## Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

7. Domestic Financial Markets

Current developments in the euro area and the advance estimate of the third quarter US GDP data indicate a continuation of moderate economic growth. The month-on-month growth of industrial production in the euro area has declined slightly in recent months, while the volume of retail trade has stagnated. According to the advance estimates, GDP in the US in the third quarter was up 0.5% in quarter-on-quarter terms, slightly more than in the second quarter, largely as a result of increased growth in private consumption. Despite an upward revision, the IMF's October forecasts for economic growth in the euro area remain low at 1.7% for this year and 1.5% for the next year. The economic growth in the US is projected at 2.6% for this year, and 2.3% for the next year. Given the financial markets' expectations of additional quantitative easing by the Federal Reserve, the US dollar is continuing to fall, which is leading to the growth in US dollar prices of oil and gold.

Certain indicators in the domestic economy indicate a slowdown in growth in the third quarter. After declining in July, industrial production rose sharply in August compared with July, although new orders fell for the second consecutive month. The monthly confidence indicators show renewed growth in early autumn. According to provisional figures, volume turnover in retail trade stagnated in the third quarter compared with the second quarter, while growth in volume turnover from the trade and repair of motor vehicles and motorcycles slowed sharply. Despite recording month-on-month growth, activity in the construction sector remained low; growth was also limited by the adverse financial situation of construction companies.

The number of the unemployed fell below 98,000 in September, although it is expected to rise again in the following months as a result of some recent large corporate bankruptcies and the usual autumn season. Decline in the workforce in employment in August was slightly larger than usual during this month. The workforce in employment continues to decline in the construction sector, where the survey data for employment expectations indicate great pessimism. The average gross wage per employee rose 5.1% in year-on-year terms in August, to reach EUR 1,487. One of the factors for a relatively high wage growth was a rise in the number of work hours paid.

Inflation measured by the HICP remained unchanged in October at 2.1% year-on-year. The contribution of energy prices increased, while the contributions of food prices and of non-energy industrial goods decreased. All core inflation indicators were lower than in September, in line with the adverse situation in the domestic macroeconomic environment.

The current account surplus was smaller in August than in the two previous months as a result of movements in merchandise trade and transfer payments. The month-on-month rate of growth in merchandise exports in August remained at its July level, while year-on-year growth exceeded 20%. Exports to EU Member States recorded more pronounced growth in the previous months, although exports to non-EU countries also increased sharply in August. The relative improvement in the terms of trade with countries outside the euro area in the second quarter was significantly larger than that with euro area countries.

The general government deficit amounted to 6.3% of GDP in the 12 months to August, slightly down from the previous month, primarily as a result of extraordinary revenues from the repayment of Russia's clearing debt. Revenues are still slightly down on last year, while expenditures are up, although growth in expenditures is gradually slowing.

The banking system's total assets declined by EUR 321 million in September. On the funding side, the largest declines were recorded by liabilities to the Eurosystem, as a result of maturing liabilities from LTROs, and government deposits. Banks also reduced their investments, particularly at banks in the rest of the world and in securities. Growth in lending to non-banking sectors declined as a result of modest household lending and a decline in net lending to non-financial corporations and OFIs. The banking system's pre-tax profit during the first nine months of the year was down more than a half on the same period last year at EUR 95 million. Impairments and provisioning were again the main factor in this decline in September.

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 0.6% in September, while the market capitalisation of shares declined by 0.3%. The proportion of the market capitalisation of shares accounted for by non-residents stood at 9.1% in September. The SBI TOP rose by 1.5% in monthly terms, taking the year-on-year change to -21.5%. In the context of net withdrawals of EUR 1.4 million, the domestic mutual funds' assets under management rose to EUR 1,947 million as a result of a 1.0% rise in the average unit price.

# 1 | International Environment

The current developments in the euro area and the US indicate a continuation of the moderate economic growth seen in the recent months. According to seasonally adjusted figures, the volume of retail trade and the index of construction activity in the euro area in August declined by 0.2%, while industrial production was up 1.1% month-on-month. Retail sales in the US were up by 0.5% in September, while industrial production was down by 0.2% compared with August. An increase of private consumption was a major factor in the 0.5% quarter-on-quarter growth in GDP in the US in the third quarter, up 0.1 percentage points on the previous quarter. The unemployment rate remains high in both economies. In September it stood at 10.1% in the euro area, and 9.6% in the US. The economic sentiment indicator in the euro area rose again in October, while the consumer confidence indicator and the PMI in manufacturing in the US continued to fall in September.

In October the IMF raised forecast for economic growth in 2010 for the euro area and cut forecast for the US. The IMF is forecasting economic growth of 1.7% and 1.5% in 2010 and 2011 respectively in the euro area, and 2.6% and 2.3% in 2010 and 2011 respectively in the US. Global

economic growth is now expected to be 4.8% in 2010, up 0.2 percentage points from the April forecast. The highest growth among major economies is expected to be recorded by China (10.5%) and India (9.7%). Consensus cut economic growth forecast for this year for Eastern Europe by 0.1 percentage points to 3.9% in October, the rate also forecasted for 2011.

Year-on-year inflation in the euro area stood at 1.8% in September and 1.9% in October. Inflation in the US fell for the second consecutive month in September, to 1.1%. The main factors in September's rise in inflation in the euro area were higher transport prices and higher

Sources: Bloomberg, Consensus, The Economist (Bank of Slovenia calculations – for Commodities, USD prices), Eurostat, Bureau of Economic Analysis (BEA).  
Notes: \*Seasonally adjusted data – Eurostat for the euro area, BEA for the US, \*\*IMF, October 2010.

housing prices. The largest price rises in September in the US were recorded by fuels and hospital services. Core inflation remained unchanged in the euro area at 1.0%, but fell to 0.8% in the US. Year-on-year growth in prices of manufactured goods stood at 3.6% in the euro area in August, and 4.0% in the US.

**Prices of oil and gold continued to rise in October.** A barrel of Brent crude averaged USD 82.92 in October, up 6.6% from September. October's rise in oil prices was mostly the result of the continuing fall in the US dollar. US dollar prices of commodities other than oil continued to rise in October, prices of food and cotton recording the highest month-on-month growth. The price of gold rose in October,

partly as a result of expectations of additional quantitative easing by the Federal Reserve.

**The US dollar continued to fall in October, as a result of the financial markets' expectations of continuing non-standard measures by the Federal Reserve.** The euro averaged USD 1.3898 in October, up by 6.4% from September. The euro also rose against the pound sterling, the Japanese yen and the Swiss franc in October. The key interest rates of the ECB and the Federal Reserve remain unchanged, while the Japanese central bank unexpectedly cut its key interest rate to the interval between zero and 0.10%.

## 2 | Economic Activity and Labour Market

### Real sector

**Industrial production rose significantly month-on-month in August, while the figures available for the third quarter indicate slightly lower growth than in the second quarter.** After declining in July, industrial production recorded m-o-m growth of 5.2% in August according to seasonally and working day adjusted data, similar growth was recorded in manufacturing. Year-on-year growth also increased in line with the m-o-m growth to 11.4%, the second-highest figure this year. Among the major branches of the manufacturing sector, year-on-year growth according to the original figures for August exceeded 20% in the manufacture of rubber and plastic products, basic metals, electrical equipment, and machinery and equipment n.e.c. Turnover in industry also rose m-o-m in August, by just under 3%, which in conjunction with last year's low basis resulted in year-on-year growth of 9.1%. Growth in industry turnover primarily remains the result of an increase in turnover on the foreign market, although turnover on the domestic market has been increasing in year-on-year terms in the last three months.

**The real value of new orders declined m-o-m for the second consecutive month in August, although the**

monthly confidence indicators show renewed growth at the beginning of autumn. The quarterly survey figures for new orders indicate a quarter-on-quarter decline in demand at the end of the year, while the increase in production capacity utilisation is also expected to slow. The real value of new orders declined again in August, by around 4%. The value of new orders from domestic market recorded an increase of just over 3% compared with the previous month, the highest figure this year. The value of new orders from the non-domestic market declined by just under 7% m-o-m, the largest m-o-m fall since March 2009. Orders from the non-domestic market nevertheless remained the main factor in the year-on-year growth of 7.3% in

the total value of new orders. An indication of these m-o-m movements in August also came from the survey indicators of total orders and export orders and of export expectations, which were down compared with the previous month. These indicators rose again in September, and were mostly unchanged in October. The quarterly survey figures for new orders indicate a slowdown in demand in the third quarter and a q-o-q decline in demand towards the end of the year. The slowdown in industrial production is also indicated by a slowdown in the increase in production capacity utilisation in the final quarter of this year. Capacity utilisation stands at 79%, down 5 percentage points on the average in 2008, but up 10 percentage points on the low recorded in the second quarter of last year.

After four months of m-o-m decline, construction activity recorded a slight increase in August compared with the previous month, largely as a result of an expansion of civil engineering work. The value of construction put in place was up 4.6% in August compared with the previous month according to seasonally adjusted figures, which reduced the year-on-year decline by 5 percentage points from the previous month to 13.6%. Construction of dwellings recorded the highest growth at just under 24%, although this segment fluctuates sharply m-o-m, and the trend remains negative. The fluctuation in this segment is related to large differences in reported turnover by companies. The value of work performed on non-residential buildings was down just over 13% m-o-m in August, the largest decline of the

year, partly as a result of the completion of the main works on a major sports and commercial complex. This is the only segment of construction that recorded a year-on-year increase during the first eight months of the year, by 0.5%. The value of civil engineering work increased by just over 10% in August as a result of work on a major tunnel and the modernisation of railway infrastructure, the highest m-o-m increase in this segment in the last two years. The value of civil engineering work during the first eight months of the year was nevertheless down in year-on-year terms by just under a fifth.

**This year's year-on-year increase in the contractual value of new contracts for the construction of buildings**

indicates a stabilisation of the situation in the construction sector, although the financial position of construction companies is continuing to deteriorate. The contractual value of new contracts for the construction of buildings during the first eight months of the year increased sharply in year-on-year terms, by a quarter for non-residential buildings and by just over a tenth for residential buildings. In the absence of any major infrastructure projects, the decline in the value of new contracts for civil engineering work during the first eight months of the year deepened to more than a quarter. Insufficient demand still prevails as a limiting factor in construction, although the proportion of companies facing insufficient demand has settled at 52% in the last

Notes: Differences from official numbers are due to rounding. Data are unadjusted for seasonal and working days effects.

\* Volume of industrial production. \*\* Real value of construction put in place.

two months, down just over 10 percentage points on the beginning of the year. The proportion of companies facing high financing costs is still increasing, and surpassed 30% in September. The proportion of unsettled past-due corporate liabilities accounted for by construction companies was also high in September, at just under a third.

**Volume turnover in retail trade in September was up slightly compared with the previous month, while turnover in the third quarter stagnated, primarily as a result of the decline in July. Growth in volume turnover from the trade and repair of motor vehicles and motorcycles also slowed sharply in the third quarter.** Volume turnover in retail trade in August was up 0.8% on

July, and was up in year-on-year terms for the fourth consecutive month, primarily as a result of high year-on-year growth in volume turnover in the trade in automotive fuels. According to provisional figures, volume turnover stagnated q-o-q in the third quarter after growing by 1% in the second quarter. Volume turnover from the non-food trade (except automotive fuel) continued to decline, and also remained down in year-on-year terms. These movements continue to be related to the significant lack of consumer confidence in association with high unemployment and the low number of new hires. After recording a high rate in the second quarter, growth in volume turnover from the trade and repair of motor vehicles and motorcycles slowed in the third quarter to 0.8% compared with the previous quarter. The number of new vehicle registrations was down just over 1% on the second quarter.

**After stagnating in September, the economic sentiment indicator declined by 1 percentage point in October, as a result of lower confidence in services.** The economic sentiment indicator thus reached its level of this May. The decline in confidence indicator in services was primarily the result of lower estimated demand and a deterioration in the business situation. There was an improvement in confidence in manufacturing, most notably in the selling price expectations indicator. The expected total demand indicator also improved. The confidence in retail trade also increased in October, partly as a result of higher estimated sales. Consumer confidence and confidence in construc-

tion remained low, and unchanged compared with the previous month.

## Labour market

With hiring increasing significantly, the number of unemployed fell in September to 97,908 at end the

month. The number of registered unemployed was down 1,124 on August, less than the usual September decrease before the crisis. Outflows from registered unemployment into employment stood at 6,771 in September, the highest figure in the last five years. A total of 9,113 people were newly registered as unemployed, significantly higher than the usual September influx, but less than in September of last

Notes: \* Sections of NACE Rev. 2 classification. \*\* CPI deflator.

year. Employers notified 15,786 vacancies in September, up 6% on the same month last year. Year-on-year growth in the number of unemployed has been falling since last October, when it stood at 51.1%, reaching 10.8% in September. The registered unemployment rate has remained more or less unchanged since the beginning of the year, and stood at 10.6% in August. Despite encouraging movements in the unemployment indicators in September, the number of unemployed is expected to increase in the coming months as a result of the usual autumn seasonal movements and certain major corporate bankruptcies.

**August's decline in the workforce in employment was slightly larger than the usual decline in this month.** The workforce in employment in the economy as a whole fell by 1,920. Taking into account seasonal factors, the most pronounced decline was in the construction sector, where in contrast to the usual seasonal rise in the workforce in employment there was a fall of 490 in August, with the negative employment trend in this sector thus continuing. The workforce in employment was also down in current terms in the manufacturing sector, by 829, only slightly more than the usual August figure. The survey figures for employment expectations indicate considerable pessimism regarding future employment. Expectations are worst in the construction sector, where for some time now the proportion of companies expecting their workforce to contract in the next three months has been more than 40 percentage points higher than the proportion expecting an expansion. In contrast to construction, in manufacturing this indicator has been improving markedly since mid-2009.

**The average gross wage per employee in August was up 5.1% in year-on-year terms at EUR 1,487.** Year-on-year wage growth stood at 6.6% in the private sector and 0.5% in the public sector.<sup>1</sup> The increase was most pronounced in the manufacturing sector, where year-on-year growth reached 11.0% in August, although productivity in this sector is also recording high year-on-year growth. The movement of wage bill is a better reflection of corporate cost adjustment to the economic situation. Year-on-year growth in the private sector's wage bill was negative for almost one year, but has recently turned positive again, reaching 3.1% in August. Wage bill in the manufacturing sector recorded year-on-year growth of 6.0% in August. Significant factor in wage growth this year is the increase in hours worked, with August recording a 4.2% year-on-year increase in the total number of work hours paid in the private sector.

### Selected competitiveness indicators

**The harmonised index of the nominal effective exchange rate appreciated in September in month-on-month**

<sup>1</sup> The public sector and private sector are distinguished according to the standard classification of economic activities. Thus the public sector includes public administration, education, health and culture. The weakness in this indicator is that it includes legal entities that do not fall within the public sector.

**Harmonised competitiveness indicators  
(41 countries and rest of euro area countries)**

**terms but depreciated in year-on-year terms.** The nominal effective exchange rate appreciated by 0.1% in September as a result of the euro's rises of 1.3% against the US dollar, 1.9% against the pound sterling and 0.1% against the Japanese yen. The euro fell against the Swiss franc by 2.3%. In contrast to the month-on-month appreciation, the year-on-year depreciation in the nominal effective exchange rate increased from 2.7% in August to 2.8% in September.

**The harmonised index of the real effective exchange rate as measured by consumer prices recorded similar movements in September to the nominal effective exchange rate.** The real effective exchange rate appreciated by 0.2% in September, a half higher than the month-on-month appreciation in the nominal effective exchange rate. The difference in growth was caused by domestic consumer prices, which fell in month-on-month terms in September, but by 0.1 percentage points less than the simultaneous fall in the basket of foreign prices. The real effective exchange rate was down 2.3% in year-on-year terms in September. The year-on-year depreciation in the nominal effective exchange rate contributed 2.8 percentage points towards this fall, having entirely neutralised the 0.5 percentage points by which year-on-year growth in domestic prices outpaced the basket of foreign prices.

**Slovenia's price competitiveness as measured by consumer prices deteriorated in September.** Price competi-

**Harmonised price competitiveness indicator  
(41 countries and rest of euro area countries)**

tiveness deteriorated by 0.2% in month-on-month terms in September. The index remains at a high level, and reveals that Slovenia's price competitiveness was worse than that of the most important trading euro area partners. Their price competitiveness deteriorated by 0.1% in month-on-month terms in September on average. The year-on-year comparison for price competitiveness also indicates Slovenia's poorer position relative to the most important euro area trading partners. In September this indicator improved by 2.3% in year-on-year terms in Slovenia, but by 5.3% on average in the most important trading partners. There were major differences from country to country. Price competitiveness as measured by consumer prices improved most in Germany, where the indicator recorded a year-on-year depreciation

**Harmonised price competitiveness indicator  
(41 countries and rest of euro area countries)**

**Real harmonised competitiveness indicator – GDP deflator  
(21 countries and rest of euro area countries)**

of 6.6%. The depreciation in the indicator stood at 5.6% in Italy, 5.0% in France and 4.0% in Austria.<sup>2</sup>

**The harmonised index of price competitiveness as measured by the GDP deflator, which reflects the general level of prices in the economy, depreciated in quarter-on-quarter and year-on-year terms in the second quarter in Slovenia.** In Slovenia this indicator depreciated by 1.5% in quarter-on-quarter terms in the second quarter, while recording a year-on-year depreciation for the second consecutive quarter, at 2.9%. In the main euro area trading partners the indicator recorded an average depreciation of 2.1% in quarter-on-quarter terms and 3.5% in year-on-year terms. The aforementioned competitiveness indicator recorded year-on-year depreciations of 3.8% in France and Italy, 4.5% in Germany and just under 2.0% in Austria.

**The harmonised indicator of cost competitiveness as measured by unit labour costs in the economy as a whole in Slovenia depreciated in the second quarter.** The aforementioned indicator also depreciated in the second quarter in the main euro area trading partners. The quarter-on-quarter depreciation in the indicator in Slovenia stood at just under 1%, 1.4 percentage points less than the average depreciation in the main trading partners. The Slovenian index also recorded a second consecutive year-on-year depreciation in the second quarter, at 0.9%. The year-on-year

**Real harmonised competitiveness indicator – ULC total economy  
(21 countries and rest of euro area countries)**

depreciations in the second quarter in the trading partners were larger, at 3.7% in Germany and Italy, and 1.8% in Austria and France. The relatively higher quarter-on-quarter growth in unit labour costs was a factor in the small quarter-on-quarter and year-on-year depreciation in Slovenia.

### 3 | Price Developments

**Year-on-year inflation as measured by the HICP remained unchanged in October at 2.1%.** After declining for four months, the year-on-year fall in prices of non-energy industrial goods increased again in October by 0.6 percentage points to 1.6%. The main reason was a smaller current rise in prices of clothing and footwear compared with October 2009. The movements of oil prices on global markets and the changes in excise duties on refined petroleum products contributed to higher growth in energy prices, which were up 13.9% in year-on-year terms in October. Food prices growth declined by 0.4 percentage points to 3.4%, primarily as a result of lower prices of seasonal food and non-alcoholic beverages. Year-on-year growth in services prices was unchanged in October at -0.1%.

<sup>2</sup> The European Commission also publishes price and cost competitiveness indicators ([http://ec.europa.eu/economy\\_finance/db\\_indicators/db\\_indicators8642\\_en.htm](http://ec.europa.eu/economy_finance/db_indicators/db_indicators8642_en.htm)). These differ from those of the ECB because of methodological differences resulting from the countries involved, the different sources for the deflators and the data conversion methods.

**Year-on-year inflation rates**

**Individual price categories**

Source: SORS, Bank of Slovenia calculations.

The adverse situation in the macroeconomic environment is still affecting the low level of core inflation through low consumption and the impact of cost factors. Core inflation excluding energy, food, alcohol and tobacco stood at -0.5% in September, and -0.8% in October. October also saw falls in core inflation excluding energy, from 0.6% to 0.3%, and core inflation excluding energy and unprocessed food, from 0.2% to -0.1%. The high level of unemployment is continuing to impact on a low consumption of households. Consequently the level of retail sector revenues remain low, what is limiting retailers' possibilities of raising prices, and is acting to curb the core inflation trend.

According to detailed SORS figures, a major factor in the inflation breakdown in September was the fall in the prices of canteen services, what reduce year-on-year inflation by 0.7 percentage points. The sharp fall of 68.7% in these prices was the result of the introduction of meal subsidies for all students at primary schools. Year-on-year growth in prices of solid fuels and liquid fuels also declined, from 17.9% to 8.8% and from 26.6% to 24.3% respectively. After recording month-on-month growth in June and July and a seasonal fall in August, prices of vegetables fell again in m-o-m terms in September. This had an impact on their year-on-year growth, which was down 3.3 percentage points on August at 15.8%. After the end of the summer sales, prices of clothing rose more in m-o-m terms

in September than in the same month last year, making the year-on-year rate of growth positive again after more than a year, at 2.1%. Prices of footwear also rose in year-on-year terms, by 2.4%. At 3.2%, year-on-year growth in prices of telecom products and services was up 2.6 percentage points on August as a result of promotional campaigns ending. Year-on-year growth in prices of hospital services became positive in September, reaching 3.9%, as a result of m-o-m growth in recent months and also a base effect.

**Growth in prices of manufactured goods on the domestic market declined slightly in September.** Year-on-year growth stood at 2.8% in September, down 0.1 percentage points on August. Prices in the manufacture of coke and refined petroleum products and in the manufacture of textiles and clothing recorded the largest m-o-m falls. The largest rises were recorded by prices in the manufacture of leather and related products and in the manufacture of basic metals. Prices in the manufacture of basic metals and in water collection, treatment and supply continued to record the highest year-on-year growth.

# 4

## Balance of Payments

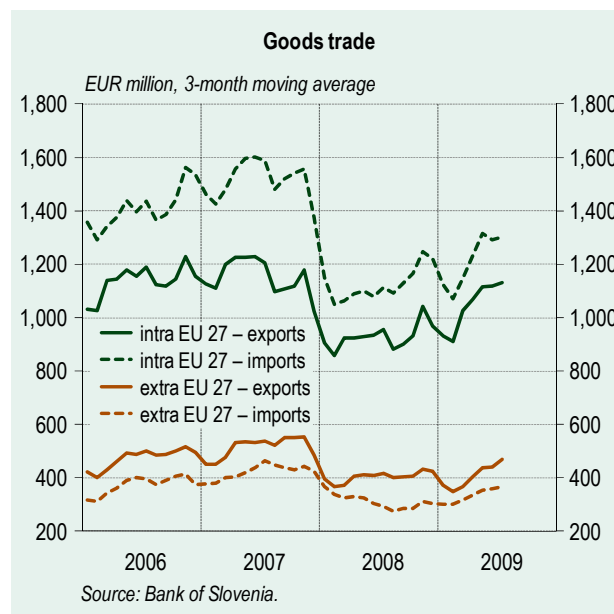

### Current account

The current account results improved sharply as a result of a surplus in the three months to August. The current account surplus amounted to EUR 94 million in June, EUR 44 million in July and EUR 5 million in August, which reduced the current account deficit of EUR 252 million in the first five months of the year to a deficit of EUR 110 million in the first eight months of the year. The main factors in the decline in the current account surplus in August were the movements in merchandise trade and transfers. The merchandise trade deficit widened from EUR 14 million in July to EUR 84 million in August, while the surplus in transfers narrowed from EUR 26 million to EUR 7.5 million. The deficit in factor income stagnated in August, while the surplus of trade in services increased by EUR 51 million in month-on-month terms to EUR 135 million. The current account deficit over the 12 months to August narrowed to EUR 175 million or 0.5% of GDP, compared with 3.8% of GDP a year earlier.

The annualised current rate of growth in merchandise trade in August was slower than the average over the first seven months of the year. The annualised month-

on-month rate of growth in exports declined from 23.3% to 13.7%, while the decline on the import side was larger, from 21.4% to 6.4%.<sup>3</sup> Despite the slowdown in the rates of growth compared with the previous month, year-on-year growth in merchandise trade was above-average. Merchandise exports were up more than 22% in year-on-year terms at EUR 1,301 million, while imports were up 13% at EUR 1,386 million. In the context of this dynamic in merchandise imports and exports, August's merchandise trade deficit was down a half in year-on-year terms at EUR 84 million. The deficit over the first eight months of the year amounted to just under EUR 400 million, and was little different from the same period last year.

**In the first eight months of this year merchandise trade with EU Member States increased faster than trade with non-EU countries.** This was a reflection of the economic recovery in EU Member States moving faster than in most of the major trading partners outside the EU. It is only in recent months that trade with the latter has strengthened. Merchandise trade with non-EU countries strengthened sharply in August, the year-on-year rates of growth in imports and exports approaching to within 1 percentage point of those of trade with EU Member States at 13% and 22% respectively. Merchandise exports to EU Member States over the first eight months of the year were up 16.4% in year-on-year terms, while exports to non-EU countries were up 6.2%.

The gap is smaller on the import side. Merchandise imports from EU Member States were up 13.2% in year-on-year terms, while imports from non-EU countries were up 9.8%. According to SORS figures, the merchandise trade deficit narrowed by EUR 10 million in year-on-year terms to EUR 650 million, as a result of a year-on-year narrowing of EUR 50 million in the merchandise trade deficit with EU Member States and a decline of EUR 40 million in the merchandise trade surplus with non-EU countries.

#### The year-on-year movement in the index of the average value of imports and exports in the second quarter

<sup>3</sup> Seasonally adjusted figures by the Tramo-Seats method, annualised current rates of growth.

of this year reveals an improvement in the terms of trade with trading partners outside the euro area. The index of the average value of merchandise imports in the second quarter was up 9.7% in year-on-year terms, while that of merchandise exports was up 8.5%. Growth in the index of the average value of exports was up more on the first quarter than growth in the index of the average value of imports. The terms of trade deteriorated by 4.2% in year-on-year terms in the first quarter, but by 1.1% in the second quarter. An improvement in the terms of trade was seen in transactions with partners outside the euro area. The terms of trade with these countries improved by 0.4% in the second quarter, primarily as a result of high growth in export prices of chemical products. The terms of trade with euro area countries deteriorated by 3.4%, less than in the previous quarter.

The main factor in the year-on-year growth in merchandise trade with EU Member States was intermediate goods, while the main factors in merchandise trade with non-EU countries were intermediate goods on the import side and consumer goods on the export side. Exports of intermediate goods to the EU over the first seven months of the year were up just over 25% in year-on-year terms, while exports of capital goods were down 2.6%. The largest increase in imports from EU Member States was recorded by intermediate goods, at 18.7%, although imports of other goods also strengthened. Exports to non-EU countries in the three months to July were up in year-on-year terms for all categories of goods. The largest growth was recorded by exports of consumer goods, at just under 17%. Imports from non-EU countries during the first seven months of the year were up just under 10% in year-on-year terms, imports of intermediate goods and capital goods

recording the largest increases in the last two months, at just over 32%.

**The surplus of trade in services was up in both month-on-month and year-on-year terms in August as a result of favourable movements in transport and tourism services.** The surplus of trade in services was in August, compared with July, up by EUR 51 million and by more than EUR 9 million in year-on-year terms at EUR 135 million. The largest factors in the year-on-year increase in the surplus in August were the surpluses in transport and tourism services, which were up EUR 6 million and EUR 19 million in year-on-year terms respectively. There was contrasting movement in trade in other services in August, which generated a deficit of EUR 16 million. The largest contributions to the deficit came from the deficits in construction services, intellectual property services, and other business services. At 4.3%, year-on-year growth in imports of services during the first eight months of the year was 0.5 percentage points higher than the simultaneous growth in exports of services. The result was a year-on-year increase of EUR 14 million in the surplus of trade in services to EUR 748 million.

**The deficit in factor income continued to narrow in year-on-year terms in August, primarily as a result of a decline in net outflows of income from FDI and net interest payments on loans raised in the rest of the world.** The deficit in factor income over the first eight months of the year narrowed by EUR 194 million in year-on-year terms to EUR 397 million. The largest factor was the decline of EUR 139 million in the deficit in capital income, while just over a quarter of the improvement was the result of an increase of EUR 55 million in the surplus in labour income. This year's narrowing of the deficit in capital income was the result of a decline of EUR 103 million in net outflows of income from FDI, and a decline of EUR 116 million in net interest payments on loans raised in the rest of the world. Only net income from investments in securities acted to widen the deficit in capital income, having swung from a surplus of EUR 73 million in the first eight months of the last year to a deficit of EUR 53 million in the same period this year. This was primarily the result of net outflows of income from government bonds and notes, which was the result of previous government borrowing. The deficit in factor

income in the year to August stood at EUR 588 million or 1.6% of GDP.

**The deficit in current transfers over the first eight months of the year was down in year-on-year terms primarily as a result of a narrowing of the deficit in taxes on products and other government transfers.** The deficit in factor income over the first eight months of the year stood at EUR 62 million, down EUR 145 million on the same period last year. The largest factor in this favourable movement was government transfers, including a decline in the deficit in taxes on products and other government transfers. Transfers from the EU budget amounted to just over EUR 6 million in August, having exceeded EUR 30 million in June and July.

## Capital and financial account

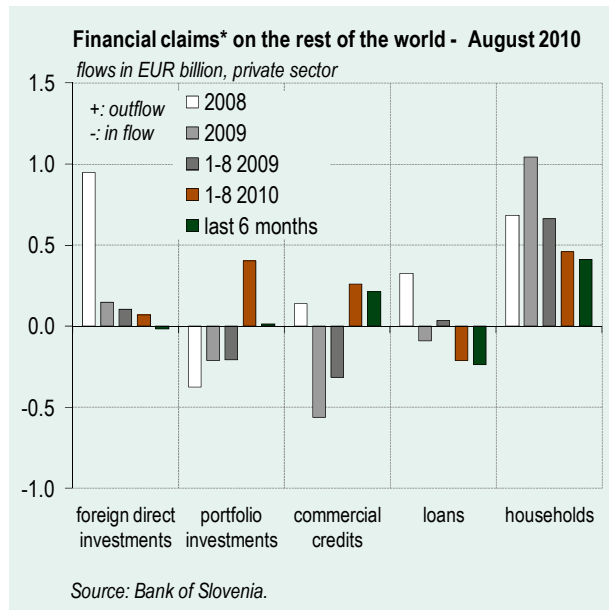

**After two months of net financial inflows, the private sector recorded a net financial outflow of EUR 258 million in August.** Net financial outflow in August was primarily the result of an increase in claims; the decline in the private sector's liabilities was small. The largest contribution to the increase in claims came from an increase in the domestic commercial banks' currency and deposits in the rest of the world, while the main factor in the decline in liabilities were trade credits. The government sector also recorded a net outflow in August, of EUR 84 million, primarily as a result of a decline in liabilities from government debt securities and an increase in deposits in the rest of the world. The Bank of Slovenia recorded a net financial inflow of EUR 354 million in August, although its cumulative position over the first eight months of the year remained a net outflow.

**After declining in July, the private sector's claims against non-residents increased by EUR 236 million in August, taking the increase in the first eight months of the year to EUR 647 million.** Claims from currency and deposits and from loans increased in August. The largest increase was in claims from the domestic banks' holdings of currency and deposits in the rest of the world, by EUR 287 million. Claims from the holdings of currency and deposits in the rest of the world by households and corporate sector increased by EUR 85 million and EUR 24 million respectively.

vely. Claims from loans to non-residents increased by EUR 38 million, taking the increase over the first eight months of the year to EUR 209 million. Claims from trade credits declined by EUR 184 million in August. Outward FDI and portfolio investments also declined, by EUR 15 million and EUR 3 million respectively.

The largest factor in the decline in the private sector's liabilities to the rest of the world in August was the decline in trade credits. Liabilities to the rest of the world declined by EUR 41 million over the first eight months of the year, compared with EUR 1,787 million during the same period last year. This was primarily the result of a decline in the banks' debt repayments in the rest of the world and portfolio investments by non-residents in domestic securities. The private sector's liabilities to the rest of the world declined by EUR 21 million in August, in which declines in trade credits and loans to domestic banks were the largest factors. Liabilities from trade credits declined by EUR 168 million in August, but remained in a

net inflow position over the first eight months of the year. Another factor in the decline in liabilities was debt repayment in the rest of the world by the private sector, particularly debt repayment in the rest of the world by the domestic banks. These liabilities thus declined by EUR 82 million in

Signs: inflows or increases in liabilities (+), outflows or increases in claims (-).

### Financial liabilities to the rest of the world - August 2010

Source: Bank of Slovenia.

August. While the banking sector continued to repay debt in the rest of the world, domestic corporate sector recorded borrowing of EUR 49 million in August after six months of paying down debt. This is to a great extent the result of the long-term loans raised by Gorenje with the International Finance Corporation (IFC) and a consortium of banks, whereby over EUR 100 million of long-term loans were raised for the restructuring of existing debt. The main factor in the increase in the private sector's liabilities to the rest of the world was the increase of EUR 84 million in non-residents' deposits at domestic banks. FDI and portfolio investments in shares of non-banking sectors also increased. Foreign portfolio investments in domestic securities increased by EUR 28 million in August.

**After increasing by EUR 102 million in July, Slovenia's net external debt fell by EUR 214 million in August to stand at EUR 11.2 billion at the end of the month.** The gross external claims of the economy as a whole increased by more than the gross external debt, which resulted in a fall in the net external debt. The banking sector, the government sector and other sectors saw their gross external claims increase in August, while the Bank of Slovenia recorded a slight decline in its gross external claims. The largest contribution to the increase in gross external debt came from the Bank of Slovenia, which increased its gross short-term debt by EUR 336 million to EUR 3.3 billion, while the government sector and the rest of the private sector reduced their gross debt to EUR 8.3 billion and EUR 9.4 billion respectively.

## 5 | Public Finance

The general government deficit declined slightly to stand at 6.3% of GDP during the 12 months to August. The improvement was primarily the result of the repayment of Russia's clearing debt in August. The general government deficit over the first eight months of the year stood at EUR 1,475 million, down EUR 14 million on the figure over the first seven months of the year. The improvement was primarily the result of revenues from the repayment of Russia's clearing debt (around EUR 60 million) in August. The state budget deficit during the first nine months of the year stood at EUR 1,588 million, 90% of the deficit planned in the revision to this year's budget. The Health Insurance Institute also recorded a deficit over the first nine months of the year, at EUR 29 million, down from EUR 58 million in the same period last year. The deficit in local government over the first eight months of the year amounted to EUR 52 million, similar to that in the same period last year.

**The year-on-year decline in general government revenues over the first eight months of the year slowed to 0.4%, primarily as a result of the repayment of Russia's clearing debt in the amount of approximately EUR 60 million.** Taking only tax revenues into account, the decline was correspondingly larger, at 2.4% over the first eight

### Public finance developments

Source: SORS, Ministry of Finance; Bank of Slovenia calculations.

months of the year and 1.6% over the first nine months of the year. The slowdown in the decline in tax revenues is primarily the result of growth in collected social security contributions, which over the first nine months of the year were up 1.2% in year-on-year terms, and growth in collected VAT (up 3.4%) and excise duties (up 1.1%). Collected excise duties during the first nine months of the year were up around EUR 12 million in year-on-year terms, primarily as a result of excise duties on tobacco and alcohol. The amount of excise duties on energy and electricity was down on the first nine months of last year, despite a rise in the rates. Despite the growth in certain tax revenues, total collected tax revenues during the first nine months of the year were down in year-on-year terms, primarily as a result of a decline in collected corporate income tax and personal income tax. Compared with the first nine months of last year, corporate income tax inflows were down EUR 219 million, a reflection of the 1 percentage point cut in the tax rate, the adverse economic situation and, in particular, higher tax refunds during final settlement for last year. Personal income tax inflows during the first nine months of the year were down around EUR 59 million, primarily as a result of lower prepayments of tax on

income from business activities and income from the sale of capital, and higher refunds for last year.

**Year-on-year growth in general government expenditure during the first eight months of the year slowed slightly, but expenditure is still exceeding revenues.** Year-on-year growth in expenditure during the first eight months of the year stood at 2.6%, having exceeded 4% in the first quarter. The slowdown in growth in expenditure was primarily the result of a year-on-year decline in expenditure on investment and expenditure on goods and services, and lower payments to the EU from the second quarter. The main factors in the growth in expenditure during the first eight months of the year were interest payments (up EUR 86 million in year-on-year terms), pensions (up EUR 93 million) and transfers to the unemployed and recipients of social assistance (up EUR 33 million). Interest payments rose this year as a result of last year's relatively heavy borrowing, which was primarily related to the issue of long-term bonds in the total amount of EUR 4 billion. Similarly, growth in expenditure on interest is expected to continue rising next year as a result of this year's issues of long-term bonds in the amount of EUR 2.5

Source: Ministry of finance, except: \*\* Public Payments Administration of the Republic of Slovenia, Report on classified general government revenues and coverage (B-2); Bank of Slovenia calculations.

Note: \* Consolidated central government budget, local government budgets and social security funds (pension and disability insurance fund and health insurance fund) in cash accounting principle.

billion. However, there are several actions underway aimed at controlling the growth in general government expenditure this year and in the next two years. In October the government decided to call off the collective agreement for the public sector (in order to postpone the implementation of the third and fourth phases of a new wage pay grid), while in September it submitted an emergency bill to parliament that will limit growth in expenditure over the next two years, including wages, pensions, social transfers, payments for kindergartens and local government investments.

**The majority of the general government deficit during the first eight months of the year was financed via the issue of securities on the domestic market, while a portion of the money was obtained via the withdrawal of government deposits at banks.** The general government deficit during the first eight months of the year was financed via net borrowing in the amount of EUR 884 million. The borrowing relates primarily to the issue of the RS67 and RS68 bonds on the domestic market. A portion of the deficit was financed by the withdrawal of money from bank accounts in the amount of EUR 590 million. The general government lending/repayments and net acquisitions of equity account (the B-balance) was almost in balance over the first eight months of the year, however it is expected to be in deficit by the end of the year, as the first instalment of the loan to Greece (EUR 104 million) was transferred in September, and the second instalment of around EUR 40

million is expected to follow in December. The deficit in this account is expected to widen next year as a result of another loan to Greece (around EUR 140 million) and the announced recapitalisation of NLB, which the government decided on at the end of October. The spreads of 10-year Slovenian government bonds over the German benchmark bonds fell again in October, when the monthly average was down around 10 basis points on the September average of 130 basis points.

Note: \*All bond issues disbursed on domestic market are counted under domestic borrowing, despite of the residency of buyers. Out of EUR 6,500 million bonds issued from February 2009 till April 2010 EUR 5,264 million were bought by foreigners until end August 2010.

## 6

## Banking System\*

The banking system's total assets declined by EUR 321 million in September, year-on-year growth falling to 0.4%. The main factor in the decline in total assets was a decline of EUR 260 million in the banks' liabilities to the Eurosystem, which was the result of the maturing of funding obtained in 1-year, 6-month and 3-month LTROs at the ECB. The banks renewed a little less than a third of the maturing liabilities to the ECB. The decline in government deposits also contributed to the decline in total assets. On the investment side there was a consequent decline of EUR 292 million in claims against foreign banks and in investments in securities. The change in loans to non-banking sectors was slightly negative in September.

Year-on-year growth in loans to non-banking sectors was down on the previous month at 1.9% in September, the monthly decline in loans standing at EUR 6 million. The main factor in the decline in loans to non-banking sectors was the very modest lending to households, in the context of a decline in loans to non-financial corporations and OFIs.

September's decline in loans to non-financial corporations was significantly smaller than that in August. Year-on-year growth in loans to non-financial corporations remained at -0.6%, the stock of loans declining by EUR 12

million. The main factor in this decline was the small domestic banks and, once again, the banks under majority foreign ownership, which have been reducing their lending activity for this segment of borrowers for some time.

After relatively high lending to households was recorded in August, September's net increase in loans to households was among the lowest this year at EUR 28 million. Year-on-year growth in loans to households remained at the level of the two previous months at 10%. The average maturity of loans is continuing to lengthen. Long-term loans increased by EUR 53 million in September, while short-term loans declined by EUR 25 million.

After three months of making debt repayments to foreign banks, the banks again recorded net borrowing

\* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

in September, in the amount of EUR 249 million. The reasons for the borrowing by the majority of banks was the repayment of funds to the ECB for maturing LTROs and the repayment of government deposits. The banks under majority foreign ownership were the main borrowers.

**Deposits by non-banking sectors declined by EUR 268 million in September.** The main factor in this decline was the decline of EUR 164 million in government deposits, while the decline in deposits by OFIs and households also made a contribution. The decline in government deposits had an adverse impact on year-on-year growth in deposits by non-banking sectors, which was negative for the second time this year at -1.2%. The diminished growth in deposits by other investors remains positive.

**Net impairments and provisioning increased again, year-on-year growth in profit consequently deteriorating further.** Net interest during the first nine months of the year was up 14.9% on the same period last year, primarily as a result of lower interest expenses. The main factor in the negative growth in non-interest income and the resulting decline in year-on-year growth in gross income was losses from securities trading. Operating costs remain at last year's level, while impairments and provisioning are continuing to increase. They increased by EUR 74 million in September to EUR 447 million, a year-on-year increase of 57%. This

is an indication of the increase in credit risk, and is adversely affecting the operating result. The banking system's pre-tax profit during the first nine months of the year was consequently down more than a half on the same period last year at EUR 95 million.

## 7 | Domestic Financial Markets

**The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 0.6% in September.** The 25<sup>th</sup>-issue NLB bonds were delisted upon maturity in September. The volume of trade in bonds stood at EUR 8.9 million, below the monthly average for 2009 (EUR 13.0 million) and 2010 (EUR 11.2 million). The proportion of total stock exchange volume accounted for by bonds declined to 22.2% in September, as a result of increased demand for shares. The heaviest trading was in 7<sup>th</sup>-issue Nova KBM bonds (EUR 5.0 million in block trades), 2<sup>nd</sup>-issue Slovenska odškodninska družba bonds (EUR 1.9 million) and 15<sup>th</sup>-issue NLB bonds (EUR 1.8 million).

**The market capitalisation of shares on the Ljubljana Stock Exchange declined by 0.3% in September.** The SBI TOP reached its low of the year of 803 on 14 September, finishing the month at 831. Despite the fall of 3.8% in the Krka share price, it rose by 1.5% in September, taking the year-on-year change to -21.5%. The P/E ratio stood at 43.0 on the prime market at the end of September. Shares in Center naložbe were delisted in September. The volume of trading in shares in September was above the average for 2010 at EUR 29.6 million, primarily as a result of an increase in trading in shares on the standard market (Sava, Pozavarovalnica Sava and Zavarovalnica Triglav).

**The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents stood at 9.1% in September.** Non-residents made net purchases of EUR 30.7 million in Slovenian securities in September, of which EUR 21.1 million was in bonds and EUR 9.5 million in shares. The heaviest trading

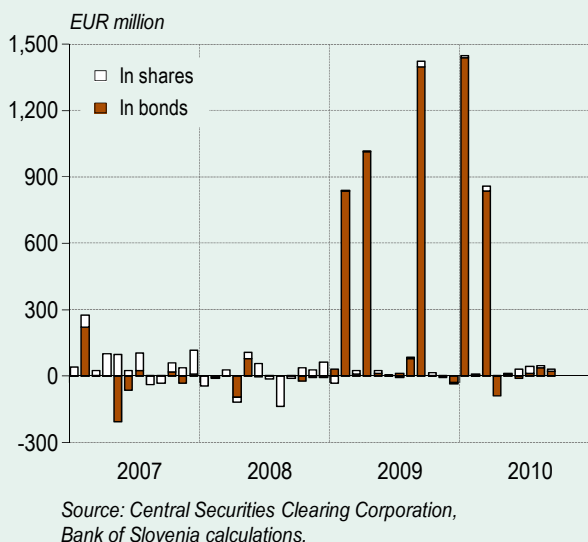

by non-residents was in government bonds and shares in Slovenian blue-chips. Residents of Luxembourg were the largest net purchasers of bonds, while residents of Austria, Germany and the UK were major net sellers of Slovenian bonds. The largest net purchases of shares were made by residents of Austria, while residents of Switzerland made the largest net sales.

**Residents made net sales of EUR 2.6 million in foreign bonds, and net purchases of EUR 20.5 million in foreign shares in September.** The banks made net sales of securities from the euro area, government bonds and bank bonds in particular, while insurance corporations made net purchases. Other financial intermediaries made net

### Net foreign investments in Slovenia

purchases of shares from BRIC<sup>4</sup> countries and net sales of bonds from the euro area, while households made net sales of securities from the euro area, the US and the former Yugoslav republics.

The domestic mutual funds' assets under management rose to EUR 1,947 million in September (up 0.7% on the previous month, taking the year-on-year change to +7.8%) in the context of net withdrawals of EUR 1.4 million, as a result of a rise of 1.0% in the average unit price (taking the year-on-year change to +3.1%). Balanced funds recorded net withdrawals of EUR 5.3 mil-

lion, while net inflows were recorded by equity funds (EUR 0.6 million) and bond funds (EUR 4.0 million). The largest net inflows into the domestic mutual funds were recorded by the insurance sector (EUR 9.1 million) and the banking sector (EUR 3.0 million), while the largest net withdrawals were recorded by households (EUR 9.8 million) and non-financial corporations (EUR 2.4 million). The proportion of the mutual funds' assets accounted for by liquid assets<sup>5</sup> declined to 10.7% at the end of September. The value of the mutual funds' investments rose on the majority of markets in September: the DJ EuroStoxx index for western Europe rose by 5.3% (taking the year-on-year change to -1.8%), the S&P 500 index in the US rose by 8.8% (taking the year-on-year change to +8.0%) and the Hang Seng in China rose by 8.9% (taking the year-on-year change to +6.7%). There was greater variation in the movement in the indices in the former Yugoslav republics: the BELEX 15 fell by 0.4%, the CROBEX rose by 3.6% and the MBI-10 fell by 10.2%. The year-on-year changes in all three indices remained negative, at -24.9% for the BELEX 15, -12.8% for the CROBEX and -32.8% for the MBI-10.

The bank may perform the following supplementary financial services, pursuant to Article 11 of the ZBan-1:

1. Insurance brokerage in accordance with the act governing the insurance business and
4. Custodian services in accordance with the law governing investment funds and management companies;
6. Brokerage of financial leasing.

## II. Savings banks

**Delavska hranilnica d.d. Ljubljana**  
**Miklošičeva cesta 5**  
**1000 Ljubljana**  
**Phone: +386 (1) 300 02 00**

The savings bank may perform the following mutually recognized financial services, pursuant to Article 10 of the ZBan-1:

1. Receiving deposits,
2. Granting credits that also includes:
  - consumer credits,
  - mortgage credits,
  - financing of commercial transactions, including forfeiting,
4. Payment services;
5. Issuance and management of other payment instruments (i.e. travellers' cheques and bankers' drafts) in the part in which this service is not included in service of point 4. of this Article;
6. Issuing of guarantees and other commitments,
7. Trading for own account or for account of customers in:
  - foreign exchange, including currency exchange transactions,
  - trading for own account:
  - money market instruments,
  - transferable securities.

**Hranilnica LON, d.d., Kranj**  
**Bleiweisova cesta 2**  
**4000 Kranj**  
**Phone: +386 (4) 280 07 77**

The savings bank may perform the following mutually recognized financial services, pursuant to Article 10 of the ZBan-1:

1. Receiving deposits,
2. Granting credits that also includes:
  - consumer credits,
  - mortgage credits,
  - factoring, with or without recourse,
  - financing of commercial transactions, including forfeiting,
4. Payment services;
5. Issuance and management of other payment instruments (i.e. travellers' cheques and bankers' drafts) in the part in which this service is not included in service of point 4. of this Article;
6. Issuing of guarantees and other commitments,
7. Trading for own account or for account of customers in:
  - foreign exchange (only currency exchange transactions),
  - trading for own account:
  - money market instruments and
13. Credit reference services: collection, analysis and provision of information on creditworthiness.

The savings bank may perform the following supplementary financial services, pursuant to Article 11 of the ZBan-1:  
5. Credit brokerage for consumer and other types of loans.

**Hranilnica in posojilnica Vipava d.d.**  
**Glavni trg 15**  
**5271 Vipava**  
**Phone: +386 (5) 366 45 00**

The savings bank may perform the following mutually recognized financial services, pursuant to Article 10 of the ZBan-1:

1. Receiving deposits,
2. Granting credits that also includes:
  - consumer credits,
  - mortgage credits,
  - financing of commercial transactions, including forfeiting,
4. Payment services;
5. Issuance and management of other payment instruments (i.e. travellers' cheques and bankers' drafts) in the part in which this service is not included in service of point 4. of this Article;
6. Issuing of guarantees and other commitments,
7. Trading for own account in:
  - money market instruments.

# IV. NOTES ON METHODOLOGY

## General notes

### Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

### Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

## Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

## 1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

### Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

### Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

#### Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

#### Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

**Securities other than shares**

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

**Shares and other equity**

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

**Remaining assets**

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

**Deposits**

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

**Debt securities issued**

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

**Capital and reserves**

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

**Remaining liabilities**

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

**Tables**

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

**Table 1.1.: Monetary Aggregates**

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

### Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

### Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%

**Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments**

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

**Table 1.8.: Investment funds****General**

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

**Deposit**

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

**Debt securities**

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

**Shares and other equity**

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

**Other assets**

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

**Loans**

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

**Investment fund shares/units**

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

**Other liabilities**

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

## 2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

### Interest rates (tables 2.1–2.4)

**Table 2.1: Bank of Slovenia Interest Rates**

*Lombard loan:* Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

*Interest rate on banks' obligatory reserves:* 1 percent per year since October 1991.

*The overnight-deposit interest rate* is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

*Long-term deposit* at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

*Tolar bills* are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

*Foreign currency bills* are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

*Interest rates* for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

**Table 2.2: Interbank Money Market Rates and Indexation Clause**

#### **Interbank market**

##### **SIONIA/SITIBOR**

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

##### **EONIA/EURIBOR**

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

#### **Indexation clauses**

##### **TOM**

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

#### Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

### Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

**Main refinancing operations** are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

#### Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

### 2.4: Monetary Financial Institutions Interest Rates

#### Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

**Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.**

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

**Outstanding amounts** are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

**New business** is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

**The annual percentage rate of charge (APRC)** is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

**Weighting method:** The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

\* Households = sole proprietorships + individuals + non-profit institutions serving households

\*\*APRC data includes households without sole proprietorships and without non-profit institutions serving households

*Note 1:* For this instrument category, new business and outstanding amounts coincide.

*Note 2:* For this instrument category, households and non-financial corporations are merged and shown under the household sector.

## **Ljubljana Stock Exchange (Tables 2.6 to 2.8)**

### **General**

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

### **Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities**

Shares – investment fund shares are not included.

IF – investment fund shares.

Turnover is measured with a single counting.

### **Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio**

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

**Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index**

- SBI – Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO – Bond Index
- SBI, BIO – value of SBI and BIO at the end of period
- dT – change of index value by points
- d% – change of index value in percentage
- Min, Max – minimum and maximum value of index in a period

**Exchange rates (Tables 2.9.1–2.9.2)**
**Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006**

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.  
 The Polish złoty was denominated on 1 January 1995 at the exchange rate of 1 new złoty for 10,000 old złotys.

**Table 2.9.2: European Central Bank exchange rates**

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

**Payment systems (Tables 2.10 to 2.16)**
**General**

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

**Table 2.10: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions**

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

**Note 2:** SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

**Note 3:** Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

**Note 4:** As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

**Note 5:** Gross value is the total value of all payment orders executed in the payment system.

**Note 6:** Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

## Table 2.11 Payment Cards

**Note 1: Credit card:** A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

**Note 2: Debit card:** A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

**Note 3: Cards issued abroad:** Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

**Note 4: Volume and value of transactions abroad:** Use of cards issued in Slovenia for payments abroad.

**Number of payment cards in circulation:** Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

**Number and value of payments refer** to the use of payment cards in each quarter/year.

**Domestic card:** Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

**Licence card:** Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

**Bank card:** Payment card issued by banks.

**Retailer card:** Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

**Personal card:** Payment card issued to a natural person (family cards included).

**Business card:** Payment card issued to a legal entity.

## Table 2.12 Other Payment Instruments and Innovative Payment Schemes

**Note 1:** Data refer to the end of each quarter.

**Note 2:** Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

## Table 2.13 Electronic Banking

**Note 1:** Only debt transactions are included.

## Table 2.14 Credit Transfers

**A paper-based order** is a payment instrument related to a credit or debit transfer, in which the payer submits an order on

a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

**Special payment order** is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

**A non-paper-based credit transfer** is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

**A standing order** is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

**Direct credit** is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

### Table 2.15 Debit Transfers and Simply book-entry

**Direct debit** is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

**A special money order** is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

### Table 2.16: Network of Commercial Banks

*Note 1:* Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

*Note 2:* Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

## 3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

### Balance of Payments

#### General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

#### Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

#### Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

## Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
  - report on account balances at domestic banks – PPV (until 31 December 2004),
  - report on account balances abroad – C (until 31 December 2006),
  - report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
  - report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.
- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

**Estimates and other sources**

- estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
- estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
- estimate of Italian pensions (UMAR) until the end of 1998,
- estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
- estimate of labour income (SURs),
- data on pensions paid to non-residents (ZPIZ),
- survey on the write-downs of debt from trade in goods and services abroad,
- estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
- estimate of cash transactions on tourism and labour income (from 2007 onwards),
- quarterly data on consumption of foreign embassies in Slovenia (SURs, from 2008 onwards),
- migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
- households' transfers (SURs, from 2008 onwards),
- assets acquired directly by tenders and programmes of EU (SURs, from 2008 onwards),
- data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards).

**Current account****Goods**

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

**Adjustments of CIF/FOB** – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

**Coverage adjustments** - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

**Services****Transport**

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

**Travel - methodology until 2004**

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

**Travel - methodology since 2005 onwards**

**Main data sources** to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURs):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

**Main data source** to estimate the **import** of travel is SURS's survey TU\_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU\_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

#### **Construction services**

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

#### **Insurance services**

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

#### **Government services**

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SURS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

## **Income**

**Labour income – receipts.** Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

**Labour income - expenditures.** ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

**Capital income –** Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

#### **Current transfers**

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are

obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SURS survey) are included from 2008 onwards.

## **Capital and financial account**

### **Capital account**

#### **Capital transfers**

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SURS, Annual survey on investment in tangible assets).

### **Financial account**

#### **Direct investment**

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

#### **Portfolio investment**

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

#### **Financial derivatives**

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

### **Other investments**

#### **Short-term trade credits**

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]}
- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]}

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

#### **Loans and long-term trade credits**

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

#### **Currency and deposits**

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

#### **International monetary reserves**

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

### **Table 3.1: Balance of Payments 1988–1993**

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

### **Table 3.2: Balance of Payments**

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

\* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount

of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

**Note 3:** Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)

**Note 4:** For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

**Note 5:** Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

**Note 6:** Use of IMF credit (assumed upon membership in January 1993).

**Note 7:** Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

**Note 8:** The data on reinvested earnings for 2009 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2006 to 2008 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2010, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2009 shall take into consideration the new three year average (2007 to 2009).

**Note 9:** From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

**Note 10:** Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

**Note 11:** In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

### Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

### Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2009 are provisional.

## International Investment Position of Slovenia

### General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial

items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

#### **Revision policy**

See note "Revision policy" in the section "Balance of Payments".

#### **Data sources**

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

#### **Direct investment**

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

#### **Portfolio investment**

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

#### **Financial derivatives**

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

#### **Trade credits and loans**

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not

distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

#### **Currency and deposits, other assets, other liabilities and reserve assets**

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

### **Table 3.6: International Investment Position of Slovenia**

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: [http://www.bsi.si/iskalniki/ecb\\_en.asp?Mapald=714](http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714).

### **Table 3.7: International Investment Position by countries**

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

## **Gross External Debt**

#### **General notes**

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

#### **Revision policy**

See note "Revision policy" in the section "Balance of Payments".

#### **Data sources**

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial derivatives are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

### **Tables 3.8 and 3.9: Net External Debt**

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

### Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

### International reserves

#### Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

## 4. PUBLIC FINANCE

### General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.  
Quarterly and yearly data on Gross domestic product are not yet reconciled.

### General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

#### Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

**EDP debt** is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

#### Tables 4.2 and 4.3: Non-financial Account of the General Government sector

**Fiscal burden** is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

**Intermediate consumption** consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

#### Tables 4.4 and 4.5: Financial Account of the General Government sector

**Change in EDP debt** is a difference between the current and preceding EDP debt figure.

**Deficit-debt adjustment (DDA)** is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

**Other liabilities** consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity,

insurance technical reserves and other liabilities.

**Other flows** are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

**Borrowing requirement** consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

#### Table 4.6: Revenues and Expenditures of the General Government

*Note 1:* The data of the current and previous year are revised monthly until the data on the previous year become final.

*Note 2:* Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

*Note 3:* Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

#### Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

*Note 1:* The data of the current and previous year are revised monthly until the data on the previous year become final.

#### Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

## 5. FINANCIAL ACCOUNTS

### Financial accounts (Tables 5.1 to 5.6)

**Tables 5.1, 5.2, 5.4 and 5.5** show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

**Tables 5.3 and 5.6** present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

#### Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.

- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

## 6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

### General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev. 2 (Nomenclature statistique des activités économiques dans la Communauté

européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: [http://www.stat.si/skd\\_nace\\_2008.asp](http://www.stat.si/skd_nace_2008.asp) (in Slovene).

## General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

## Non-financial accounts and general economic statistics

### Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

### Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

### Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

### Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

## Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

### Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

*Note 1:* From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

### Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

### Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1–ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

### Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, ECB EER-41 group of currencies (AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CZ, EE, HU, LV, LT, PL, BG, RO, NZ, DZ, AR, BR, HR, IN, ID, IL, MY, MX, MA, PH, RU, ZA, TW, TH, TR, IS, CL, VE) – Euro area 16 against Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs deflated, ECB EER-21 group of currencies and Euro area 16 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO) against Slovenian tolar (until 31.12.2006) from 01.01.2007 against Euro.

The growth of the index value represents decrease of competitiveness.

*Note 1:* Data shown every three months of the year are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia: <http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

### Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

**Tables 6.17 and 6.18: Industrial Producer Price Index**

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products , as well as by main divisions of activities, v2 (2008).

## Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
1.5. Selected Assets of Other Monetary Financial Institutions by Sector	2.6 MFI holdings of securities, breakdown
1.6. Selected Obligations of Other Monetary Financial Institutions by Sector or	2.5 Deposits held with MFIs, breakdown
1.4. Balance Sheet of Other Monetary Financial Institutions	
1.8. Investment funds	2.9. Aggregated balance sheet of euro area investment funds
	2.10. Securities held by investment funds broken down by issuer of securities
2.2. Interbank Money Market Rates and Indexation Clause	4.6 Money market interest rates
2.3. European Central Bank Interest Rates	1.2 Key ECB interest rates
2.8. The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Ind	4.8 Stock market indices
2.9.2a. European Central Bank exchange rates - Average Rates	8.2 Bilateral exchange rates
3.2. Balance of payments, capital and financial account	7.1 Balance of payments - summary
	7.2 Current and capital account
	7.3 Financial account
3.3. Current Account by countries	7.2.3 Current and capital account - geographical breakdown
3.4. Capital and Financial Account by countries	7.3.8 Financial account - geographical breakdown
3.5. Trade in goods by countries	7.5 Trade in goods
3.6. International Investment Position of Slovenia; assets, liabilities	7.3 Financial account
3.7. International Investment Position by countries; assets, liabilities	7.3.8 Financial account - geographical breakdown
3.12. International reserves	7.3.7. Reserve assets

\* The period to which data relate is shown in the parenthesis. NLT stands no-later-than.

\*\* Changes in weighting system will affect data for January. Delay in publishing is expected - NLT 9 February 2011.

1 The data on interest rates are published by the Bank of Slovenia and Ministry of Finance separately.

2 Data are disseminated daily on Bank of Slovenia Internet website - Financial Data/ Bank of Slovenia exchange rates and on Archive of financial data. Links are given in column Additional data.

Note: "Special Data Dissemination Standard" - SDDS is a special standard for statistical data dissemination established by the International Monetary Fund in 1996.

Relevant information on the standard are available on - <http://dsbb.imf.org/Applications/web/sddshome/#introduction>. Data for Slovenia are published on - <http://www.bsi.si/imf/>
