Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

7. Domestic Financial Markets

The majority of indicators of activity and confidence in the international environment point to a slowdown in economic growth in the second quarter. There was no significant change in the latest forecasts for global economic growth published by the IMF and the OECD, but the forecasts for some of Slovenia's important trading partners, Germany and France in particular, were raised. Economic growth in the major developing economies remains high, and is also being reflected in higher inflation, and a restrictive economic policy therefore continues to be pursued in these countries. At the same time the risks relating to the stability of demand for Slovenian products from the rest of the world are increasing. Doubts surrounding the sustainability and feasibility of fiscal consolidation in the euro area periphery countries are increasing, and are also increasingly arising in relation to the US, where the latest economic indicators published were weaker than expected.

According to the indicators currently available, there is no reason to expect any major impetus in economic activity in Slovenia in the second quarter. Industrial production fell in April, as did the year-on-year rate, which is expected to have remained moderate in the following months given the demand indicators. Further indication of this comes from the end of the improvement in manufacturing confidence. Growth in turnover in export-oriented service sectors is also slowing as a result of the slowdown in the foreign climate. The slow growth in volume turnover in the retail sector is a reflection of low consumer confidence and the persistent adverse situation on the labour market, while the crisis in construction is continuing.

The number of unemployed fell in May, primarily as a result of the usual seasonal effects, but the year-on-year increase remained around 10%. The registered unemployment rate fell to 11.9% in April, while the seasonally adjusted surveyed unemployment rate rose slightly to 8.2%. The workforce in employment either increased or remained unchanged in almost all branches of the private sector in April, largely as a result of strong seasonal effects. The average gross wage in April was up 1.4% in year-on-year terms. The relatively low year-on-year growth derives primarily from a base effect caused by a rise in the minimum wage in March 2010.

Inflation as measured by the HICP was down 0.8 percentage points in June at 1.6%, which is just over 1 percentage point less than average inflation in the euro area. The temporary fall was primarily the result of a fall in prices of manufactured goods and a decline in growth in food prices. The narrowest core inflation indicator fell sharply, to -0.9%, and the gap with core inflation in the euro area overall is widening. The cost pressures from the international environment have been easing in recent months as a result of a fall in commodity prices, although they remain more significant in year-on-year terms. This is also being reflected in year-on-year growth in producer prices. By contrast, the adverse macroeconomic situation is acting to reduce unit labour costs, purchasing power and consumption, and these factors are curbing growth in core inflation.

The current account position was positive in April for the second consecutive month, but the cumulative deficits during the 12 months to April and over the first four months of the year remained similar to those recorded a year earlier. In the context of a larger merchandise trade deficit, which to a great extent is being determined by the terms of trade, the surplus of trade in services during the first four months of the year was up in year-on-year terms. The increases in the surplus in travel services and transportation services contributed equally to this. With the labour income position unchanged, there was a significant increase in the deficit in capital income, primarily as a result of increased net outflows from FDI and higher payments of net interest. The position in current transfers has been positive this year, as a result of high net inflows of official transfers, in contrast to the negative position recorded during the first four months of last year.

The consolidated general government deficit according to the ESA 95 in the first quarter was up in year-on-year terms, primarily as a result of the capital increase at NLB, while the cumulative deficit over 12 months declined to 6.0% of GDP, from 6.9% of GDP in the first quarter of 2010. Growth in general government revenues according to the national methodology outpaced growth in expenditure during the first four months of the year. The largest year-on-year increases were recorded by corporate income tax revenues, VAT revenues and inflows from the EU budget. The highest growth on the expenditure side was recorded by transfers to the unemployed and interest payments, while investment expenditure and investment transfers have been declining in year-on-year terms since the final quarter of last year. The premiums on Slovenian bonds over the benchmark German bonds increased by just over a quarter to average around 170 basis points in June. The government is drawing up a revision to the budget for 2011, which is expected to reduce expenditure on goods and services and investment expenditure in particular.

The banking system's total assets were up EUR 45 million on April at EUR 49.9 billion in May, but were down 4% in year-on-year terms. The main factors in May's increase in total assets were increases in deposits by non-banking sectors and equity, while debt repayments to banks in the rest of the world continued. On the investment side the banks recorded a moderate increase in claims against the central bank, while lending to non-banking sectors stagnated despite an increase in lending to households. The banking system generated a pre-tax profit of EUR 63 million during the first five months of the year, down 39% on the same period last year.

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 0.9% in May, while the market capitalisation of shares increased by 0.4%. The proportion of the market capitalisation of shares accounted for by non-residents stood at 11.9%. The SBI TOP fell by 2% in May to finish the month at 722, thereby recording its lowest figure since early 2004 for the second consecutive month. The domestic mutual funds' assets under management declined to EUR 2,052 million as a result of net withdrawals of EUR 11.4 million and a fall of 0.7% in the average unit price.

1 | International Environment

The global economic activity slowed slightly in the second quarter as a result of the increased uncertainty surrounding fiscal consolidation in the euro area periphery countries and the US, the weakness of the labour market in the majority of developed economies and the aftermath of the earthquake in Japan. The IMF's June forecast for this year's global economic growth was down slightly on its April forecast at 4.3%, while the forecast for 2012 was unchanged at 4.5%, above the long-term average. The main change since the April forecast was the increase in the risks relating to fiscal consolidation in the euro area periphery countries, most notably Greece, and in the US, where the situation on the labour market also deteriorated. The IMF thus reduced its economic growth forecasts for the US for 2011 and 2012 by 0.3 percentage points and 0.2 percentage points respectively to 2.5% and 2.7%. Under the influence of increased growth in Germany and France in the first quarter of this year, the IMF raised its economic growth forecast for the euro area for this year to 2.0%, up 0.3 percentage points on the April forecast. Economic growth in 2012 is forecasted at 1.7%. Developing coun-

tries will continue to contribute most to global economic growth this year and next year, although some of the larger countries are already showing signs of overheating in the form of higher inflation.

Growth in industrial production in the euro area and the US is gradually slowing, while developments in the retail sector are becoming less favourable, and the adverse situation in construction is continuing. Industrial production in April was up by 5.2% in year-on-year terms in the euro area, and by 3.4% in the US. The fastest year-on-year growth among the components of industrial production was recorded by the production of

Notes: *Seasonally adjusted data – Eurostat for the euro area and BEA for the US, ** IMF, June 2011.

capital goods in the euro area, and the manufacture of business equipment in the US. Year-on-year growth in volume of retail trade during the first four months of this year did not exceed 1% in the euro area, while in the US real retail sales declined from over 6% at the beginning of the year to 4% by May. Activity also remains low in the construction sector. Year-on-year growth in construction activity remains negative, while the number of building permits issued in the US during the first five months of the year was down around 5% on last year's average. Growth in industrial production also slowed slightly in China, although the year-on-year growth rate was still over 13% in May.

The economic sentiment indicator in the euro area and consumer confidence in the US both declined in June, while unemployment remains high in both economies. The European Commission's economic sentiment indicator declined in May under the influence of a decline in confidence in industry. The confidence indicator also declined in Germany. The consumer confidence indicator in the US declined under the influence of weaker assessments of the current and future economic situation. Unemployment in the euro area remained high in May, at 9.9%. The non-farm payroll employment in the US was small in May, and unemployment rose to 9.1%.

Inflation remained unchanged in the euro area at 2.7% in June, but rose significantly in the US in May. Core inflation is rising in both economies. Year-on-

year growth in the harmonised index of consumer prices in the euro area stood at 2.7% in May, where energy prices were up 11.1% in year-on-year terms. The consumer price index in the US was up 0.4 percentage points in May at 3.6%, energy prices recording growth of 21.5% year-on-year. Core inflation stood at 1.7% in the euro area and 1.5% in the US in May.

After falling significantly in May, oil prices were again down in monthly terms in June. Other commodity prices also fell. The price of a barrel of Brent crude was very volatile in June, primarily as a result of the deterioration in the public finance situation in the euro area periphery countries, Greece in particular, and the release of economic activity and labour market figures in the US,

which were mostly weaker than expected. A barrel of Brent crude averaged USD 113.80 in June, down 0.6% on May. Despite a fall in monthly terms, year-on-year growth in commodity prices remains high, and stood at just under 42% in June. Food prices were up over 43% in year-on-year terms. Precious metal prices rose in June, primarily as a result of the uncertainty surrounding the resolution of Greece's public finance difficulties, gold again reaching historical highs.

The euro rose against the US dollar in June. The movement in the euro in June was primarily under the influence of the continuing deterioration in the public finance crisis in Greece and the economic figures in the US, which were weaker than expected. The euro rose 0.3% against the US dollar to average USD 1.44 over the month. The Federal Reserve is finishing its second round of government securities purchases programme, but there was no change in its key interest rate at the June meeting. The Chinese central bank raised its reserve requirement rate by half a percentage point, as a result of rising inflationary pressures.

2 | Economic Activity and Labour Market

Real sector

In the context of negative monthly developments, year-on-year growth in industrial production in April fell to its lowest level of the last year and a half. Industrial production was down by just over 3% on March, as a result of a decline of more than 4% in manufacturing. The year-on-year rate declined to 4.3%, which was partly the result of the increasing basis from last year. The gradual slowdown in the trend rate of growth also continued. These movements were in line with the movements in industrial production and imports in the euro area, while the movements in survey indicators of demand continue to point to a slowdown in growth in the months ahead.

Despite an uninterrupted year-on-year increase in industrial production, its level remains lower than before the crisis. During the first four months of the year it was down more than a tenth on the average recorded in 2008. Only the manufacture of motor vehicles, the manufacture of electrical equipment and the leather industry recorded production that was in excess of the pre-crisis level.¹ The shortfall is relatively small in the chemicals, paper and food industries, but is more than 10% in other sectors. Here the figures for the repair and installation of machinery, the manufacture of non-metallic mineral products, the manufacture of furniture and the manufacture of clothing and textiles indicate a permanent de-

¹ For reason of data confidentiality the SORS does not publish production indices for the pharmaceutical industry or the manufacture of coke and refined petroleum products.

cline in the proportion of total industrial production that they account for, as their production figures are still 30% to 50% down on those recorded in 2008.

After some better results at the turn of the year, the crisis in construction has been deteriorating again since February. The main factor in the slowdown in the contraction in construction activity in December and January was a significant increase in residential construction, which was merely temporary and was most likely more the result of reporting by large companies than the result of an actual increase in activity. Activity in residen-

tial construction has again been declining sharply over the remainder of the year, which together with the continuing negative developments in other segments of construction deepened the year-on-year contraction in the total real value of construction put in place by just over a quarter. There were similar movements in the real value of new contracts in the construction sector: there was a sharp increase in the value of contracts for residential construction at the turn of the year, followed by a sharp decline. The total value of new contracts in construction during the first four months of the year was down almost 50% in year-on-year terms on average. The slightly

* Volume of industrial production. ** Real value of construction put in place. *** Old methodology.

higher basis from the first quarter of last year was also a factor in this.

The slowdown in year-on-year growth in value turnover in private sector services other than trade continued in April. The main factor was again the slowdown in growth in turnover in transportation and storage, which was in line with the slowdown in growth in industrial production and export demand and the increasing basis from last year. Growth in turnover in the majority of services dependent primarily on the domestic market remained positive. The exceptions were advertising and market research, services related to construction investment, radio and television activities and other information activities, where turnover during the first four months of the year was down between 4% and 17% in year-on-year terms.

Growth in volume turnover in the retail sector remained low in May, and its increase remains primarily the result of higher sales in trade in motor fuels. Turnover in the retail sector in May was up 1.8% in year-on-year terms, the rate having declined significantly since the beginning of the year as a result of the predominantly negative monthly growth rates since February. Turnover in trade in foodstuffs and non-foodstuffs other than motor fuels remains low, in line with the continuing adverse situation on the labour market and reduced consumer purchasing power. Despite the adverse economic situation, turnover in the trade and repair of motor vehicles is

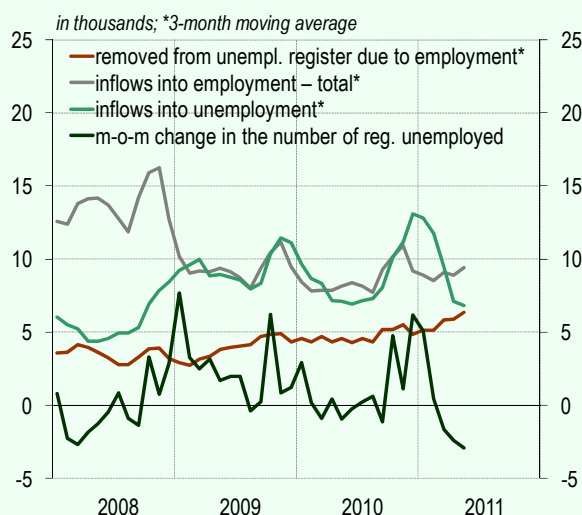

continuing to increase rapidly. The year-on-year rate again exceeded 15% in May.

Despite June's decline, confidence in the economy in the second quarter was higher than in the first quarter. Confidence in retail and other services increased in quarterly terms. The manufacturing confidence indicator remained unchanged, while the consumer confidence and construction confidence indicators continued to primarily reflect pessimism. In line with the developments in the international economy, the indicators of current demand and demand expectations in manufacturing declined in May and June, an indication that growth in industrial production will remain slow. The manufacturing confidence indicator nevertheless remained positive in June, as the indicator of assured production remained relatively high. The demand expectations indicators declined slightly in June in the service sector and in the retail sector, but nevertheless remained relatively favourable.

Labour market

The number of registered unemployed fell in May, in line with the usual seasonal movements, reaching 108,634. The number of registered unemployed was down 2,900 or 2.6% on April, but the year-on-year rate of growth remained high, at 10.4%. Around 6,400 people were newly registered as unemployed in May, slightly more than in April. There were around 300 more redundancies in May than in April, but around 200 less than in

Registered unemployment and new hires

Labour market

last May. In May 9,300 people deregistered as unemployed, two-thirds of whom moved into employment. Companies notified 17,800 vacancies in May, the proportion of unfilled vacancies nevertheless remaining at a slightly higher level than before the crisis. The registered unemployment rate fell by 0.3 percentage points in April

to 11.9%, while the seasonally adjusted survey unemployment rate rose by 0.1 percentage points to 8.2%.

The workforce in employment in the private sector increased in April for the fourth consecutive month, but was still down by around 2% in year-on-year terms. The workforce in employment either increased or

Total wage bill and average monthly gross wage per employee

*The wage bill is calculated as the product of the average gross wage for employees of legal persons who received pay and the total number of employees of legal persons.

Source: SORS, Bank of Slovenia calculations.

remained unchanged in virtually all branches of the private sector, including construction, where there was an increase of around 200 in April as a result of strong seasonal effects. The workforce in employment in the construction sector is already down a quarter from the peak of the cycle, and there remains pessimism surrounding future employment. The largest increases in the workforce in employment in April were recorded in agriculture, where strong seasonal effects are prevalent, and elsewhere in the professional, scientific and technical activities sector, where employment was up around 400. The workforce in employment also increased in the public sector, by 580 during the month, primarily as a result of employment in health and public administration. Year-on-year growth in the workforce in employment in the sectors of public administration and culture nevertheless remained negative, at -1.5% and -2.5% respectively in April.

The average gross wage per employee in April was up 1.4% in year-on-year terms at EUR 1,505. This low year-on-year growth – in the 12 months to February, the gross wage per employee recorded average year-on-year growth of 4.0% – is the result base effects from March 2010, when wages increased as a result of a rise in the minimum wage. The average gross wage in the private sector was up 1.9% in April, while the average gross

wage in the public sector stagnated. As a result of the fall in employment and lower wage growth, the nominal wage bill according to the calculation covering all corporate employees was also down in year-on-year terms. It was down 1.2% in the private sector, and was unchanged in the public sector.

Selected competitiveness indicators

After increasing for three months, the harmonised indicator of the nominal effective exchange rate declined in May, although it was up in year-on-year terms for the second consecutive month. The harmonised indicator of the nominal effective exchange rate in May was down 0.1% on the previous month. The euro fell by 0.7% against the US dollar, 3.2% against the Japanese yen, 0.5% against the pound sterling and 3.3% against the Swiss franc in May. The main factors in the euro's fall against major currencies were the uncertainties surrounding the debt crisis in certain euro area countries. Due to the base effect the year-on-year appreciation in the nominal effective exchange rate rose from 0.5% in April to 1.0% in May.

The harmonised indicator of the real effective exchange rate as measured by consumer prices was down in monthly terms in May, primarily as a result of the decline in the nominal effective exchange rate.

**Harmonised competitiveness indicators
(40 countries and rest of euro area countries)**

² The public sector and private sector are distinguished according to the standard classification of economic activities. The public sector includes public administration, education, health and culture. The drawback of this indicator is that it includes legal entities that do not fall within the public sector.

Harmonised price competitiveness indicator
(40 countries and rest of euro area countries)

The index of the real effective exchange rate in May was down 0.2% on April. As a result of a base effect, the year-on-year depreciation declined from 0.8% in April to 0.1% in May. The ratio of the basket of domestic prices to the basket of foreign prices was a major factor in the year-on-year depreciation. Slower year-on-year growth of domestic prices than the basket of foreign prices contributed 1.1 percentage points to May's year-on-year depreciation.

Slovenia's price competitiveness in May relative to the main euro area trading partners deteriorated slightly compared with April. In the context of the smaller monthly depreciation, the decline in Slovenia's harmonised index of price competitiveness in May was

0.3 percentage points less than the average decline in the main euro area trading partners. Nevertheless, the year-on-year comparison shows that Slovenia's price competitiveness in May improved relative to the trade partners in question. Slovenia's price competitiveness indicator depreciated by 0.1% in year-on-year terms, compared with an average appreciation of 1.2% in the main euro area trading partners. Over the long term price competitiveness has been maintained best in Germany, where the average year-on-year decline in the indicator during the first five months of the year was 1.9%.

3 | Price Developments

Year-on-year inflation as measured by the HICP stood at 1.6% in June, down 0.8 percentage points on May, primarily as a result of changes in food prices and energy prices, but also as a result of changes distributed across other categories. Growth in energy prices in June was down 2.1 percentage points on May at 6.5%, which sharply reduced their contribution to inflation. There was an unexpected fall in electricity prices, as a result of a fall in one of the contributions included in the electricity price. Prices of fuels and lubricants and prices of heating oil also fell, as a result of the fall in oil prices on global markets. A similar decline in the contribution to

Harmonised price competitiveness indicator
(40 countries and rest of euro area countries)

HICP growth rates

overall inflation made by energy prices was recorded by food prices; prices of unprocessed food were the largest factor in this decline. After two months of high growth, prices of fruit in June were down 16.9% on May, halving the year-on-year rate of growth. Prices of vegetables also fell. Pre-seasonal discounts on clothing and footwear were a factor in the decline of 0.4 percentage points in year-on-year growth in prices of non-energy industrial goods to -1.1%. Prices of telephone and internet services also fell significantly in June.

All the core inflation indicators were down sharply in year-on-year terms in June, their low level primarily reflecting the adverse macroeconomic situation. Core inflation according to the harmonised index of consumer prices excluding energy, food, alcohol and tobacco was down 0.4 percentage points in year-on-year terms in May at -0.9%. Core inflation excluding energy and core inflation excluding energy and unprocessed food also fell, to 0.7% and 0.1% respectively. The available indicators of prices of non-energy industrial goods, such as producer prices and import prices, point to the existence of significant price pressures in the production chain. However, as a result of the adverse macroeconomic situation the pass-through of these factors into final consumer prices is limited. The ongoing decline in consumer purchasing power as measured by real growth in the gross wage bill is continuing to bring low final household consumption,

thereby curbing growth in core inflation.

According to the latest official breakdown available, the largest contributions acting to raise year-on-year inflation in May came from prices of fruit and vegetables, while the largest contributions acting to lower inflation came from prices of fuels and lubricants and prices of liquid fuels. The year-on-year fall in prices of cars and prices of clothing slowed. In line with seasonal movements, the largest increases in May were recorded by prices of fruit and vegetables, which raised their contributions to overall inflation as measured by the HICP. The contribution made by prices of fruit increased

Price Developments	May.11	Jun.11	Average of last 12 months	Jun.10	Jun.11

Note: Figures may not sum up to official figures due to rounding.

by 0.2 percentage points to 0.5 percentage points, while that made by prices of vegetables was up 0.1 percentage points at 0.2 percentage points. The contribution to year-on-year inflation made by prices of fruit thereby equalised that of prices of motor fuels. The fall in oil prices on the global markets was reflected in May in a decline in year-on-year growth in prices of fuels and lubricants and prices of liquid fuels, and in their contributions to inflation. The contribution made by energy prices to overall inflation as measured by the HICP declined by 0.2 percentage points to 1.2 percentage points. The more pronounced seasonal dynamic of the new collection in May brought rises in prices of clothing, which slowed the year-on-year fall in their prices. The year-on-year fall in car prices also slowed, to 5.5%.

Industrial producer prices on the domestic market in May were down in monthly terms. After increasing for seven months, year-on-year growth in industrial producer prices declined by 1.4 percentage points in May to 3.6%. This was primarily the result of a year-on-year fall in commodity prices and energy prices, which was in line with the fall in these prices on the global market. The largest falls in prices in monthly terms in May were recorded by the manufacture of computer, electronic and optical products, the manufacture of basic metals and the manufacture of coke and refined petroleum products. The largest rise in prices was recorded by the manufacture of rubber and plastic products. The highest year-on-year growth continued to be recorded by the manufacture of basic

metals, the manufacture of paper and paper products and the manufacture of textiles.

4 | Balance of Payments

Current account

A current account surplus was recorded in April for the second consecutive month. The surplus of EUR 39 million narrowed the current account deficit over the first four months of the year to EUR 48 million. Alongside the above-average surplus of trade in services, the main factor in April's current account surplus was a net inflow in official transfers. At the same time, the deficit in factor income increased slightly. Despite the surpluses recorded in March and April, the current account deficit over the last twelve months nevertheless increased in year-on-year terms, to stand at EUR 315 million or 0.9% of GDP in April, compared with 0.7% of GDP a year earlier.

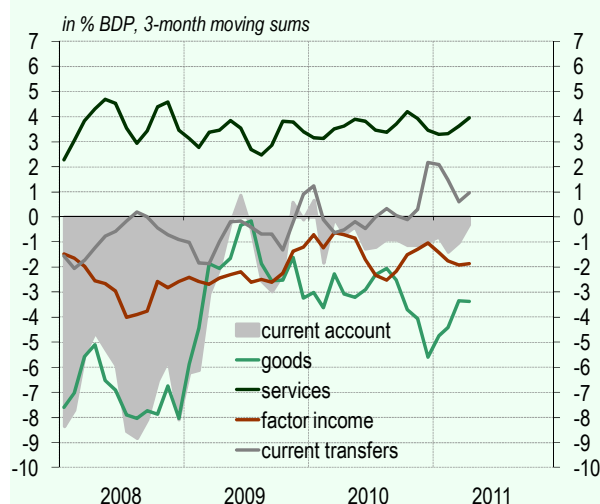

After slowing in the first quarter, the trend monthly growth in merchandise trade increased in April. Annualised trend growth in merchandise imports stood at 13.1% in April, while the rate for exports was 15.0%. Year-on-year growth in merchandise exports also increased, while the rate for merchandise imports continued to slow

Producer prices on domestic market

Source: SORS, Banka of Slovenia calculations.

Current account components

Source: Bank of Slovenia.

as a result of the high basis from last year. Merchandise imports were up 12.4% in year-on-year terms in April at EUR 1,761 million, while merchandise exports were up 14.8% at EUR 1,685 million. The merchandise trade deficit stood at EUR 76 million.³

After several months of being lower, the trend and year-on-year rates of growth in merchandise exports again outpaced the rates for merchandise imports in April. The increase in economic activity meant that after the second quarter of last year there was also an increase in growth in imports of capital goods and consumer goods alongside the growth in imports of intermediate goods. Given that commodity prices on global markets were also rising rapidly, growth in imports began to outpace growth in exports, the merchandise trade deficit thereby gradually widening. The year-on-year outpacing by import growth stalled in April, partly as a result of a base effect. Year-on-year growth in merchandise exports was up just over 2 percentage points, and the deficit declined by just over a quarter compared with March. The cumulative merchandise trade deficit in the 12 months to April stood at EUR 1,275 million or 3.5% of GDP, compared with 2.2% of GDP in the same month last year.

The increase in economic activity in the key trading partners continues to be most clearly evidenced in an increase in demand for intermediate goods. Year-on-year growth in exports of intermediate goods during the

first four months of the year stood at 18.1%. Exports of consumer goods recorded growth of 10.3%. Other than in March, exports of capital goods have also been increasing rapidly, recording year-on-year growth of 9.3% over the first four months of the year. Intermediate goods also recorded the highest growth on the import side, at 20.2%. As a result of low growth in domestic household consumption, growth in imports of consumer goods was significantly lower than overall import growth at 4.3%. After a pronounced decline during the deepening of the economic crisis in late 2008 and in 2009, investment in production has been gradually increasing since the second quarter of last year. This is also being reflected in imports of capital goods, which were up 15.0% in year-on-year terms during the first four months of the year, in connection with high capacity utilisation and increased manufacturing confidence.

Growth in exports of services slightly outpaced growth in imports of services during the first four months of the year, which alongside the smaller deficit in merchandise trade contributed to an overall trade surplus of EUR 70 million being recorded. Imports of services were up 3.3% in year-on-year terms in April, while exports of services were up 9.7%. Imports of services during the first four months of the year were up 9.3% in year-on-year terms at EUR 1,032 million, while exports were up 9.7% at EUR 1,485 million. The surplus

³ According to the SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix to the bulletin), the merchandise trade deficit in April stood at EUR 84 million.

of trade in services was up EUR 44 million in year-on-year terms at EUR 453 million.

Favourable results were recorded by trade in travel services and transportation services during the first four months of the year. Revenues from travel services were up 7.0% in year-on-year terms. Given that the number of foreign visitors and the number of overnight stays were both up around 9.5% in year-on-year terms, this could indicate a slight deterioration in the breakdown of visitors in terms of average spending. Expenditure on travel services was down 4.6% in year-on-year terms, in light of the weak situation on the labour market. The surplus of trade in travel services thereby widened by EUR 49 million in year-on-year terms to EUR 363 million. Exports of transportation services were up 17.2% in year-on-year terms. The rate of growth was only slightly slower

than the simultaneous growth in merchandise exports, which is a favourable result in light of the increasing competition from countries with lower labour costs. Growth in trade in communications services and financial services remained rapid in April. Expenditure on construction and assembly work and revenues from and expenditure on intellectual property services also recorded above-average growth.

The deficit in factor income over the first four months of the year widened by EUR 145 million in year-on-year terms to EUR 224 million. The cumulative deficit in factor income over the 12 months to April increased to EUR 652 million or 1.8% of GDP, compared with 1.6% of GDP a year earlier. The surplus in labour income stagnated in year-on-year terms at EUR 42 million, while the deficit in capital income increased by EUR 146 million to

EUR 266 million. Net outflows of income from FDI accounted for the majority or EUR 173 million of this deficit in capital income. Net outflows of reinvested and undistributed earnings were up EUR 108 million in year-on-

year terms at EUR 114 million, while the repatriation of dividends and distributed earnings to the rest of the world and net interest payments on loans to affiliates increased to EUR 59 million. Another factor in the year-on-year in-

Box: Change in balance of payments figures during this year's revision

The regular annual revision of balance of payments figures, which covered the period from 2008, was undertaken in June. The main feature of the revision on this occasion was an increase in the current account deficit in 2008, and a decline in the deficit in 2009 and 2010.

According to the final figures for merchandise trade in 2010, while exports were virtually unchanged, there was an increase of EUR 236 million in imports. This widened last year's merchandise trade deficit. There were also major changes in services and in factor income.

On the basis of surveys of spending by foreign tourists in Slovenia, their average spending in 2010 was increased by around 25%. Travel revenues were therefore EUR 192 million higher than the figure from before the revision. The increase in travel revenues was the largest factor in the increase of EUR 251 million in the surplus of trade in services in 2010.

Changes in factor income also acted to reduce the current account deficit in 2009 and 2010. The deficit in factor income was reduced by EUR 16 million in 2009, and by EUR 90 million in 2010. The largest changes in receipts and expenditures were recorded by reinvested and undistributed earnings. According to the revised figures, there were reductions in capital held in corporates under majority ownership by Slovenian corporates in the rest of the world and by foreign corporates in Slovenia.

Note: Changes shown are in EUR million

crease in the deficit in capital income was the increase in net interest payments to the rest of the world from investments in other forms of capital, where loans are prevalent. These amounted to EUR 59 million during the first four months of the year, up EUR 21 million in year-on-

year terms. The net outflow in income from securities during the first four months of the year was unchanged in year-on-year terms at EUR 35 million.

The surplus in current transfers increased further in April, and amounted to EUR 82 million over the first four months of the year, merely a fifth less than the total surplus recorded last year. Current transfers recorded a net inflow of EUR 30 million in April, as a result of a net inflow of EUR 34 million in official transfers. The majority of the net inflow in official transfers comprised funds from the EU budget for the implementation of the common agricultural and fisheries policy, and money from the structural funds and regional development funds.

Capital and financial account

The private sector recorded a net financial outflow in April for the second consecutive month. The outflow of EUR 45 million was largely the result of a decline in liabilities from loans, to which the domestic commercial banks contributed the most. Claims also declined in April,

Signs: inflows or increases in liabilities (+), outflows or increases in claims (-).

in which the main factors were a decline in the domestic banks' holdings of currency and deposits in the rest of the world. The net external debt increased by EUR 71 million in April to stand at EUR 11.3 billion at the end of the month.

The private sector's claims against the rest of the world declined by EUR 60 million in April, primarily as a result of a decline in the domestic banks' holdings of currency and deposits in the rest of the world, and a decline in loans to non-residents. The banks reduced their claims from currency and deposits by EUR 382 million in April, although the cumulative total this year remained a net outflow, in the amount of EUR 579 million. Corporates also reduced their holdings of currency and deposits in the rest of the world in April, by EUR 31 million, taking the cumulative decline this year to EUR 75 million. Loans to the rest of the world by the domestic banks declined by EUR 13 million in April, primarily as a result of a decline in long-term loans. Outward FDI and portfolio investments increased again in April, by EUR 4 million and EUR 123 million respectively. April's increase in portfolio investments was again primarily the result of an increase in the banks' investments in bonds and money-market instruments. The banks have invested more than EUR 460 million in foreign debt securities to date this year. The trend of increase in claims from trade credits continued in April, taking the increase over the first four months of the year to EUR 329 million.

The largest factor in the decline in the private sector's liabilities to the rest of the world in April was debt repayments by the domestic banks. The private sector's liabilities to the rest of the world declined by EUR 106 million in April; the largest contribution was a decline of EUR 251 million in non-residents' loans to domestic banks. Non-residents' holdings of currency and deposits at the domestic banks also declined, by EUR 126 million. Inward FDI and portfolio investments increased again in April, by EUR 96 million and EUR 3 million respectively. The increase in inward FDI was primarily the result of a decline in claims held by foreign owners against affiliates in Slovenia. Corporates recorded borrowing of EUR 24 million in the rest of the world in April. Corporate net borrowing amounted to EUR 113 million during the first four

months of the year, compared with a net repayment of EUR 161 million in loans from the rest of the world during the same period last year. Liabilities from trade credits increased again in April, by EUR 134 million, taking the cumulative increase of liabilities from trade credits this year to EUR 207 million.

April's increase of EUR 71 million in the net external debt was the result of gross external claims declining by more than the gross external debt. The gross external debt was down EUR 195 million on March, while gross external claims were down EUR 266 million. The main factor in the decline in the gross external debt was repayments by the banking sector and the government sector, which reduced their long-term gross external debt

by EUR 732 million in April. The Bank of Slovenia and other sectors recorded an increase of EUR 537 million in gross debt, primarily as a result of an increase in the Bank of Slovenia's gross debt from currency and deposits. Gross external claims declined by EUR 266 million in April, primarily as a result of a decline in the banking sector's short-term exposure to the rest of the world.

5 | Public Finance

The general government deficit according to ESA 95 methodology in the first quarter increased to 10.3% of GDP, primarily as a result of the capital increase at NLB bank. Without the capital increase, the deficit would stand at 7.5% of GDP, less than in the first quarter of last year, when it stood at 8.8% of GDP. Growth in general government expenditure outpaced growth in general government revenues as a result of the capital increase; without the aforementioned transaction growth in general government expenditure would have been lower than revenue growth for the second consecutive quarter. The general government debt amounted to EUR 16,385 million or 45.2% of GDP at the end of the first quarter. The increase of EUR 2.7 billion since the end of last year was primarily the result of issues of two government bonds in the first quarter, which according to the government financing programme accounts for the majority of this year's budget borrowing.

According to the national methodology, the general government deficit during the first four months of the year narrowed in year-on-year terms, primarily as a result of developments in the state budget. The general government deficit amounted to EUR 693 million, EUR 271 million less than in the same period last year. The main contribution to decline in deficit came from the state budget deficit, where the movement in corporate income tax revenues related to tax settlements was the major factor. Local government recorded a small surplus

during the first four months of the year, and the Health Insurance Institute recorded a deficit, which widened in May to stand at EUR 40 million over the first five months of the year. The board of directors of the Health Insurance Institute therefore adopted a draft revision to its financial plan, which envisages savings of EUR 16 million. The state budget deficit during the first five months of the year amounted to EUR 871 million, EUR 367 million less than in the same period last year.

General government revenues during the first four months of the year were up around a tenth in year-on-year terms. The largest increase was recorded by corporate income tax revenues. General government revenues during the first four months of the year were up EUR 465 million in year-on-year terms. The main increases were recorded by corporate income tax revenues (EUR 186 million), VAT revenues (EUR 106 million) and funds received from the EU budget (EUR 131 million). Inflows of taxes and contributions during the first five

months of the year were up 7.3% in year-on-year terms. Inflows of corporate income tax increased again in year-on-year terms in May, while VAT revenues remained at a similar level to the same month last year. The main factor

in the aforementioned movements in corporate income tax revenues were tax settlements for the previous year: this year tax settlements have been positive, while corporate income tax revenues were EUR 170 million lower last year on the basis of tax returns. Year-on-year growth in revenues from social contributions and personal income tax on the basis of wages during the first five months of the year was relatively low at around 1.5%. This was a reflection of the continuing adverse situation on the labour market, in particular the year-on-year fall in employment.

Growth in general government expenditure during the first four months of the year stood at 3.6%. Transfers to individuals and households are increasing, while investment expenditure and investment transfers continue to decline. General government revenues during the first four months of the year were up EUR 193 million in year-on-year terms. A quarter of this sum was pension-related. This February's pension increase was low, as a result of the Intervention Measures Act, while the number of old-age pensioners was up 4.9% in year-on-year terms in the first five months of the year. Interest payments were up around a tenth as a result of the increased borrowing, while there was also an increase in expenditure on goods and services. Growth in employee compensation stood at 0.7%. In light of the adverse situation on the labour market, transfers to the unemployed recorded the largest increase. The largest decline was recorded by investment expenditure and investment transfers, which have been declining in year-on-year terms since the final quarter of last year.

The government borrowed just under EUR 3.1 billion in the first four months of the year. In addition to financing the deficit the government also repaid EUR 882 million of debt, and increased its bank balances by just over EUR 1.1 billion. During the first four months of the year the deficit in general government revenues under general government expenditure amounted to EUR 693 million. The deficit in the general government sector's financial claims and investments, which also includes the capital increase at NLB d.d. bank in the amount of EUR 243 million and two loans to Greece in the total amount of EUR 104 million, amounted to EUR

Spread on 10-year government bond as compared to Germany

Sources: Bloomberg, Bank of Slovenia calculations.

Note: Spread is calculated as a difference between yield of 10-year government bond and the yield of reference German bond on a daily basis and is used as a measure of country's credit risk. * In the picture SLOREP 01/21 is used after 11. January 2011.

353 million. During the first four months of the year the government repaid the majority of bonds maturing this year.

The premium on Slovenian 10-year bonds over the German benchmark bond increased in June. There was mounting concern surrounding the debt crisis in certain euro area periphery countries, Greece in particular. The premium on Slovenian 10-year bonds over the benchmark German bonds averaged close to 170 basis points in June, more than in the previous months (the premium was 133 basis points in May). The largest increases in May and June were recorded by the premiums on Portuguese, Irish and Greek 10-year government bonds. This was related to the uncertainty surrounding the resolution of debt problems, particularly in Greece. At the end of June the Greek parliament approved a new package of austerity measures in the amount of EUR 78 billion for the period to 2015, which was a precondition for further financial assistance.

EU finance ministers reached agreement in June on the strengthening of the European Financial Stability Facility (EFSF). This will have at its disposal EUR 780 billion in guarantees (currently EUR 440 billion), and EUR 440 billion in effective loan capacity (currently EUR 250 billion). Slovenia's potential contribution within the framework of the facility has thereby increased to EUR 3,664 million (from EUR 2,073 million).

Within the framework of the European Semester recommendations were made to EU Member States for action this year and next year. Slovenia received six recommendations. The government must take action to ensure the long-term sustainability of the pension system and to maintain adequate pension provision. Within this framework Slovenia was called upon to raise the employment rate for older workers by introducing incentives for later retirement and to continue developing policies to ensure active ageing and lifelong learning measures. The recommendations also relate to the attainment of the target deficit this year, to specific measures to support the aim of reducing the deficit next year, and to the consistent consolidation of the public finances, including a willingness to take further measures where necessary.

6 | Banking System*

The banking system's total assets increased by EUR 45 million in May, but were down 4% in year-on-year terms, 0.9 percentage points more than in the previous month. One of the reasons for the relatively small increase in total assets was the passivity of the government sector, which did not undertake any major transactions in May. The banks recorded increases of EUR 98 million in their claims against the central bank, EUR 9 million in their lending to banks and EUR 26 million in their lending to non-banking sectors, while reducing their investments in securities by EUR 107 million. On the funding side the banks made debt repayments of EUR 235 million to banks in the rest of the world in May, while slightly reducing their liabilities in the form of debt securities, but recorded an increase in deposits by non-banking sectors and in equity.

Lending to non-banking sectors stagnated again in May. The main factors in the increase of EUR 26 million in loans were lending to households and lending to non-residents. The large domestic banks recorded negative year-on-year growth for the first time this year, while the

banks under majority foreign ownership recorded positive year-on-year growth for the first time this year. The monthly increase in loans at the small domestic banks was also positive in May, the fifth consecutive increase this year.

Lending to non-financial corporations (NFCs) regressed in May. The stock of loans declined by EUR 64 million, the fourth consecutive monthly decline. The rate of contraction thus increased to 3.6%. The large domestic banks and the banks under majority foreign ownership contributed most to May's decline in lending to NFCs, while the small domestic banks recorded a positive monthly increase. The year-on-year contraction at the banks under majority foreign ownership is diminishing, but that at the large domestic banks is increasing. Year-on-year growth in lending at the small domestic banks was also negative in May for the first time this year.

Lending to households increased again in May, by EUR 78 million, the four consecutive monthly increase and the largest so far this year. Year-on-year growth thereby increased to 7.6%. The largest increase in the stock of loans to households in May was recorded by the banks under majority foreign ownership, which have continued to lend intensively to households this year. Short-term loans to households were up on the previous month, while long-term loans have been increasing since January.

* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

The main factors in the increase in total assets on the funding side were an increase in household deposits and deposits by other financial institutions, and increase in equity. The trend of debt repayments to banks in the rest of the world slowed slightly, as debt repayments were down EUR 138 million on the previous month. Issued debt securities declined by just EUR 13 million in May. The increase of EUR 191 million in household deposits was seasonal in nature, the majority of companies paying their annual leave allowance in May. There was an increase of EUR 130 million in deposits by other financial institutions, while government deposits and deposits by NFCs declined. The banking system's equity increased by EUR 133 million in May as a result of the capital increases at NKBM and Unicredit banka.

Rising impairment and provisioning costs are continuing to reduce the banking system's profits. Interest income is growing more slowly than interest expenses, and growth in net interest was thus negative in May for the third consecutive month. Growth in gross income was positive, at 1.3%, primarily as a result of growth of 6.2% in non-interest income. Impairment and provisioning costs amounted to EUR 56.3 million in May, taking the total over the first five months of the year to EUR 232.1 million, up 25% on the same period last year. As a result the banking system's pre-tax profit was down 39% on the same period last year, at EUR 63.1 million over the first five months of the year.

7 | Domestic Financial Markets

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 0.9% in May. After falling significantly the previous month, the volume of trading in bonds was up 25.1% at EUR 4.4 million. Trading with Slovenska odškodninska družba's 2nd-issue bonds accounted for more than 60% of the monthly volume. The volume in the second-most heavily traded bond, Petrol 1st-issue, was just EUR 0.9 million. The proportion of total stock exchange volume accounted for by bonds stood at 11.2% in May. Despite the newly issued Abanka bonds this May, the number of bond issues is gradually declining, and was down 11.8% on last year. This development is having an adverse impact on the desired improvement in stock exchange liquidity.

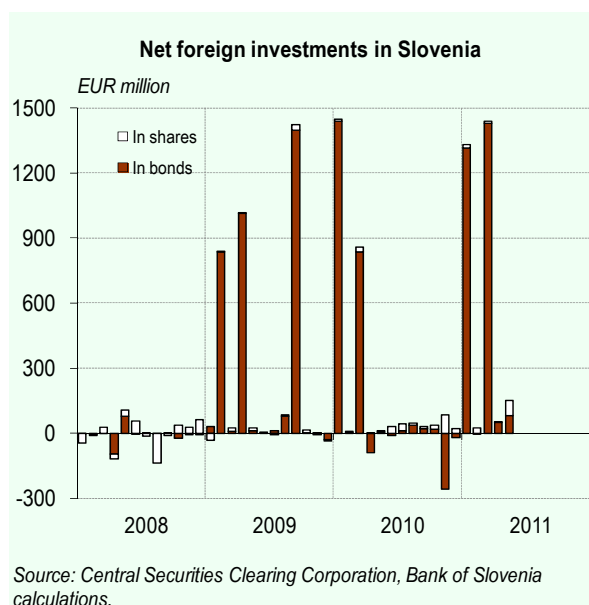

The market capitalisation of shares on the Ljubljana Stock Exchange rose by 0.4% in May. Having more than halved in April, the monthly volume of trading in shares increased by 56.5% in May, reaching EUR 33 million, or 84.9% of total stock exchange volume. Krka shares accounted for almost half of the volume, at EUR 14.9 million. The SBI TOP fell by 2% in May, taking the year-on-year change to -12.5%, to stand at 772 at the end of the month. The SBI TOP has not been as low as it

has in the last two months since early 2004. The P/E ratio on the prime market rose again to reach 371.7 in May.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents stood at 11.9% in May. Non-residents' net purchases of Slovenian shares increased to EUR 71.6 million in May, the highest figure this year. The majority of trading, 63% to be precise, was undertaken in Nova KBM ordinary shares, which were primarily purchased by residents of Poland. Non-residents made net purchases of EUR 81.6 million on the bond market. The largest net purchasers of bonds were residents of Luxembourg (EUR 492.2 million), while the largest net sellers were residents of the UK (EUR 426 million). The largest

net sellers of shares were residents of Luxembourg (EUR 2 million), while the largest net purchasers were residents of Austria (EUR 15.1 million). Slovenian blue chips accounted for the majority of net purchases of shares.

Residents made net sales of EUR 87.7 million in bonds and EUR 9.8 million in shares of foreign issuers in May. The largest net sales of foreign shares were made by other financial intermediaries except insurance corporations and pension funds, in the amount of EUR 19.4 million. The sector of insurance corporations and pension funds remains predominant in investment in foreign shares, with net purchases of EUR 8.3 million, the majority of which went into the former Yugoslav republics and the US. The main net seller of bonds was the banking sector, which made EUR 97.5 million of net sales in foreign debt securities, primarily bonds from euro area countries. Slovenian households made net purchases of EUR 1.1 million in foreign bonds and net sales of EUR 3.4 million in foreign shares in May.

The domestic mutual funds' assets under management declined to EUR 2,052 million in May, as a result of net withdrawals of EUR 11.4 million and a fall of 0.7% in the average unit price. Investors made net withdrawals of EUR 4.1 million from mutual funds under majority bank ownership in May, and net withdrawals of EUR 7.3 million from non-bank mutual funds. The largest net withdrawals were recorded by equity funds and balanced funds, at EUR 8.4 million and EUR 5.3 million respec-

tively. The largest net inflows of EUR 1.3 million were recorded by bond funds. The household sector made the majority of net withdrawals, at EUR 7.7 million, followed by the banking sector, with EUR 4.8 million of net withdrawals. The financial auxiliaries sector and the insurance corporations and pension funds sector recorded net inflows of EUR 1.8 million and EUR 1.5 million respectively. The proportion of domestic mutual funds' assets held in liquid assets⁴ was up 0.6 percentage points in May at 9.1%. In contrast to the previous month, the three major global indices fell: the DJ EuroStoxx for western Europe by 3.6%, the S&P 500 for the US by 1.4% and the Hang Seng for China by 0.2%. The indices in the former Yugoslav republics recorded monthly rises: Croatia's CROBEX was up 2.0%, Serbia's BELEX 15 was up 10.7%, and Macedonia's MBI-10 was up 5.6%. All the aforementioned indices recorded positive year-on-year changes: +13.1% for the DJ EuroStoxx, +23.5% for the S&P 500, + 19.8% for the Hang Seng, +14.7% for the CROBEX, +24.3% for the BELEX 15 and +8.9% for the MBI-10.

⁴ Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Note 1: With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds**General**

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Exchange rates (Tables 2.6.1–2.6.2)

Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish złoty was denominated on 1 January 1995 at the exchange rate of 1 new złoty for 10,000 old złotych.

Table 2.6.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

Payment systems (Tables 2.7 to 2.13)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.8 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.9 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.10 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.11 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.12 Debit Transfers

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.13: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
 - report on account balances at domestic banks – PPV (until 31 December 2004),
 - report on account balances abroad – C (until 31 December 2006),
 - report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
 - report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

- **Estimates and other sources**
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
 - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
 - estimate of Italian pensions (UMAR) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
 - estimate of labour income (SURS),
 - data on pensions paid to non-residents (ZPIZ),
 - survey on the write-downs of debt from trade in goods and services abroad,
 - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
 - estimate of cash transactions on tourism and labour income (from 2007 onwards),
 - quarterly data on consumption of foreign embassies in Slovenia (SURS, from 2008 onwards),
 - migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
 - households' transfers (SURS, from 2008 onwards),
 - assets acquired directly by tenders and programmes of EU (SURS, from 2008 onwards),
 - data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards),
 - data on purchases/sales of real-estate in Croatia (Croatian National Bank, from 2008 onwards),
 - data on purchases/sales of emission allowances between residents and nonresidents (Slovenian Environment Agency, from 2008 onwards).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2009)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SURS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SURS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SURS, Annual survey on investment in tangible assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Repub-

lic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From the same year data on Slovenian residents' purchases/sales of real-estate in Croatia are included (data source is Croatian National Bank).

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies.

Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1988 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)
- January 2011, RS69 (EUR 1000.0 million)
- March 2011, RS70 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2011 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2008 to 2010 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2012, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2012 shall take into consideration the new three year average (2009 to 2011).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt**General notes**

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial derivatives are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves**Table 3.12.: International reserves**

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.
Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev. 2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site:

http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1-ZAP/M)). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: until 31.12.2006 Slovenian tolar, from 01.01.2007 Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia:
<http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.
