Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

7. Domestic Financial Markets

Economic growth in the third quarter slowed in the euro area, but rose slightly in the US. Quarterly GDP growth stood at 0.4% and 0.6% respectively. High unemployment is continuing to hamper household demand in both economies. The relatively low demand in the euro area is also the result of the adverse fiscal situation in the peripheral countries. The trend in industrial production remains positive, although it is still below its pre-crisis level. In November the OECD raised its forecast for this year's economic growth in the euro area to 1.7%, and cut its forecast for the US to 2.7%. Global economic growth is forecast at 4.6% for this year, but the forecast for next year was cut to 4.2%. Prices of oil and other commodities rose again, while the euro depreciated against the US dollar for the first time in four months, primarily as a result of the increasing public finance problems in Ireland.

Economic growth in Slovenia slowed in the third quarter in line with expectations. GDP increased by 0.3% in quarterly terms. Foreign demand remains the key to growth, while the gradual decline in final domestic consumption continued. Final household consumption again declined in connection to the uncertain situation on the labour market, while gross fixed capital formation also recorded a sharp decline in year-on-year terms. The sharp decline in construction activity continued. Construction sector thus remains the biggest brake on economic growth. The key economic sentiment indicators do not point to improvement in the economic situation towards the end of the year. Slovenia's price and cost competitiveness could also hamper economic growth in the future, as the level of these indicators is less favourable than in major partners in the euro area.

Imbalances between jobseekers' and employers' needs are increasing on the labour market as the adverse trends continue. The number of unemployed rose significantly in October, primarily as a result of a higher-than-usual seasonal inflow of registered unemployed. The gap between the number of notified new vacancies and new hires is an indication of the deepening imbalances on the labour market. The average gross wage per employee in the private sector in September was up 4.6% in year-on-year terms. This year's growth in the average gross wage has to a great extent been linked to lay-offs among low-paid employees and an increase in the number of paid work hours.

In November, year-on-year inflation as measured by the HICP was down 0.5 percentage points on the previous month at 1.6%. The largest factor was a decline in year-on-year growth in energy prices as a result of base effects. The core inflation indicators remained at low levels in November, and are still reflecting the adverse macroeconomic situation in the domestic environment.

The current account was in surplus for the fourth consecutive month in September, as a result of the high surplus of trade in services brought by tourism exports. The merchandise trade deficit in the third quarter narrowed in year-on-year terms, as the slowdown in quarterly growth in merchandise imports was greater than on the export side. In the context of these movements the current account deficit in the 12 months to September narrowed to EUR 105 million or 0.3% of GDP.

In November the National Assembly adopted the state budget for the next two years, which envisages a gradual reduction of the deficit. The deficit is estimated at 4.5% of GDP in 2011, and 3.6% of GDP in 2012. Under the excessive deficit procedure Slovenia has committed itself to cutting the general government deficit to below 3% of GDP by 2013. State budget revenues during the first ten months of the year were down around 3% on last year, while state budget expenditure was up by approximately the same amount.

The banking system's total assets declined by EUR 645 million in October. The main factors on the funding side were the repayment of debt to banks in the rest of the world and a decline in government deposits. On the investment side the largest declines were in balances at the central bank, short-term loans to banks in the rest of the world and investments in securities. Despite above-average government lending, year-on-year growth in lending to non-banking sectors remained at September's level as a result of modest lending to households and a decline in loans to non-financial corporations. The banking system's pre-tax profit during the first ten months of the year was down to a bit over a third of that in the same period last year (to EUR 86 million); impairments and provisioning remained the main factor also in October.

The market capitalisation of bonds on the Ljubljana Stock Exchange increased by 0.1% in October, while the market capitalisation of shares increased by 1.2%. The proportion of the market capitalisation of shares accounted for by non-residents stood at 9.3% in October. On 15 October 2010 the Ljubljana Stock Exchange stopped calculating the LJSEX (the successor to the SBI 20 and the SBI). Its replacement is the SBI TOP, which rose by 4.2% in October, taking the year-on-year change to -18.3%. The domestic mutual funds' assets under management increased to EUR 1,981 million as a result of net inflows of EUR 2.6 million and a rise of 1.8% in the average unit price.

1 | International Environment

Economic activity in the third quarter slowed in the euro area, but in the US was up slightly on the second quarter, although remaining moderate. Quarterly growth in real GDP in the euro area stood at 0.4% in the third quarter, down 0.6 percentage points on the second quarter. Household consumption was the main factor in the growth of 0.6% in the US in the third quarter. Of the other major economies, Japan's real GDP in the third quarter was up 0.9% on the previous quarter, while year-on-year growth in China slowed to 9.6% after the withdrawal of government stimulus.

Household demand in the euro area and the US remains relatively low, while the trend in industrial production remains positive. On the labour market, where unemployment in both economies has persisted around 10.0% for several months, there were 151,000 new jobs created in the US in October, the highest figure in the last six months. This could be one of the reasons, alongside cuts in prices of clothing and cars, for the rise in volume turnover in the retail sector. Turnover nevertheless remains significantly lower than its peak at the end of 2007. In contrast to the US, volume turnover in the retail sector

in the euro area declined in the last two months, on food, beverages and tobacco in particular. The trend in industrial production has been positive in both economies since the middle of 2009, but production has not yet reached its pre-crisis level.

The adverse fiscal situation in certain members is continuing to be a factor in the low domestic consumption in the euro area. Ireland has now followed Greece in officially asking the EU and the IMF for financial aid. As a result the premiums of the euro area peripheral countries over the benchmark German government bonds of comparable maturity mostly rose, while the debt

Notes: *Seasonally adjusted data – Eurostat for the euro area, BEA for the US, **OECD, November 2010.

insurance premiums in these countries also rose.

In November the OECD raised its economic growth forecast for 2010 for the euro area, and cut its forecast for the US, while the Consensus forecasts for both economies remained unchanged. According to the OECD forecasts, economic growth in the euro area is expected to stand at 1.7% this year and next year, while economic growth in the US is expected to reach 2.7% this year and 2.2% in 2011. Global economic growth is expected to reach 4.6% this year, and 4.2% next year. The forecast for this year remained unchanged, while next year's forecast was cut by 0.3 percentage points. Consensus' forecasts remained unchanged. Economic growth in the euro area is expected to stand at 1.6% this year, and 1.4% in 2011. Economic growth in the US is expected to reach 2.7% this year, and 2.4% next year. Consensus cut its economic growth forecast for eastern Europe this year to 3.9%, while the same figure is also expected for next year.

Year-on-year inflation in the euro area remained unchanged in November at 1.9%. Inflation in the US rose to 1.2% in October. The main factors in October's rise in inflation in the euro area were higher transport prices, higher alcohol and tobacco prices and higher housing prices. The largest price rises in October in the US were recorded by energy and transport services. Core inflation rose to 1.1% in the euro area, but fell to 0.6% in the US. The main factors in the fall in the US were lower

prices of cars and clothing. Year-on-year growth in prices of manufactured goods stood at 4.2% in the euro area in September, and 4.3% in the US in October.

Prices of oil and gold rose again in November. A barrel of Brent crude averaged USD 85.7 in November, up 3.3% on October. November's rise in oil prices was largely the result of the solid figures for certain major indicators in the US. US dollar prices of commodities other than oil continued to rise in November, prices of food and cotton recording particularly high monthly growth. The price of gold rose in November as a result of the fall in the US dollar, and also as a result of continuing concerns over the fiscal situation in the euro area peripheral countries.

The US dollar rose against the euro in November after four months of falls, primarily as a result of an increase in risk aversion in the context of rising public finance problems in the euro area peripheral countries. The euro averaged USD 1.3661 in November, compared with USD 1.3897 in October. In November the euro also fell against the pound sterling and the Japanese yen, but remained practically unchanged against the Swiss franc. The ECB and the Federal Reserve left their key interest rates unchanged. Inflationary pressures saw the Chinese central bank raise its reserve requirement ratio for the fifth time this year, by 0.5 percentage points.

2 | Economic Activity and Labour Market

Real sector

As expected, economic growth slowed significantly in the third quarter, to a quarterly rate of 0.3% and a year-on-year rate of 1.7%. Foreign demand was again the key growth factor in the third quarter. Year-on-year growth in exports was slightly lower than in the second quarter at just over 10%, while year-on-year growth in imports halved to just under 5%. This brought an increase in the contribution to GDP growth made by net trade to 3.4 percentage points. The decline in imports is linked to a further decline in final domestic consumption, and a decline in the renewal of inventories, whose contribution to GDP growth declined to 0.8 percentage points. Low domestic consumption is continuing to hinder faster economic growth, and is being reflected in a continuing decline in final household consumption in connection with the bad situation on the labour market. In addition to the confidence indicators, further evidence of the persistent uncertainty in the domestic economy comes from the renewed sharp decline in gross fixed capital formation, of more than 9% in year-on-year terms.

The important role of foreign demand is also being seen in the movement of value-added in certain branches of the private sector. Year-on-year growth in

the manufacturing sector was down on the second quarter at 8.6%. Alongside a moderate slowdown in foreign demand, another factor was a continuing decline in activity in certain branches of manufacturing related primarily to domestic consumption. Growth in merchandise exports was reflected in a year-on-year increase of 7.4% in value-added in transportation, storage and communications. Despite the low basis, value-added again declined sharply in the construction sector, by just over 14% in the third quarter. Construction thus remains the biggest brake on economic growth.

Industrial production in September was down on August, and growth in the third quarter was down significantly in the context of a moderate slowdown in growth in foreign demand. Industrial production was down by just over 2% on August, while growth in the third quarter was down a half on the second quarter at 2.3%. Given the heavy export-dependence of domestic industry, the slowdown in industrial production was expected, growth in imports by the main trading partners slowing in the third quarter. Output in certain sectors of industry, mostly depending on domestic demand, declined again. The number of new vehicle registrations in the EU27 continued to decline as a result of the withdrawal of subsidies, while output in the manufacturing sector in the euro area actually stagnated compared with the second quarter.

Production of intermediate goods remains the main factor in growth in domestic industrial production.

Growth in production of intermediate goods declined from just under 6% in the second quarter to less than 3% in the third quarter. Despite the slowdown, the level in the third quarter was just under a fifth higher than the bottom point recorded in the second quarter of last year. The decline in activity in the manufacture of beverages and furniture and the stagnation in the manufacture of food-stuffs were reflected in a 1.4% decline in the production of consumer goods in the third quarter compared with the second quarter. With exports of consumer goods up in year-on-year terms, this is a reflection of the low level of domestic demand. The recovery in this production remains relatively weak, as the level in the third quarter was up just 8% on the bottom point recorded in the second quarter of last year. Economic growth in the trading partners, primarily those in the EU27, was also reflected in an increase in demand for capital goods in the second and third quarters of this year. Quarterly growth in the production of capital goods increased from 0.8% in the second quarter to 3.3% in the third quarter. Important factor in this was increased growth in the manufacture of other machinery and equipment. The recovery in the production of capital goods nevertheless remains the weakest among all the categories of goods; its level in the third quarter of this year was just under 7% up on the bottom point recorded in the second quarter of last year.

The movement in the real value of new orders is likely an indication of a continuing slowdown in

growth in industrial production in the final quarter of this year. In September, the total value of new orders declined again in monthly terms, while its level in the third quarter was down over 5% on the second quarter. The decline in orders from the domestic market accelerated sharply, a continuing reflection of low domestic demand. In contrast to previous quarters, orders from the foreign market also declined, by just under 5%. This is in line with the expected slowdown in growth in foreign demand in the second half of this year.

Construction activity again declined sharply in the third quarter, and the contraction in construction activity remains the main factor reducing economic

* Volume of industrial production. ** Real value of construction put in place.

growth. The quarterly decline in the real value of construction put in place was just under 1 percentage point less than in the second quarter at 5.3%, primarily as a result of relatively high growth in civil engineering work in August. Construction activity in the third quarter was down just under a fifth in year-on-year terms, reaching its level of 2005, before the start of the construction boom. In contrast to the first half of the year, there was a significant year-on-year decline in activity in the construction of non-residential buildings, which was linked to the completion of the main work on a large sports and business complex. The construction of residential buildings remains prominent: the year-on-year contraction ranged between 35% and 40% for the fifth consecutive quarter, and activity in the third quarter was lower than the aver-

age for the 2000 to 2005 period. The number of transactions in new residential buildings over the first nine months of the year was up just over 50% in year-on-year terms, an indication of the considerable inventory of unsold housing, in light of the low level of new construction. Prices of new-build housing remained down around 15% on 2008, when they were at their peak.

The figures for building permits are not yet indicating a stabilisation of construction sector. The trend of decline in the total value of new contracts is continuing, although this year's movements have been slightly more favourable in the buildings segment. The number of building permits issued in the third quarter was up for the second consecutive quarter, but neverthe-

less remained low. The total floor area of the corresponding buildings also remained relatively small. This year's quarterly average of the number of building permits issued was down a third on the quarterly average between 1999 and 2009, and the corresponding floor area was down a fifth. The value of new contracts continued to decline during the first nine months of the year. This was the result of a decline in the value of new contracts in civil engineering work, which is linked to the completion of major work in the construction of the motorway network. By contrast, the value of new contracts in the construction of buildings during the first nine months of the year was significantly higher than in the same period last year, which could be an indication of a slowdown in the negative trend in this segment.

Volume turnover in the retail sector in October was down slightly in current terms, although turnover in the trade and repair of motor vehicles continued to increase. Despite the monthly fluctuations, the year-on-year movements in trade turnover remained relatively favourable. Volume turnover in the retail sector in October was down 0.5% on September, but was up in year-on-year terms for the fifth consecutive month. The movements in trade in non-foodstuffs (other than motor fuels) continue to indicate cautious behaviour of customers, turnover having continued to stagnate this year. The trend of growth in volume turnover in the trade and repair of motor vehicles has continued as prices have fallen, although growth in recent months has not been in line

with the movement in the number of new vehicle registrations. The movement in turnover in the retail sector also remains out of line with the gradual decline in final household consumption according to the national accounts.

The economic sentiment indicator stagnated in November, and was down 3 percentage points on this year's high recorded in July. Its movement in recent months indicates a slowdown in economic activity in the final quarter. Confidence declined in the manufacturing sector, where the indicator in November was down 8 percentage points on this year's high recorded in July. The export expectations and export orders indicators have declined significantly in recent months. The retail confidence indicator declined slightly in November. Confidence in this activity remains the highest among real sector's activities, and is out of line with the movements in final household consumption. Confidence in the service sector was up significantly on October, the movements in the current demand indicator were particularly positive. Construction confidence and consumer confidence remained low.

Labour market

The number of unemployed rose significantly to 102,683 in October, primarily as a result of a large seasonal inflow into unemployment. The seasonal inflow was the result of the loss of status by a large number of school-leavers and students, many of whom fail to find employment and thus register as unemployed. In

October 14,071 people newly registered as unemployed, of whom 6,343 were first-time jobseekers, and 3,825 had reached the end of their employment contracts. The number of unemployed rose by 4,775 as a result of these changes. This October's increase in unemployment was less than last year's figure of 6,225, but was nevertheless around 45% higher than the October average over the last five years. October's outflow from registered unemployment to employment stood at 4,849, which was at the level of this year's average, and up almost a third on last year's average. Employers notified 17,422 vacancies in October, the largest figure in the last two years. There were 10,863 new hires in October, which was down 8.8% in year-on-year terms, and remains around 30% down on the pre-crisis level. This continued the trend of a gap between the number of new hires and the number of vacancies, an indication of the increase in imbalances on the labour market in the Slovenian economy.

The workforce in employment increased by 2,236 in September, primarily as a result of seasonal movements in the education sector. The workforce in employment in the private sector increased by 332 in September, still considerably less than the usual September movement in the years before the crisis. There was great variation in the movement in the workforce in employment in individual branches of the private sector. There was an increase of 463 in the manufacturing sector, and an increase of 331 in the professional, scientific and technical activities sector. By contrast, the workforce in employ-

ment in the construction sector is continuing to decline, by a further 388 in September, while there was also a decline of 199 in the trade and repair of motor vehicles sector. The workforce in employment has been declining in the construction sector since last April. Survey figures for employment expectations in this sector also indicate great pessimism regarding future employment. The workforce in employment in the public sector in September was up 1,902 on the previous month, primarily as a result of the usual seasonal increase in the education sector.

The average gross wage per employee in September was up 3.6% in year-on-year terms, largely as a result of significant lay-offs among the low-paid. Wages were up by 4.6% in year-on-year terms in the private sec-

tor, but by 0.6% in the public sector.¹ The largest year-on-year increase in gross wages (7.0%) was recorded by the manufacturing sector, which recently has also seen rapid growth in productivity. The growth in the average wage is also to a great extent related to the decline in employment in certain sectors where job losses were primarily among the low-paid. Thus gross wages in September were up sharply in year-on-year terms in the manufacture of textiles (by 11.1%), where the workforce in employment was down 26.6% in year-on-year terms. Wages also recorded a sharp year-on-year increase in the manufacture of clothing (by 8.6%), where the workforce in employment was down 30.2%. Year-on-year growth in the total wage bill, which better reflects corporate cost adjustment, was negative in the private sector for almost a year, but has again become positive since the beginning of the year as the decline in employment has slowed. According to the calculation including only corporate employees drawing wages, year-on-year growth in the total

Total wage bill and average monthly gross wage per employee

*The wage bill is calculated as the product of the average gross wage for employees of legal persons who received pay and the total number of employees of legal persons.

wage bill in the private sector stood at 2.3% in September.

Notes: * Sections of NACE Rev. 2 classification. ** CPI deflator.

¹ The public sector and private sector are distinguished according to the standard classification of economic activities. Thus the public sector includes public administration, education, health and culture. The weakness in this indicator is that it includes legal entities that do not fall within the public sector.

Selected competitiveness indicators

The harmonised index of the nominal effective exchange rate appreciated in current terms in October, while the year-on-year depreciation declined. The harmonised index of the nominal effective exchange rate appreciated by 0.8% in October in current terms, taking the year-on-year depreciation to 2.1%. October's current appreciation was the result of the euro's rises of 6.5% against the US dollar, 4.4% against the pound sterling, 3.1% against the Japanese yen and 2.9% against the Swiss franc. The main factor in the euro's rise against the US dollar in October was the Fed's announcement of additional non-standard monetary policy measures. The current depreciation also had an impact on the longer-term comparisons, the year-on-year depreciation in the index of the nominal effective exchange rate declining from 2.8% in September to 2.1% in October.

The harmonised index of the real effective exchange rate as measured by consumer prices appreciated in current terms in October, thereby reducing the year-on-year depreciation. The current appreciation in the real effective exchange rate in October was at the level of the appreciation in the nominal effective exchange rate. The year-on-year depreciation declined from 2.8% in September to 2.3% in October. The year-on-year depreciation in the nominal effective exchange rate contributed 2.1 percentage points, while the slower year-on-year growth in domestic prices than in the basket of foreign prices contributed 0.2 percentage points.

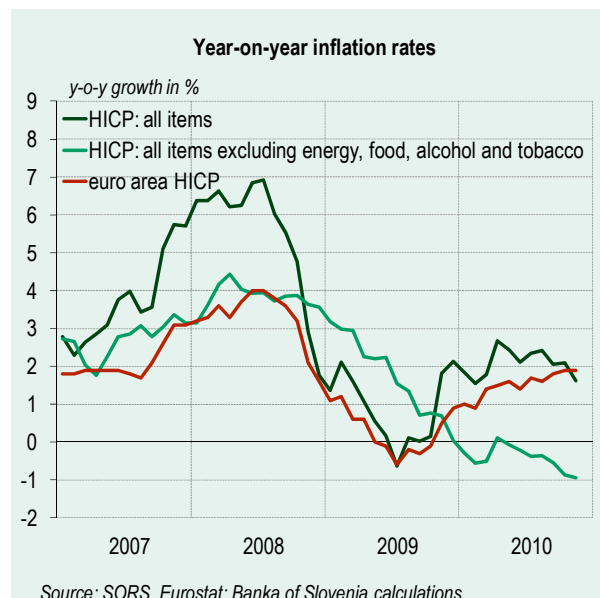

The monthly deterioration in Slovenia's price competitiveness in October was slightly less than in the main euro area trading partners, but the level of the indicator remained higher than in the countries under comparison. The deterioration was primarily the result of the appreciation of the euro. Slovenia's price competitiveness deteriorated by 0.8% in monthly terms, 0.7 percentage points less than the average of the main euro area trading partners. The year-on-year gap with the average of the main trading partners diminished slightly. The year-on-year depreciation in the indicator for Slovenia in October was down 0.5 percentage points on September at 2.3%, while the average of the major trading partners was down 1.1 percentage points at 4.2%. There were major

differences from country to country. The best relative year-on-year improvement in price competitiveness was recorded by Germany, where October's depreciation stood at 5.4%. The other year-on-year depreciations stood at 4.3% in Italy, 3.9% in France and 3.1% in Austria.

3 | Price Developments

In November, year-on-year inflation as measured by the HICP was down 0.5 percentage points on the previous month at 1.6%, primarily as a result of a fall in prices of industrial goods. Year-on-year growth in prices of industrial goods inside the HICP declined by 1.2 percentage points to 1.9%, while their contribution to inflation declined by 0.5 percentage points to 0.9 percentage points. The largest factor in this was the year-on-year decline of 3.7 percentage points in growth in energy prices to 10.3%, largely as a result of base effects. Despite a rise in prices of clothing and footwear, the year-on-year decline in prices of non-energy industrial goods deepened by 0.2 percentage points. The effect of last November's rise in water supply prices dropped out of the calculation of year-on-year growth in prices. Growth in food prices in November was up 0.1 percentage points

at 3.5%, primarily as a result of growth in prices of seasonal food. Year-on-year growth in services prices remained unchanged for the third consecutive month at -0.1%, as a result of September's large fall in prices at canteens.

The adverse macroeconomic situation, particularly on the labour market, is continuing to affect core inflation. Year-on-year growth in prices excluding energy, food, alcohol and tobacco was unchanged in November at -0.9%. Core inflation excluding energy was also unchanged in November at 0.2%, while core inflation excluding energy and unprocessed food fell by 0.1 percentage points to -0.2%. The persistent adverse situation

Note: Figures may not sum up to official figures due to rounding.

on the labour market is resulting in low household consumption. This has continued to be reflected in relatively low growth in volume turnover in the retail sector, which is limiting retailers' possibilities of raising prices, and is thus acting to curb the core inflation trend.

According to detailed SORS figures, the most notable change in the structure of inflation in October was in year-on-year growth in prices of food, clothing and energy. Prices of fruit fell in October for the second consecutive month, taking the year-on-year rate to 2.6%, down 9.6 percentage points on September. There were also declines in year-on-year growth in prices of solid fuels, from 8.8% in September to 2.4% in October, and distilled beverages, from 7.7% in September to 4.3% in October. After temporarily year-on-year growth of 1.9% in September, prices of clothing fell in October, by 2.9% in year-on-year terms. The overall seasonal price increases relative to August were thus comparable to last year. After falling in August and September, prices of liquid fuels and of fuels and lubricants rose in October, taking year-on-year growth in prices of liquid fuels to 30.2%, up 5.9 percentage points, and growth in prices of fuels and lubricants to 13.0%, up 4.1 percentage points. Year-on-year growth in prices of passenger air transport also increased, from 2.5% to 6.5%.

Industrial producer prices on the domestic market rose in October. Year-on-year growth in industrial producer prices on the domestic market stood at 3.1% in

October, up 0.3 percentage points on September. The largest price rises in current terms were recorded by the manufacture of coke and refined petroleum products and by printing and reproduction of recorded media, while the largest year-on-year price rises continue to be recorded by the manufacture of basic metals, water collection, treatment and supply, and the manufacture of textiles.

4 | Balance of Payments

Current account

The current account recorded a surplus in September for the fourth consecutive month, which was partly a reflection of low domestic demand. The current account surplus in the third quarter totalled EUR 93 million, a pronounced change from the same quarter last year, when a deficit of EUR 235 million was recorded. The main factor in September's current account surplus of EUR 39 million was a high surplus of trade in services. The deficit in factor income was unchanged from August, while the merchandise trade deficit narrowed. The cumulative current account deficit over the first nine months of the year was just a ninth of that recorded in the same period last year, falling from EUR 475 million to EUR 55 million. Further evidence of balance being

achieved in the current account comes from the longer-term comparisons: the cumulative current account deficit over the 12 months to September narrowed to EUR 105 million or 0.3% of GDP, compared with 3.5% last September. A major factor in this was the narrowing of the merchandise trade deficit, also due to the low level of domestic demand.

According to seasonally adjusted² figures, quarterly growth in merchandise trade slowed notably in the third quarter, by more on the import side than the export side. Quarterly growth in merchandise exports was down 1 percentage point on the second quarter at 4.5%, while growth in imports declined from 6% to 1.5%. Under these movements in merchandise trade, the merchandise trade deficit in the third quarter was down a half on the same period last year at EUR 113 million. The cumulative merchandise trade deficit over the first nine months of the year reached EUR 425 million, up slightly on the same period last year, but as a result of a lower basis in the second quarter of last year.

This year's third quarter showed higher growth in exports to EU Member States, and faster growth in imports from non-EU countries. According to SORS figures, year-on-year growth in exports to EU Member States stood at 19.3%, while growth in exports to non-EU countries was 6 percentage points lower. Imports from EU Member States were up just over 12% in the third

quarter, while imports from non-EU countries were up 19.5%. These movements also had an impact on the regional breakdown of the merchandise trade deficit in the third quarter. The deficit in merchandise trade with EU Member States narrowed by EUR 104 million in year-on-year terms, while the surplus in merchandise trade with non-EU countries also declined.

The surplus of trade in services in the third quarter increased by EUR 65 million in year-on-year terms, primarily as a result of relatively high exports of tourism services. Year-on-year growth in exports of services was up 3.5 percentage points on the second quarter at 9.1%. The largest factor was the relatively high growth in exports of tourism services, which was double that in the second quarter at just under 9%, imports of tourism services having stagnated. Year-on-year growth in transport services in the third quarter was down on the previous quarter on both the import and export sides. At 6.6%, year-on-year growth in imports of transport services was a third of that in the second quarter, while growth in exports was down 2.4 percentage points on the second quarter at 8.4%. This was linked to the lower growth in merchandise trade in the third quarter.

The deficit in factor income continued to narrow in year-on-year terms in the third quarter, primarily as a result of a decline in the deficit in capital income. The deficit in factor income in the third quarter of this year

² Seasonally adjusted using the Tramo-Seats method.

narrowed by EUR 78 million in year-on-year terms to EUR 162 million. The main contribution came from the narrowing of the deficit in capital income, which was down EUR 71 million in year-on-year terms. The main factor in the narrowing of the deficit in capital income was reinvested and undistributed earnings, where a deficit of EUR 84 million was recorded in the third quarter of last year and a surplus of EUR 30 million in the same period this year. By contrast the deficit in income from investments in securities has been widening this year, which is primarily the result of previous issues of government bonds and notes. It stood at EUR 35 million in the third quarter, compared with EUR 4 million in the same period last year.

The movements in current transfers remained favourable in the third quarter, which was a factor in this

year's narrowing of the current account deficit. The cumulative deficit in current transfers over the first nine months of the year stood at EUR 88 million, down EUR 149 million in year-on-year terms. In contrast to the deficit in the first half of this year, the third quarter saw a small surplus in the amount of EUR 8 million. The main factor in the favourable movements was government transfers, where a surplus of EUR 60 million was recorded in the third quarter. Net transfers from the EU budget rose again in September to reach EUR 20 million.

Capital and financial account

In September, private sector registered net financial inflow of EUR 293 million. There was an increase in both claims and liabilities. After a net financial outflow was recorded in August, largely as a result of an increase in the banks' claims against the rest of the world, Sep-

Source: Bank of Slovenia.

tember's net financial inflow was primarily the result of an increase in deposits by non-residents at domestic banks and an increase in trade credits received from the rest of the world. After five months of recording a net outflow, the government sector recorded a net inflow of EUR 20 million in September as a result of inflows from the EU's structural and cohesion funds. The Bank of Slovenia recorded a net financial outflow of EUR 282 million in September.

The private sector's claims against the rest of the world increased in September, primarily as a result of an increase in trade credits granted to the rest of the world and household currency and deposits. Claims against the rest of the world increased by EUR 74 million in September, taking the increase over the first nine months of the year to EUR 769 million. The largest contribution to September's increase in claims came from trade credits granted to the rest of the world, at EUR 177 million. The trend of increase in trade credits granted to the rest of the world thus continued in September, an indica-

tion of the stabilisation of economic activity in the main trading partners and the consequent rise in foreign demand for Slovenian products and services. The rise in major stock markets is also being reflected in the capital and financial account, where the private sector's claims

Signs: inflows or increases in liabilities (+), outflows or increases in claims (-).

from investments in securities increased again in September, to stand at over EUR 400 million over the first nine months of the year. In the same period last year, the private sector reduced its exposure to the rest of the world by EUR 113 million due to uncertainties on the international financial markets. Claims from outward FDI increased by EUR 32 million in September, the first increase since April.

The main factors in September's increase of EUR 368 million in the private sector's liabilities to the rest of the world were an increase in bank deposits by non-residents and an increase in trade credits. The private sector's liabilities increased by EUR 218 million overall during the first nine months of the year, compared with a decline of EUR 1,445 million in the same period last year as a result of debt repayments to the rest of the world by banks. The largest factors in September's increase in the private sector's liabilities were non-residents' deposits at banks (EUR 203 million) and trade credits (EUR 178 million). In respect of loans, the process of repayments in the rest of the world by domestic banks continued in September. Banks repaid EUR 31 million in loans in September, and a total of EUR 465 million over the first nine months of the year. While the banking sector continued to reduce its liabilities from foreign loans, domestic corporates recorded borrowing from the rest of the world for the second consecutive month, of EUR 22 million. Liabilities from FDI declined for the first time this year, primarily as a result of a decline in liabilities to affiliates. Foreign port-

folio investments also declined in September, but nevertheless remain the most important source of foreign finance. The private sector received a total of EUR 660 million from this source over the first nine months of the year.

After falling by EUR 214 million in August, Slovenia's net external debt rose by EUR 333 million in September to stand at EUR 11.5 billion at the end of the month. The gross external debt increased in September, while the total economy's gross external claims declined, thereby increasing the net external debt. The largest contribution to the increase in the net external debt in September came from the banking sector (EUR 735 million). All other sectors reduced their net external debt.

5 | Public Finance

The general government deficit in the 12 months to August amounted to 6.3% of GDP, while the state budget deficit in the 12 months to October amounted to around 6% of estimated GDP. The general government deficit amounted to EUR 1,475 million during the first eight months of the year, and to 6.3% of estimated GDP during the 12 months to August. The state budget deficit in September and October amounted to around EUR 340 million, compared with EUR 286 million in the

same months last year. The state budget deficit amounted to EUR 1,739 million during the first ten months of the year, and to around 6.0% of estimated GDP during the 12 months to October.

Inflows of taxes and contributions during the first ten months of the year were down 2.2% in year-on-year terms, also as a result of poor corporate performance and a decline in the workforce in employment. The main factors in the decline in collected taxes were declines in collected corporate income tax and personal income tax. Inflows of excise duties were also lower than usual in October, as the final payment day was a non-working day (the so-called calendar effect), although November's inflows of excise duties are expected to be correspondingly higher. Inflows of corporate income tax during the first ten months of the year were down EUR 237 million in year-on-year terms, as a result of a 1 percentage point cut in the tax rate, the adverse economic situation and higher refunds of tax during settlement for last year. Inflows of personal income tax during

the first ten months of the year were down EUR 57 million in year-on-year terms, primarily as a result of lower pre-payments of tax on income from business activities and income from the sale of capital, and higher refunds for last year. Inflows of VAT and social contributions during the first ten months of the year were up 2.5% and 1.2% respectively on the same period last year. State budget revenues during the first ten months of the year were down 2.8% in year-on-year terms. The main factor in the decline was a decline in collected taxes, while inflows of non-tax revenues during the first ten months of the year exceeded those last year, even if the extraordinary revenues from the repayment of Russia's clearing debt this August are excluded. State budget revenues during the first ten months of the year reached 72% of the estimated revenues in the revision to this year's budget.

Growth in general government expenditure is continuing to outpace revenues. General government expenditure during the first eight months of the year was up 2.6% in year-on-year terms. Expenditures on wages and

employee contributions, on goods and services and on investment and transfers remained at approximately the level recorded last year, while interest payments increased significantly. The last were up EUR 151 million during the first ten months of the year. State budget expenditure in October was down 7.7% in year-on-year terms, primarily as a result of lower investment expenditure and transfers. State budget expenditure during the first ten months of the year reached 77% of the estimated expenditure in the revision to this year's budget.

The financing of this year's general government deficit is based primarily on bond issues from the first quarter of this year. The majority of the general government deficit from the first eight months of the year (EUR 1,475 million) and the maturing debt during this period (EUR 1,719 million) was financed by securities issues in the first quarter of this year (EUR 2,603 million). A portion of the financing was also obtained by reducing government deposits at banks (EUR 590 million). The premiums on 10-year Slovenian government bonds over the German benchmark bonds in the first half of November were around the average level recorded in October, when they stood at 120 basis points.

In the state budgets for 2011 and 2012 adopted in November the planned deficit is to gradually narrow to 3.6% of GDP in 2012. Deficits of 4.5% and 3.6% of GDP are forecast for 2011 and 2012 respectively, a grad-

ual reduction from the deficit of 5.0% of GDP envisaged in the revision to this year's budget. Slovenia is also committed to reducing the deficit because of the excessive deficit procedure introduced against Slovenia by the EU at the end of last year. Under this procedure Slovenia must reduce its budget deficit (according to ESA 95 methodology) to below 3% of GDP by 2013. A significant portion of the reduction comes from the reduction in the state budget deficit. Imposing wage, pension and social transfer adjustments for inflation or wage growth that are lower than those defined by law will make a significant contribution to limiting growth in expenditure in the next two years. The adjustment envisaged in 2011 has been re-

Note: *All bond issues disbursed on domestic market are counted under domestic borrowing, despite of the residency of buyers. Out of EUR 6,500 million bonds issued from February 2009 till April 2010 EUR 5,264 million were bought by foreigners until end August 2010.

duced to a quarter of the legally defined framework.

6 | Banking System*

The banking system's total assets declined by EUR 645 million in October, while year-on-year growth in total assets was zero. The main factors in the change in total assets were debt repayments in the rest of the world by banks and a renewed decline in government deposits. On the investment side there was a consequent decline in balances at the central bank, while short-term loans to banks and investments in securities in particular also declined. October's net increase in loans to non-banking sectors was below this year's monthly average.

Year-on-year growth in loans to non-banking sectors remained at its September level of 1.9%. In the context of above-average lending to the government sector, a renewed decline in loans to non-financial corporations and low household lending were the reasons for the modest lending to non-banking sectors.

After September's small decline in loans to non-financial corporations, October's decline was again above-average. Year-on-year growth in loans to non-financial corporations remained at the level of the previous two months, while the net increase was negative in the amount of EUR 95 million. Although the domestic

banks accounted for 62% of this decline, their year-on-year growth in loans to non-financial corporations nevertheless remains positive, while growth is negative at the banks under majority foreign ownership.

October's net increase in loans to households was the lowest of the year. Year-on-year growth in loans to households was down on the previous months at 9.4%, while the net increase amounted to a modest EUR 18 million. The process of lengthening maturity continued in October. Long-term loans accounted for 80% of all loans to households.

October's debt repayments by the banks to banks in the rest of the world were among the highest of the year. The banks made net debt repayments of

EUR 404 million to banks in the rest of the world in October, taking the total for the year to EUR 1,234 million. It was primarily the domestic banks that contributed to the decline in liabilities during this period.

The banks increased their financial liabilities to the Eurosystem. The banks obtained funding of EUR 154 million at the end of October through 3-month LTROs. The majority of this funding was obtained by the domestic banks.

The net increase and year-on-year growth in deposits by non-banking sectors were negative for the second consecutive month. Deposits by non-banking sectors declined by EUR 174 million in October. Despite an above-average net increase in deposits by non-financial corporations and OFIs, the principal factor in the decline was a renewed decline in government deposits, of EUR 232 million. In addition, there was also a decline of EUR 45 million in household deposits, the largest decline this year.

The banking system's performance is deteriorating as a result of an increase in impairments and provisioning. Net interest during the first ten months of the year was up by 13.8% on the same period last year, as

interest expenses declined faster than interest income. The negative year-on-year growth in non-interest income was slightly lower in October as a result of a smaller loss from trading. With operating costs stagnating, the banking system's performance also deteriorated as a result of a renewed increase in impairments and provisioning (by EUR 59 million in October). The banking system's pre-tax profit during the first ten months of the year stood at EUR 86 million, merely just over a third of that recorded in the same period last year.

7 | Domestic Financial Markets

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 0.1% in October. At EUR 3.8 million, the volume of trading in bonds was the lowest figure this year. The proportion of total stock exchange volume accounted for by bonds fell to 11.3% in October. The heaviest trading was in 2nd-issue Slovenska odškodninska družba bonds (EUR 1.6 million).

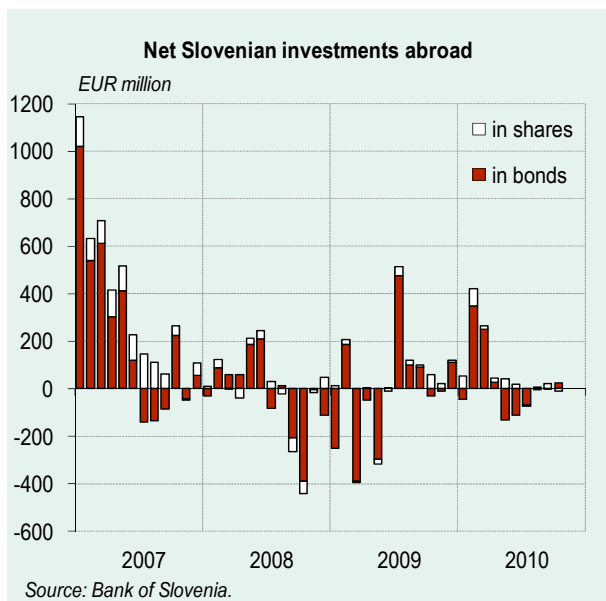

The market capitalisation of shares on the Ljubljana Stock Exchange rose by 1.2% in October. On 15 October 2010 the Ljubljana Stock Exchange stopped calculating the LJSEX, the successor to the SBI 20 and the SBI. Its role was assumed by the SBI TOP, which rose by

4.2% in October, taking the year-on-year change to -18.3%, and ending the month at 865. The P/E ratio in the prime market stood at 44.1 at the end of October. The volume of trading in shares in October was above the monthly average for 2010 at EUR 28.4 million.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents stood at 9.3% in October. Non-residents made net purchases of EUR 39.4 million in Slovenian securities in October, of which EUR 20.3 million was in bonds and EUR 19.1 million in shares. The heaviest trading by non-residents was in government bonds and shares in Slovenian blue-chips. Residents of the UK were the largest net purchasers of bonds, while residents of

Luxembourg were major net sellers of Slovenian bonds. The largest net purchases of shares were made by residents of the UK, while residents of the Netherlands made the largest net sales.

Residents made net purchases of EUR 23.9 million in foreign bonds, and net sales of EUR 9.9 million in foreign shares in October. The largest net purchases of securities were made by insurance corporations, which primarily purchased securities from the euro area. The banks made net sales of government bonds and bank bonds in particular, while other financial intermediaries made net sales of shares from the euro area. Households made net sales of shares from the euro area and Canada, while primarily purchasing bonds from the euro area.

The domestic mutual funds' assets under management increased to EUR 1,980.5 million in October (up 1.7% in monthly terms, and 9.4% in year-on-year terms), as a result of net inflows of EUR 2.6 million and a rise of 1.8% in the average unit price (taking the year-on-year change to +6.2%). Equity funds and bond funds recorded net inflows of EUR 3.5 million and EUR 0.7 million respectively, while money-market funds and balanced funds recorded net withdrawals of EUR 0.9 million and EUR 0.8 million respectively. The largest net payments into the domestic mutual funds were recorded by the insurance sector (EUR 8.9 million), while other sectors mainly made withdrawals. The largest

withdrawals were made by non-financial corporations (EUR 3.5 million), households (EUR 1.5 million) and other financial intermediaries (EUR 1.3 million). The proportion of the domestic mutual funds' assets accounted for by liquid assets³ declined to 10.6% in October. The value of the mutual funds' investments rose on the majority of markets in October, but less than in September: the DJ EuroStoxx index for western Europe rose by 3.7% (taking the year-on-year change to -6.9%), the S&P 500 index in the US rose by 3.7% (taking the year-on-year change to +14.2%) and the Hang Seng in China rose by 3.3% (taking the year-on-year change to +6.2%). There was again variation in the movement in the indices in the former Yugoslav republics: the BELEX 15 rose by 2.4%, the CROBEX fell by 2.4% and the MBI-10 rose by 2.5%. The year-on-year changes in all three indices remained negative, at -21.2% for the BELEX 15, -12.8% for the CROBEX and -38.9% for the MBI-10.

³ Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%
2	1.3.	liabilities/ 4		Liabilities/ Deposits/ Domestic sectors/ Other MFIs/ Foreign currency	100%	100%	-
3	1.3.	liabilities/ 8		Liabilities/ Deposits/ Domestic sectors/ General government/ Foreign currency	74%	72%	82%
4	1.3.	liabilities/ 15		Liabilities/ Securities issued/ Foreign currency	92%	89%	100%

Table 1.4.: Balance Sheet of other Monetary Financial Institutions

The table summarizes data on assets and liabilities of other Monetary Financial Institutions, i.e. banks, savings banks, savings and loans undertakings and money market funds, at the end of the month.

Detailed survey of assets and liabilities of the monetary financial institutions is in the tables 1.5. and 1.6.

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds**General**

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Ljubljana Stock Exchange (Tables 2.6 to 2.8)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities

Shares – investment fund shares are not included.

IF – investment fund shares.

Turnover is measured with a single counting.

Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

- SBI – Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO – Bond Index
- SBI, BIO – value of SBI and BIO at the end of period
- dT – change of index value by points
- d% – change of index value in percentage
- Min, Max – minimum and maximum value of index in a period

Exchange rates (Tables 2.9.1–2.9.2)

Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.
 The Polish złoty was denominated on 1 January 1995 at the exchange rate of 1 new złoty for 10,000 old złotys.

Table 2.9.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

Payment systems (Tables 2.10 to 2.16)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.10: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.11 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.12 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.13 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.14 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on

a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.15 Debit Transfers and Simply book-entry

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.16: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).

- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**

- report on account balances at domestic banks – PPV (until 31 December 2004),
- report on account balances abroad – C (until 31 December 2006),
- report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
- report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.

- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.

- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.

- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.

- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.

- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.

- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.

- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.

- **Accounting data of the Bank of Slovenia**

- **Accounting data of banks (KNB)**

- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

Estimates and other sources

- estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
- estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
- estimate of Italian pensions (UMAR) until the end of 1998,
- estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
- estimate of labour income (SURs),
- data on pensions paid to non-residents (ZPIZ),
- survey on the write-downs of debt from trade in goods and services abroad,
- estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
- estimate of cash transactions on tourism and labour income (from 2007 onwards),
- quarterly data on consumption of foreign embassies in Slovenia (SURs, from 2008 onwards),
- migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
- households' transfers (SURs, from 2008 onwards),
- assets acquired directly by tenders and programmes of EU (SURs, from 2008 onwards),
- data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards).

Current account**Goods**

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services**Transport**

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURs):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SURS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are

obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SURS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SURS, Annual survey on investment in tangible assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]}
- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]}

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount

of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2009 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2006 to 2008 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2010, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2009 shall take into consideration the new three year average (2007 to 2009).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2009 are provisional.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial

items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not

distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial derivatives are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.
Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity,

insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.

- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev. 2 (Nomenclature statistique des activités économiques dans la Communauté

européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1–ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, ECB EER-41 group of currencies (AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CZ, EE, HU, LV, LT, PL, BG, RO, NZ, DZ, AR, BR, HR, IN, ID, IL, MY, MX, MA, PH, RU, ZA, TW, TH, TR, IS, CL, VE) – Euro area 16 against Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs deflated, ECB EER-21 group of currencies and Euro area 16 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO) against Slovenian tolar (until 31.12.2006) from 01.01.2007 against Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data shown every three months of the year are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia: <http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products , as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
1.5. Selected Assets of Other Monetary Financial Institutions by Sector	2.6 MFI holdings of securities, breakdown
1.6. Selected Obligations of Other Monetary Financial Institutions by Sector or	2.5 Deposits held with MFIs, breakdown
1.4. Balance Sheet of Other Monetary Financial Institutions	
1.8. Investment funds	2.9. Aggregated balance sheet of euro area investment funds
	2.10. Securities held by investment funds broken down by issuer of securities
