Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

7. Domestic Financial Markets

The international economic situation has continued to gradually improve, but numerous risks regarding the sustainability of the recovery remain. GDP in the US grew rapidly in the final quarter of 2009, by 1.5% in current terms, whereas growth in the euro area was lower than expected at 0.1%. The rise in activity primarily stemmed from the rise in exports, and in the US also from increased private consumption. The unemployment rate remains high in both economies. Consensus forecast for the economic growth in the year 2010 stands at 1.5% for the euro area and 3.1% for the US. Oil prices recorded a slight fall in February, partly as a result of strengthened US dollar. Year-on-year inflation stood at 0.9% in the euro area in February, and 2.6% in the US in January. The euro exchange rate continued to depreciate against the US dollar in February, primarily as a result of the financial markets' concerns over the state of public finances in some euro area countries.

The q-o-q growth in domestic economic activity in the final quarter of 2009 slowed to 0.1%, the same as in the euro area, whereas y-o-y decline in GDP of 7.8% was double the euro area average. Domestic consumption remained weak and in y-o-y terms was lower than import demand from the trading partners, hence the contribution to growth of net external trade was again positive. In line with the slightly weaker but positive current growth of output, the decline in value added slowed in y-o-y terms, most notably in manufacturing and also in the trade sector. Real sales revenue in the retail sector was up in current terms in January, but remained relatively low. The economic sentiment indicator in February was down slightly in current terms, most notably in the service sector, although consumers were more optimistic than in January.

Regardless of the positive developments in economic activity, the labour market is not yet showing any signs of improvement. The number of registered unemployed rose to 99,591 in January and the unemployment rate reached 10.3%. The number of employed workers continued to decline in December in current terms as a result of developments in the private sector, most notably in construction and manufacturing. The average nominal gross wage stood at EUR 1,488 in December, up 2.1% in year-on-year terms, albeit largely as a result of lay-offs among the low-paid.

Year-on-year inflation measured by the HICP stood at 1.6% in February, down 0.2 percentage points from January. The decline in inflation was primarily the result of a reduced positive contribution by energy prices and an increase in the negative contribution by prices of manufactured goods. Core inflation has been falling since the second half of 2008 due to the adverse situation in the domestic macroeconomic environment, the rate falling further in February to -0.5%.

The movements in the current account essentially reflect the gradual improvement in the international economic situation and the weakness of domestic demand. The current account deficit fell from 6.2% of GDP in 2008 to 0.6% of GDP in 2009, when it stood at EUR 0.2 billion. Domestic import demand fell in 2009 as a result of the economic crisis, whereas the measures to stimulate the economic recovery in the rest of the world brought about a renewed increase in exports of commodities in the second half of the year, particularly to the EU. The movements in the external trade of services had the opposite effect as the surplus declined by a third in y-o-y terms. The other major factor contributing to the narrowing of the current account deficit was factor income and transfers of which net interest payments to the rest of the world recorded the largest decline as a result of lower interest rates.

The consolidated general government deficit over the 12 months to November 2009 stood at EUR 2.0 billion, or 5.7% of GDP. Social contributions and the majority of tax revenues decreased in year-on-year terms in January. Growth in general government expenditure slowed in the second half of 2009. Expenditure on wages, goods and services slowed sharply, whereas the expenditures on subsidies and transfers to the unemployed are strengthening. In the Stability programme and the Exit strategy, the Government is planning to gradually reduce the general government deficit to below 3% of GDP by 2013, which is to be achieved primarily by cutting government expenditure.

The banking system's total assets increased by EUR 531 million in January of this year. The main factor was the increase in government deposits at banks, which was related to the issue of government bonds with a nominal value of EUR 1.5 billion. Banks, particularly those under majority foreign ownership, made net debt repayments to the rest of the world. Lending activity revived slightly in January, loans to non-banking sectors recording a net increase of EUR 92 million, almost half of which consisted of loans to non-financial corporations. Banks recorded higher impairment and provisioning costs than in January of last year. The banking system's pre-tax profit was down 7.5% on the same month of last year at EUR 31.8 million.

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 14.1% in January, primarily as a result of the new government bonds being listed for trading. The market capitalisation of shares was up 0.5%, while the SBI 20 rose by 1%.

1 | International Environment

The initial economic growth figures for the final quarter of 2009 indicate a continuation of the gradual improvement in economic activity in the US, while growth was lower than expected in the euro area. The situation on the labour market is settling, although uncertainties surrounding future developments remain high. According to initial estimates, GDP in the final quarter was up 0.1% on the previous quarter in the euro area (down 2.1% in year-on-year terms, and down 4.0% in 2009), while in the US it was up 1.5% on the previous quarter (up 0.1% in year-on-year terms). The growth in both economies primarily came from increased exports, in particular to China, where imports in 2009 primarily increased as a result of government subsidies and increased lending for investment. Other factors in the economic growth in the US were increased inventories and domestic private consumption. In January the US recorded an increase in retail for the third consecutive month, while it was unchanged in the euro area in December. The US also saw a current increase of 0.8% in industrial production in January, while in the euro area industrial production was down 1.7% in December, primarily as a result of a decline in the production of inter-

mediate goods and capital goods. In January unemployment was down 0.3 percentage points at 9.7% in the US, but unchanged at 9.9% in the euro area. Consumer confidence indicators nevertheless deteriorated in both economies. Among the major global economies, increased exports also brought a strengthening of activity in Japan, which recorded a quarterly rise of 1.1% in GDP in the final quarter of 2009.

The latest economic growth forecasts of the European Commission and Consensus for the euro area in 2010 remained unchanged, while the Consensus forecast for the US is predicting a slight increase in growth. The two institutions' forecasts for 2011 both sug-

Notes: *Seasonally adjusted data – Eurostat for the euro area, BEA for the US, **Consensus, February 2010.

gest a slight increase in growth in the euro area, and a decline in the US. The Consensus forecast for economic growth in 2010 remains at 1.3% for the euro area, while the forecast for the US was revised upwards slightly to 3.1%. Economic growth in 2011 is expected to stand at 1.5% in the euro area, and 3.0% in the US. In its February interim forecasts the European Commission left the economic growth forecast for 2010 for the euro area unchanged from its autumn forecasts at 0.7%. This year's economic growth forecast for eastern Europe also remains unchanged at 3.0%, while the forecast for next year improved slightly to 4.1%.

Year-on-year inflation stood at 0.9% in the euro area in February (down from 1.0% in January), and at 2.6% in the US in January (down from 2.7% in December). Core inflation fell in the euro area and the US. The main factor in the movement in inflation in both economies was energy prices. Year-on-year growth in prices excluding energy and unprocessed food fell to 0.9% in the euro area, while growth in prices excluding energy and food stood at 1.6% in the US. The movement of energy prices is continuing to have an impact on year-on-year movements in industrial producer prices on the domestic market. Prices of manufactured goods were down 1.0% in year-on-year terms in the euro area in January, but up 4.6% in the US.

US dollar prices of oil, gold and other commodities fell in February. A barrel of Brent crude averaged USD

74.1 in February, compared with USD 76.3 in January. The fall in oil prices was primarily the result of the strengthening of the US dollar. This was also reflected in a fall in gold prices and US dollar prices of commodities other than oil.

The euro continued to depreciate against the US dollar in February, while the two central banks again left their interest rates unchanged. The euro fell against the US dollar for the third consecutive month in February, by 4.24%, and averaged USD 1.3658 over the month. The euro also depreciated against the Japanese yen, the Swiss franc and the pound sterling. The main reason for the depreciation of the euro was the public finance problems in certain euro area countries. The ECB's key refinancing rate stood at 1.00%, while the Federal Reserve's key rate remained in the interval from zero to 0.25%.

2 | Economic Activity and Labour Market

Real sector

According to the initial SORS figures adjusted for the season and the number of working days, GDP in the final quarter was up 0.1% on the previous quarter, but down 5.8% in year-on-year terms. GDP fell by 7.8% in 2009 according to the original figures. The slowdown in the current rate of growth is similar to the movement of GDP in the euro area. According to the expenditure breakdown of GDP, the largest year-on-year decline in the final quarter was again recorded by gross investment, inventories accounting for almost half of the decline of 27.7%. Household consumption again declined, by 0.9%, while government spending also recorded a year-on-year decline for the first time last year, of 1.4%. Low foreign demand meant that exports were down 3.6% in year-on-year terms. Imports were down more, by 8.5%, primarily under the influence of the contraction in domestic demand, the contribution to the fall in GDP by net trade thus diminishing by 3.6 percentage points.

Gross domestic product in 2009	Q1	Q2	Q3	Q4
	in %			
Changes on the previous quarter	-6.8	0.3	0.6	0.1
Changes on the same quarter of the previous year	-8.7	-9.0	-8.7	-5.8

Source: SORS. Note: Constant prices, seasonally and working days adjusted data.

According to the output structure of GDP, the positive current rates of growth in the last three quarters have to a great extent been reflected in a decline in the year-on-year contraction in value-added in manufacturing. Value-added in manufacturing in the final quarter was down just 4.3% in year-on-year terms, significantly less than the 16.6% contraction recorded in the third quarter. Its contribution to current GDP growth was again positive, while the current rate of growth was in line with growth in industrial production based on monthly figures. Year-on-year growth in value-added in construction remained sharply negative at -20%, the negative current rate of growth in this sector making a significant contribution to the slowdown in current GDP growth. The largest declines in value-added in 2009 were recorded by the sectors of manufacturing (16.5%), construction (15.9%) and retail (12.9%). Value-added increased in the sectors of financial intermediation (5.3%), public administration (3.2%), education (3.0%) and health (1.9%). Value-added in manufacturing is moving similarly to that in the euro area, but the situation is different in the construction sector, where activity contracted sharply again in the final quarter, having stabilised in the euro area.

Industrial production was up slightly in current terms in December 2009, although growth was significantly weaker than the monthly average over the second half of last year. According to SORS figures adjusted for the season and the number of working days, the real value of industrial production again increased in current terms last December, but by just 0.2%. In manufacturing growth slowed to 1.2%, while activity fell sharply in the sectors of mining and quarrying, and electricity, gas and steam supply. The slowdown in growth in output in manufacturing is related to the industrial dynamic in the euro area, where, having increased in November, industrial production declined by 1.7% in December, the largest decline in the last six months. The gradual growth in real revenues from sales of manufactured goods continued in December. New orders remained at a higher level than a year earlier, as a result of a year-on-year increase in orders from the rest of the world and a strong base effect, but volatility has increased significantly in recent months at the current level. Inventories in industry declined again in current terms, by 0.7%, and were down around 10% in year-on-year terms.

December's slowdown in industrial production was the result of a significant decline in the production of intermediate goods. Having increased by 4% in current terms in November, the production of intermediate goods declined by 5% in current terms in December. This is a similar dynamic to industrial production in the EU27 and the euro area, where the production of intermediate goods recorded the largest decline of all the categories in December. The production of capital goods in Slovenia increased in current terms in December, but remained low. The production of consumer goods remained similarly volatile, and at a low level. It increased by 3% in

current terms in December, but only as a result of an increase in the production of consumer non-durables. The production of consumer durables declined by almost 4% in current terms in December, an indication that households are less inclined to purchase goods of a more durable nature because of the uncertain situation on the labour market.

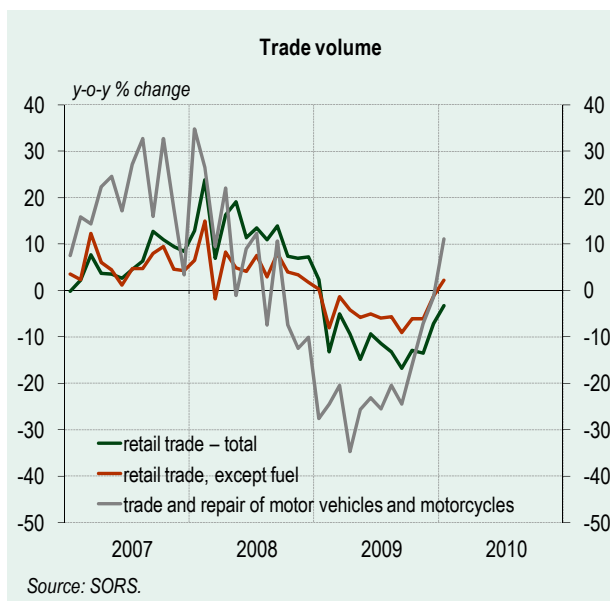

Industrial production contracted by 17.6% on average last year. After recording significant current growth in the third quarter, industrial production recorded a much smaller increase in the final quarter. According to the SORS figures adjusted for the season and the

Economic Activity	2006	2007	2008	2009	2008 Dec.	2009 Dec.

Notes: Differences from official numbers are due to rounding. Data are unadjusted for seasonal and working days effects.

* Volume of industrial production. ** Real value of construction put in place.

number of working days, the largest annual contraction in activity was recorded by the manufacturing sector (at 18.8%), as a result of the significant contraction in trade. A sharp contraction in the first half of the year was followed by a gradual recovery, encouraged by fiscal measures on the part of the larger euro area countries, and indirectly by faster growth in demand from Asia. Industrial production was up 2.7% on the first half of the year, and production in manufacturing by over 3%, but primarily as a result of current growth in the third quarter. The average current increase in industrial production in the final quarter was just 0.5%, just under 4 percentage points less than in the second quarter. The significant slowdown in current growth in industrial production in the final quar-

ter is a reflection of the persistently weak, volatile and uneven recovery in European economies, and the very gradual recovery in domestic industrial production.

The real value of construction work continued to decline in December, as in the majority of EU Member States, although the contraction in Slovenia was one of the largest. The real value of construction work performed in December was down 8.1% in current terms and down 18.8% in year-on-year terms, the third-largest year-on-year contraction in construction activity among EU Member States. The real value of construction work performed in Slovenia in December returned to its average level of 2005; housebuilding recorded the largest decline, and was over a quarter down on the average value in 2005. The number of transactions in new residential properties increased significantly in the second half of 2009, but the real estate market remains significantly less dynamic than in previous years. Other factors in the decline in the value of housebuilding work were the cold winter and the liquidity difficulties of construction companies. The number of building permits issued for residential properties stagnated in the final quarter, and remained low in year-on-year terms, which is partly the result of a slowdown in prices for new build and, according to some assessments, high inventories of unsold residential properties. The real value of construction work performed on non-residential buildings in December was up slightly in current terms, by 0.5%, while civil engineering work was down 6.7%.

Real revenues in the retail sector were again up slightly in current terms in January. There was considerable variation in the movement in nominal revenues in December in certain service sectors. According to provisional SORS figures, real revenues in the retail sector in January were up 1.4% in current terms, non-food retail (other than motor vehicles) recording the largest increase. Real sales revenues in the retail sector were nevertheless down 3.3% in year-on-year terms, partly as a result of the relatively high basis from last January. There was considerable variation between individual service sectors in the movement of nominal revenues. Travel agencies recorded high current growth in revenues, of 16.6%. Revenues fell again in current terms in the hotels and restaurants sector, by 1.1%, and in storage and support activities for transportation, by 1.5%. The latter result was in line with December's figures for transportation, which indicate a continuing decline in land and air transport. The volume of freight moved at ports and at the airport was also down, in line with the decline in foreign and domestic demand. Revenues remained down in year-on-year terms in the vast majority of service sectors in December.

The seasonally adjusted economic sentiment indicator in February was down slightly in current terms, and remained below its long-term average. The largest current deterioration in February was recorded by the services confidence indicator, in particular the indicators of the business climate and demand. The retail confidence indicator remains relatively low, despite a small current improvement. The manufacturing and construction confidence indicators were unchanged from the previous month, output expectations, order books and employment expectations recording the largest declines for both. February's largest current decline in the construction sector, where the indicator is 47 percentage points below its long-term average, was recorded by order books. Consumers were more optimistic in February than in the previous month, primarily as a result of savings expectations and the current financial situation in households: the indicator was up 2 percentage points in current terms.

Labour market

January's changes in the number of registered unemployed indicate a continuation of the unfavourable situation on the labour market. The rise in the number of unemployed in January was slightly higher than the usual January rise at 2,919. The rise was however significantly less than in January 2009, when the number of unemployed rose by 7,672. The total number of registered unemployed stood at 99,591 in January. Year-on-year growth in the number of unemployed slowed significantly in January, primarily as a result of a base effect, to 34.7% (compared with an average of 47.6% in the second half of 2009). In January 10,650 people were newly registered as unemployed, of whom 44% were temporary workers whose contracts ended, and around 26% were those classified as permanently redundant and those who lost their jobs as a result of bankruptcies. In January 8,912 people entered new employment, down 29.1% on the average January figure in the last five years. The number of outflows from unemployment into employment amounted to 5,032 in January, a year-on-year increase of 58.2%, primarily as a result of a base effect. Employers advertised 12,660 vacancies in January, 7.7% less than in the same month last year. The registered unemployment rate reached 10.3% in December, unchanged from the previous month after allowing for seasonal effects. A similar movement in quarterly terms can be seen in the surveyed unemployment rate, which rose from 6.2% in the third quarter of 2009 to 6.4% in the final quarter.

The workforce in employment in December was down 5,361 on the previous month, a poor result even in light of the customary fall in December. Between 2004 and 2007 the current decline in December averaged around 4,200. The fall was primarily the result of current developments in the private sector, where the workforce in employment was down 5,047 on the previous month. The largest contributions to the current decline inside the private sector came from construction (1,913 job losses) and manufacturing (1,466 job losses). The workforce in employment in the public sector in December was down 314 on the previous month, with public administration accounting for about half of this fall.

The average nominal gross wage stood at EUR 1,488 in December, up 2.1% in year-on-year terms. Year-on-year growth in the average gross wage in the public sector stood at 1.0% in December, while the rate in the private sector was 2.0%.¹ Average extraordinary bonuses

(13th wage payments, Christmas bonuses, etc.) in December were down 14.3% in year-on-year terms, and were down 1.6% overall in 2009. The decline in the total

Notes: * Sections of NACE Rev. 2 classification. ** CPI deflator.

¹ That average wage growth in the economy as a whole is higher than the rates in both the public and private sectors is a consequence of a change in the relative number of employees in both sectors, and parallel changes in the total wages from which average wages are calculated.

value of extraordinary bonuses in 2009 reduced the average year-on-year wage growth in the economy as a whole by just 0.1 percentage points. Annual nominal wage growth stood at 3.5%, while real growth was down 0.1 percentage points on the previous year at 2.6%. The effects of the economic crisis can thus be seen primarily in unemployment, and less so in the adjustment of wages.

Selected competitiveness indicators

The harmonised index of the nominal effective exchange rate recorded a current depreciation in January as a result of the euro's fall against major global currencies; there was also a depreciation in year-on-year terms for the first time since November 2008.

The nominal effective exchange rate depreciated by 0.7% in current terms. The euro fell by 2.3% against the US dollar, by 1.9% against the pound sterling, by 1.7% against the Swiss franc and by 0.7% against the Japanese yen. The index of the nominal effective exchange rate also recorded a year-on-year depreciation in January, of 0.2%, after more than a year. The effect of last year's basis resulting from the euro's high current appreciation against the pound sterling in January 2009 was also a factor alongside current movements.

In January 2010 the harmonised index of the real effective exchange rate as measured by consumer prices depreciated in current terms, but in contrast to the index of the nominal effective exchange rate it still recorded an appreciation in year-on-year terms.

The price competitiveness indicator recorded a current depreciation of 0.6% in January, while the year-on-year appreciation was down 1.2 percentage points on the previous month at 0.3%. Alongside the current depreciation, another factor in the significant year-on-year decline in the appreciation in the price competitiveness indicator was the relatively high basis, the indicator having recorded a current appreciation of 0.5% in January 2009. In contrast to the nominal effective exchange rate, the real effective exchange rate recorded a year-on-year appreciation in January, an indication that domestic prices were growing 0.5 percentage points faster than the simultaneous growth in the basket of foreign prices.

Slovenia's competitive position as measured by the real effective exchange rate deteriorated again in January 2010 relative to its most important euro area trading partners. The current depreciation in the indices of the real effective exchange rate in the most important trading partners in January was an average of approximately 0.4 percentage points larger than in Slovenia. There was also a year-on-year depreciation in the aforementioned countries, which averaged 0.2%, while the real effective exchange rate in Slovenia recorded a year-on-year appreciation. Both indicate a current and year-on-year deterioration in price competitiveness relative to other trading partners.

3 | Price Developments

Year-on-year inflation as measured by the HICP stood at 1.6% in February, down 0.2 percentage points on January. The decline in inflation was primarily the result of a decline in the positive contribution made by energy prices and an increase in the negative contribution made by prices of manufactured goods. Year-on-year growth in energy prices declined by 3.2 percentage points in February, while their contribution to inflation declined by 0.3 percentage points to 1.5 percentage points. The decline

was the result of base effects from last February, when there was a rise in excise duties on refined petroleum products. The negative contribution to inflation made by non-energy industrial goods increased from 0.8 to 0.9 percentage points. Growth in services prices also declined, from 2.1% to 1.9%. The higher growth in prices of processed food and the lower fall in prices of unprocessed food were the main factors in the year-on-year increase in the contribution made by food prices.

The trend in core inflation has been under the influence of the harsh situation in the macroeconomic environment since the second half of 2008. The HICP excluding energy, food, alcohol and tobacco fell in year-on-year terms in January, and the fall deepened to 0.5% in February. Year-on-year growth in non-energy industrial goods fell from 1.7% to -3.2% over the last 12 months, while growth in services prices fell from 4.1% to 1.9%. Core inflation as measured by the HICP excluding energy and unprocessed food also fell, from 0.2% in January to 0.0%. The medium-term trend in core inflation is under the influence of low aggregate demand and the consequent low economic activity. As a result the trend of year-on-year growth in nominal labour costs is also diminishing sharply. The harsh situation on the labour market is likely to remain a factor in this adjustment in labour costs, while the rise in the minimum wage will put upward pressure on labour costs.

According to detailed figures available for January, the largest year-on-year price falls were recorded by cars, clothing and footwear, while the largest price rises were recorded by fuels and the water supply. The largest year-on-year falls among the components of the HICP were recorded by car prices (11.6%) and prices of clothing and footwear (7.0%). High year-on-year growth in water supply prices, which is the result of an upgrade, i.e. the introduction of new services as a result of higher supply standards and environmental standards, has been seen since November 2009, and stood at 27.2% in January. Refuse disposal prices increased in current terms in January for the same reason, by 7.2%. Higher oil prices on global markets brought year-on-year

growth in fuel prices, of 24.0% on average. The current growth of 3.9% in electricity prices was the result of a rise in the charge for renewable resources and for ensuring reliable supply by utilising domestic energy resources. However, the higher current growth in electricity prices did not lead to higher year-on-year growth, which was lower in January than in the previous month, as a result of the significant price rises in January 2009.

January's year-on-year fall in prices of manufactured goods on the domestic market was slightly smaller than in the previous month. Domestic industrial producer prices were down 0.1% in year-on-year terms in January, compared with a year-on-year fall of 0.7% in

Note: Figures may not sum up to official figures due to rounding.

December. The decline in the year-on-year fall in prices of manufactured goods was primarily the result of a smaller fall in commodity prices and prices of consumer non-durables. Euro area prices of manufactured goods were down 1.0% in year-on-year terms in January, 1.9 percentage points less than the fall recorded in December. The smaller fall in prices was primarily the result of a smaller fall in energy prices and prices of intermediate goods.

4 | Balance of Payments

Current account

The current account deficit stood at EUR 32 million in December 2009, the lowest figure in the last 12 years. Alongside the usual deficit in trade in merchandise and services, and net outflows in factor income, the main factor in the modest current account deficit in December was the high net inflow of current transfers with the rest of the world, for the second consecutive month. The current account deficit narrowed from EUR 334 million in December 2008 to EUR 32 million a year later, thus making a notable contribution to the narrowing of the current ac-

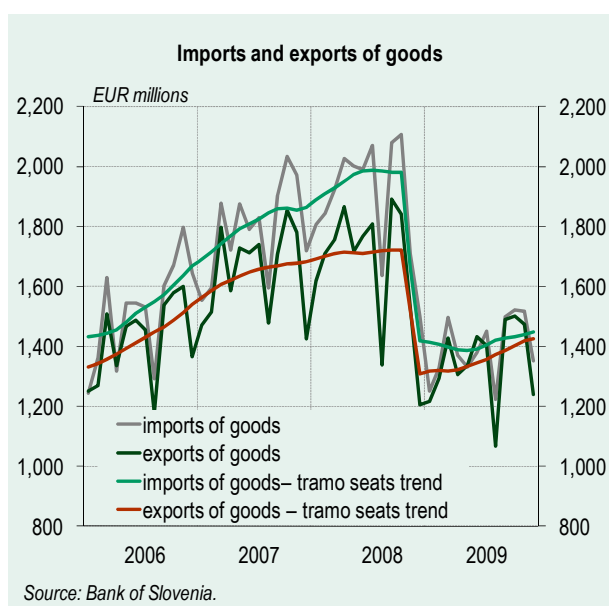

count deficit in 2009.

In the context of December's low deficit, the current account deficit declined from 6.2% of GDP in 2008 to EUR 0.2 billion or 0.6% of GDP in 2009. Under the influence of the financial and economic crisis, the largest year-on-year contraction in 2009 was recorded by domestic consumption, and with it import demand. Merchandise imports fell faster than exports in both current and year-on-year terms, as a result of which the merchandise trade deficit in 2009 declined to a fifth of that recorded in the previous year. With the surplus in services and the net outflow of factor income falling by a third, and net outflows of current transfers falling by a half, the current account deficit narrowed from EUR 2,287 million in 2008 to EUR 207 million in 2009.

The trend in merchandise trade remains unchanged. The current rate of growth in merchandise exports slowed again in December 2009, while merchandise imports accelerated slightly further. For the first time since July 2009 the current rate of growth in merchandise exports was more than 1 percentage point slower than the current rate of growth in merchandise imports. In the context of faster current growth in merchandise imports, there was a deficit in merchandise trade in December. Despite merchandise imports recording faster current growth than merchandise exports, in December's year-on-year comparison growth in merchandise exports was still

⁴ According to the SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix), the merchandise trade deficit in November 2009 stood at EUR 80 million.

sharply outpacing that of merchandise imports. Merchandise imports amounted to EUR 1,351 million in December, down 10.0% in year-on-year terms, while exports were up 2.9% in year-on-year terms at EUR 1,239 million. The result of these movements in merchandise trade was a small deficit of EUR 112 million,² compared with a deficit of EUR 297 million in the same month of 2008.

According to the SORS figures, in December 2009 the year-on-year change in merchandise trade moved from a contraction to an increase of 3.1% on the export side, while the contraction on the import side declined to 10.6%. In December merchandise exports to EU Member States recorded faster growth (4.1%) than exports to non-EU countries (1.3%). The differences were much larger on the import side: merchandise imports from the EU were down just 3.9% in year-on-year terms,

Source: Bank of Slovenia.

while imports from non-EU countries were down just under a third. Despite a slightly more favourable dynamic over the last few months, merchandise imports were down 26.4% in year-on-year terms in 2009, while merchandise exports were down 19.0%. Under the influence of economic stimulus measures in the second half of the year, the current rate of growth in merchandise trade with EU Member States rose faster than that with non-EU countries. As a result of these movements, merchandise exports to EU Member States in 2009 were down 18.1% in year-on-year terms, while merchandise exports to non-EU countries were down 21.3%. On the import side the regional differences widened in recent months, but in annual terms the figures do not differ significantly from those for exports: merchandise imports from EU Member States are recording faster growth. Imports from EU Member States were down 25.8% in year-on-year terms, while imports from non-EU countries were down 28.7%. According to the SORS methodology, the merchandise trade deficit in 2009 reached EUR 919 million, less than a third of that recorded in 2008. The deficit in merchandise trade with EU Member States was down more than a half in year-on-year terms at EUR 2,114 million, while the surplus with non-EU countries increased from EUR 1,030 million in 2008 to EUR 1,195 million in 2009, despite the contraction in the volume of merchandise trade. The level of coverage of merchandise imports by exports was up just under a tenth on 2008 at 94.6%.

The rapid year-on-year decline in the surplus of trade in services seen between September and November 2009 slowed slightly in December. The surplus was down EUR 12 million on December 2008 at EUR 45 million. During a time of reduced activity as a result of the global economic crisis, exports of Slovenian services declined much faster than imports, although the decline in the latter was much less than the simultaneous year-on-year contraction in merchandise trade. Imports of services amounted to EUR 3.2 billion in 2009, down 5.8% in year-on-year terms, while exports were down 14.9% at EUR 4.3 billion. With exports falling more quickly than imports, the surplus of trade in services was down EUR 556 million in year-on-year terms at EUR 1,053 million.

There were year-on-year deteriorations in the results for the majority of services, with the exception of business and technical services and government services. In the majority of service sectors, both imports and exports recorded year-on-year falls. The exception on the export side was financial services, where revenues were up 3.8%. On the import side, there were sharp year-on-year increases in imports of tourism services (16.3%), financial, computer and information services and intellectual property services (more than 20%), despite the economic crisis.

The deterioration in transport and tourism services accounted for over four-fifths of the year-on-year decline in the surplus of trade in services. Over half of the total year-on-year decline in the surplus, or EUR 279 million, can be attributed to the deterioration in tourism services, exports of tourism services declining by 6.9% as imports increased. The decline in exports of tourism services was primarily the result of a decline of 6% in the number of arrivals and the number of overnight stays by foreign visitors. Among the major countries of origin of foreign visitors to Slovenia, there was a decline of more than 20% in the number of arrivals from the UK, and a decline of around 10% in the number of arrivals from Germany and France. With the number of arrivals from Austria stagnating, the number of arrivals from Italy was up 5% and the number of overnight stays by visitors from Italy was up 4%. There were also increases in the number of arrivals and overnight stays by visitors from other European and Asian countries in addition to Italy, most notably Japan (up 22%), which did not compensate for the loss of tourists from Germany, France, the Netherlands and elsewhere.

The deficit in net factor income narrowed by EUR 403 million to EUR 637 million in 2009, making a significant contribution to the narrowing of the current account deficit. Expenditure on labour income halved in 2009 as a result of the decline in domestic economic activity and in the employment of foreign workers in Slovenia. As a result there was a surplus of EUR 84 million in labour income, compared with a deficit of EUR 4 million in the previous year. The deficit in capital income declined sharply in year-on-year terms, by EUR 315 million, to

EUR 702 million. Expenditure on capital was down more than a quarter, while receipts were down a fifth. Gross external claims and liabilities remained relatively high in 2009, despite the decline in economic activity. The net debt repayments by banks were compensated for by net government borrowing. Under these conditions, the net external debt remained relatively stable at around EUR 10 billion. Low interest rates meant that the largest decline among all capital income items was recorded by net interest payments to the rest of the world, from EUR 792 million in 2008 to EUR 307 million in 2009. The increase of EUR 8 million in the deficit in FDI income to EUR 501 million and the decline of EUR 163 million in the surplus from investments in securities to EUR 88 million acted to increase the deficit in capital income.

The deficit in current transfers in the amount of EUR 95 million was less than half of that in 2008, thus contributing to the decline in the current account deficit in 2009. With the deficit in private transfers almost unchanged at EUR 16 million, the deficit in official transfers

declined from EUR 110 million in 2008 to EUR 79 million. Official transfers into Slovenia, primarily from increased utilisation of available EU funding, recorded above-average increases of EUR 111 million in November and EUR 121 million in December, which accounted for just under half of total official transfers into Slovenia of EUR 515 million. The realisation of the forecast flows vis-à-vis the EU budget stood at 73.1% on the revenue side (compared with 46.4% in 2008), and 97.2% on the expenditure side; the overall position was a net inflow (of current and capital transfers) in the amount of EUR 156 million.

Capital and financial account

In the private sector's financial flows with the rest of the world there was a net financial outflow of EUR 3,738 million in 2009, which was mostly covered by the net financial inflow into the government sector. After the outbreak of the financial turmoil in the middle of 2008, the private sector's claims and liabilities began to fall rapidly. The decline in claims slowed in early 2009, to

Signs: inflows or increases in liabilities (+), outflows or increases in claims (-).							

Financial liabilities to the rest of the world - December 2009

stand at EUR 208 million over the first half of the year, but in the second half of the year claims increased sharply as a result of an increase in the currency and deposits held by banks and households in the rest of the world. The private sector's liabilities to the rest of the world fell rapidly until the middle of 2009 as a result of the decline in economic activity and the adverse financing conditions in the rest of the world, and only began to increase again in the second half of the year. The private sector's claims increased by EUR 1,842 million overall in 2009, while its liabilities declined by EUR 1,896 million as a result of the large debt repayments in the first half of the year. There was a trend of increase in the private sector's claims and liabilities in the second half of the year, but high volatility was evident in the monthly figures. After increasing in November, claims and liabilities declined again in December.

The largest contributions to the increase in the private sector's claims against the rest of the world in 2009 came from claims from currency and deposits (EUR 1,432 million) and outward FDI (EUR 610 million). Currency and deposits and outward FDI increased throughout 2009, while other flows, in particular investments in foreign securities, loans to the rest of the world and trade credits, reflected the loss of confidence in foreign financial markets and the decline in economic activity. The increase in the private sector's claims against the rest of the world was most pronounced in the third quarter of 2009, when confidence in the international financial

Financial claims* on the rest of the world - December 2009

markets strengthened slightly, which was also reflected in investments in foreign securities, which increased by EUR 702 million during this period.

The private sector's liabilities to the rest of the world declined by EUR 1,896 million in 2009, primarily as a result of the adverse funding conditions on the foreign interbank markets. The domestic banks' debt repayments in the rest of the world are evidenced in particular in the decline in liabilities from foreign loans to the domestic banks. The domestic banks made net loan repayments of EUR 2,961 million in 2009. The large banks partly compensated for the decline in this funding by issuing bonds, which was also the largest factor in the increase in non-residents' investments in domestic securities (of EUR 1,520 million).

The net external debt was practically unchanged in 2009, and stood at EUR 10.3 billion in December. The stock of gross external claims and the gross external debt were similarly unchanged, at EUR 29.7 billion and EUR 40.0 billion respectively in December. Despite the lack of any significant change in the aforementioned aggregates, there was a sharp change in the sectoral and maturity breakdown of the debt in 2009. As part of the anti-crisis measures the government increased its long-term debt on foreign capital markets, thereby neutralising the net financial outflow (debt repayment) from the banks. The adverse funding conditions on the foreign interbank markets meant that banks were compelled to reduce their

short-term debt, which they partly replaced by long-term borrowing on foreign capital markets.

5 | Public Finance

The consolidated general government deficit over the 12 months to November 2009 stood at EUR 2.0 billion, or 5.7% of GDP. There was a general government deficit of EUR 1.6 billion or 4.8% of GDP over the first eleven months of last year. According to available figures and estimates, including the December figures, the general government deficit in 2009 amounted to just under EUR 2.0 billion. The state budget deficit amounted to EUR 1.7 billion, less than the planned deficit of EUR 1.8 billion, while the Health Insurance Institute recorded a deficit of EUR 76 million. Local government recorded a deficit of EUR 96 million over the first eleven months of the year, comparable to the deficit recorded in the same

period the previous year. The state budget deficit in January 2010 amounted to EUR 220 million, compared with a surplus of EUR 7 million recorded in the same month last year.

Social contributions and the majority of tax revenues were down in year-on-year terms in January. Despite higher VAT inflows, the largest year-on-year decline in January was recorded by inflows of taxes on goods and services, but solely because of the deferral of excise duty payments until February. Inflows of taxes and contributions fell by around 7% last year, and the year-on-year fall was similar this January according to the initial figures. The latter is to a great extent a reflection of the deferral of the payment of excise duties on energy products from January to February. Inflows of excise duties on energy products amounted merely to just over EUR 2 million in January, having averaged around EUR 83 million each month in the final quarter of last year. Inflows of VAT in January were up in year-on-year terms for the second consecutive month. The developments on the labour market were a factor in the con-

Note: * Consolidated central government budget, local government budgets and social security funds (pension and disability insurance fund and health insurance fund) in cash accounting principle.

tinuing fall in inflows of social contributions (down 2.2% in year-on-year terms in January) and personal income tax (down 5.2%). The new personal income tax act adopted by the National Assembly in mid-February raises the additional general relief and the income ceiling for claiming it, as a result of which inflows of personal income tax will be EUR 46 million lower on an annual basis. At the same time inflows of social contributions will be higher as a result of the increase in the gross minimum wage, although certain social transfers will also be higher. Inflows of corporate income tax in January were down a fifth in year-on-year terms, although the inflows remained of a comparable magnitude to those in recent months, despite a 1 percentage point cut in the rate this year.

Year-on-year growth in general government expenditure in the second half of 2009 was slower than in the first half of the year, growth slowing in the final quarter in particular. Expenditure in November was down 0.6% in year-on-year terms, while the available figures and estimates for December indicate a year-on-year decline in general government expenditure. Despite the slowdown in the final quarter, expenditure over the first eleven months of 2009 was up 7.6% in year-on-year terms. While expenditure on wages and on goods and services slowed sharply at the end of the year, expenditure on subsidies strengthened from the middle of the year, and expenditure on the unemployed from the beginning of the year. The government has begun negotiations with the public sector unions with the aim of adjusting

wage policy to reflect the adverse public finance situation.

Expenditure on transfers to individuals and households increased by just over 7% last year, but growth will be lower this year as a result of the Act of intervention step because of economic crisis. Transfers to the unemployed recorded the largest increase last year, and will remain high this year given the situation on the labour market. Expenditure on pensions increased by 4.8% in 2009. The majority of pensions were increased by 1.1% in February, although this year's adjustment is lower as a result of the Act of intervention step because of economic crisis. The government put forward some bills relating to social security in February: the long-term care act, the social security benefits act, and the public funds entitlement act.

In its stability programme and exit strategy, the government is planning to gradually reduce the general government deficit to below 3% of GDP in 2013. The general government deficit is expected to stand at 5.7% of GDP this year, which was the figure recorded in 2009 according to the estimates in the stability programme. The general government debt is expected to increase to 39.6% of GDP this year, having reached 34.4% of GDP in 2009 according to the estimates. In times of low economic growth, reducing the deficit to below 3% of GDP by 2013 will focus primarily on cutting government expenditure. Savings are expected to be achieved through measures to improve the efficiency of the public sector, by rationalising the services provided by the public sector, by rationalising the distributive role of the state, and by rationalising programmes in favour of the government's development priorities. The key will be the timely implementation of the planned measures within the defined timetables.

6 | Banking System*

The banking system's total assets increased by EUR 531 million in January. The main factor in this was the increase in government deposits at banks, as a result of the issue of 10-year government bonds with a nominal value of EUR 1.5 billion. The increase in government deposits at banks was temporarily reflected in a rise in marginal bank deposits at the central bank. Banks again made net debt repayments to the rest of the world, of EUR 0.5 billion, the banks under majority foreign ownership accounting for the largest proportion. After several consecutive months of decline in lending, in January there was a renewed net increase, albeit modest, in the stock of loans to non-banking sectors and to non-financial corporations.

The banking system's lending activity to non-banking sectors was weak, but positive. Year-on-year growth in lending to non-banking sectors stood at 1% in January. There was a net increase of EUR 92 million in loans in January.

The stock of loans to non-financial corporations (NFCs) increased by EUR 44 million in January. Year-on-year growth in bank loans to NFCs was negative for the second consecutive month (at -0.8%). The decline in the current rate of growth was most pronounced at the banks under majority foreign ownership. Corporates recorded similar net borrowing of EUR 24 million at the banks under majority foreign ownership and the large domestic banks in January, while making net repayments at the small domestic banks.

January's net increase of EUR 34 million in loans to households was down on last year's monthly average, but this type of lending is usually weak in the first two

* The book figures for banks are used in this section, and differ in methodological terms from the published statistics. The figures for 2009 are unaudited.

months of the year. The majority of the net increase in such loans was recorded at the banks under majority foreign ownership. They also recorded significantly faster current growth in lending to the household sector than the domestic banks.

The banking system made net repayments to banks in the rest of the world in January, while government deposits at banks increased sharply. Banks again made net repayments to the rest of the world (of EUR 517 million) in January, the banks under majority foreign ownership accounting for the majority (EUR 484 million). The net decline in the Slovenian banking system's liabilities to banks in the rest of the world over the 12 months to January amounted to EUR 3.5 billion. This funding accounted for 23.7% of the banking system's total liabilities at the end of January, down from just under a third a

year earlier.

Deposits by non-banking sectors increased by EUR 1.04 billion in January, primarily as a result of a sharp increase in government deposits at banks in the net amount of EUR 926 million. Household deposits again recorded relatively sharp growth, primarily as a result of the payment of agricultural subsidies. In maturity terms January saw an increase in household sight deposits (of EUR 93 million), a decline in short-term deposits (of EUR 118 million) and an increase in long-term deposits (of EUR 163 million). The maturity bucket of 1 year to 2 years accounted for four-fifths of the increase in long-term deposits by households.

Banks again recorded relatively high impairment and provisioning costs in January. Net interest in January was up more than a fifth on the same month last year, primarily as a result of a decline in banks' interest expenses. Net non-interest income grew relatively modestly, primarily as a result of losses from trading. The banking system created impairments and provisions of EUR 28.9 million in January, a relatively large figure compared with previous years. January usually sees a seasonal low in impairment and provisioning costs. Operating costs in January were wholly comparable to those in the same month last year, while the banking system's pre-tax profit was down 7.5% on the same month last year at EUR 31.8 million.

7 | Domestic Financial Markets

The yield on Slovenian government bonds stood at 4.00% at the end of January 2010, compared with 3.26% on German government bonds. The spread had thus narrowed to 74 basis points at the end of the month. The spread is not as pronounced as in early 2009, but is still significantly larger than in mid-2008.

The majority of global stock market indices fell in January 2010. The DJ EuroStoxx 50 index for western Europe fell by 4.7%, while the S&P 500 for the US stock market fell by 3.7%. The year-on-year changes in the stock market indices nevertheless remain strongly positive (26.5% for the DJ EuroStoxx 50, 30.0% for the S&P 500).

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 14.1% in January, primarily as a result of a new government bond issue. RS67 government bonds were listed for trading (with a nominal value of EUR 1,500 million, or 12.2% of the total market capitalisation of bonds on the Ljubljana Stock Exchange). Financial firm KB1909 also held its second bond issue (nominal value: EUR 10.2 million), while the eighth issue of Nova KBM bonds (nominal value: EUR 29.1 million) was delisted upon maturity. At EUR 8.5 million (21.8% of total stock exchange volume), January's volume of trading in bonds was below the monthly average in 2009 of

EUR 13.0 million.

The market capitalisation of shares on the Ljubljana Stock Exchange rose by 0.5% in January. The SBI 20 reached its monthly high on 6 January, closing the month at a low of 4,118. It rose by 1.0% during the month, and was up 7.3% on a year earlier. The P/E ratio was unchanged in January at 23. At EUR 20.8 million, January's monthly volume of trading in shares (excluding block trades) was below the monthly average (excluding block trades) in 2009 of EUR 32.1 million.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents rose slightly in January 2010, but remained low at 7.3%. The volume of trading accounted

for by non-residents in January was sharply higher than the monthly average in 2009, primarily as a result of purchases of government bonds. Non-residents made net purchases of EUR 1,440.7 million in bonds from Slovenian issuers, and EUR 21.9 million in shares in Slovenian issuers in January. The largest net purchasers and net sellers were again residents of Austria, Luxembourg and the UK.

Residents made net purchases of EUR 16.8 million in foreign shares and EUR 34.9 million in foreign bonds in January. The majority of net purchases of foreign shares, predominantly shares in euro area financial corporations and non-financial corporations from the BRIC³ countries, were made by insurance corporations and mutual fund managers. The latter primarily sold shares in non-financial corporations from the former Yugoslav republics, Turkey and the UK. The banking sector mostly purchased bonds from the euro area, while pension funds also purchased Greek government bonds in the amount of EUR 2.3 million.

There was a slight increase in January in assets under management at domestic mutual funds to EUR 1,857 million (up 0.1% in monthly terms, and 23.7% in year-on-year terms), as a result of net inflows of EUR 8.6 million and a fall of 1.0% (taking the year-on-year change to +23.5%) in the average unit price. The larg-

est net inflows of EUR 7.6 million were recorded by equity funds, followed by bond funds with inflows of EUR 1.2 million, while balanced funds and money-market funds recorded net outflows of EUR 0.5 million and EUR 0.7 million respectively. The largest contributor to the domestic mutual funds was again the insurance sector, which recorded net inflows of EUR 7.9 million, while the corporate sector recorded net outflows from mutual funds of EUR 2.4 million. Households recorded net inflows of EUR 3.3 million into mutual funds. The proportion of domestic mutual funds' assets accounted for by liquid assets⁴ remained slightly below the average in 2009 at 11.4%. The domestic mutual funds slightly increased their invest-

³ Brazil, Russia, India and China. changes in tax rates and excise duties.

⁴ Liquid assets include cash, deposits, money-market instruments and government bonds.

ments in Norway, the BRIC countries and the domestic economy at the expense of a decline in investments in the euro area, the US and Turkey, but these movements were relatively small, and do not indicate any fundamental changes in investment policy. After falling in December, the Balkan stock market indices rose in January 2010. Macedonia's MBI-10 rose by 3.2% in January (taking the year-on-year change to +26.9%), Serbia's BELEX 15 rose by 2.2% (taking the year-on-year change to +26.4%) and Croatia's CROBEX rose by 9.9% (taking the year-on-year change to +31.0%).

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The *overnight-deposit interest rate* is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The **tolar indexation clause (TOM)** is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Ljubljana Stock Exchange (Tables 2.6 to 2.8)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities

Shares – investment fund shares are not included.

IF – investment fund shares.

Turnover is measured with a single counting.

Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed

securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

- SBI – Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO – Bond Index
- SBI, BIO – value of SBI and BIO at the end of period
- dT – change of index value by points
- d% – change of index value in percentage
- Min, Max – minimum and maximum value of index in a period

Exchange rates (Tables 2.9.1–2.9.2)

Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.
The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.9.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

Payment systems (Tables 2.10 to 2.16)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.10: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.11 Payment Cards

Note 1: *Credit card:* A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: *Debit card:* A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: *Cards issued abroad:* Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: *Volume and value of transactions abroad:* Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.12 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.13 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.14 Credit Transfers

A **paper-based order** is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

A **special payment order** is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A **non-paper-based credit transfer** is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A **standing order** is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.15 Debit Transfers and Simply book-entry

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A **special money order** is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.16: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
 - report on account balances at domestic banks – PPV (until 31 December 2004),
 - report on account balances abroad – C (until 31 December 2006),
 - report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
 - report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.
- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Accounting data of the Bank of Slovenia**

- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

- **Estimates and other sources**
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
 - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
 - estimate of Italian pensions (UMAR) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
 - estimate of labour income (SURS),
 - data on pensions paid to non-residents (ZPIZ),
 - survey on the write-downs of debt from trade in goods and services abroad,
 - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
 - estimate of cash transactions on tourism and labour income (from 2007 onwards).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolaars from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolaars to non-residents abroad.

The data on sales of tolaars to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,

- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad.

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from

2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data).

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad.

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies.

Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]}
- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]}

Since 2002, short-term commercial credits are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade

credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1988 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)
- March 2007 (EUR 1000.0 million)
- February 2008 (EUR 1000.0 million)
- February 2009 (EUR 1000.0 million)
- March 2009 (EUR 1500.0 million)
- September 2009 (EUR 1500.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2009 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2006 to 2008 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2010, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2009 shall take into consideration the new three year average (2007 to 2009).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2009 are provisional.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and

liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment-other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1-3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank.

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Sources for long-term trade credits and loans are credit registration forms (until 2006 forms KR, from 2007 onwards forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,

- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo',
- data on foreign ownership of real estate in Slovenia.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial instruments are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service

- J Information and communication
 - K Financial and insurance activities
 - L Real estate activities
 - M Professional, scientific and technical activities
 - N Administrative and support service activities
 - O Public administration and defence, compulsory social security
 - P Education
 - Q Human health and social work activities
 - R Arts, entertainment and recreation
 - S Other service activities
 - T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site:
http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics (Tables 6.1 to 6.8)

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2008 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1–ZAP/M)). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, ECB EER-41 group of currencies (AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CZ, EE, HU, LV, LT, PL, BG, RO, NZ, DZ, AR, BR, HR, IN, ID, IL, MY, MX, MA, PH, RU, ZA, TW, TH, TR, IS, CL, VE) – Euro area 16 against Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs deflated, ECB EER-21 group of currencies and Euro area 16 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO) against Slovenian tolar (until 31.12.2006) from 01.01.2007 against Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data shown every three months of the year are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia:
<http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.
