the European Monetary Union, the European currency unit (XEU) was replaced by the euro (EUR) at an exchange rate of 1:1. Fixed exchange rates between the euro and the national currencies of the EMU member states (valid from 1 January 2001):

1EUR = 40.33990 BEF

- 1.95583 DEM
- = 340.75000 GRD
- = 166.38600 ESP
- 6 55957 FRF
- 0.78756 IEP
- = 1936.27000 ITL 40.33990 LUF
- 2.20371NLG 13.76030 ATS
- = 200.48200 PTE
- 5.94573 FIM

Due to the introduction of the euro in January 2002, the exchange rates of some members of EMU currencies (ATS, FRF, DEM, ITL) have been replaced by the exchange rates of some EU accession countries (CZK, HUF, PLN, SKK).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish złoty was denominated on 1 January 1995 at the exchange rate of 1 new złoty for 10.000 old złotys.

## Table 2.9.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 Decem-

On 1 January 2009 the euro became legal tender in Slovakia. It replaced the Slovak koruna (SKK) at the exchange rate of 1EUR = 30.1260 SKK.

# Payment systems (Tables 2.10 to 2.16)

# General

Data prior to 2007 are published in tolars; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

# Table 2.10: TARGET and Giro Clearing transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolars). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 3: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

# **Table 2.11 Payment Cards**

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

**Number of payment cards** in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

# Table 2.12 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

# **Table 2.13 Electronic Banking**

Note 1: Only debt transactions are included.

# Table 2.14 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

BANK OF SLOVENL

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/ or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

#### Table 2.15 Debit Transfers and Simply book-entry

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

#### Table 2.16: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

# 3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

# **Balance of Payments**

#### General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

# Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

# Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in monthly data are published with the release of:

- the following month's data:
- the corresponding quarterly data;
- the corresponding revised quarterly data;

- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in quarterly data are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

#### **Data sources**

- The external trade statistics (Statistical Office of the Republic of Slovenia) is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (SAD).
- Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):
  - report on account balances at domestic banks PPV (until 31 December 2004),
  - report on account balances abroad C (until 31 December 2006),
  - report on transactions through accounts at domestic banks PPT,
  - report on transactions through accounts abroad C.

All banks which conduct international payment transactions and all residents with open accounts abroad are obliged to report. The resident issuer/beneficiary of the payment is obliged to forward data on the type of transaction.

- Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD) are the sources of portfolio investments (debt and equity securities) and financial derivates since 2004.
- Reports on purchased/sold foreign debt securities without domestic brokers (DVP) are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR) are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- Reports on monetary financial institutions (PORFI) are the source for data on loans, cash and deposits of the banking sector since 2005.
- Reports on credits received and granted and deposits with non-residents (KRD) are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- Reports on short-term receivables and liabilities from operations with non-residents (SKV) are the source for short-term trade credits since 2002.
- Reports on investments (SN) are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- · Accounting data of the Bank of Slovenia
- · Accounting data of banks (KNB)
- · Budget data on the transactions of government sector between the Republic of Slovenia and EU
- Estimates and other sources
  - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) until 2004,
  - estimate of expenditures on travel abroad including purchases of goods abroad until 2004
  - estimate of Italian pensions (UMAR) until the end of 1998,
  - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
  - estimate of labour income (SURS),
  - data on pensions paid to non-residents (ZPIZ),
  - survey on the write-downs of debt from trade in goods and services abroad,
  - estimates for exports and imports of travel from 2005 onwards (detailed explanation under item Travel),
  - estimate of cash transactions on tourism and labour income (from 2007 onwards)

# **Current account**

#### Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations and for which data are available from ITRS or from the reports of duty free shops and consignment warehouses. Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

#### **Services**

#### Transport

The source of records on transportation services is the ITRS.

#### Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolars from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolars to non-residents abroad.

The data on sales of tolars to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

# Travel - methodology since 2005 onwards

Main data sources to estimate the export of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the import of travel is SURS's survey TU\_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU\_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health related travel,
- Education,
- Other,
- Same day travelers.

#### Construction services

The source of data is the ITRS. All construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures).

#### Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments.

#### **Government services**

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item.

#### Income

**Labour income** – **receipts**. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

**Labour income - expenditures.** ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated (from a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes, paid in the current month). The estimate is replaced by actual data only when these data are available. Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-tern commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

#### **Current transfers**

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates. From 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data).

# Capital and financial account

# Capital account

#### Capital transfers

Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. Data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad.

# Financial account

#### Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies.

Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment rela-

tionship (these data are included in item other investment/loans.

#### Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

#### Financial derivatives

Since 2004, these types of transactions are included in VRP and KDD sources.

#### Other investments

#### Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]
- {[import of goods FOB + coverage adjustments (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]

Since 2002, short-term commercial credits are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

#### Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

# **Currency and deposits**

The foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (tranxactions booked on the account number 188000 showing net result of incoming and outgoing payments conducted in EUR currency thorugh TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

#### International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

# Table 3.1: Balance of Payments 1988-1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former

Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

# Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

\* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)
- March 2007 (EUR 1000.0 million)February 2008 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <a href="http://www.bsi.si/en/financial-data.asp?Mapald=64">http://www.bsi.si/en/financial-data.asp?Mapald=64</a>.

Note 8: The data on reinvested earnings for 2008 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2005 to 2007 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2009, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2008 shall take into consideration the new three year average (2006 to 2008).

<u>Note 9</u>: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions

does not make sense.

#### Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

# Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2006 are provisional.

# **International Investment Position of Slovenia**

#### **General notes**

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

#### Revision policy

See note "Revision policy" in the section "Balance of Payments".

#### Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments. However, there are differences in some items and data sources as follows:

#### Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR),
- short-term commercial credits with non-residents (SKV),
- reports on accounts abroad (C) and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment-other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital respresenting a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

#### Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portofolio investment.) From 2007 data on equity shares bellow 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

#### Financial instruments

Since 2003, the data are included in VRP and KDD sources.

#### Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Sources for long-term trade credits and loans are credit registration forms and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

#### Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments, those being the accounting data of commercial banks (KNB), the account balances of banks in original currencies (PPV), the account balances abroad of companies (C) and the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

#### Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households";
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb\_en.asp?Mapald=714.

# Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

# **Gross External Debt**

## General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm.

#### Revision policy

See note "Revision policy" in the section "Balance of Payments".

# EUROSYSTEM

#### **Data sources**

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial instruments are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

#### Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities

#### Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

#### International reserves

#### Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

# 4. PUBLIC FINANCE

# General

Data prior to 2007 are published in tolars; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

## General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

# Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

**EDP debt** is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

# Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

**Intermediate consumption** consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

#### Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

**Deficit-debt adjustment (DDA)** is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

# Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

<u>Note 3:</u> Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

#### Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

# Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

# 5. FINANCIAL ACCOUNTS

# Financial accounts (Tables 5.1 to 5.6)

**Tables 5.1, 5.2, 5.4 and 5.5** show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

# Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic of foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

# 6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

#### **General notes**

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 2/2002) and is in line with the classification of activities NACE Rev.1 (Nomenclature statistique des activités économiques dans la Communanté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 3 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, hunting and forestry
- B Fishing
- C Mining and quarrying
- D Manufacturing
- E Electricity, gas and water supply
- F Construction
- G Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods
- H Hotels and restaurants
- I Transport, storage and communications
- J Financial intermediation
- K Real estate, rental and business activities
- L Public administration and defence; compulsory social security
- M Education
- N Health and social work
- O Other community, social and personal service activities
- P Activities of private households as employers and undifferentiated production activities of private households

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: www.stat.si.

#### General

Data prior to 2007 are published in tolars; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

# Non-financial accounts and general economic statistics (Tables 6.1 to 6.8)

# Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

## Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

#### Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production. Indices on industrial production are provisional from February 2004 on.

#### Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2006 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

#### Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

# Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 - self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

# Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

# Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1–ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

# Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exch. rate, ECB EER-42 group of currencies (AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CZ, EE, HU, LV, LT, PL, SK, BG, RO, NZ, DZ, AR, BR, HR, IN, ID, IL, MY, MX, MA, PH, RU, ZA, TW, TH, TR, IS, CL, VE) - Euro area 15 against Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs deflated, ECB EER-22 group of currencies and Euro area 15 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO) against Slovenian tolar (until 31.12.2006) from 01.01.2007 against Euro.

The growth of the index value represents decrease of competitiveness

Note 1: Data shown every three months of the year are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia: http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039.

#### Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

BANKA SLOVENIJE BANK OF SLOVENIA EUROSYSTEM

# Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

# Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: http://www.ecb.int/pub/mb/html/index.en.html.

 $<sup>^{\</sup>star}\,$  The period to which data relate is shown in the parenthesis. NLT stands no-later-than.

Note: "Special Data Dissemination Standard" - SDDS is a special standard for statistical data disemination established by the International Monetary Fund in 1996.

Relevant information on the standard are available on - http://dsbb.imf.org/Applications/web/sddshome/#introduction. Data for Slovenia are published on - http://www.bsi.si/imf/

<sup>1</sup> The data on interest rates are published by the Bank of Slovenia and Ministry of Finance separately.

<sup>2</sup> Data are disseminated daily on Bank of Slovenia Internet website - Financial Data/ Bank of Slovenia exchange rates and on Archive of financial data. Links are given in column Additional data.
