Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

7. Domestic Financial Markets

The economic situation in developed countries remained negative in the third quarter, and the economic growth forecasts were additionally reduced. Consensus's September forecasts for economic growth in 2011 were 1.7% for the euro area and 1.6% for the US, while forecasts for next year were 1.0% for the euro area and 2.1% for the US. The downward revisions for next year were larger. The unemployment rate remains high in both economies, which is still having an adverse impact on consumer confidence and private consumption. At the same time, inflationary pressures caused by high energy and commodity prices remain significant. In the euro area, the year-on-year inflation rate rose to 3.0% in September, while in the US it stood at 3.8% in August. US dollar oil prices in September were up 42.5% in year-on-year terms. There was another increase in uncertainty on financial markets, in connection with the debt crisis in certain euro area countries. This was also a factor in the euro's fall against most major global currencies.

The decline in growth in foreign demand is also slowing growth in export-oriented sectors of the Slovenian economy. Alongside weak domestic demand this is worsening the outlook for economic growth in the third quarter. Industrial production fell in monthly terms for the second consecutive month in June, and indicators of demand from foreign markets continue to deteriorate. At the same time, there has been a decline in growth in volume turnover in export-oriented services. Domestic demand remains weak, as evidenced by the further contraction in construction and a relatively low level of volume turnover, particularly in the segment of trade in durables. Confidence in the economy remains low, while most survey indicators of activity and demand have deteriorated in recent months.

The number of registered unemployed in August was down on July, slightly reducing year-on-year growth in the number of registered unemployed, which nevertheless remained high. The registered unemployment rate was 11.5% in July. July saw an end to the trend of increase in the workforce in employment seen since the beginning of the year, primarily as a result of a decline in the workforce in employment in construction. Growth in the average gross wage is continuing to slow in the private sector, where year-on-year growth in gross wages stood at 1.8%, down 1 percentage point on June. The average wage in the public sector remains unchanged. As a result of the decline in the workforce in employment the wage bill in the private sector was down 1.3% in year-on-year terms, the wage bill in the public sector remaining almost unchanged.

Year-on-year inflation as measured by the HICP in September was up 1.1 percentage points on August at 2.3%. The large increase was largely the result of the disappearance of the effect of last year's cut in prices of school meals, which reduced inflation by 0.7 percentage points in the last year. This effect also significantly contributed to the rise in core inflation indicators, which are still under the influence of low growth in economic activity and the adverse situation on the labour market. Despite the rise, inflation in Slovenia remains below the euro area average.

Weak domestic demand has in recent months been a major factor in the elimination of the current account deficit. In June and July, in the context of a more rapid decline in growth in imports of merchandise and services compared with exports, a significant surplus was generated in the current account. Inflows of government transfers were again high, while the deficit in factor income narrowed in year-on-year terms in these two months. The main increase in factor income this year has been recorded by net interest expenses. In the year to July the current account deficit stood at 0.1% of GDP, compared with 0.9% of GDP last July.

According to Ministry of Finance forecasts, this year's general government deficit is expected to reach 5.5% of GDP, while the general government debt is expected to reach 45.1% of GDP. A factor in the maintenance of a high government deficit this year was two transactions of a one-off nature in the amount of 1% of GDP, namely a capital increase at NLB and a transfer to Slovenian Railways, which were included in the government deficit in the first half of the year. In September a revision to the state budget was adopted, which maintains this year's deficit at EUR 1,688 million or 4.7% of GDP. General government revenues in July this year were down in year-on-year terms, and the figures available for August indicate the same. General government expenditure in July was up 0.4%, lower than the rates recorded in the first half of the year. Like for certain other countries, the premiums of Slovenian government bonds over the benchmark German government bonds rose slightly. The rating agencies Moody's and Fitch downgraded Slovenian government bonds by one step in September.

The main factors on the funding side in August's decline of EUR 62 million in the banking system's total assets were a decline in liabilities to foreign banks and a decline in government deposits. On the investment side, the stock of loans to non-banking sectors declined in August, primarily as a result of impairment and provisioning costs. The negative current rate of growth in lending to non-financial corporations nevertheless did not deteriorate, while the increase in household lending is slowing. In the first eight months of the year the banking system operated at a loss in the amount of EUR 11 million before taxes, in which the main factor in August was above-average impairment and provisioning costs.

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 0.4% in August, while the market capitalisation of shares fell by 6.3%. The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents amounted to 12.5%. The SBITOP fell below the 700 level in August, ending the month at 668. The monthly fall was 8.1%, taking the year-on-year change to -18.3%. The domestic mutual funds' assets under management fell in August for the fourth consecutive month, to stand at EUR 1,919 million. This was the result of net withdrawals in the amount of EUR 12.2 million, and an 8.3% fall in the average unit price.

1 | International Environment

Growth in global economic activity slowed in the third quarter, while forecasts for global economic growth were also cut. In developed and emerging economies signs of a slowdown in economic growth became more evident in the manufacturing and service sectors. Because growth in international trade also slowed, in September the World Trade Organisation lowered its forecast for this year's growth in international trade by 0.7 percentage points to 5.8%. As a result of weak economic activity at the start of the third quarter, and new turmoil in international financial markets, other international institutions also cut their forecasts for this year and next year. The IMF forecast in September that global economic growth in 2011 and 2012 would reach 4.0%, down 0.3 and 0.5 percentage points respectively on the previous forecasts. In September Consensus lowered its forecast of economic growth for the euro area and the US in 2011 and 2012, to 1.7% and 1.0%, and 1.6% and 2.1% respectively. The forecast for this year was cut by 0.2 percentage points for both economies, while the forecast for 2012 was cut by 0.5 percentage points for the euro area and 0.3 percentage points for the USA. The majority of global economic growth remains in the emerging coun-

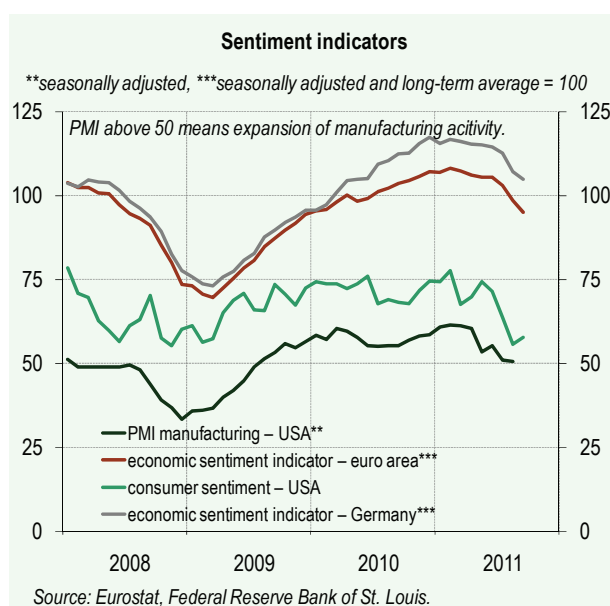

tries, where growth has remained relatively high despite the slowdown.

Increased uncertainty surrounding global economic growth has brought a decline in the indicators of economic activity. Growth in industrial production in the euro area slowed in the second quarter, and reached 1.0% in monthly terms in July. The year-on-year comparison also indicates a slowdown in growth in industrial production since the beginning of this year, which in addition to the effect of a rising basis was caused by the decline in growth in international trade, particularly over recent months. This is evident from the movement in the value

Notes: *Seasonally adjusted data – Eurostat for the euro area and BEA for the US, ** Consensus, September 2011.

of new orders in industry, which fell in monthly terms for the second consecutive month in July, by 2.2%. Growth in industrial production is also slowing in the US; in August it stood at 0.2% in monthly terms and 3.4% in year-on-year terms. The global PMI in August approached the level indicating a contraction in activity, while the preliminary PMI for the euro area was in the contraction zone in September.

The unemployment rate in the euro area and the US remains high, while uncertainty on the labour market is affecting consumer confidence, private consumption and volume turnover in the retail sector. The unemployment rate in the euro area was 10% for the third consecutive month in August. The unemployment rate in the US remains high, and stood at 9.1% in August for the second consecutive month. Consumer confidence in the US fell sharply in August, mainly as a result of a decline in confidence in the government's ability to significantly revive economic growth and increase employment. Confidence remained at a low level in September. Consumer confidence in the euro area also declined sharply in recent months. Retail sales in the euro area in July were up just 0.2% on June, and have been declining in year-on-year terms since May. Real volume turnover in the retail sector (including food services) in the US in August was down 0.3% on June, but up 3.3% in year-on-year terms.

Inflation in the euro area rose sharply in September, reaching 3.0%. Inflation in the US also rose, to 3.8%

in August. The main factors in the year-on-year inflation rate of 2.5% in the euro area in August were prices of motor fuels, heating oil and electricity, while prices of clothing and telecommunications services acted to reduce inflation. After rising significantly in May and June, year-on-year core inflation (excluding energy and unprocessed food) in the euro area slowed, reaching 1.5% in August. The largest price rises in the US in August were recorded by energy, while year-on-year core inflation (excluding energy and food) reached 2.0%. Inflationary pressures remain considerable, as oil prices and other commodities prices remain high. Year-on-year growth in producer prices of manufactured goods remains high, at 6.1% in the euro area in July, and 8.2% in the US in August.

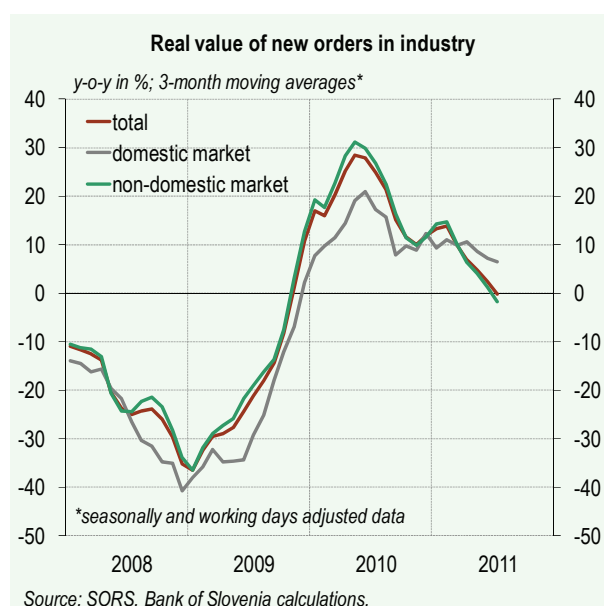

US dollar commodity prices fell on average in September, while the price of oil increased slightly. US dollar oil prices were up 0.7% on average in September relative to August, while euro oil prices rose by 4.9% as a result of the depreciation of the euro. The price rose primarily in the first half of September, while it fell in the second half of the month as a result of new signs of a slowdown in global economic activity and increased uncertainty on the financial markets. It stood at USD 104.30 per barrel at the end of September. Commodity prices were down on August, metals in particular. Year-on-year growth in commodity prices continues to slow. It stood at 15.2% in September, just over 34 percentage points down on this year's peak rate in February.

In September the euro depreciated against major global currencies as a result of the increased uncertainty on the financial markets in the euro area. The euro fell 4.0% against the US dollar in September, to average USD 1.38 for the month. The euro depreciated against the Japanese yen and the pound sterling, and appreciated against the Swiss franc as a result of the Swiss central bank's intervention in the foreign exchange markets. The key ECB and Federal Reserve interest rates remained unchanged in September.

2 | Economic Activity and Labour Market

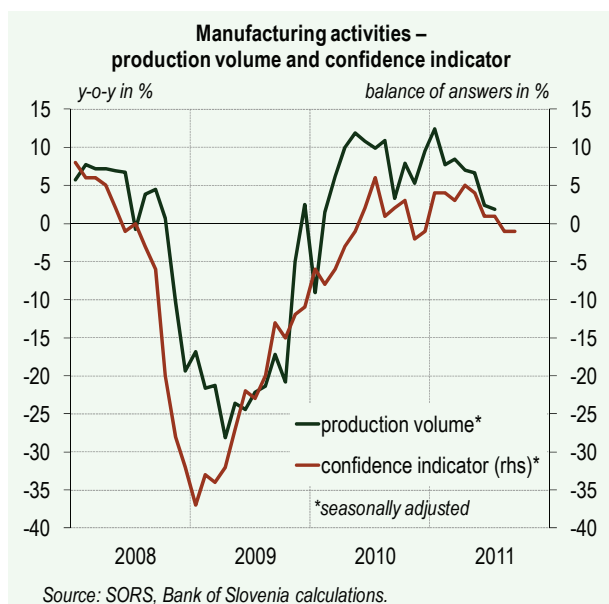

Real sector

Indicators of output and demand in industry again deteriorated in July. Industrial production in July was down by more than 2% in monthly terms for the second consecutive month, while the year-on-year rate according to figures adjusted for the number of working days fell below 2%. The production of capital goods and raw materials was lower than a year earlier. As a result of the rapid slowdown in growth in international trade, the situation in the manufacturing sector in particular has been visibly deteriorating in recent months. According to SORS figures, trend monthly growth in July in manufacturing was negative for the fourth consecutive month. The real value

of new orders also continued to decline. It was down 1.7% in year-on-year terms in July according to figures adjusted for the number of working days. Among the different categories of goods, only intermediate goods recorded positive growth in orders.

The movements in confidence indicators in September are an indication of the continuing adverse situation in the manufacturing sector. The deterioration in the international environment and weak domestic demand were reflected in the manufacturing confidence indicator. This was again negative in September. The survey indicators of current demand declined for the fifth consecutive month. In September corporates were slightly less optimistic about activity and demand in the

next three months, but these indicators nevertheless remained relatively high. After relatively favourable movements in the first half of the year, the employment expectations indicator turned negative.

Activity in the construction sector increased significantly in July compared with June, although in year-on-year terms the sharp contraction in activity continued. As a result of high growth in the construction of buildings and a stagnation in civil engineering work, overall activity in the construction sector was up a tenth in monthly terms in July. Activity in the construction of build-

ings increased by a third in July. Growth was particularly high in the construction of residential buildings, which since the end of 2009 has typically seen pronounced fluctuations in growth with a prevailing negative trend. In July the total real value of construction put in place according to original figures was down by more than a quarter in year-on-year terms. The survey indicator of current and expected orders and the trends in the real value of new contracts remain negative.

Volume turnover in the retail trade was up in August for the third consecutive month, while volume turn-

* Volume of industrial production. ** Real value of construction put in place. *** Old methodology.

over in trade in motor vehicles was up for the second consecutive month. Volume turnover in the retail trade was up 3.1% in monthly terms in August, to which the largest contribution came from trade in food, beverages and tobacco. Turnover in this segment was up 4.4% in monthly terms, which could be partly attributed to a good holiday season, the number of foreign tourists rising by a tenth in year-on-year terms in August. Year-on-year growth in volume turnover in the retail trade in the first eight months of the year stood at just over 2%, primarily as a result of growth in turnover in trade in motor fuels. Volume turnover in the retail trade excluding motor fuels in the first eight months of the year was down just under 1% in year-on-year terms, which is in line with weak domestic consumption. Given the adverse situation on the labour market, this was the result of a decline in consumer purchasing power. Volume turnover in trade in motor vehicles in August was up 3.9% on July, in line with the 3.8% rise in the number of new vehicle registrations. Their year-on-year growth also remains high, exceeding 11% in the first eight months of the year, despite the adverse economic situation.

The economic sentiment indicator in September was up 1 percentage point on August, although this was primarily due to a strong increase in confidence in the retail trade, where the confidence indicator has fluctuated sharply this year. The movement in the retail confidence indicator in July and August was more in line with the low level of household consumption and the ad-

verse situation on the labour market, but it rose again sharply in September. It was up 24 percentage points on August. Among the indicators included in the calculation of the retail confidence indicator, the current sales indicator in particular has fluctuated sharply this year, in contrast to the movements in turnover in the retail trade. The manufacturing confidence indicator remained negative, primarily as a result of the low level of the indicator of total orders, while expectations of future production remained fairly optimistic. The services confidence indicator declined, primarily as a result of declines in the indicators of current and expected demand. Pessimism continues to prevail in the construction sector; expectations of orders in the next three months have been notably declining since May. Consumers also remain pessimistic; the confidence indicator in September was down 8 percentage points on its average between 2000 and 2008.

Labour market

The number of registered unemployed fell in August, and more new vacancies were notified. The number of registered unemployed stood at 106,996, down 566 on July and down 85 on June. This eliminated the seasonal rise in unemployment in July, the movement in registered unemployment in 2011 thereby becoming more similar to the years preceding the economic crisis. These years saw a fall in the number of registered unemployed in the spring and summer months. In light of these developments, year-on-year growth in the number of registered

unemployed was also lower in August. It stood at 8%, down 1.3 percentage points on July. The registered unemployment rate was up 0.1 percentage points in July at 11.5% as a result of the rise in unemployment in July. Around 7,000 people deregistered as unemployed in August, of which more than half entered new employment. The number of newly registered unemployed was 6,500, about 900 less than in July. Around 17,000 new vacancies were notified in August, which is a few thousand more than in August 2010 but several thousand less than the usual August figure in the years before the crisis. The vast majority of notified vacancies were for temporary employment. They accounted for 83.5% of the total, the highest figure in the last five years.

The workforce in employment fell in July. The trend of increase in the workforce in employment ended in July, the figure declining by around 5,000. The decline was particularly pronounced in the construction sector, where the workforce in employment fell by approximately 1,100, and in agriculture, where it fell by 1,200. The workforce in

employment remained at a level similar to that recorded in 2004 and 2005. The year-on-year decline in the workforce in employment in the private sector, which slowed in the first half of 2011, increased again, from 1.7% in June to 2.0% in July. July's decline in the workforce in employment in the public sector was mostly the result of a sea-

sonal decline in the workforce in employment in education, which was significantly smaller than in previous years.

Growth in the average nominal gross wage in the private sector slowed in July, while gross wages in the public sector continued to stagnate. The average nominal gross wage per employee stood at EUR 1,500, up 1.3% on last July, while gross wages were down slightly on June. The average gross wage in the private sector in July was up 1.8% in year-on-year terms, 1 percentage point less than in the previous month. The rise in the minimum wage in March 2010 ceased to have any impact on the basis for calculating annual wage growth in March 2011, since when year-on-year growth in gross wages in the private sector has been lower than the average in 2010 and early 2011. The highest year-on-year increase in gross wages was recorded in the sectors of mining and transport, while the largest decline was recorded by the sectors of agriculture, and financial and insurance activities. Gross wages in the public sector were practically unchanged in July, the stagnation of wages in the public sector thus continuing. The wage bill in the private sector in July was down 1.3% in year-on-year terms, more than 1 percentage point larger than June's decline. This was the result of a significant decline in the workforce in employment in the private sector in July. The wage bill in the public sector remained practically unchanged.

Total wage bill and average monthly gross wage per employee

*The wage bill is calculated as the product of the average gross wage for employees of legal persons who received pay and the total number of employees of legal persons.

Selected competitiveness indicators

The lower appreciation in the nominal harmonised national competitiveness indicator in August was the result of the euro's rise against the US dollar. The nominal index appreciated by 0.3% compared with July. The euro was up 0.6% against the US dollar in August, but fell against the pound sterling (by 0.9%), the Swiss franc (by 4.8%) and the Japanese yen (by 2.5%). The strengthening of the euro against the US dollar was the result of weak economic results in the US, while the euro's fall against the Swiss franc and the Japanese yen was a result of investors migrating into safe havens. The Japanese yen and the Swiss franc thus gained in value in comparison with other major currencies, despite interventions by the two central banks.

The harmonised indicator of price competitiveness depreciated again in year-on-year terms in August, but by less than in the previous month. This was the result of a monthly appreciation in the indicator of 0.2%. This appreciation was primarily the result of changes in the nominal euro exchange rate, while the effect of the change in prices in monthly terms was small. The real effective exchange rate depreciated by 0.9% in year-on-year terms. Despite the year-on-year appreciation of 1.3% in the nominal effective exchange rate, slower growth in domestic prices more than offset the rise in the nominal effective exchange rate, growth in foreign prices

**Harmonised competitiveness indicators
(40 countries and rest of euro area countries)**

outpacing domestic prices by 2.2 percentage points in year-on-year terms.

The gap by which Slovenia's price competitiveness trails that of most important euro area trading partners widened slightly in August. The widening was caused by a monthly appreciation in the real effective exchange rate in August, which did not occur in Slovenia's main trading partners. The gap by which Slovenia's price competitiveness trails that of the key trading partners nevertheless narrowed during the first eight months of the year, by 1.4 percentage points relative to France and by 2.2 percentage points relative to Austria.

3 | Price Developments

Year-on-year inflation as measured by the HICP was up 1.1 percentage points on August at 2.3% in September, primarily as a result of changes in prices of services and non-energy industrial goods. It nevertheless remains below the euro area average. Year-on-year growth in service prices was up 2.2 percentage points on August at 1.7% in September, primarily as a result of the disappearance of last September's changes in the calculation of prices of school meals. The contribution to year-on-year inflation made by services prices turned positive, reaching 0.6 percentage points. The year-on-year fall in prices of non-energy industrial goods slowed from 1.7% in August to 1.2% in September, as a result of slower year-on-year falls in prices of cars and prices of clothing and footwear. Year-on-year growth in food prices rose by 0.5 percentage points to 3.8%, with a more pronounced rise in prices of unprocessed food, while growth in processed food prices was less pronounced. Year-on-year growth in prices of unprocessed food was up 1.2 percentage points at 1.5%, as a result of rises in prices of fruit and meat. Year-on-year growth in energy prices was up 0.2 percentage points at 7.7%, as a result of a year-on-year rise in fuel prices. Despite the rise, inflation remains below the euro area average, year-

on-year inflation in the euro area having jumped to 3.0% in September.

All the core inflation indicators increased significantly in September, primarily as a result of the effect of last year's changes in canteen prices. The broadest core inflation indicator, the HICP excluding energy, rose by 1.2 percentage points to stand at 1.3%. If food and energy prices, which account for around 35% of the HICP basket, are excluded from the HICP, year-on-year core inflation was up 1.5 percentage points at 0.5%. Inflation thus measured comprises services and non-energy industrial goods, and it is determined primarily by domestic factors, such as wages, earnings and direct taxes. The continuing adverse situation on the labour market led to a decline in purchasing power as measured by real gross wages, and thus to weak final household consumption. Providers of goods and services in some segments of the economy thus found it more difficult to raise prices, despite a rise in input costs. Core inflation therefore remains low, below the average in the euro area, where the narrowest year-on-year core inflation indicator stood at 1.2% in August.

According to the latest detailed figures available, the main factor in August's increase in year-on-year inflation was energy prices, while the largest decline was recorded by the contribution made by tobacco prices. After seven months of declining year-on-year growth,

energy prices rose again in August, mainly as a result of a rise in prices of fuels and lubricants and prices of heating oil. The total contribution made to inflation by these two price categories thus increased by 0.3 percentage points to 0.8 percentage points. The rise in global commodity prices at the end of last year and at the beginning of this year is still being reflected in the continued growth in prices of certain processed foods, in particular dairy products, and bread and other cereal products. The biggest price increases in August compared with July were recorded by wine and by coffee, tea and cocoa, while oils and fats continue to record the highest year-on-year growth in prices. Year-on-year growth in prices of proc-

Note: Figures may not sum up to official figures due to rounding.

essed food was nevertheless down in August, as last year's rise in excise duties on tobacco disappeared, which acted to reduce inflation by 0.2 percentage points. Year-on-year growth in prices of clothing and footwear declined again in August, by 1.2 percentage points to stand at -5.3%. At the same time the slowdown in the fall in car prices continued. Despite a seasonal rise in package holiday prices, the year-on-year fall increased by a further 1.1 percentage points to 6.8%, which reduced year-on-year growth in services prices by 0.1 percentage points to -0.5%.

After a more pronounced increase at the beginning of the year, growth in producer prices on the domestic market has slowed recently according to the latest figures. Year-on-year growth was up 0.1 percentage points on July to stand at 3.8% in August, 2.3 percentage points less than the average growth recorded in the euro area in July. Commodity prices continued to record the fastest year-on-year growth in August. By contrast, the largest year-on-year fall was recorded by prices of consumer non-durables, as a result of a fall in prices in the manufacture of food products, and the manufacture of basic pharmaceutical products and pharmaceutical preparations. The import price index is recording slower growth this year than last year. This is being reflected in the year-on-year growth rate, which declined from over 10% in January to 4.8% in August. Last year's rise in import prices could nevertheless represent a deferred inflationary pressure on producer prices and conse-

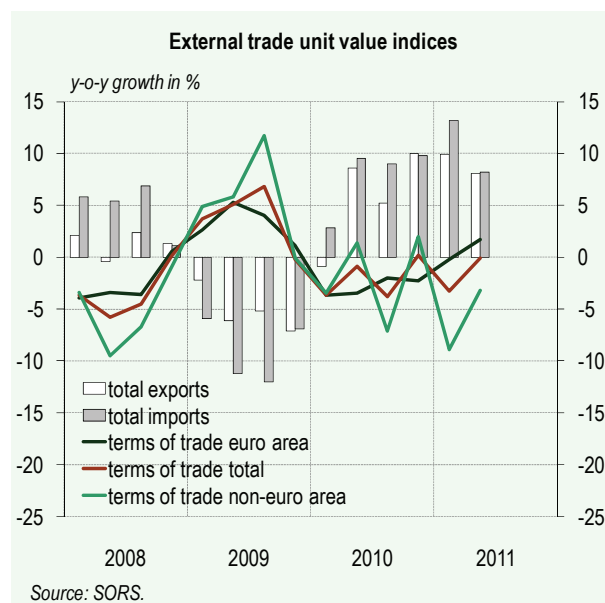

quently on consumer prices, particularly in segments where the pass-through of this rise has to date been small. The pass-through of the rise in corporate input costs to final consumer prices continues to be strongly curbed by the adverse macroeconomic situation. Because prices of manufactured goods on the domestic market fluctuate depending on growth in global commodity and energy prices, the rise in prices of manufactured goods in Slovenia has slowed in recent months.

4 | Balance of Payments

Current account

July saw another sizeable surplus in the current account, while in the twelve months to July the current account position was almost in balance. With merchandise imports declining faster than exports, a surplus was recorded in merchandise trade in July for the second consecutive month. The slowdown in growth in imports of services in recent months was faster than in exports, and the surplus of trade in services has been increasing faster this year than last year. The net inflow in government transfers remained high in July. The surplus in transfers remains a significant factor in the current account surplus, which continues to be curbed by a high

deficit in capital income, where the main year-on-year increase this year was in net interest payments on loans from the rest of the world. The current account surplus over the first seven months of the year stood at EUR 102 million, compared with a deficit amounted of EUR 143 million in the same period last year. The current account deficit in the year to July narrowed to 0.1% of GDP, compared with 0.9% of GDP last July. These trends are the result of weak domestic demand, which is being reflected in imports of merchandise and services in particular.

Year-on-year growth in merchandise imports and exports declined sharply again in July. According to the seasonally adjusted figures, exports declined by around 2% again in monthly terms in July, which alongside the rising base effect reduced year-on-year growth to 6.8%. The monthly contraction in imports was again more pronounced, at close to 5%, the year-on-year rate of growth declining to 2.7%. In recent months the impact of weak domestic demand on merchandise imports was obviously greater than the impact of declining growth in foreign demand on exports, while the terms of trade have also improved. Evidence is provided by the merchandise trade balance, which was again in surplus in July, in the amount of EUR 21 million. There was a deficit in merchandise trade during the first seven months of the year, in the amount of EUR 505 million, slightly less than in the same period last year.

The deterioration in the terms of trade in the first half of this year was smaller than last year.¹ On average in the first half of the year the unit value index of merchandise exports increased by 8.8% in year-on-year terms, while that of imports increased by 10.8%; as a result, the terms of trade deteriorated by 1.8% in year-on-year terms. A significant factor in this was the high growth in commodity and energy prices, which was particularly pronounced in the first quarter. The largest increases were recorded by the unit value indices of imports of animal and vegetable oils and fats, at 42.3%, and of fossil fuels and lubricants, at 25.7%. This was the main reason for the year-on-year deterioration of 4.9% in the terms of

¹ The terms of trade are calculated on the basis of the foreign trade unit value indices, and may vary from the terms of trade based on figures from the national accounts. Source: SORS

trade of intermediate goods, while those for capital goods actually improved by 5.2% and those for consumer goods by 3.9%. As a result of the deterioration in the terms of trade of intermediate goods, the terms of trade with countries outside the euro area deteriorated this year, while those with the euro area improved by 0.6% in year-on-year terms. In the second quarter the deterioration in the terms of trade came to a halt, as the rise in energy prices slowed, while at the same time import prices of capital goods fell.

The surplus of trade in services this year has been increasing faster than last year as a result of high growth in exports of tourism and transport services.

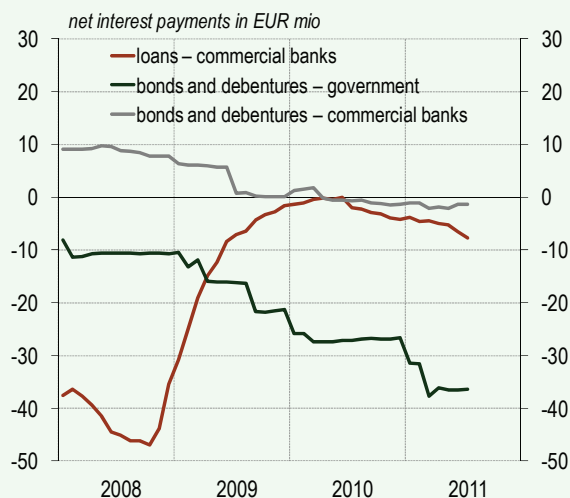

Tourism export over the first seven months of the year increased by 8.3% in year-on-year terms, while export of transport services increased by 13.3%, despite a slow-

down in recent months. Because tourism imports declined by 8.6% in year-on-year terms and growth in imports of transport services was well below growth in exports at 5%, the total surplus of trade in these services was up over a quarter in year-on-year terms at just over EUR 1 billion. At the same time there was a significant increase in the deficit in trade in other services (services other than tourism and transport), where the deficit in trade in intellectual property services was particularly notable. Year-on-year growth in imports of other services in the first seven months of the year was 12.8%, 8.4 percentage points higher than growth in exports. Growth in trade in other services has also slowed considerably in recent months, and exports of other services in July were actually down in year-on-year terms. The surplus of trade in services in the first seven months of the year reached

Net interest payments on loans, bonds and debentures

EUR 861 million, up EUR 126 million on the same period last year.

Although the deficit in June and July was lower than a year ago, factor income is becoming the main factor preventing a surplus in the current account. The deficit in factor income in the first seven months of the year amounted to EUR 361 million, up EUR 61 million in year-on-year terms. The deficit in capital income widened by EUR 69 million, from FDI widened by EUR 15 million, from investments in securities by EUR 13 million, and the deficit in net interest payments on loans by EUR 40 million. Compared with last year, the net outflows of commercial banks and the government sector for interest on debt securities increased significantly as a result of past

bond issues. These outflows will grow further, partly as a result of the downgrading of Slovenia's sovereign debt. Net interest payments by banks and firms on loans from the rest of the world have increased this year, primarily as a result of the rise in interest rates. Since the outbreak of the crisis labour income has recorded a surplus as a result of extensive redundancies among foreign workers, the monthly surplus fluctuating slightly above EUR 10 million.

As a result of higher inflows in government transfers there was again a surplus in current transfers in July. At EUR 82 million, July's inflow in government transfers was among the largest this year. These inflows amounted to EUR 569 million over the first seven months of the year, up EUR 191 million on the same period last year. At the same time, inflows from the EU budget increased by EUR 150 million in year-on-year terms to reach EUR 440 million. There was no significant increase in the deficit in transfers recorded by other sectors. The surplus in current transfers over the first seven months of the year amounted to EUR 107 million, while the deficit over the same period last year amounted to EUR 71 million.

Capital and financial account

The private sector's claims and liabilities increased sharply in July. Because the increase in claims was greater, there was a negative net financial flow for the fifth consecutive month. Claims rose by EUR 466 million in July, while liabilities rose by EUR 401 million.. An

Current transfers

Financial claims* on the rest of the world - July 2011

increase of EUR 439 million in residents' holdings of currency and deposits in the rest of the world, particular those of banks, was the main factor in July's increase in the private sector's claims. For the first time since January, FDI in the rest of the world rose sharply in July, by EUR 52 million. At the same time investments by residents in foreign debt securities declined by EUR 101 million. On the liability side of the private sector, there was a sharp increase of EUR 415 million in foreign long-term loans to domestic residents, while short-term loans to residents declined by EUR 173 million. The large domestic banks were the main contributors to the increase in foreign long-term loans to residents, having obtained long-term syndicated loans in the rest of the world in July. For the first time since February, liabilities from non-residents' deposits at domestic banks also increased in July, by EUR 69 million, while liabilities from FDI have also been increasing since February. They rose again in July, by

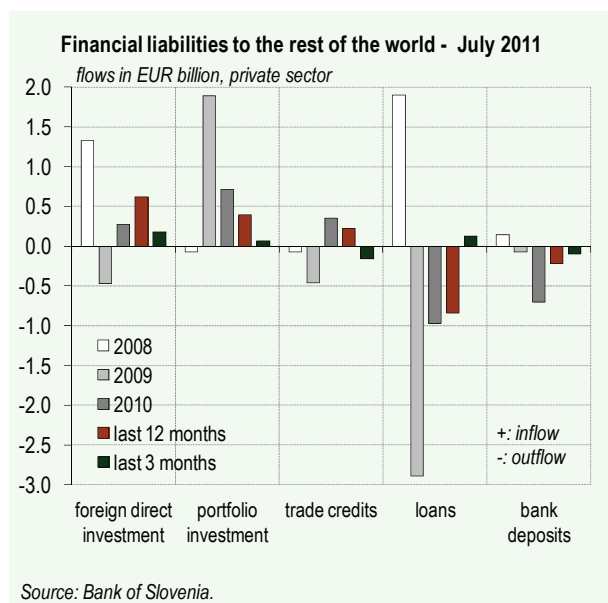

EUR 64 million.

The first seven months of the year saw a relatively large net outflow of financial assets to the rest of the world, primarily as a result of significant outflows of residents' holdings of currency and deposits. The private sector's claims rose by EUR 2.14 billion during the first seven months of the year, EUR 1.9 billion more than in the same period last year. The main factor in this year's increase in claims was a year-on-year increase of EUR 1.64 billion in residents' holdings of currency and deposits in the rest of the world. The private sector's liabilities to the rest of the world increased by EUR 245 million in the first seven months of the year, having declined by EUR 203 million in the same period last year. FDI and portfolio investment increased by EUR 666 million. This was slightly higher than in the same period last year, when these liabilities rose by EUR 642 million. The year-on-year increase in the private sector's liabilities was

Signs: inflows or increases in liabilities (+), outflows or increases in claims (-).

therefore driven mainly by an increase in foreign loans to domestic non-banking sectors, whose liabilities increased by EUR 255 million this year after last year's debt repayments of EUR 262 million. Following last year's withdrawal of deposits by non-residents from the domestic banking system, these deposits increased by EUR 69 million this year. The increase in the private sector's liabilities in the first seven months of the year was limited primarily by further debt repayments by domestic banks in the rest of the world in the amount of EUR 744 million, or double the amount repaid in the same period last year.

The gross external debt and gross external claims increased in July, while the net external debt declined for the third consecutive month. The net external debt

declined by EUR 63 million in July, as a result of a larger increase in gross claims than in gross debt to the rest of the world. The gross external debt in July was up EUR 329 million on the previous month, primarily as a result of an increase in foreign long-term loans to the banking sector. July saw a renewed increase in non-residents' deposits with the central bank and commercial banks, while the increase in debt was limited by the domestic banks' repayments of short-term loans from the rest of the world and the government sector's repayment of long-term bonds. The increase in claims was mainly driven by the banking sector, which increased its investments in the rest of the world by EUR 326 million, and the private sector, which increased its claims against the rest of the world by EUR 70 million. The majority of the latter were short-term claims from currency and deposits.

5 | Public Finance

According to the Ministry of Finance forecasts, the general government deficit is expected to reach 5.5% of GDP this year, while the general government debt is expected to reach 45.1% of GDP. The general government deficit (ESA 95 methodology) was estimated at 5.8% of GDP for 2010 in the regular annual revision. This was 0.2 percentage points more than in the preliminary estimate, partly because of a larger nominal government deficit, and partly because of lower nominal GDP. The general government deficit in one year up to June amounted to EUR 2,305 million, or 6.4% of GDP. The government accounts in the first half of the year were affected by two transactions of a one-off nature, and as a result expenditure was up 5.9% in year-on-year terms. The deficit in the first quarter included the recapitalisation of NLB in the amount of EUR 243 million, while the transfer to Slovenian Railways in the amount of EUR 134 million was posted in the second quarter, together equivalent to 1% of annual GDP. General government revenues in the first half of the year were up 3.8% in year-on-year terms, 2.1 percentage points less than growth in expenditure. A recapitalisation in the amount of EUR 50 million

was carried out at Adria Airways, and the ministries must reduce their state budget expenditure by the same amount. The revision to this year's state budget was approved by the National Assembly in mid-September, and the planned deficit (according to the national methodology) remained at the level of EUR 1,688 million, or 4.7% of GDP.

The general government deficit in July widened by EUR 92 million in year-on-year terms, but the cumulative deficit over the first seven months of the year was down EUR 356 million in year-on-year terms. The general government deficit over the first seven months of the year stood at EUR 1,134 million. In the first half of the year the deficit narrowed as a result of high growth in revenues, in particular corporate income tax, as a result of settlements for 2010, VAT and inflows from the EU budget. General government revenues in July were down in year-on-year terms, while the deficit widened. According to the available figures, the deficit in August was again higher in year-on-year terms. The state budget recorded a deficit of EUR 99 million in August, compared with a surplus of EUR 24 million in the same month last year. The state budget deficit over the first eight months of the year reached EUR 1,210 million, EUR 190 million less than in the same period last year. Local government recorded a surplus in the first seven months of the year in the amount of EUR 15 million (compared with a deficit of EUR 45 million in the same period last year), while the

Health Insurance Institute recorded a deficit of EUR 50 million during the first eight months of the year (compared with a deficit of EUR 24 million in the same period last year).

General government revenues were down in year-on-year terms in July and, according to the available figures, also in August, although they recorded year-on-year growth of 6.9% in the first seven months of the year. Growth in general government revenues was high in the first half of the year, but revenues were down 7.4% in year-on-year terms in July. This was primarily the result of payments of excise duties being deferred to August. Available estimates suggest that general govern-

 Note: *All bond issues disbursed on domestic market are counted under domestic borrowing, despite of the residency of buyers.

ment revenues were again down in year-on-year terms in August, mainly as a result of lower non-tax revenues. The latter were relatively high last August, as a result of the extraordinary revenues from Russia's clearing debt repayment of approximately EUR 60 million. Among tax revenues, there was an increase in inflows of excise duties, while VAT revenues were lower. Growth in revenues tied to wages has been low this year. Given the adverse situation on the labour market, payments of social contributions increased by just over 1% in the first eight months of the year (they were up around 0.7% in year-on-year terms in July and August), while revenues from personal income tax were up less. Revenues from the EU budget were down slightly in August for the third consecutive month, although the cumulative total over the first eight months of the year was up EUR 150 million on the same period last year.

Growth in general government expenditure in the first seven months of the year stood at 2.1%. The growth

is most notable in expenditure on interest and social transfers, while investment expenditure is shrinking.

The largest factor in the increase of EUR 197 million in expenditures was expenditure on pensions (EUR 86 million). This expenditure was up 3.6%, primarily as a result of an increase in the number of pensioners, February's pension increase having been minimal, in line with the intervention act. Growth in interest expenditure was high, as a result of a higher stock of debt, and payments were up almost a tenth in year-on-year terms. Given the adverse situation on the labour market, expenditure on the unemployed is also growing. The largest overall decline was recorded by investment expenditure and investment transfers, which were down 11.2% in year-on-year terms in the first seven months of the year. Expenditure on wages in the first seven months of the year was up 0.4% in year-on-year terms, primarily as a result of the growth in the number of employees in the public sector, while expenditure on goods and services was up 1.7%.

Source: Ministry of finance, except: ** Public Payments Administration of the Republic of Slovenia, Report on classified general government revenues and coverage (B-2); Bank of Slovenia calculations.

Note: * Consolidated central government budget, local government budgets and social security funds (pension and disability insurance fund and health insurance fund) in cash accounting principle.

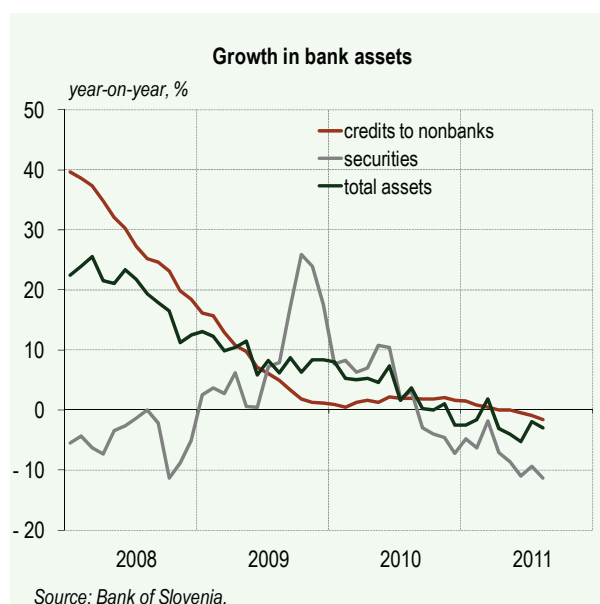

In the first seven months of the year the government sector borrowed approximately EUR 3.1 billion, mainly by issuing long-term bonds. Borrowing was used to finance the deficit in the general government revenue and expenditure account in the amount of EUR 1,134 million, and to repay debt in the amount of EUR 956 million, while EUR 592 million was deposited in accounts. In addition it was used to finance the deficit in the account of financial claims and investments in the amount of EUR 403 million, which covers, inter alia, the NLB recapitalisation (EUR 243 million) and the loans to Greece (EUR 131 million). On 27 September the National Assembly approved the revised version of the Act on Guarantees of the Republic of Slovenia for the purpose of maintaining financial stability in the euro area, thereby approving the agreement reached by the heads of state of the euro area on 21 July. This will increase the Slovenian guarantee from EUR 2.073 billion to EUR 3.664 billion. In the context of a further deterioration on the government debt markets, the premiums on bonds issued by certain euro area countries over the benchmark German bonds increased further. According to the figures up to 28 September, the premium on Slovenian 10-year bonds over the German benchmark averaged 296 basis points in September (compared with 258 basis points in August). The rating agencies Moody's and Fitch downgraded Slovenian government bonds by one notch.

6 | Banking System*

The banking system's total assets declined by EUR 62 million in August. The main factors in August's decline on the funding side were a decline in liabilities to foreign banks and a decline in government deposits. On the investment side the stock of loans to non-banking sectors continued to decline in August, primarily on account of the domestic banks. As a result of relatively high impairment and provisioning costs, for the second consecutive month there was an above-average decline in the stock of loans to non-financial corporations, while the fall in the Swiss franc meant that the stock of households loans also slightly declined. The banking system operated at a loss in the first eight months of the year; the main factors in August were more negative growth in gross income and, most notably, an increase in impairment and provisioning costs.

The net stock of loans to non-banking sectors in August fell by EUR 194 million, while the current rate of growth was lower than in July at -1.6%. The stock of loans declined for the first time this year at all the different groups of banks; the impact of impairment and provi-

* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

sioning costs was greater than in the previous month.

Lending to non-financial corporations (NFCs) was down again in August, although the negative growth remained unchanged compared with July. Under the influence of a significant negative net increase in loans, the current rate of growth in lending remains at its lowest level this year. NFCs recorded a larger decline in long-term loans in August.

The trend of decline in growth in loans to households continued in August after an interruption in July. The banks under majority foreign ownership contributed most to the net decline of EUR 21 million in loans to households, as a result of the movement in the Swiss franc. This group of banks nevertheless maintains higher growth in lending to households than the domestic banks.

In August the banks again reduced their liabilities to the rest of the world. The process of reducing the banks' dependence on foreign funding is continuing. During the first eight months of the year the banks reduced their net liabilities to banks in the rest of the world by a total of EUR 1,025 million, slightly more than in the same period last year. At the same time the banks recorded an above-average increase in financial liabilities to the Eurosystem in August, at EUR 88 million, as they participated in the extraordinary 6-month LTRO.

A decline in government deposits was the main reason for August's decline in bank deposits by non-banking sectors. Growth in deposits by non-banking sectors is declining, and is down considerably compared with last year. The government contributed EUR 92 million to August's decline of EUR 60 million in deposits by non-banking sectors. To a lesser extent, household deposits also declined, but they nevertheless grew in August at the average rate for this year. The increase in deposits by non-financial corporations, which amounted to EUR 23 million in August, was considerably smaller than the increase in July, while the increase in deposits by OFIs was above average. As a result of a decline in sight deposits and short-term deposits, there was an increase in the relative importance of long-term deposits, particularly in the segment of maturities of 1 to 2 years.

Impairment and provisioning costs recorded above-

average increases in August, so that the banking system operated at a loss in the first eight months of the year. The deterioration in the banking system's financial results in August was to a lesser extent caused by declining growth in gross income, primarily as a result of non-interest income. The banks recorded a relatively sharp increase in impairment and provisioning costs in the amount of EUR 102 million in August. Impairment and provisioning costs amounted to EUR 459 million during the first eight months of the year, up 22% on the same period last year. In August the banking system generated a loss before taxes for the first time since February, of EUR 11 million.

7 | Domestic Financial Markets

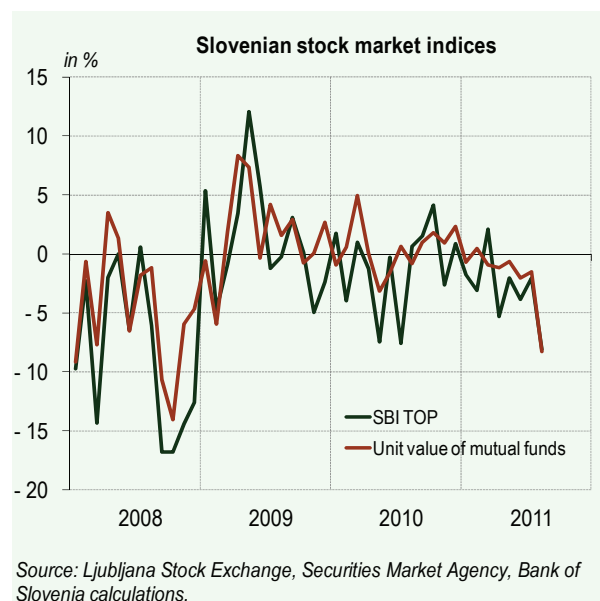

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 0.4% in August. Government bonds accounted for the largest proportion of market capitalisation (91.5%), followed by bank bonds (5.6%) and corporate bonds (just under 3%). Poteza Skupina 1st issue bonds were delisted from the Ljubljana Stock Exchange in August as a result of bankruptcy. Despite the delisting, the volume of trading was up 70% at EUR 3.4 million. Slovenska odškodninska družba 2nd-issue bonds accounted for more than 80% of the volume. The propor-

tion of total stock exchange volume accounted for by bonds stood at 8.3% in August.

The market capitalisation of shares on the Ljubljana Stock Exchange fell by 6.3% in August. Corporates accounted for the majority of the market capitalisation of shares (86.4%), followed by banks (7.2%) and insurance corporations (6.4%). After declining in July as is customary, the monthly volume of trading in shares rose by 52.9% in August to EUR 37.6 million, or 91.3% of total stock exchange volume. Almost three-quarters of the total volume of trading in shares, or EUR 28.1 million, was in Krka and Mercator shares. At the end of August shares in Goriške opekarne and Finetol were delisted from the Ljubljana Stock Exchange, while Unior shares were listed. The dividend yield on the prime market has been rising for almost a year, and stood at 3.1% at the end of August. The SBITOP fell below the 700 level in August, ending the month at 668. Such lows have not been seen since the end of 2003. The monthly fall was 8.1%, taking the year-on-year change to -18.3%.

The major stock market indices fell sharply in August. The DJ EuroStoxx for western Europe and the S&P 500 for the US were down 12.9% and 5.7% respectively, the fourth consecutive monthly falls. China's Hang Seng and the Frankfurt DAX XETRA also declined, by 8.5% and 19.2% respectively. The indices in the former Yugoslav republics fell in monthly terms, but the year-on-year changes remained positive. Croatia's CROBEX was

down 6.4%, Serbia's BELEX 15 was down 11.1%, and Macedonia's MBI-10 was down 6.2%, taking the monthly changes to +10.1%, +1.6% and +1.1% respectively.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents stood at 12.5% in August. Net purchases of Slovenian shares by non-residents amounted to EUR 4.2 million in August, the second lowest figure this year. The majority of trading this month was again in Krka shares. The largest net sellers of shares were residents of Austria with EUR 17.4 million, while the largest net purchasers were residents of Croatia with EUR 13.9 million. Non-residents made net sales of Slovenian bonds in the amount of EUR 28.5 million. The largest net pur-

chasers of bonds were residents of Germany with EUR 23.1 million, while the largest net sellers were residents of the UK with EUR 32.9 million and residents of Luxembourg with EUR 24.3 million.

Residents made net sales of bonds in the amount of EUR 135 million, the highest figure this year. They also made net sales of shares in foreign issuers in the amount of EUR 15.1 million. The largest net sales of foreign bonds were made by the banking sector, at EUR 113.4 million, primarily from the euro area. Three-quarters of all net sales of foreign bonds were made by Nova Ljubljanska banka. Insurance corporations and pension funds were the most important net investors in foreign shares, with a total of EUR 5.9 million. The largest net sales, of EUR 23 million, were made by households. The majority of net sales were made in shares from the euro area and the US.

The domestic mutual funds' assets under management declined in August for the fourth consecutive month, reaching EUR 1,919 million. This was the result of net withdrawals in the amount of EUR 12.2 million and an 8.3% fall in average unit price. In August the largest investment fund, NFD 1, converted into a mutual fund. The conversion of all the investment funds was thus completed before the deadline at the end of 2011. During conversion all the shares in the investment funds were converted into mutual fund units, and began

to be valued at book value. The mutual funds under majority bank ownership recorded net withdrawals of EUR 16.7 million in August, the largest figure this year. The non-bank mutual funds began recording inflows again, in the amount of EUR 4.6 million in August. The largest net withdrawals were recorded by balanced funds and equity funds, at EUR 10.7 million and EUR 9.6 million respectively. Money-market funds recorded the largest net inflows, at EUR 6 million, followed by bond funds with EUR 2.2 million. The household sector accounted for almost all net withdrawals (99% to be exact). Net inflows were almost non-existent in August. Even insurance corporations and pension funds, which have invested most in recent months, recorded net inflows of just EUR 0.9 million. The proportion of the domestic mutual funds' assets held in liquid assets² declined to 9.1% in August.

² Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Note 1: With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

Table 1.4.: Balance Sheet of other Monetary Financial Institutions

The table summarizes data on assets and liabilities of other Monetary Financial Institutions, i.e. banks, savings banks, savings and loans undertakings and money market funds, at the end of the month.

Detailed survey of assets and liabilities of the monetary financial institutions is in the tables 1.5. and 1.6.

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds**General**

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Exchange rates (Tables 2.6.1–2.6.2)

Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish złoty was denominated on 1 January 1995 at the exchange rate of 1 new złoty for 10,000 old złotych.

Table 2.6.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

Payment systems (Tables 2.7 to 2.13)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.8 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.9 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.10 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.11 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.12 Debit Transfers

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.13: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
 - report on account balances at domestic banks – PPV (until 31 December 2004),
 - report on account balances abroad – C (until 31 December 2006),
 - report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
 - report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

- **Estimates and other sources**
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
 - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
 - estimate of Italian pensions (UMAR) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
 - estimate of labour income (SURS),
 - data on pensions paid to non-residents (ZPIZ),
 - survey on the write-downs of debt from trade in goods and services abroad,
 - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
 - estimate of cash transactions on tourism and labour income (from 2007 onwards),
 - quarterly data on consumption of foreign embassies in Slovenia (SURS, from 2008 onwards),
 - migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
 - households' transfers (SURS, from 2008 onwards),
 - assets acquired directly by tenders and programmes of EU (SURS, from 2008 onwards),
 - data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards),
 - data on purchases/sales of real-estate in Croatia (Croatian National Bank, from 2008 onwards),
 - data on purchases/sales of emission allowances between residents and nonresidents (Slovenian Environment Agency, from 2008 onwards).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2009)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SURS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SURS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SURS, Annual survey on investment in tangible assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Repub-

lic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From the same year data on Slovenian residents' purchases/sales of real-estate in Croatia are included (data source is Croatian National Bank).

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies.

Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1988 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)
- January 2011, RS69 (EUR 1000.0 million)
- March 2011, RS70 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2011 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2008 to 2010 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2012, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2012 shall take into consideration the new three year average (2009 to 2011).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt**General notes**

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial derivatives are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves**Table 3.12.: International reserves**

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.
Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev. 2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site:

http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1-ZAP/M)). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: until 31.12.2006 Slovenian tolar, from 01.01.2007 Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia:
<http://www.bsi.si/publikacije-in-raziskave.asp?MapaId=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
1.5. Selected Assets of Other Monetary Financial Institutions by Sector	2.6 MFI holdings of securities, breakdown
1.6. Selected Obligations of Other Monetary Financial Institutions by Sector or	2.5 Deposits held with MFIs, breakdown
