Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

After high economic growth in the euro area in the second quarter, current figures indicate a slowdown in growth in the third quarter, while current growth is also expected to remain moderate in the US. Industrial production in the euro area and in the US has not yet reached its pre-crisis level. Unemployment remains high. Primarily as a result of the improvement in the second quarter, the European Commission raised its GDP growth forecast for the euro area for this year to 1.7%, while Consensus' September forecasts stood at 1.6% for the euro area and 2.7% for the US. Inflation rose to 1.8% in the euro area in September, and stood at 1.1% in the US in August. Prices of oil, other commodities and gold rose in September, partly under the influence of further depreciation in the dollar. The key interest rates of the ECB and the Fed remained unchanged.

After recording high growth in the second quarter, domestic industrial production was down in current terms in July. Growth in new orders in industry has slowed in recent months: July's decline was larger than the usual monthly fluctuations. Weak domestic consumption is continuing to result in low revenues in the retail sector. These declined in current terms in August for the second consecutive month. Construction activity continued to decline, but the situation in non-residential construction has stabilised this year. The rise in the economic sentiment indicator has ceased in recent months.

The number of registered unemployed was up in current terms in August at more than 99,000. The workforce in employment fell in July, which is partly the result of the usual seasonal movement in the education sector at the end of the school year. The workforce in employment is continuing to decline in the construction sector, where survey figures for employment expectations indicate a continuation of the adverse situation. The average gross wage per employee was up 4.0% in year-on-year terms in July, as a result of growth in the private sector. Growth was 1.5 percentage points lower than the average over the last five years, but unit labour cost indicators remain at considerably higher levels than before the onset of the economic crisis.

Year-on-year inflation as measured by the HICP was down 0.3 percentage points in September at 2.1%. The decline in the contribution made to the HICP by services prices in September was larger than the usual seasonal movements, as a result of a one-off effect related to the calculation of prices of school meals. The contributions made by energy prices and food prices to headline inflation in September stood at 1.5 percentage points and 0.8 percentage points respectively. Core inflation remains low, in line with the adverse macroeconomic situation, while year-on-year growth in the narrowest core inflation indicator has mostly been negative since the beginning of the year.

The current account deficit is gradually diminishing, and amounted to 0.9% of GDP in the year to July. July's current account surplus was down a half on the previous month as a result of a decline in the surplus of trade in merchandise and services. Year-on-year growth in merchandise imports and exports has slowed in the last two months, more notably on the import side. The surplus of trade in services during the first seven months of the year was down slightly on the same period last year. The deficit in factor income continued to diminish in July. The deficit in current transfers in the year to July diminished, partly as a result of net inflows from the EU budget.

According to Ministry of Finance, this year the general government deficit is expected to reach 5.6% of GDP, while the general government debt will reach 37.9% of GDP. At the end of September the government passed the state budgets for 2011 and 2012. The planned budget deficits of 4.5% of GDP and 3.6% of GDP are to be achieved by means of savings on the expenditure side. The austerity measures ran into opposition from interest groups, and the government's persistence in keeping to the planned path, both in passing budgets and in pursuing longer-term reforms, will thus be of key importance for achieving fiscal balance.

The banking system's total assets rose by EUR 502 million in August. On the investment side, the largest increase was recorded by short-term loans to banks in the rest of the world, while the increase in loans to non-banking sectors was modest. There was a sharp increase in loans to the government and loans to households, while lending to non-financial corporations declined. On the funding side, there was an increase in deposits by non-banking sectors, primarily government deposits, but also to a lesser extent in Eurosystem funding and other liabilities. Pre-tax profit during the first eight months of the year was down 45% in year-on-year terms; in August the main factor was again impairments and provisioning.

The market capitalisation of bonds on the Ljubljana Stock Exchange increased by 0.1% in August, while the market capitalisation of shares increased by 0.2%. The proportion of the market capitalisation of shares accounted for by non-residents stood at 9.2% in August. The SBI TOP rose by 0.6% in monthly terms, taking the year-on-year change to -20.4%. The domestic mutual funds' assets under management declined to EUR 1,934 million as a result of net withdrawals of EUR 5.1 million and a fall of 0.8% in the average unit price.

1 | International Environment

The economic situation in the euro area and the US remains uncertain. Construction activity in the euro area declined by 3.1% in current terms in July, while new orders in industry declined by 2.4%. In the US, new orders in industry declined by 1.3% in current terms in August. Industrial production was unchanged from the previous month in the euro area in July, and was up 0.2% in the US in August. Unemployment remains high in both economies, at 10.1% in the euro area and 9.6% in the US in August.

The European Commission and Consensus raised their economic growth forecasts for 2010 for the euro area, but lowered their forecasts for the US. The European Commission is forecasting economic growth of 1.7% in the euro area this year. Consensus is forecasting economic growth of 1.6% this year, and 1.4% in 2011. Economic growth in the US is expected to reach 2.7% this year, and 2.4% next year. Consensus raised its economic growth forecast for Eastern Europe to 4.0% for this year, while maintaining its forecast for 2011 at 3.9%.

Year-on-year inflation in the euro area stood at 1.6% in August, and 1.8% in September. Inflation in the US

fell from 1.2% in July to 1.1% in August. The main factors in August's fall in inflation in the euro area were the current fall in prices of transport services, and the year-on-year decline in growth in prices of clothing. The main factor in the fall in inflation in US was lower growth in energy prices. Core inflation remained unchanged in August, at 1.0% in the euro area and 0.9% in the US. Year-on-year growth in industrial producer prices stood at 4.0% in the euro area in July, and 3.1% in the US in August.

Prices of oil, other commodities and gold rose in September. The price of a barrel of Brent crude aver-

aged USD 77.8 in September and USD 77.1 in August. Monthly fluctuations in oil prices have recently eased somewhat. The rise in oil prices in September was primarily the result of depreciation in the US dollar, and the closure of inflows of oil from Canada to the US. US dollar prices of commodities other than oil rose again in current terms in September, growth reaching 5.4%. Food prices recorded the highest current growth, at 9.2%. As a result of uncertainty in the financial markets, gold prices rose again in September, reaching an all-time high of over USD 1,300 per ounce at the end of the month.

The euro appreciated against the US dollar in September. The key interest rates remained unchanged. The euro averaged USD 1.3067 in September, up 1.3%

on August. This was the third consecutive month in which the euro appreciated against the US dollar. The euro also appreciated against the pound sterling, but depreciated against the Japanese yen and the Swiss franc. The Japanese central bank made purchases of approximately USD 23 billion in mid-September with the aim of preventing a rise in the Japanese yen. The key interest rates of the ECB and the Federal Reserve remained unchanged at 1.00% and at the interval between zero and 0.25% respectively.

2 | Economic Activity and Labour Market

Real sector

After recording relatively high growth in the second quarter, industrial production recorded a decline in current terms in July at the level of the usual monthly fluctuations of recent years, while there was a considerable decline in new orders. The high growth in the second quarter was primarily the result of a 4.9% increase in production in May. Growth slowed significantly in June, before industrial production declined by 2% in July. Year-on-year growth also declined in line with the slowdown in the current rate of growth, slowing from 11.9% in May to 9.5% in July. July saw a current decline in new orders of 4.1%, the largest since March 2009. The decline in orders from the domestic market deepened to 8.5% in July, an indication of the continuing adverse situation in the domestic economy. Orders from the foreign market also declined, by more than 3%. This was broadly in line with developments in indicator of demand expectations in manufacturing, which declined by 9 percentage points from May to July.

Intermediate goods continued to record the most stable growth in production among the various product categories. Production of intermediate goods was up in current terms for the sixth consecutive month in July, taking the year-on-year growth in production over the first seven months of the year to 10%. Production of capital goods and consumer goods has fluctuated significantly: a

recovery in year-on-year terms has only been evident since April. Production of capital goods in the first seven months of the year was up by just over 1% in year-on-year terms, while production of consumer goods was up by just over 2%. The growth in production of intermediate goods is primarily tied to the role of domestic producers in industrial supply chains in the euro area. This produces notable demand for intermediate goods, exports of which were up over a fifth in the first half of the year. Total merchandise exports were up by just over a tenth during this period.

Output fell sharply last year in all major activities of manufacturing industry as a result of the crisis, but there has been great variation in this year's trends. According to original figures, manufacturing output during the first seven months of the year was up 6.4% in year-on-year terms, the second quarter recording more notable growth. Notable among activities responsible for more than 5% of total value-added in the manufacturing sector is the manufacture of electrical equipment, where output rose by more than a third during the first seven months of the year. This activity has recorded high year-on-year growth in output since November 2009, partly as a result of a base effect. Output in the manufacture of motor vehicles, trailers and semi-trailers has been rising in year-on-year terms since October 2009, its growth in the first seven months of the year exceeding 22%. After peaking in March and April, growth in this activity has gradually slowed, not only as a result of a base effect, but also as a

result of the abolition or phasing-out of subsidies for the purchase of new vehicles in the most economically important EU Member States. The abolition of subsidies has also been reflected in the number of vehicle registrations in the EU, which has been declining in year-on-year terms since April, and was down by just under 15% in August. There was also high growth in output in the manufacture of rubber and plastic products, which reached 30% in May, before slowing somewhat. Output in the manufacture of basic metals and fabricated metal products began rising in March, but growth over the first seven months of the year did not exceed 5%. Output in the manufacture of other machinery and equipment n.e.c. only began to rise in the second quarter, and the food industry also recorded low growth.

The real value of total construction work performed fell again in July, although the value of work performed in non-residential construction during the first seven months of the year increased slightly. Construction activity was down 3.2% in current terms in July, taking the year-on-year decline to just under 19%, despite last year's low basis. There was a sharp current decline in housebuilding activity in July, of just under a fifth, taking the year-on-year decline during the first seven months of the year to more than 40%. These movements lowered the proportion of total construction activity accounted for by housebuilding from 13% in 2009 to 11% during the first seven months of this year. The figures for

the construction of non-residential buildings are better. Activity in this segment recorded a current increase of just over 6% in July, resulting in positive year-on-year growth during the first seven months of the year, at 2.1%. Its proportion of total construction activity increased from 36% in 2009 to 44% during the first seven months of the year. Activity in civil engineering continued to decline.

The value of new contracts and building permits indicate a current stabilisation of the situation in the construction of non-residential buildings. The value of new contracts for the construction of non-residential buildings during the first seven months of the year increased sharply, by 35% in year-on-year terms. After declining by 45% in 2009, the value of new contracts for housebuilding during the first seven months of the year was down just over 2%. In the absence of any major infrastructure projects, the decline in the value of new contracts for civil engineering work during the first seven months of the year deepened to more than 25%. The value had declined by 10% in 2009. Building permits also indicate a gradual stabilisation of the situation in the construction of non-residential buildings. The decline in the number of such building permits slowed significantly compared with the first half of 2009, while the area covered by approved construction works increased in the second quarter of this year. These trends could indicate a recovery in certain areas of investment related to construction activity.

Sources: SORS, Eurostat, Bank of Slovenia calculations.

Notes: Differences from official numbers are due to rounding. Data are unadjusted for seasonal and working days effects.

* Volume of industrial production. ** Real value of construction put in place.

Real revenues in the retail trade were down again in current terms in August, while trade in motor vehicles continued to record better results. Revenues in the retail sector declined by 2.6% in current terms in August; the decline was particularly pronounced in the food, beverages and tobacco sector, reaching 6.3%. Revenues in the retail sector over the first seven months remained lower in year-on-year terms. These movements are in line with the ongoing predominant loss of low-paid jobs, and a severe lack of household confidence. The trend in the trade and repair of motor vehicles remains notable: growth in real revenues reached 5% in current terms in August, while revenues during the first seven months of the year were up over a tenth in year-on-year terms. The

high growth in revenues from trade in motor vehicles is also reflected in the number of new vehicle registrations, which during the first seven months of the year was up 4% in year-on-year terms.

According to the figures available up to June, total revenues from services in the private sector other than trade were up in nominal terms. Current growth in total nominal revenues from private sector services stood at 2.9% in June, although nominal revenues from services other than trade (wholesale and retail) remained unchanged. Revenues in the trade sector, which were up 4.1% in current terms, thus contributed to the current growth in total revenues from private sector services in June. Of the other service sectors, nominal revenues from transportation, storage and communication have been growing rapidly for about a year. In June they were up 2.2% in current terms and 24.6% in year-on-year terms, this growth coinciding with the expansion of merchandise trade with the rest of the world. Year-on-year growth in total nominal revenues from private sector services stood at 7.7%, partly as a result of last year's low basis. Growth in revenues from wholesale and retail trade reached 8.3%, while growth in revenues from other services stood at 6.4%.

The rise in confidence has stalled in recent months. The economic sentiment indicator remained unchanged in current terms in September. The manufacturing confidence indicator also stagnated in current

terms in September. Services confidence declined again; the main factor in September was a decline in demand expectations. After rising in August, retail confidence also declined in September; the main factor was a decline in the sales indicator. Construction confidence rose for the second consecutive month, but nevertheless remains the lowest among all sectors. The main factors were rises in the actual prices and expected prices indicators. After declining for two months, consumer confidence rose slightly in September. The main factor was increased consumer optimism regarding the household financial situation in the next twelve months. The proportion of consumers who were more optimistic regarding the timing of major purchases also increased slightly, but this indicator nevertheless remains at a low level.

Labour market

After a current decline in May and June, the number of registered unemployed began to slightly rise again, reaching 99,032 in August. The number of unemployed is currently around a level last reached in early

2004. As a result of the usual autumn seasonal movements and the recent bankruptcies of certain large companies it is expected to further increase, passing 100,000 by the end of the year. Year-on-year growth in the number of unemployed fell between last October, when it stood at 51.1%, and this July, when it reached 11.2%. It

Advertised and filled job vacancies, new registered unemployed

Source: Employment Service of Slovenia, Bank of Slovenia calculations.

then rose to 12.4% in August. The registered unemployment rate has remained more or less unchanged since the beginning of the year, and stood at 10.5% in July. There were 7,257 people newly registered as unemployed in August, which resulted in this year's first year-on-year increase in the number of newly registered unemployed, at 8.6%. Employers notified 14,923 vacancies in August, 21.5% more than in last August. At the same time the number of new hires continued to decline, and was down 2.7% in year-on-year terms in August.

The workforce in employment ceased falling in the first half of the year, but then declined again in July to reach its lowest level of the last three years. The workforce in employment in the economy as a whole fell by 3,435 in July. A major factor in this decline was the usual seasonal movement in the education sector at the end of the school year, the workforce in employment in this sector falling by 991. The workforce in employment also fell significantly in the sector of trade, maintenance and repair of motor vehicles (by 553) and the manufacturing sector (by 535). The workforce in employment was up in certain sectors, most notably in the sector of professional, scientific and technical activities, where it rose by 213. The workforce in employment has continued its sustained decline in the construction sector, where it fell by over 13,000 between October 2008 and this July. Survey figures for employment expectations in this sector indi-

Expected employment

Source: SORS.

cate great pessimism regarding future employment. For some time now the proportion of construction companies expecting their workforce to contract in the next three months has been more than 40 percentage points higher than the proportion expecting an expansion. In contrast to construction, in manufacturing this indicator has been markedly improving since mid-2009.

The average gross wage per employee in July was up 4.0% in year-on-year terms at EUR 1,480.7. Year-on-year wage growth stood at 4.9% in the private sector, and 0.8% in the public sector.¹ The increase was most pronounced in the manufacturing sector, where year-on-year

Total wage bill and average monthly gross wage per employee

Source: SORS, Bank of Slovenia calculations.

¹ The public sector and private sector are distinguished according to the standard classification of economic activities. Thus the public sector includes public administration, education, health and culture. The weakness in this indicator is that it includes legal entities that do not fall within the public sector.

growth reached 8.1% in July, although year-on-year growth in this sector has been slowly easing since March, when it peaked at 15.3%. Year-on-year growth in total wage bill in the private sector was negative for almost one year, an indication that companies were cutting labour costs as a result of the economic crisis. Growth in total wage bill has recently been positive again, reaching 2.2% in July. Wage bill in the manufacturing sector recorded year-on-year growth of 3.5% in July. Two significant factors in recent wage growth are the statistical effect of the rise in the average wage as a result of lay-offs of the low-paid and a rise in wages for employees whose wages were temporarily reduced during their inclusion in the government measure to subsidise temporary lay-offs.²

Selected competitiveness indicators

The harmonised indicator of the nominal effective exchange rate depreciated in both current and year-on-year terms in August. The current depreciation was 0.2%, which took the year-on-year depreciation to 2.7%. August's depreciation in the indicator was the result of the euro's falls of 1.4% against the pound sterling, 1.5% against the Japanese yen and 0.4% against the Swiss franc. The euro rose by 0.9% against the US dollar in current terms in August. The euro's rise against the US dollar, which was the result of its appreciation in the first half of the month, came as a result of the US's weaker

macroeconomic figures in the second quarter compared with the more encouraging figures for economic growth in the euro area. The current depreciation in the nominal effective exchange rate also brought an increase in the year-on-year depreciation, from 2.6% in July to 2.7% in August.

The harmonised indicator of the real effective exchange rate as measured by consumer prices depreciated in both current and year-on-year terms in August. The real effective exchange rate recorded a current depreciation of 0.1% in August, slightly less than the current depreciation in the nominal effective exchange rate.

² Brezigar Masten, Arjana; Kovačič, Saša; Lušina, Urška; Selan, Ana: Estimation of the impact of minimum wage rise in Slovenia. IMAD, Working Paper 3/2010, Ljubljana.

Growth in domestic consumer prices this August was only slightly higher than growth in the basket of foreign prices. The year-on-year depreciation in the real effective exchange rate, which had stood at 2.3% in July, rose to 2.5% in August. The year-on-year depreciation in the nominal effective exchange rate contributed 2.7 percentage points, but faster year-on-year growth in domestic prices compared to the basket of foreign prices reduced the depreciation by 0.2 percentage points.

The level of the harmonised indicator of price competitiveness continues to indicate that Slovenia's price competitiveness is weak relative to its major trading partners in the euro area. The harmonised indicator of price competitiveness as measured by consumer prices depreciated by 0.2% on average in current terms in the major trading partners in August, 0.1 percentage points more than in Slovenia. The year-on-year movements in the price competitiveness indicator are also less favourable for Slovenia. In Slovenia it recorded a year-on-year depreciation of 2.5% in August, compared with an average of 5% in the major trading partners. The biggest improvement in price competitiveness was recorded by Germany, where the indicator depreciated by 6.4% in year-on-year terms in August. The other year-on-year depreciations stood at 5.1% in Italy, 4.6% in France and 3.7% in Austria.

3 | Price Developments

Year-on-year inflation as measured by the HICP was down 0.3 percentage points in September at 2.1%. The contributions made by prices of services, energy and food all declined. After recording year-on-year growth of 1.3% in August, services prices were down 0.1% in September. Their contribution to inflation stood at 0.4 percentage points in August, but was neutral in September. The main factor in the decline in this contribution was changes in the calculation of prices of school meals. Lower prices of fuels and lubricants helped to reduce growth in energy prices from 12.7% to 11.6%. After three

months of year-on-year increases, growth in food prices declined in September by 0.6 percentage points to 3.8%, their contribution to inflation falling from 0.9 percentage points to 0.8 percentage points. The fall in prices of non-energy industrial goods slowed, from 2.1% in August to 1.3% in September. The main factors were higher prices of clothing and footwear, and household equipment.

The recent low core inflation has been the product of the adverse macroeconomic situation, in particular the situation on the labour market and low household consumption. Core inflation excluding energy, food, alcohol and tobacco stood at -0.3% in August, and -0.6% in September. Year-on-year growth in this narrowest core inflation indicator has been low or negative since the be-

ginning of the year. September also saw falls in core inflation excluding energy, from 0.8% to 0.5%, and core inflation excluding energy and unprocessed food, from 0.4% to 0.1%.

According to detailed figures available for August, the most notable changes in year-on-year growth were recorded by food prices, municipal services prices and energy prices. Of the components of the HICP, the largest increase in year-on-year growth was recorded by tobacco prices, which rose from 6.7% in July to 11.7% in August as a result of an increase in excise duty. Excise duty increases were also the reason for the increase in year-on-year growth in electricity prices from 4.7% to 6.3%. There were also increases in year-on-year growth in prices of fruit, by 3.6 percentage points to 12.9%, and vegetables, by 1.6 percentage points to 19.1%. The increase in year-on-year growth in prices of refuse disposal from 17.7% to 19.6% was the result of August price rises in certain municipalities. The most notable declines in year-on-year growth were recorded by prices of liquid fuels, from 31.2% to 26.6%, and heat energy, from 31.3% to 28.3%.

Output price index of the domestic market rose in August. Year-on-year growth in this index stood at 2.9% in August, up 0.2 percentage points on July. The largest current rises in prices were recorded by the manufacture of beverages, the manufacture of leather and related products, and manufacturing n.e.c. Prices in the manu-

facture of metals and in water collection, treatment and supply continued to record the highest year-on-year growth.

4 | Balance of Payments

Current account

July's current account surplus was half that recorded in June, primarily as a result of a decline in the surplus in trade in merchandise and services. Favourable year-on-year developments seen in June continued. The current account surplus amounted to EUR 57 million in July, compared with a deficit of EUR 84 million in the same month last year. July's surplus was down on the previous month as a result of a decline of EUR 27 million in the merchandise trade surplus, and a decline of EUR 30 million in the surplus of trade in services. As a result of high net inflows from the EU budget the surplus

in current transfers stood at EUR 25 million in July, while the widening of the deficit in factor income was relatively small. In one year to July, the current account deficit amounted to EUR 308 million or 0.9% of GDP, compared with EUR 1.1 billion or 3.9% of GDP in one year to last July.

July's merchandise trade surplus was down significantly on June, while year-on-year growth in merchandise trade also slowed. The merchandise trade surplus amounted to EUR 2 million in July, EUR 28 million less than in June. These developments were nevertheless more favourable than last July, when there was a deficit of EUR 50 million in merchandise trade. Merchandise imports in July amounted to EUR 1,604 million, while exports amounted to EUR 1,606 million. Year-on-year growth in merchandise exports stood at 14.7% in July,

down just under 3 percentage points on June. The slow-down in growth was more pronounced on the import side: year-on-year growth in imports stood at more than 26% in May, but had slowed to 10.6% by July.

The increase in merchandise trade with EU Member States during the first seven months of the year was more pronounced than that in trade with non-EU countries, but the movements in June and July indicate changes on the import side in particular. Year-on-year growth in imports from EU Member States during the first seven months of the year stood at 13.9%, while the corresponding figure for exports was 15.6%. The recovery in merchandise trade with non-EU countries was significantly slower, primarily as a result of contraction in the first two months of the year. Growth in imports during the first seven months of the year stood at 9.4%, while export growth stood at 4.5%. In contrast to imports from EU Member States, June and July saw a sharp increase in imports from non-EU countries. While growth in imports from EU Member States slowed from 26% in May to 8% in July, growth in imports from non-EU countries declined only slightly over the same period, and remained above 20%.

The surplus of trade in services was up in year-on-year terms in July, primarily as a result of more favourable results in the tourism sector, but the surplus over the first seven months of the year was still slightly lower than in the same period last year. The

surplus of trade in services in the year to July amounted to EUR 604 million, down EUR 6 million in year-on-year terms. The main factor in July's increase in the surplus was the surplus of trade in tourism services, which was up EUR 12 million in year-on-year terms. The year-on-year decline in the surplus of trade in services during the first seven months of the year was primarily the result of developments in trade in other services (services other than tourism and transport), of which construction services recorded a decline of EUR 26 million in its surplus, while intellectual property services recorded an increase of EUR 34 million in its deficit.

July's year-on-year growth in exports of services was down significantly on June, while there was stagna-

tion on the import side. Year-on-year growth in exports of services stood at 8.6% in June, but declined to just under 5% in July. The slowdown was the result of a decline in growth of exports of transport services, in line with the movement in merchandise trade, while growth in exports of other services (services other than tourism and transport) also declined. Exports of construction services declined in July, by more than 28%, and were down almost EUR 30 million during the first seven months of the year. Year-on-year growth in tourism exports has fluctuated around 2.5% since May. Imports of services were down 0.3% in year-on-year terms in July, primarily as a result of tourism imports, which were down 3.7% in year-on-year terms. Year-on-year growth in imports of transport services also slowed significantly, from more than 20% in June to just over 10% in July. At 2.5%, growth in exports of services during the first seven months of the year remained lower than growth in imports, which reached 3.6%.

The deficit in factor income during the first seven months of the year amounted to EUR 360 million, EUR 170 million less than in the same period last year. The narrowing of the deficit was the result of an increase of EUR 39 million in the surplus in labour income and a narrowing of EUR 128 million in the deficit in capital income. The main factor in the movement in net capital income was income and expenditure from FDI, where the deficit during the first seven months of the year was down EUR 91 million in year-on-year terms. The deficit in net income from other investments, primarily bank loans, narrowed by EUR 154 million over the same period. The deficit from investments in securities widened by EUR 117 million, as a result of an increase in net outflows from investments in bonds and notes. Expenditure on investments in bonds and notes more than doubled in year-on-year terms, as the result of the issuance of government and bank bonds in 2009.

The deficit in current transfers during the first seven months of the year narrowed by EUR 111 million in year-on-year terms to EUR 62 million. The largest factor in this was the narrowing of EUR 106 million in the deficit in government transfers. The narrower deficit during the first seven months of the year was primarily the

result of the deficits in taxes on production and in other government transfers narrowing by EUR 39 million and EUR 75 million respectively. Government transfers recorded a surplus of EUR 27 million in July as a result of net inflows from the EU budget in the amount of EUR 30 million. The deficit in taxes on production and other government transfers was negligible in July.

Capital and financial account

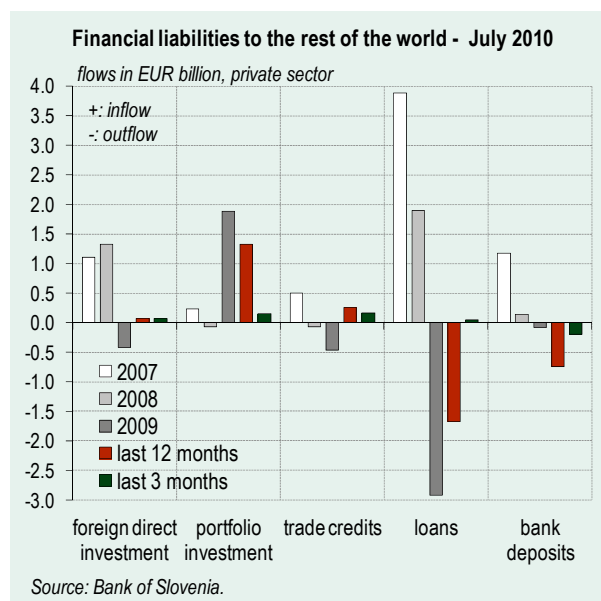

The private sector recorded a net financial inflow in July for the second consecutive month. It amounted to EUR 450 million. The net financial inflow was primarily the result of a decline in claims from currency and deposits, to which the domestic commercial banks made the largest contribution, and a decline in loans to non-residents. The largest factor in July's decline in liabilities was a decline in deposits by non-residents at domestic banks. The government sector continued to record net inflows in July. The Bank of Slovenia's net financial outflows during July amounted to EUR 371 million, taking the total during the first seven months of the year to more than EUR 700 million.

The private sector's claims against the rest of the world declined by EUR 741 million in July. The largest factors in the decline were a decline in the domestic banks' holdings of currency and deposits in the rest of the world and a decline in loans to non-residents. The banks recorded a decline of EUR 459 million in claims from currency and deposits in July, taking the decline since the

beginning of the year to EUR 762 million. Corporates reduced their deposits in accounts in the rest of the world by EUR 51 million in July, but the overall position over the first seven months of the year remained a net outflow. A decline in short-term loans meant that the domestic banks' loans to the rest of the world declined for the fourth consecutive month in July, by EUR 285 million. Outward FDI and portfolio investments also declined: FDI declined by EUR 6 million, while investments in foreign securities declined by EUR 76 million. The decline in outward portfolio investments was primarily the result of a contraction in bank investments in money-market instruments. The trend of increase in claims from trade credits continued in July, taking the increase over the first seven months of the year to EUR 445 million.

The main factor in the decline in the private sector's liabilities to the rest of the world in July was a decline in deposits by non-residents at domestic banks. The private sector's liabilities to the rest of the world declined by EUR 289 million, within this the decline in deposits by

non-residents amounted to EUR 265 million. Loans from the rest of the world also declined: short-term and long-term loans to corporates and short-term loans to banks all declined, while long-term loans to banks increased slightly. Portfolio investment in shares of non-banking

 Signs: inflows or increases in liabilities (+), outflows or increases in claims (-).

sectors and FDI rose slightly in July. Liabilities to the rest of the world declined by only EUR 13 million over the first seven months of this year, significantly less than in the same period last year, when the private sector reduced its liabilities by EUR 1,333 million. This was primarily the result of a decline in bank repayments to the rest of the world. Inflows from portfolio investment by non-residents halved this year, after recording high growth last year as a result of investments in domestic bank bonds. The main contribution to this year's increase in liabilities from securities came from SID Banka, which issued bonds with a nominal value of EUR 750 million in April. Foreign investment in domestic securities increased by just EUR 27 million in July. In the first seven months of the year corporates repaid EUR 278 million of debt to the rest of the world, having received loans in the amount of EUR 221 million from the rest of the world in the same period last year. Liabilities from trade credits declined by EUR 40 million in July, although the overall position for the year remained a net inflow, of EUR 329 million.

July's increase of EUR 103 million in the net external debt was the result of gross claims declining by more than the gross debt. Gross external claims declined by EUR 687 million in July, while the gross external debt declined by EUR 584 million. The net external debt thus increased by EUR 103 million. Gross claims declined primarily as a result of a decline in the short-term exposure of the banking sector and other sectors to the rest of the world. The main factor in the decline in the gross external debt was repayments by the banking sector and the Bank of Slovenia, which reduced their short-term gross external debt by EUR 673 million in July.

5 | Public Finance

According to Ministry of Finance, the general government deficit is expected to reach 5.6% of GDP this year, while the general government debt is expected to reach 37.9% of GDP. The general government deficit

(ESA 95 methodology) was estimated at 5.8% of GDP in the scheduled budget review for 2009. This was a rise of 0.3 percentage points compared with the initial estimate from this March. The main factor in the larger deficit was a lower estimate for accounted revenues from corporate income tax. The general government deficit in one year to June amounted to EUR 2,414 million or 6.8% of GDP. Revenues in the first half of the year were up 0.1% in year-on-year terms, while expenditure was up 4.2%. In the report on the government deficit and debt the Ministry of Finance estimates this year's general government deficit at EUR 1,999 million or EUR 5.6% of GDP. The general government debt is expected to stand at EUR 13,559 million or 37.9% of GDP at the end of this year, having stood at 35.4% of GDP at the end of last year.

At the end of September the government passed the draft budgets for 2011 and 2012, in which it is planning a gradual reduction of the deficit. The planned budget deficits of 4.5% of GDP and 3.6% of GDP are to be achieved by means of savings on the expenditure side, including wages, pensions and social transfers. Next year's introduction of the European semester will see a change in budget planning in EU Member States. The European semester represents a step in the direction of greater coordination of fiscal policies at EU level. It is envisaged that each year by the end of April countries will negotiate with the European Commission on the basic points of departure for drawing up a budget for the following year, while by September the European Commission

will issue an opinion that is then taken into account in the draft budget.

The general government deficit amounted to 6.6% of GDP in one year to July. There was also a year-on-year improvement in the position in August as a result of one-off revenues. The general government deficit during the first seven months of the year widened by EUR 410 million to EUR 1,490 million. In the first eight months of the year the state budget recorded a deficit of EUR 1,400 million, or 79% of the deficit planned in the revision to the state budget. The state budget recorded a surplus of EUR 24 million in August, compared with a deficit of EUR 84 million the previous August, partly as a result of one-off revenues from Russia's clearing debt. In the first eight months of the year the Health Insurance Institute recorded a deficit in the amount of EUR 24 million, down EUR 56 million in year-on-year terms. The deficit in local government in the first seven months of the year amounted to EUR 45 million, slightly less than in the same period last year.

General government revenues in the first seven months of the year were down 1.7% on last year. The largest decline in revenues was recorded by direct taxes. Payments of corporate income tax during the first eight months of the year were down just under 45%, while the contraction was around 5% for personal income tax. The decline in corporate income tax to a great extent reflects tax settlements for last year. Current payments of corporate income tax have remained at a monthly level of just below EUR 50 million in recent months. This is just over a fifth less than in the same period last year, and in addition to the economic situation is also a reflection of the lower tax rate this year. In the first eight months of the year personal income tax based on wages was practically unchanged in year-on-year terms, while personal income tax revenues were adversely affected by annual settlements of personal income tax and lower personal income tax prepayments on income from business activities and on income from capital sales. Social contributions and taxes on goods and services, VAT in particular, recorded positive growth in the first eight months of the year. All

types of excise duties have been raised this year, but revenues from excise duties nevertheless remain down on last year. This is particularly the case of excise duties on motor fuels, as a result of smaller sales volumes. By contrast, revenues from excise duties on alcohol and tobacco are higher than in the same period last year. The government has passed a decision to waive the planned rise in excise duties on electricity and natural gas on 1 November 2010.

Year-on-year growth in general government expenditure during the first seven months of the year amounted to 2.9%, and is continuing to significantly outpace revenues. Expenditure during the first seven months of the year was up EUR 269 million in year-on-year terms. The majority of the difference came from interest (EUR 87 million), pensions (EUR 82 million) and transfers to the unemployed and social assistance claimants (EUR 49 million). Interest payments have risen this year, as a result of last year's relatively high borrowing. Growth in expenditure on pensions is partly the result of February's pension adjustment, while the number of pensioners is also rising. The number of pensioners in August was up 2.3% in year-on-year terms, the number of old-age pensioners having risen by 4.1%.

The general government deficit in the first seven months of the year was financed by net borrowing in the amount of EUR 859 million and by a reduction of

Spread on 10-year government bond as compared to Germany

Sources: Bloomberg, Bank of Slovenia calculations.

Note: Spread is calculated as a difference between yield of 10-year government bond and the yield of reference German bond on a daily basis and is used as a measure of country's credit risk. * In the picture SLOREP 01/20 is used after 18 January 2010.

EUR 626 million in bank balances. The account of financial claims and investments for the first seven months of the year recorded a surplus of EUR 5 million. In September Slovenia transferred EUR 104 million in loans to Greece, the same amount being contributed to the deficit in this account. Premiums on 10-year government bonds over the comparable German bonds in the so-called peripheral countries rose slightly in September. The yield on Slovenian 10-year government bond in September fluctuated around a similar level as in August, when it stood at 3.67% according to ECB figures. The premium on Slovenian government bond over the comparable German bond stood at 130 basis points in September, up only

Note: *All bond issues disbursed on domestic market are counted under domestic borrowing, despite of the residency of buyers. Out of EUR 6,500 million bonds issued from February 2009 till June 2010 EUR 5,281 million were bought by foreigners until end July 2010.

slightly on the previous months.

6 | Banking System*

The banking system's total assets increased by EUR 502 million in August, year-on-year growth reaching 3.7%. The main factors in this change were an increase of EUR 231 million in deposits by non-banking sectors, and an increase in financial liabilities to the Eurosystem and in other bank liabilities. The effect was reflected on the investment side in a higher net increase in short-term loans to banks in the rest of the world in the amount of EUR 427 million. The net increase in loans to non-banking sectors was modest in August at EUR 66 million. There was an above-average increase in loans to the government sector of EUR 145 million, which in turn brought an increase in government deposits.

August's year-on-year growth in loans to non-banking sectors remained at the same level as the two previous months at 2.1%. Given the notable lending to the government sector, and above-average lending to households, for the fourth consecutive month the stagnation in lending to non-banking sectors was the result of a decline in loans to non-financial corporations. Loans to other financial institutions also declined.

Year-on-year growth in loans to non-financial corporations was negative in August at -0.6%, the stock of loans declining by EUR 126 million. This decline was primarily the result of transactions by the large domestic banks. Their current rate of growth in lending to non-financial corporations nevertheless remains positive, while at the banks under majority foreign ownership growth remains negative.

The stock of loans to households increased by EUR 109 million, the banks under majority foreign ownership accounting for 60% of this. Year-on-year growth was again above the annual average, at 10.8%. After relatively high increases in housing loans in the previous months, the increase in housing loans slowed in August: the total of

* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

EUR 85 million was considerably lower than this year's monthly average. The lower increase in housing loans brought an end to the rise in the proportion of loans to households accounted for by long-term loans, which stood at 79% in August.

The banks again made net repayments to foreign banks in August, the monthly amount of EUR 21 million taking this year's total repayments to EUR 1,079 million. The decline in liabilities to foreign banks was significantly smaller than in the previous two months.

Deposits by non-banking sectors increased by EUR 231 million in August. The increase was primarily the result of an increase of EUR 184 million in government deposits, which itself was the result of the temporary placement of a portion of the assets from the aforementioned government loans in the form of deposits. The increase in household deposits was modest, while the decline in deposits by non-financial corporations was double that in July.

Year-on-year growth in gross income in August was slightly higher than in July. Net interest during the first eight months of the year was up 15.4% on the same period last year, primarily as a result of lower interest ex-

Source: Bank monthly accounts figures.

penses. The negative year-on-year growth in non-interest income is the result of losses from financial assets and liabilities held for trading in the amount of EUR 45 million. The banks recorded a gain of EUR 41 million from the corresponding operations in the same period last year. Pre-tax profit during the first eight months of the year was down 45% on the same period last year. Given the stagnation in operating costs, the main factor was higher impairments and provisioning.

7 | Domestic Financial Markets

The market capitalisation of bonds on the Ljubljana Stock Exchange increased by 0.1% in August. Factor banka 16th-issue bonds matured in August, while Poteza naložbe 1st-issue bonds were delisted as a result of bankruptcy proceedings. The volume of trading in bonds amounted to EUR 13.2 million, higher than the monthly averages in 2009 (EUR 13.0 million) and in 2010 (EUR 11.2 million). The proportion of total volume accounted for by bonds stood at 35.5% in August. The heaviest trading was in Factor banka 17th-issue bonds (EUR 7.1 million, of which EUR 7.0 million was in block trades), and Slovenska odškodninska družba 2nd-issue bonds (EUR 2.3 million).

The market capitalisation of shares on the Ljubljana Stock Exchange increased by 0.2% in August. The SBI TOP reached its low of the year of 811 on 12 August, finishing the month at 818. It rose by 0.6% in August, taking the year-on-year change to -20.4%. The P/E ratio in the prime market stood at 43.1 at the end of August. Shares in Jelen and Trdnjava Holding were delisted, the latter because of its merger with PSZ. Additional tranches of PSZ and Maksima Invest shares were listed for trading. The volume of trading in shares amounted to EUR 22.9 million in August, below the monthly averages in 2009 and 2010.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by

non-residents stood at 9.2% in August. Non-residents made net purchases of EUR 47.4 million in Slovenian securities in August, of which EUR 38.2 million was in bonds and EUR 9.2 million in shares of Slovenian issuers. The greatest demand was for government bonds and shares in Slovenian blue-chips. The largest net purchasers and net sellers of bonds were residents of Austria, Luxembourg and the UK, while residents of Austria were the heaviest traders in shares.

Residents made net purchases of EUR 7.1 million in foreign bonds, and sales of EUR 5.5 million in foreign shares in August. The banks made net sales of securities from the euro area, but purchased Scandinavian bank bonds. The insurers made net purchases of securities from the US and shares from the euro area, while making net sales of bonds from the euro area. Other financial intermediaries and households primarily made net sales in shares from the BRIC³ countries and the US in August, and net purchases in bonds from the euro area. Kapitalska družba made net purchases of bonds from the euro area and the US.

As a result of net withdrawals in the amount of EUR 5.1 million and a fall of 0.8% in the average unit price (taking the year-on-year change to +5.1%), the domestic mutual funds' assets under management declined to EUR 1,934 million in August (a monthly de-

cline of 1.0%, taking the year-on-year change to +10.5%). Balanced funds recorded net withdrawals of EUR 4.3 million and equity funds net withdrawals of EUR 1.4 million, while bond funds recorded net inflows of EUR 0.5 million. The largest payments into the domestic mutual funds were made by the insurance sector (EUR 4.6 million), while the largest withdrawals were made by non-financial corporations (EUR 5.6 million) and households (EUR 4.1 million). Two funds managed by Probanka, PB Uranium Index and PB Biotech Index, were delisted from the Ljubljana Stock Exchange. The proportion of the domestic mutual funds' assets held in liquid assets⁴ had risen to 11.6% by the end of August, the highest figure since November 2009. The value of mutual funds' investments declined on all markets other than Slovenia. The DJ EuroStoxx index for Western Europe fell by 4.0% in August (taking the year-on-year change to -2.6%), the S&P 500 for the US fell by 4.7% (taking the year-on-year change to +2.8%), and China's Hang Seng fell by 2.3% (taking the year-on-year change to +4.1%). Developments were similar in the former Yugoslav republics: the BELEX 15 fell by 1.2% (taking the year-on-year change to -12.3%), the CROBEX fell by 0.5% (taking the year-on-year change to -8.0%) and the MBI-10 fell by 1.4% (taking the year-on-year change to -11.0%).

³ Brazil, Russia, India and China.

⁴ Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%
2	1.3.	liabilities/ 4		Liabilities/ Deposits/ Domestic sectors/ Other MFIs/ Foreign currency	100%	100%	-
3	1.3.	liabilities/ 8		Liabilities/ Deposits/ Domestic sectors/ General government/ Foreign currency	74%	72%	82%
4	1.3.	liabilities/ 15		Liabilities/ Securities issued/ Foreign currency	92%	89%	100%

Table 1.4.: Balance Sheet of other Monetary Financial Institutions

The table summarizes data on assets and liabilities of other Monetary Financial Institutions, i.e. banks, savings banks, savings and loans undertakings and money market funds, at the end of the month.

Detailed survey of assets and liabilities of the monetary financial institutions is in the tables 1.5. and 1.6.

no.	table	column	sector	title	share of euro

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds**General**

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The *overnight-deposit interest rate* is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Ljubljana Stock Exchange (Tables 2.6 to 2.8)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities

Shares – investment fund shares are not included.

IF – investment fund shares.

Turnover is measured with a single counting.

Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

- SBI – Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO – Bond Index
- SBI, BIO – value of SBI and BIO at the end of period
- dT – change of index value by points
- d% – change of index value in percentage
- Min, Max – minimum and maximum value of index in a period

Exchange rates (Tables 2.9.1–2.9.2)

Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.
 The Polish złoty was denominated on 1 January 1995 at the exchange rate of 1 new złoty for 10,000 old złotys.

Table 2.9.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

Payment systems (Tables 2.10 to 2.16)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.10: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.11 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.12 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.13 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.14 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on

a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.15 Debit Transfers and Simply book-entry

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.16: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).

- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**

- report on account balances at domestic banks – PPV (until 31 December 2004),
- report on account balances abroad – C (until 31 December 2006),
- report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
- report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.

- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.

- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.

- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.

- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.

- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.

- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.

- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.

- **Accounting data of the Bank of Slovenia**

- **Accounting data of banks (KNB)**

- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

Estimates and other sources

- estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
- estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
- estimate of Italian pensions (UMAR) until the end of 1998,
- estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
- estimate of labour income (SURs),
- data on pensions paid to non-residents (ZPIZ),
- survey on the write-downs of debt from trade in goods and services abroad,
- estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
- estimate of cash transactions on tourism and labour income (from 2007 onwards),
- quarterly data on consumption of foreign embassies in Slovenia (SURs, from 2008 onwards),
- migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
- households' transfers (SURs, from 2008 onwards),
- assets acquired directly by tenders and programmes of EU (SURs, from 2008 onwards),
- data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards).

Current account**Goods**

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services**Transport**

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURs):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SURS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are

obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SURS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SURS, Annual survey on investment in tangible assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount

of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2009 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2006 to 2008 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2010, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2009 shall take into consideration the new three year average (2007 to 2009).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2009 are provisional.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial

items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares bellow 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not

distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial derivatives are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.
Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity,

insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.

- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev. 2 (Nomenclature statistique des activités économiques dans la Communauté

européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1–ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, ECB EER-41 group of currencies (AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CZ, EE, HU, LV, LT, PL, BG, RO, NZ, DZ, AR, BR, HR, IN, ID, IL, MY, MX, MA, PH, RU, ZA, TW, TH, TR, IS, CL, VE) – Euro area 16 against Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs deflated, ECB EER-21 group of currencies and Euro area 16 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO) against Slovenian tolar (until 31.12.2006) from 01.01.2007 against Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data shown every three months of the year are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia: <http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products , as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.
