Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

Available indicators show continuing moderate growth in the euro area and the US in the final quarter of 2010. The figures showing solid economic situation in Germany and visible improvement in final household consumption in the US in the third quarter led Consensus to raise its forecasts in December. Economic growth in 2010 and 2011 is expected to stand at 1.7% and 1.5% in the euro area, while for the US it is expected to reach 2.8% and 2.7%. Commodity prices rose sharply in December, partly as a result of growth in certain major economies, while inflation in the euro area rose to 2.2%. As a result of public finance difficulties in the peripheral euro area countries, the euro again depreciated against other major currencies in December. The Federal Reserve and the ECB left their interest rates unchanged in December, while the Chinese central bank raised its interest rate for the second time in 2010 as a result of inflationary pressures.

The trend of growth in industrial production in Slovenia slowed down in the second half of 2010. In contrast to the previous three months, the real value of new orders rose in October, but confidence indicators at the end of the year were not showing any significant improvement of the situation in industry. Activity is continuing to contract in the construction sector, primarily in association with the continuing decline in investment in infrastructure. Volume turnover in retail trade other than motor vehicles and fuels also stagnated in November. The economic sentiment indicator points to a continuation of slow growth in economic activity in the final quarter of 2010.

The number of registered unemployed rose sharply in December 2010 to pass 110,000, primarily as a result of a significant rise in the number of unemployed aged between 50 and 60. The workforce in employment fell in October as a result of a large fall in employment in construction. The average gross wage in October was up 0.6% in year-on-year terms in the public sector, and up 3.3% in the private sector. As a result of the decline in employment, year-on-year growth in the private sector's wage bill was just 0.6%. Together with productivity growth, the low growth in the total wage bill is improving the private sector's cost competitiveness, although unit labour costs remain at a high level compared with the euro area overall.

Year-on-year inflation as measured by the HICP in December was up 0.6 percentage points on the previous month at 2.2%, primarily as a result of large changes in energy prices and prices of manufactured goods. The core inflation indicators remain low, a reflection of low domestic demand and the cost adjustment of the economy.

After four months of surplus, the current account recorded a deficit in October. The main contribution to this came from the merchandise trade deficit, on which deterioration in the terms of trade had a significant impact. According to provisional SORS figures, growth in merchandise imports again outpaced growth in merchandise exports in November. October's deficit in factor income narrowed slightly from September, while transfers recorded a small surplus. The current account deficit in the 12 months to October 2010 amounted to 0.4% of estimated GDP, compared with 2.9% of GDP over the 12 months to the previous October.

The general government deficit in the 12 months to October 2010 amounted to 6.5% of estimated GDP. General government revenues during the first ten months of 2010 were unchanged in year-on-year terms, although the breakdown of revenues shifted towards non-tax resources and EU budget funding. General government expenditure during the same period was up 2.8% in year-on-year terms, expenditures on interest and pensions recording the largest increases. According to Ministry of Finance estimates, the general government debt stood at approximately 33% of GDP at the end of 2010, and is expected to exceed 37% of GDP by the end of 2011.

The banking system's total assets increased by EUR 988 million in November, primarily as a result of an increase in claims towards banks. The most notable changes on the funding side were an increase in liabilities to domestic banks, and an increase in deposits by non-banking sectors (deposits by non-financial corporations and government deposits in particular). Year-on-year growth in lending to non-banking sectors stood at 2.1%, primarily as a result of a modest increase in lending to households and the government sector, and a decline in loans to non-financial corporations. The banking system's pre-tax profit during the first eleven months of 2010 was down in year-on-year terms to just a fifth or EUR 48 million; impairments and provisioning were again the main factor in November.

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 0.1% in November, while the market capitalisation of shares declined by 3.1%. The proportion of the market capitalisation of shares accounted for by non-residents stood at 9.8% in November. The SBI TOP fell by 2.6% in monthly terms in November, taking the year-on-year change to -16.3%. The domestic mutual funds' assets increased to EUR 1,996 million as a result of a rise of 0.9% in the average unit price and net withdrawals of EUR 5.8 million.

1 | International Environment

The euro area and the US continued to record moderate economic growth in the final quarter of 2010. Industrial production in the euro area in October was up just under 1% on the previous month; the production of capital goods was the largest factor in this growth. The monthly increase in November in the US was under 0.5%, and was primarily the result of an increase in output in the electricity, gas and steam supply sector. Year-on-year growth in industrial production in both economies has slowed somewhat since May. After two months of decline, volume turnover in the retail sector in the euro area rose by 0.5% in October, primarily as a result of increased sales of food, alcohol and tobacco. In the US, in addition to sales of clothing, larger sales of foodstuffs were also a major factor in the monthly rise in retail turnover in November, of 0.7%. In the euro area, year-on-year growth in volume turnover in retail trade increased in the six months to October, while in the US it fluctuated around 6.5% in the three months to November.

As the unemployment rate stabilises, consumer confidence in the euro area is gradually increasing. Unemployment has remained at 10.0% in the euro area since April, while in the US it rose to 9.8% in November after holding at 9.6% for three months. The consumer confidence indicator published by the European Commission gradually rose between May and November, while the consumer confidence indicator in the US gradually fell between August and November. The economic sentiment indicator in the euro area rose between May and November, while confidence remains lowest in the construction sector.

In December Consensus raised its economic growth forecasts for the euro area and the US for 2010 and 2011. Consensus forecasted economic growth of 1.7% and 1.5% for the euro area in 2010 and 2011, up 0.1 percentage points on its November forecasts. The forecasts for the US were 2.8% for 2010 and 2.7% for 2011, up 0.1 and 0.3 percentage points on its November forecasts.

The main reason for Consensus raising its forecast for the euro area was the solid economic situation in Germany, while the notable improvement in final household consumption in the third quarter was the main factor in the rise in the forecast for the US. Consensus left its economic growth forecasts for eastern Europe unchanged in December at 3.9% for 2010 and 2011.

In the euro area, year-on-year inflation increased to 2.2% in December, while in the US it fell to 1.1% in November. The largest contributions to inflation in the euro area in November came from prices of food, clothing, and alcohol and tobacco. In the US the largest falls in November were recorded by energy prices and prices of new cars. Core inflation remained unchanged in the euro

area at 1.1%, but rose to 0.8% in the US. The main factors in the rise in the US were higher prices of used cars and clothing. Year-on-year growth in prices of manufactured goods stood at 4.4% in the euro area in October, and 3.5% in the US in November.

US dollar prices of crude oil and gold rose sharply in December. A barrel of Brent crude averaged USD 91.80 in December, up 7.2% on November. The US dollar oil price moved in line with the US dollar exchange rate in the first half of December, while in the second half of the month it rose primarily as a result of the increased demand brought by low temperatures. Gold prices were

also at record levels in average monthly terms in December, while other commodity prices also rose sharply.

The euro fell against major world currencies for the second consecutive month in December, as a result of the continuing uncertainty in the peripheral euro area countries. Worsening fiscal problems and downgradings for governments and banks, particularly in Ireland, Portugal, Greece and Spain, led to the euro's fall against major world currencies. In December the euro was down 3.2% against the US dollar compared with November, averaging USD 1.3220 during the month. The euro also depreciated against the Japanese yen, the pound sterling and the Swiss franc. The euro reached its historic low against the Swiss franc in December. The ECB and the Federal Reserve left their key interest rates unchanged.

2 | Economic Activity and Labour Market

Real sector

The trend of growth in industrial production slowed down in the second half of 2010. In contrast to the three previous months, October saw a slight increase in the real value of new orders. According to provisional

Notes: *Seasonally adjusted data – Eurostat for the euro area, BEA for the US, **Consensus, December 2010.

SORS figures, industrial production fell by 0.7% in monthly terms in November, the movements in the second half of the year indicating a slowdown in the growth trend. After several months of decline, the real value of new orders rose by 2.5% in October, although the level was still several per cent down on the average in the second quarter, which was likely to be the peak in 2010. The survey indicators of current and expected production were also lower at the end of the year than in the second and third quarters. The available figures do not show any significant improvement in the situation in industry in the final quarter of 2010.

Year-on-year growth in industrial production in Slovenia during the first ten months of 2010 was comparable to the EU27 average, but was significantly lower than in Germany. For several years before the crisis annual growth in industrial production in Slovenia was approximately 3 percentage points higher than the EU27 average, and approximately 1 percentage point higher than growth in Germany, while GDP growth in Slovenia was around 3 percentage points higher. After a pronounced decline in international trade and consequently in industrial production in the first half of 2009, growth in industry recovered relatively quickly, although significant variations in the growth rates arose, particularly in 2010. Year-on-year growth in industrial production in Germany during the first ten months of 2010 exceeded 10%. It was approximately 4 percentage points lower in Slovenia, at the level of the EU27 average. The recovery in industry in

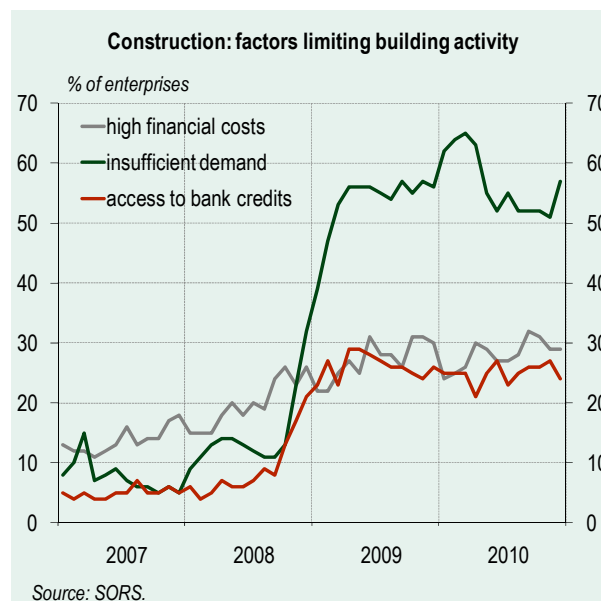

Slovenia was significantly slower in the first quarter of 2010, but the year-on-year rates later began outpacing the EU27 average. The gap by which it is outpacing the European average has nevertheless not yet reached the pre-crisis level. Given the significantly larger crisis in the construction sector compared with the EU27 average, should these trends in industry persist, it will be more difficult for GDP growth to significantly outpace the EU27 average.

Construction activity continued to decline in October.

The real value of construction put in place was down just over 1% in monthly terms as a result of a renewed decline in civil engineering work. Construction activity remained down a fifth in year-on-year terms. The total value

of new contracts in the construction sector during the first ten months of 2010 was down just over 6% in year-on-year terms, as a result of a significant decline in the value of new contracts for civil engineering structures. The value of contracts for residential buildings stagnated, while the value of contracts for non-residential buildings was up a fifth. Despite the slightly more favourable figures for the value of new contracts in the buildings segment, there were no notable signs of a stabilisation of the situation. Further evidence of this came from the low level of the confidence indicator, with a high proportion of con-

struction companies continuing to face inadequate demand and financing difficulties.

The contraction in construction activity in Slovenia during the first ten months of 2010 was one of the largest in the EU27. Construction activity in Slovenia during this period was down just under a fifth in year-on-year terms, comparable to the contraction in activity in Spain, which is facing huge problems in this part of the economy. Construction activity during the first ten months of the year was down just over 4% in the EU27 overall.

Notes: Differences from official numbers are due to rounding. Data are unadjusted for seasonal and working days effects.

* Volume of industrial production. ** Real value of construction put in place.

While the major factor in the decline in construction activity in the majority of the Member States with the largest problems in the sector was a decline in investment in residential construction, the contraction in construction activity in Slovenia was to a great extent the result of a decline in investment in infrastructure. Between 2005 and 2008 investment in residential buildings stood at 4.2% of GDP in Slovenia, compared with EU27 average of 5.6% of GDP, and ranged between 7.2% and 12.2% of GDP in Greece, Spain and Ireland. By the third quarter of 2010 it had shrunk to 3.1% of GDP in Slovenia, 4.9% of GDP in the EU27 overall, and most notably to 2.9% of GDP in Ireland. A feature of the Slovenian economy was investment in other buildings and structures, which amounted to 10.9% of GDP in the period in question, having peaked at 11.9% of GDP in 2008. The main factor in this alongside the strong corporate investment cycle was rapid motorway construction. The ratio of this investment to GDP was one of the highest in the EU27, at around 5 percentage points above the average. By the third quarter of 2010 the ratio had fallen to 9.6% in Slovenia, while the decline in the EU27 average was negligible.

Overall growth in volume turnover in the retail sector primarily remains the result of high growth in turnover in trade in motor vehicles. Turnover in trade and repair of motor vehicles was up in monthly terms for the fourth consecutive month in November. The relatively high monthly growth rates are also being reflected in the

year-on-year figures, turnover in this sector recording year-on-year growth of more than 15% in November. The high growth in turnover in recent months is slightly in contrast to the trend in the number of new vehicle registrations, where growth slowed significantly in the second half of the year. Turnover continued to stagnate in retail trade other than motor vehicles and fuels, partly in association with low growth in the total wage bill, in addition to the uncertain situation on the labour market.

After declining by more than 10% in 2009, real turnover in retail trade other than motor vehicles during the first ten months of 2010 was also down in year-on-year terms in Slovenia, the year-on-year rate turning positive significantly later than in the EU27 overall.

Turnover in the retail sector during the first ten months of 2010 was down 0.6% in year-on-year terms, but was up 0.8% in the EU27 overall and up 1.4% in Germany. Year-on-year growth turned positive in June, four months later than in the EU27 overall. The situation on the domestic labour market does not indicate faster growth in turnover in the retail sector in the coming months, as the harmonised unemployment rate is continuing to increase. By contrast, the situation on the German labour market improved significantly in 2010, which was also one of the reasons for this year's relatively high growth in retail trade turnover.

The economic sentiment indicator stagnated at -8% for the third consecutive month in December, approximately 2 percentage points down on its average in the third quarter. This is an indication of continuing low growth in economic activity in the final quarter of 2010. Manufacturing confidence in December was up slightly on the previous month, but in the final quarter of 2010 it was down 3 percentage points on the third quarter, when it reached its highest level of the last two years. The services confidence and retail confidence indicators also rose in December, but remain down significantly on their levels in the years before the crisis. The movement in the retail confidence indicator has been out of line with the movement in the consumer confidence indicator since the middle of 2009. The latter declined in December, the major purchases suitability indicator recording the largest decline from the previous month. The

construction confidence indicator remains at the lowest level of all the real sector activities.

Labour market

The number of unemployed rose in November and December, passing 110,000. November's increase stood at 1,148, significantly lower than October's increase of 4,775. October's increase was to a great extent the result of the seasonal inflow of former students who lost status, while there was not such a strong seasonal component in November's increase. The number of registered unemployed rose sharply in December 2010 to pass 110,000, primarily as a result of a significant rise in the number of unemployed aged between 50 and 60.

The imbalances on the labour market are continuing to increase. There were 10,329 people newly registered as unemployed in November, 5% more than in November 2009, while 9,181 deregistered, 2% more than in November 2009. November's outflow from registered unemployment to employment stood at 4,927, which was at the level of the average for the year, and up almost a third on the previous year's average. Employers notified 14,749 vacancies in November, a quarter more than in November 2009. There were 8,835 new hires in November, which was down around 0.5% in year-on-year terms, and remained around a quarter down on the pre-crisis level. Similar developments were seen in December. This continued the trend of a gap between the number of new hires and the number of vacancies, an indication of the

increase in imbalances on the labour market in the Slovenian economy.

The workforce in employment fell by 687 in October, primarily as a result of a continuing rapid fall in employment in construction. The workforce in employment in the private sector fell by 1,126 in October, significantly worse than the usual October trend before the crisis. In the five years before 2008 the workforce in employment recorded an average increase of 2,500 in October. There was great variation in the movement in the workforce in employment in individual branches of the private sector. The workforce in employment continued to record increases in October in the manufacturing sector, in professional, scientific and technical activities, and in administrative and support service activities, each sector recording an increase of around 250. By contrast the decline in the workforce in employment picked up pace in the construction sector, where the monthly decline in employment more than doubled to stand at 1,399 in October. The changes in the other branches of the private sector were relatively small. The workforce in employ-

Advertised and filled job vacancies, new registered unemployed

Source: Employment Service of Slovenia, Bank of Slovenia calculations.

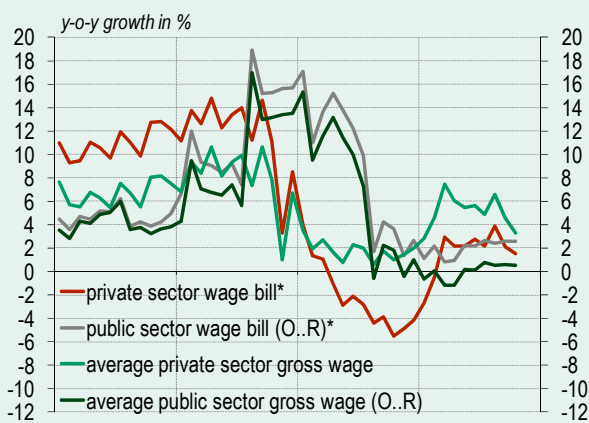

ment in the public sector in October was up 439 on the previous month, primarily as a result of the usual seasonal increase in the education sector.

The average gross wage per employee in October was up 2.7% in year-on-year terms, largely as a result of significant lay-offs among the low-paid. Wages

Total wage bill and average monthly gross wage per employee

*The wage bill is calculated as the product of the average gross wage for employees of legal persons who received pay and the total number of employees of legal persons.

Source: SORS, Bank of Slovenia calculations.

were up 3.3% in year-on-year terms in the private sector, but by 0.5% in the public sector.¹ Year-on-year growth in the gross wage was particularly high in the manufacturing sector, where wages were up 5.1%, in line with the recent high growth in productivity. Year-on-year growth in the total wage bill, which better reflects corporate cost adjustment, was negative in the private sector for almost a year, but again became positive after the beginning of the year as the decline in employment slowed. According to the calculation including only corporate employees drawing wages, year-on-year growth in the total wage bill in the private sector stood at 0.6% in October. Together

with productivity growth, the low growth in the wage bill is improving the private sector's cost competitiveness, although unit labour costs remain significantly higher than the pre-crisis level.

Selected competitiveness indicators

The harmonised index of the nominal effective exchange rate in November depreciated relative to October, the year-on-year depreciation thereby increasing slightly. In November, the harmonised index of the nominal effective exchange rate depreciated by 0.2% in monthly terms. The euro fell by 1.7% against the US dollar, 2.4% against the pound sterling, 0.9% against the Japanese yen and 0.1% against the Swiss franc. The additional uncertainties surrounding public finances in individual euro area countries were the main factor in the euro's fall against major world currencies in November. The monthly depreciation in the index brought an increase in the year-on-year depreciation from 2.1% in October to 2.4% in November.

The harmonised index of the real effective exchange rate as measured by consumer prices depreciated in both monthly and year-on-year terms in November. The real effective exchange rate depreciated by 0.2% in November relative to October. The year-on-year depreciation thus increased from 2.3% in October to 2.8% in November. The year-on-year depreciation in the nominal

Expected employment

¹ The public sector and private sector are distinguished according to the standard classification of economic activities. Thus the public sector includes public administration, education, health and culture. The weakness in this indicator is that it includes legal entities that do not fall within the public sector.

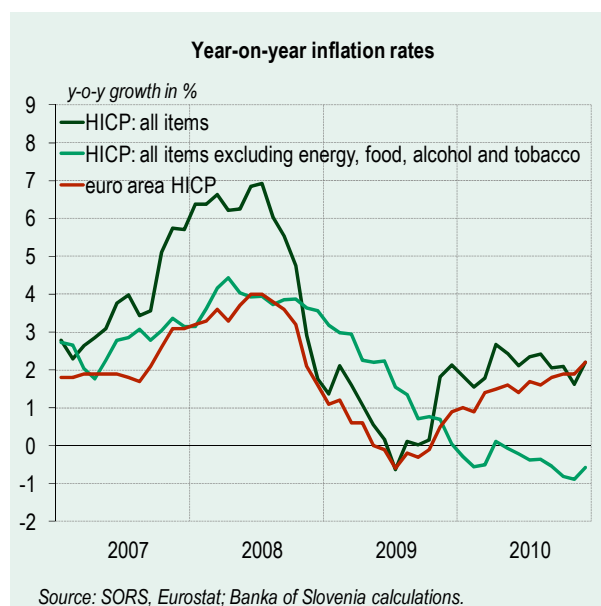

effective exchange rate contributed 2.4 percentage points, while the slower year-on-year growth in domestic prices than in the basket of foreign prices contributed 0.4 percentage points.

Slovenia's price competitiveness as measured by consumer prices improved in November, primarily as a result of the nominal depreciation of the euro. The year-on-year depreciation of the index for Slovenia and the average for the trading partners increased in November relative to October to 2.8% and 4.6% respectively. The year-on-year depreciation in the indicator increased by 0.6 percentage points to 6.0% in Germany, by 0.5 percentage points to 4.5% in France, by 0.4 percentage points to 4.6% in Italy and by 0.3 percentage points to

3.4% in Austria. Nevertheless, the index for Slovenia remains at a high level, and reveals that Slovenia's price competitiveness is worse than that of the most important euro area trading partners.

3 | Price Developments

Year-on-year inflation as measured by the HICP in December was up 0.6 percentage points on the previous month at 2.2%, primarily as a result of large changes in energy prices and prices of manufactured goods. With prices of liquid and motor fuels and prices of heat energy recoding higher monthly growth than in December 2009, year-on-year growth in energy prices was up 2.3 percentage points at 12.6%. December's smaller discounts on clothing and footwear compared with last year were a major factor in the decline in the negative contribution to the HICP made by prices of manufactured goods from 0.5 percentage points to 0.3 percentage points. The year-on-year fall in these prices stood at 1.8% in November, and 1.4% in December. After three months of year-on-year decline, services prices were up 0.1% in December, primarily as a result of higher monthly growth in prices of package holidays compared with December 2009. Year-on-year growth in food prices also

increased, from 3.5% to 3.8%, primarily as a result of higher growth in prices of processed food.

The adverse macroeconomic situation, particularly the persistent adverse situation on the labour market, is continuing to bring low core inflation. Core inflation excluding energy, food, alcohol and tobacco stood at -0.9% in November, and -0.6% in December. Core inflation excluding energy and core inflation excluding energy and unprocessed food rose to 0.5% and 0.1% respectively in December. The rise in unemployment and the low growth in the total wage bill have an adverse impact on household consumption, which is being reflected in stagnation of turnover in some of the main segments of the retail sector. This is limiting providers' possibilities of raising prices, and is therefore acting as a brake on the core inflation trend.

According to detailed SORS figures, the most notable change in the structure of inflation in November was in year-on-year growth in prices of municipal services and energy prices. Because the effects of the November 2009 rise in prices of water supply and heat energy dropped out of the calculation, year-on-year growth in these prices declined sharply, by 27.6 percentage points for water supply and by 15.8 percentage points for heat energy. The contributions made to headline inflation by these prices declined from 0.3 percentage points in October to 0.1 percentage points. With prices of refined petroleum products recording moderate monthly

growth compared with November 2009, the overall contribution made by prices of fuels and lubricants and prices of liquid fuels declined by 0.3 percentage points. The overall contribution made to headline inflation by prices of milk, milk products and eggs and prices of bread, other cereal products and meat declined by 0.1 percentage points, while the contributions made by prices of seasonal food, clothing and cars recorded increases of the same magnitude.

Industrial producer prices on the domestic market remained unchanged in monthly terms in November, while their year-on-year growth increased again. The year-on-year rate reached 3.2%, up 0.1 percentage

Note: Figures may not sum up to official figures due to rounding.

points on October. The largest price rises compared with October were recorded by the manufacture of paper and paper products, the manufacture of chemicals and chemical products and the manufacture of computer, electronic and optical products, while the manufacture of clothing recorded the largest price falls. The highest year-on-year growth in November was again recorded by prices in the manufacture of metals, but the rate has been gradually declining since August 2010.

4 | Balance of Payments

Current account

After four months of surplus, the current account recorded a deficit in October in the amount of EUR 61 million, just over a tenth more than in the same month of 2009. The largest contribution to October's deficit came from the merchandise trade deficit, which recorded its highest figure of the first ten months of the year at EUR 125 million. October's deficit in factor income narrowed slightly from September, while transfers recorded a small surplus. October's results widened the current account deficit over the first ten months of the year to EUR 150 million or 0.4% of GDP, down signifi-

cantly on October 2009's figures of EUR 1.0 billion or 2.9% of GDP.

According to the seasonally adjusted² figures, monthly growth in merchandise exports slowed, while growth in merchandise imports accelerated for the third consecutive month. Average growth in merchandise imports in the last two months strongly outpaced average growth in merchandise exports, which brought an increase in the merchandise trade deficit. The monthly rate of growth in merchandise exports slowed in October, in the context of a decline in output in manufacturing and an increase in inventories. The year-on-year comparisons have also shown merchandise import

² Seasonally adjusted current account figures using the Tramo-Seats method.

growth outpacing export growth in recent months. Merchandise exports amounted to EUR 1,651 million in October, up 10.1% in year-on-year terms, while imports were up 14.6% at EUR 1,776 million. According to provisional SORS figures, year-on-year growth in merchandise imports continued to outpace exports in November. October's merchandise trade deficit amounted to EUR 125 million,³ compared with EUR 50 million in the same month of 2009. The largest factor in the widening deficit was the 41.8% year-on-year increase in merchandise imports from non-EU countries.

The regional breakdown of merchandise trade remained stable on the import side in 2010, but shifted in favour of the EU27 on the export side. Merchandise trade during the first ten months of 2010 was up 13.2% in year-on-year terms, on both the import and export sides. The largest increase was recorded by merchandise trade with EU Member States, as a result of the economic growth recorded in the second and third quarters of 2010. Merchandise exports to EU Member States over the first ten months of the year were up 16.1% in year-on-year terms, while exports to non-EU countries were up 6.5%. The regional differences are significantly smaller on the import side: merchandise imports from EU Member States were up 13.0% in year-on-year terms, while those from non-EU countries were up 14.2%. According to the SORS methodology, the current account deficit over the first ten months of the year reached EUR 912 million, EUR 115 million more than that recorded in the same period of 2009. The level of coverage of merchandise imports by exports was unchanged in year-on-year terms at 94.3%.

The growth in economic activity in Slovenia's trading partners has primarily been reflected in high year-on-year growth in exports of intermediate goods since the second quarter of 2010. The largest year-on-year increase over the first nine months of the year was recorded by trade in intermediate goods, which is directly linked to economic activity, at 21.7%. Exports of capital goods and consumer goods also picked up slightly in the third quarter. Exports of capital goods during the first ten months of the year were nevertheless down 0.8% in year-

on-year terms, while exports of consumer goods were up 6.9%. In contrast to exports, the main factor in import growth, with the exception of intermediate goods, remains the relatively low level of domestic final consumption. In line with the low level of domestic investment demand, there was a decline of 1.8% in imports of capital goods. Year-on-year growth in imports of consumer goods has increased in recent months, and reached 5.0% over the first nine months of 2010. With increasing foreign demand, and consequently increasing activity in export-oriented sectors, imports of intermediate goods were up 20.8% in year-on-year terms, just under 1 percentage point less than the simultaneous growth in exports of intermediate goods.

As a result of the index of the average value of imports growing faster than that of exports, there was a year-on-year deterioration in the terms of trade in 2010, most notably in trade with countries outside the euro area. The index of the average value of merchandise imports over the first three quarters of 2010 was up 6.9% in year-on-year terms, while that of exports was up 4.4%, the terms of trade thus deteriorating by 2.5%. The terms of trade with the euro area deteriorated by 2.3%, while the terms of trade with countries outside the euro area deteriorated by 3.2%. The indices of average value for countries outside the euro area outpaced those of euro area countries by 4 percentage points on the import

³ According to the SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix), the merchandise trade deficit in October 2010 stood at EUR 163 million.

side and by just over 3 percentage points on the export side. The gap was widest in the category of intermediate goods, where imports of energy, primary commodities and food are prevalent.

The deterioration in the terms of trade made a significant contribution to the widening of the merchandise trade deficit in 2010. The largest contribution to the deterioration in the terms of trade came from import prices in the category of fuels and lubricants, which were up 21.8% in year-on-year terms, primarily as a result of oil price developments during this period. With energy, commodity and food prices continuing to rise in the final quarter of 2010, it is likely that the terms of trade will have deteriorated further in the final quarter.

Monthly growth in trade in services slowed in October, and only imports of services recorded year-on-

year growth. Exports of services amounted to EUR 3.8 billion over the first ten months of 2010, up 4.7% in year-on-year terms, while imports were up 4.5% at EUR 2.8 billion. With growth in exports of services slightly outpacing imports, the surplus of trade in services over the first ten months of 2010 was up EUR 52 million in year-on-year terms at EUR 1,012 million, or 3.4% of GDP during the period.

Among the major services the largest year-on-year increase was recorded by trade in transport services, while other business services recorded slightly lower growth. Year-on-year growth in exports of the aforementioned services was slower than import growth, but growth in exports of tourism services, which contribute most to the overall surplus, outpaced import growth at 5.5%. It was only in 2010 that the effects of the economic

crisis were reflected in imports of tourism services. Imports of tourism services over the first ten months of 2010 were up 1.8% in year-on-year terms, compared with 7.7% in the same period of 2009. The contraction in construction activity at home and abroad brought a sharp decline in revenues from and expenditure on construction and assembly work services. Among the services in deficit, growth in imports of insurance and financial services also strengthened sharply, passing 60%. Expenditure on intellectual property services was up 33.6%, the figure of EUR 217 million having already exceeded the previous year's total.

The deficit in net factor income in the first ten months of 2010 narrowed by just over EUR 228 million in year-on-year terms to EUR 506 million. Expenditure on labour income during the first ten months of 2010 was down just over a third in year-on-year terms as a result of the decline in activity and employment in sectors with a large number of foreign workers. A surplus of EUR 116 million was thus recorded by labour income. The deficit in capital income narrowed sharply in year-on-year terms, by EUR 169 million to EUR 621 million. Expenditure on capital income was up 4.4%, while receipts were up 65.5%. The increase in receipts from capital income in 2010 was primarily the result of the coverage of losses on outward FDI by residents, as a result of which reinvested earnings declined by just under EUR 300 million in 2009. As a result of low lending activity, the restructuring of the external debt and low interest rates, the largest decline

among all capital income in 2010 was recorded by net interest payments to the rest of the world, which fell by EUR 167 million to EUR 119 million. The restructuring of the external debt of the government sector and the banks by means of securities issues acted to widen the deficit in capital income. As a result net income from investments in securities swung from a surplus of EUR 63 million in the first ten months of 2009 to a deficit of EUR 71 million in the same period of 2010.

Current transfers recorded a net inflow of EUR 9 million in October, reducing the deficit in current transfers over the first ten months of 2010 to EUR 79 million. The majority of the deficit was the result of a deficit in official transfers in the amount of EUR 59 million, which was just a quarter of that recorded in the same period of 2009. According to provisional figures, the net position of the Slovenian state budget against the EU budget improved significantly in November. Total state budget revenues from the EU budget amounted to EUR 64 million in November, while state budget expenditure on the EU budget amounted to just EUR 13 million. This entailed an improvement of just over EUR 51 million in the net position of the state budget.

Capital and financial account

The net outflow in October was primarily the result of the continuing decline in the domestic banks' liabilities to the rest of the world and an increase in residents' holdings of currency and deposits at foreign banks. The domestic banks are primarily repaying long-term loans. The sustained growth in foreign stock markets is also being reflected in the capital and financial account, where the private sector's claims from investments in securities increased again in October. The net external debt increased in the last month as a result of a rise in the Bank of Slovenia's net external debt, other sectors having reduced their net external debts.

October's increase of EUR 96 million in the private sector's claims against the rest of the world was primarily the result of an increase in households' holdings of currency and deposits in the rest of the world and in trade credits granted to the rest of the world. Slovenia's expansion of foreign trade in 2010 was also

Financial liabilities to the rest of the world - October 2010

Source: Bank of Slovenia.

reflected in trade credits, which increased by EUR 540 million overall during the first ten months of the year, having declined by EUR 125 million during the same period of 2009. The growth in foreign stock markets is also being reflected in the capital and financial account, where the private sector's claims from investments in securities

increased again in October, by EUR 11 million. They totalled EUR 410 million during the first ten months of the year. October saw another monthly increase in outward FDI, of EUR 24 million. The private sector's loans to the rest of the world declined by EUR 127 million overall during the first ten months of the year, but are continuing to fluctuate sharply at the monthly level.

In October, liabilities to the rest of the world declined by EUR 107 million, although the total during the first ten months of the year remained a net inflow. The largest decline in October was recorded by foreign loans to domestic banks. Banks repaid EUR 235 million of loans in October, and a total of EUR 678 million over the first ten months of 2010. The repaid loans primarily consisted of the most-expensive and hardest-to-renew long-term loans (EUR 545 million). October also saw corporates repaying loans raised in the rest of the world. They reduced their corresponding liabilities by EUR 4 million, thereby repaying a total of EUR 51 million of such loans over the last six months. Having declined by EUR 2

million in September, non-residents' investments in domestic securities rose again in October, and they continued to constitute the most significant inflow into the private sector overall in the first ten months of the year. Low deposit rates and downgradings for certain domestic banks reduced the attractiveness of saving in Slovenia for non-residents. Non-residents' deposits declined by EUR 138 million in October, taking the decline over the first ten months of the year to EUR 585 million.

The net external debt stood at EUR 11.5 billion in October, up EUR 31 million on the previous month. The increase was the result of a rise in the Bank of Slovenia's net external debt, all other sectors having reduced their net external debts. The proportion of the total gross external debt accounted for by short-term debt increased for the third consecutive month, while the maturity breakdown of gross claims was mainly unchanged. The main factors in the increase in short-term debt were the Bank of Slovenia and its increase in gross debt from currency and deposits, and other sectors, which recorded an increase in their short-term debt from short-term trade credits. The banking sector reduced its gross external debt. The government sector reduced its net external debt by EUR 47 million in October, primarily as a result of an increase in other debtor claims.

5 | Public Finance

The general government deficit according to ESA95⁴ methodology reached 7.1% of GDP during the first three quarters of 2010, and stood at 6.7% of GDP in the 12 months to the third quarter. General government expenditure recorded faster year-on-year growth than revenues during the first three quarters. General government revenues were up EUR 132 million, while general government expenditure was up EUR 469 million in year-on-year terms. The largest factors in the increase on the revenue side were transfers from the rest of the world (around EUR 90 million) and revenues from interest on deposits held at banks by the government. The largest increases on the expenditure side were from higher expenditure on social assistance (around EUR 190 million), employee compensation and interest. In the 12 months to the end of the third quarter the general government deficit amounted to 6.7% of GDP, up from 5.8% of GDP in 2009.

The general government deficit according to the national methodology amounted to 6.5% of estimated GDP in the 12 months to October. The general government deficit over the first ten months of 2010 amounted

Source: SORS, Ministry of Finance; Bank of Slovenia calculations.

⁴ Captures a larger number of entities than the national methodology, which is the basis for the consolidated public finances. Another significant methodological difference relates to the capture of transactions, which under ESA95 methodology are recorded on an accrual basis, compared with the cash flow basis used in the national methodology.

to EUR 1,854 million. The state budget recorded a deficit of EUR 1,689 million over the first eleven months of the year, 95.6% of the deficit forecast in the revision to the budget for 2010. The state budget recorded a surplus of EUR 50 million in November, primarily as a result of higher payments of excise duties and slightly lower transfers to the Pension and Disability Insurance Institute. The Health Insurance Institute's deficit over the first eleven months of the year amounted to EUR 40 million, and is expected to have reached EUR 54 million by the end of the year. It will be financed from the institute's savings. Local government recorded a deficit of EUR 78 million over the first ten months of the year, compared with EUR 86 million in the same period the previous year.

General government revenues during the first ten months of the year were unchanged in year-on-year terms, while their structure changed notably. Tax revenues were down EUR 235 million, while non-tax revenues were up EUR 139 million. Transfers from the

EU budget were also up on the same period of the previous year (by EUR 100 million).

Payments of taxes and contributions during the first eleven months of the year were down 1.4% in year-on-year terms. The largest declines were in payments of corporate income tax (EUR 250 million) and personal income tax (EUR 58 million). The decline in corporate income tax payments was the result of a cut of 1 percentage point in the tax rate, the adverse economic situation and higher refunds to taxpayers in the final settlement for 2009. The reasons for the decline in personal income tax payments in 2010 were higher refunds (settlements) for the previous year and the decline in the workforce in employment in 2009. Payments of personal income tax on income from business activities were also down, as a result of the adverse economic situation. Payments of VAT, excise duties and social contributions during the first eleven months of the year were up on the same period of the previous year by a total of EUR 139 million.

Source: Ministry of finance, except: ** Public Payments Administration of the Republic of Slovenia, Report on classified general government revenues and coverage (B-2); Bank of Slovenia calculations.

Note: * Consolidated central government budget, local government budgets and social security funds (pension and disability insurance fund and health insurance fund) in cash accounting principle.

Growth in general government expenditure during the first ten months of the year continued to outpace general government revenues. General government expenditure during the first ten months of the year was up 2.8% or EUR 368 million in year-on-year terms. In 2010 there was a particularly sharp increase in expenditure on interest, which during the first ten months of the year was up EUR 172 million on the previous year, in association with the high growth in government debt in 2009. Expenditure on pensions during the first ten months of the year was up EUR 114 million in year-on-year terms, despite the limits based on the emergency law. There was also a notable rise in unemployment benefits, which was linked to the situation on the labour market.

The government primarily took its money for covering the deficits and for maturing debt from bond issues in the first quarter of 2010. The general government deficit over the first ten months of the year in the amount of EUR 1,853 million, the maturing debt in the amount of EUR 1,740 million and the deficit in the account of net loans and changes in capital holdings in the amount of EUR 87 million were mostly financed by government borrowing (EUR 2,591 million). This was based primarily on bond issues on the domestic market in the first quarter. The government also drew money from bank deposits in the amount of EUR 1,090 million.

In 2011 the state budget borrowing requirement is expected to amount to EUR 3 billion, while the budget debt is expected to rise to 37% of GDP. The maximum state budget borrowing requirement in the programme for financing the state budget for 2011 is EUR 4,239 million. Of this, borrowing of EUR 2,865 million is required for financing the implementation of the state budget in 2011. The remaining borrowing relates to pre-financing of repayments of debt principal in 2012 and 2013, and will be dependent on the situation on the financial markets. Borrowing in 2011 is anticipated at EUR 3 billion, with the surplus over the requirement for the current year (EUR 135 million) being used in 2012 for financing (part of) the repayments of debt principal maturing in 2012. Given the anticipated borrowing in 2011, according to Ministry of Finance estimates the state budget debt is expected to reach EUR 13,923 million or 37.4% of estimated GDP at end of 2011, while the state budget debt at the end of 2010 was estimated at EUR 11,884 million or 33.2% of GDP.

Health Insurance Institute is planning a balanced budget for 2011, while Pension and Disability Insurance Institute is planning to balance the budget with around EUR 1.3 billion of transfers from the state budget. Pension and Disability Insurance Institute's financial plan envisages around EUR 950 million of transfers from the state budget in 2011 to cover the gap be-

Note: *All bond issues disbursed on domestic market are counted under domestic borrowing, despite of the residency of buyers. Out of EUR 6,500 million bonds issued from February 2009 till April 2010 EUR 5,269 million were bought by foreigners until end October 2010.

tween its revenues and expenditure, and EUR 379 million for pensions and other benefits under special regulations. In June 2011 payments of state pensions and income support,⁵ which account for the majority of transfers from the state budget under special regulations, will be transferred from the Pension and Disability Insurance Institute to the state budget. A deficit of EUR 76 million is forecast for local government in 2011.

Standard & Poor's left its credit rating of Slovenia unchanged in December, albeit with a negative outlook. The rating was left unchanged for long-term (AA) and short-term debt, but the agency downgraded the outlook from stable to negative. The negative outlook entails the possibility of a downgrading in the next two years, which could occur in the event of inadequate stabilisation of the government debt.

Credit ratings of Ireland and Portugal were downgraded in the middle of December, which did not lead to a notable rise in the premiums on 10-year Slovenian government bonds. The premiums on 10-year Slovenian government bonds over the German benchmark reached 128 basis points in the second half of December, but fell to 122 basis points towards the end of the month, close to November's average of 120 basis points. In December Slovenia joined the international plan to address Ireland's financial problems. The total aid

package to be received by Ireland will amount to EUR 85 billion. Slovenia is expected to cover its corresponding share in the form of a guarantee in early 2011.

6 | Banking System*

Year-on-year growth in the banking system's total assets stood at 1.2% in November. The main factor in the increase of EUR 988 million in total assets was the increase of EUR 896 million in claims against banks. Just under half of the increase was contributed by claims against banks in the rest of the world, while just over half came from claims against domestic banks. Lending to non-banking sectors remained negligible. The most notable features on the funding side were the increase in liabilities to domestic banks (EUR 473 million) and the increase in deposits by non-banking sectors.

Year-on-year growth in loans to non-banking sectors stood at just 2.1% in November. Lending to households and the government sector contributed towards the minimal net increase in loans of EUR 25 million, while loans to non-financial corporations again declined. The proportion of the stock of loans accounted for by long-term loans increased to 72% in November.

⁵ Claimants with pensions under EUR 444 are entitled to income support. There are around 47,000 claimants, and the income support amounts to between EUR 80 and EUR 107 monthly. State pensions in the monthly amount of EUR 182 are received by over 15,000 claimants.

* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

Loans to non-financial corporations (NFCs) declined by EUR 98 million in November, taking year-on-year growth down to -0.8%. The year-on-year contraction in loans to NFCs approached 7% at the banks under majority foreign ownership, while year-on-year growth remained positive at the banks under majority domestic ownership at 2.5%.

Growth in loans to households was moderate in 2010, year-on-year growth standing at 9.7% in November. November's net increase in loans to households of EUR 66 million was slightly above the monthly average for the year. Long-term loans accounted for three-quarters of November's increase in loans to households.

The stock of debt at banks in the rest of the world was almost unchanged in November. The largest increases on the funding side were recorded by deposits by non-financial corporations and government deposits. The banks made minimal debt repayments in the rest of the world (EUR 5.3 million), taking the total

over the first eleven months of the year to EUR 1.2 billion. Despite the increase of EUR 0.4 billion in deposits by non-banking sectors, year-on-year growth was barely positive, at 0.2%. The period of relatively low monthly increases in household deposits continued in November. The net increase amounted to just EUR 32 million, taking year-on-year growth to 3.6%. The proportion of deposits accounted for by long-term deposits stood at 28% in November, up just over 11 percentage points on 2009.

The increase of EUR 118 million in the banks' liabilities from securities was the result of issues of SID banka bonds.

High impairment and provisioning costs were the main reason for the sharp decline in the banking system's profits. Net interest during the first eleven months of the year was up 13.4%, primarily as a result of a decline in the banks' interest expenses (of 14%). Net non-interest income during the same period was down 16% in

year-on-year terms, partly as a result of losses of EUR 42 million from financial assets and liabilities held for trading. At the same time the banks again recorded a sharp increase in impairment and provisioning costs in November; these were up EUR 227 million or 63% in year-on-year terms. The banking system's profit during the first eleven months of the year was just a fifth of that in the previous year at EUR 48.4 million.

7 | Domestic Financial Markets

In November, the market capitalisation of bonds on the Ljubljana Stock Exchange increased by 0.1%. At EUR 2.0 million, the monthly volume of trading bonds was the lowest figure in 2010. The proportion of total stock exchange volume accounted for by bonds fell to 6.3% in November. The EUR 1.6 million of trading in 2nd-issue Slovenska odškodninska družba bonds accounted for 79.1% of total trading in bonds.

In November, the market capitalisation of shares on the Ljubljana Stock Exchange declined by 3.1%. The SBI TOP fell by 2.6% in November (taking the year-on-year change to -16.3%) to finish the month at 843. The P/E ratio in the prime market stood at 43.5 at the end of November. The volume of trading in shares in November was at the monthly average for 2010 at EUR 28.5 million.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents stood at 9.8% in November. Non-residents made net sales of EUR 256.3 million in bonds of Slovenian issuers and net purchases of EUR 87.3 million in shares of Slovenian issuers in November. The heaviest trading by non-residents was in government bonds and shares in Slovenian blue-chips. The largest net sellers of bonds were residents of Luxembourg (EUR 139.6 million) and the UK (EUR 99.2 million). The largest

net purchases of shares were made by residents of Austria (EUR 79.7 million), while residents of France made the largest net sales (EUR 40.1 million).

Residents made net sales of EUR 153.6 million in foreign bonds, and net purchases of EUR 72.4 million in foreign shares in November. The largest net purchases of securities were made by insurance corporations (EUR 27.8 million, primarily from the euro area), while the largest net sales were made by banks (EUR 188.6 million, primarily from the euro area) Households made net purchases of securities from the euro area and Canada, and primarily made net sales of shares from the US, the former Yugoslav republics and the BRIC countries.

The domestic mutual funds' assets under management increased to EUR 1,995.6 million in November (up 0.8% in monthly terms, and 10.3% in year-on-year terms), as a result of a rise of 0.9% in the average unit price (taking the year-on-year change to +7.2%) and **net withdrawals of EUR 5.8 million.** Equity funds recorded net inflows of EUR 6.9 million, while balanced funds recorded net withdrawals of EUR 9.9 million, bond funds net withdrawals of EUR 2.5 million, and money-market funds net withdrawals of EUR 0.3 million. The largest net payments into the domestic mutual funds were recorded by the insurance sector (EUR 5.9 million), while other sectors mainly made withdrawals. The largest

net withdrawals were made by non-financial corporations and other financial intermediaries, in the total amount of EUR 7.2 million. The proportion of the domestic mutual funds' assets accounted for by liquid assets⁶ declined to 9.9% at the end of November. The value of the mutual funds' investments fell on the majority of markets in November: the DJ EuroStoxx index for western Europe fell by 5.2% (taking the year-on-year change to -6.1%), the S&P 500 index in the US fell by 0.2% (taking the year-on-year change to +7.8%) and the Hang Seng in China fell by 0.4% (taking the year-on-year change to +5.4%). There was again variation in the movement in the indices in the former Yugoslav republics: the BELEX 15 rose by 2.0%, the CROBEX fell by 4.4% and the MBI-10 rose by 5.0%. The year-on-year changes in all three indices remained negative, at -4.8% for the BELEX 15, -13.5% for the CROBEX and -24.4% for the MBI-10.

⁶ Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%
2	1.3.	liabilities/ 4		Liabilities/ Deposits/ Domestic sectors/ Other MFIs/ Foreign currency	100%	100%	-
3	1.3.	liabilities/ 8		Liabilities/ Deposits/ Domestic sectors/ General government/ Foreign currency	74%	72%	82%

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds**General**

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The *overnight-deposit interest rate* is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Ljubljana Stock Exchange (Tables 2.6 to 2.8)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities

Shares – investment fund shares are not included.

IF – investment fund shares.

Turnover is measured with a single counting.

Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

- SBI – Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO – Bond Index
- SBI, BIO – value of SBI and BIO at the end of period
- dT – change of index value by points
- d% – change of index value in percentage
- Min, Max – minimum and maximum value of index in a period

Exchange rates (Tables 2.9.1–2.9.2)

Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.
 The Polish złoty was denominated on 1 January 1995 at the exchange rate of 1 new złoty for 10,000 old złotys.

Table 2.9.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

Payment systems (Tables 2.10 to 2.16)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.10: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.11 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.12 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.13 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.14 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on

a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.15 Debit Transfers and Simply book-entry

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.16: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).

- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**

- report on account balances at domestic banks – PPV (until 31 December 2004),
- report on account balances abroad – C (until 31 December 2006),
- report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
- report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.

- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.

- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.

- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.

- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.

- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.

- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.

- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.

- **Accounting data of the Bank of Slovenia**

- **Accounting data of banks (KNB)**

- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

Estimates and other sources

- estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
- estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
- estimate of Italian pensions (UMAR) until the end of 1998,
- estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
- estimate of labour income (SURS),
- data on pensions paid to non-residents (ZPIZ),
- survey on the write-downs of debt from trade in goods and services abroad,
- estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
- estimate of cash transactions on tourism and labour income (from 2007 onwards),
- quarterly data on consumption of foreign embassies in Slovenia (SURS, from 2008 onwards),
- migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
- households' transfers (SURS, from 2008 onwards),
- assets acquired directly by tenders and programmes of EU (SURS, from 2008 onwards),
- data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards).

Current account**Goods**

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services**Transport**

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SURS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are

obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SURS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SURS, Annual survey on investment in tangible assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]}
- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]}

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount

of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2010 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2007 to 2009 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2011, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2011 shall take into consideration the new three year average (2008 to 2010).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial

items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares bellow 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not

distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial derivatives are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity,

insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.

- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev. 2 (Nomenclature statistique des activités économiques dans la Communauté

européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1–ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, ECB EER-41 group of currencies (AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CZ, EE, HU, LV, LT, PL, BG, RO, NZ, DZ, AR, BR, HR, IN, ID, IL, MY, MX, MA, PH, RU, ZA, TW, TH, TR, IS, CL, VE) – Euro area 16 against Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs deflated, ECB EER-21 group of currencies and Euro area 16 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO) against Slovenian tolar (until 31.12.2006) from 01.01.2007 against Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data shown every three months of the year are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia: <http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products , as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
