Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

Summary

Economic developments in Slovenia remain unfavourable. The continuing adverse situation in the international environment is being reflected in a lower level of industrial production. Activity in the construction sector and turnover in retail trade reveal a further decline in domestic demand. This is also a factor in the continuing surplus in the current account. Although the economic sentiment indicators were slightly better in the first quarter, survey estimates of current demand remain unfavourable in all sectors. Consumer confidence returned to its levels before the announcement of the last year's consolidation measures, which is contrary to the deteriorating situation on the labour market. The number of unemployed rose and the workforce in employment fell in the early part of the year. The number of vacancies and new hires were low, and the nominal wage bill declined.

Last year's general government deficit narrowed sharply compared with the previous year, to 3.7% of GDP. This was achieved by cuts in expenditure via measures under the ZUJF, discretionary government measures, the partial deferral of expenditure to strengthen the banks' capital to 2013, and cuts in corporate subsidies. The deficit has continued to narrow in the early part of this year.

Measured by the HICP, year-on-year inflation stood at 2.2% in March, down 0.7 percentage points on February. The fall in inflation was the result of a sharp fall in prices of industrial goods, in particular as a result of very weak seasonal dynamics in prices of clothing and footwear, and a fall in prices of refined petroleum products.

The contraction in the banking system's total assets continued in the early part of this year, primarily as a result of the banks' debt repayments to the rest of the world. A solid increase in household deposits has mitigated the adverse impact of the withdrawal of government deposits on total deposits by the non-banking sector. The decline in lending to non-financial corporations slowed in January, as a result of the smaller creation of loan impairments compared with the end of last year. By contrast, the decline in household financing via consumer and housing loans increased, which is a reflection of the economic and social situation in the country. The banking system recorded a modest pre-tax profit of EUR 9.9 million in January.

1 | International Environment

In March, business expectations in the euro area deteriorated in light of the most recent shocks on the financial markets. In the early part of the year, the contraction in activity in individual sectors was accompanied by a high unemployment rate, which stood at 12% in February. Oil prices fell and the euro slid against the US dollar under the influence of the Cypriot crisis. There was no significant change in the forecasts for this year's economic growth in Slovenia's most important trading partners in March, while global economic growth is expected to decline slightly according to the latest forecasts.

Economic developments

In the early part of this year, unfavourable economic developments in the euro area continued. After strengthening in December, industrial production declined again in January, taking the year-on-year decline to just over 1%. The contraction in the amount of construction put in place deepened in January, taking the year-on-year decline to more than 7%. As activity contracts, the unemployment rate is rising, standing at 12% in February. As a result of the situation on the labour market, turnover in the retail sector remains low, despite a monthly recovery in January. A major factor in January's increase in revenues in retail trade was sales in Germany, where the developments on the labour market were among the most favourable of the euro area countries. Consumer confidence in the euro area remained low in March, and was practically unchanged on the previous month. Other indicators of economic sentiment calculated by the European Commission declined in March. The retail confidence indicator recorded the largest decline.

The worsening situation in Cyprus and the renewed uncertainty surrounding euro area periphery countries deteriorated expectations for economic developments. In March, Markit's composite PMI for the euro area recorded its fastest decline of the last four months,

the level suggesting a significant decline in economic activity. March saw business expectations in the index decline in both manufacturing and services. In France, assessments of business conditions fell to their lowest level in the last three years. Expectations in German manufacturing also declined. Germany's Ifo index, which measures the business climate, declined significantly in March, as the assessment of future business trends deteriorated significantly. Consensus's March GDP growth forecast for the euro area stood at -0.3% for 2013, which is a 0.1 percentage points larger decline in comparison to the previous forecast, conducted in February. Of Slovenia's most important euro area trading partners, the largest decline in March was in the economic growth forecast

for Italy, which was down 0.3 percentage points at -1.2% as a result of political uncertainty. The forecasts for this year's economic growth in Germany and Austria remained unchanged at 0.7%. In February, there was no significant change in the forecasts for this year's economic growth in Slovenia's main partners outside the euro area. According to the latest IMF forecasts, this year's global economic growth will be slightly lower than previously projected.

Global financial markets and commodity prices

In February, the mood on the global financial markets mostly deteriorated. The reasons for this were the uncertainty brought by the election result in Italy, rising unemployment in the EU, and the release of the initial estimates of GDP for the final quarter of last year, which were worse than expected in key euro countries (Germany, France and Italy). Markets in Europe were affected by the unfavourable developments in the financial situation in Cyprus in February. The latest indicators released in the US currently suggest a modest recovery in the American economy. US corporate results last year were also better than expected. Japan's Nikkei and the S&P 500 in the US both recorded positive growth in February, at 3.8% and 1.1% respectively. Germany's DAX fell by 0.4%, the DJ EuroStoxx 50 for western Europe by 0.8%, Hong Kong's HSI by 3% and the MSEELEME for eastern Europe by 3.4%. Growth in the Balkan stock exchange indices was mostly weak in February.

Prices of oil and other commodities fell in March, while the euro also fell. The price of Brent crude fell in March as a result of the contraction in sales in the automotive industry in the euro area, and in particular as a result of the Cypriot crisis. The price of a barrel averaged USD 109.2 during the month, the lowest figure since February 2011. It was down 6% on the previous month, and down 12.6% in year-on-year terms. In March, other commodity prices were also down on February. Metals prices fell most, by almost 6%. Since last September, food prices have been declining in monthly terms. They fell again in March, and were down 2% in year-on-year terms. The uncertainty surrounding a solution to the Cypriot crisis also had an impact on the value of the euro. It averaged USD 1.30 in March, down 3% on February.

2 | Economic Activity

Economic developments in Slovenia remain unfavourable. Judging by turnover in retail trade and construction activity, domestic demand is continuing to decline. Further evidence of the continuing adverse situation in the narrower international environment comes from the diminished level of industrial production. The economic sentiment indicators rose slightly in the first quarter, although survey estimates of current demand remain unfavourable in all sectors. Consumer confidence returned to its levels before the announcement of tougher consolidation measures, but the movement in the index is contrary to the deteriorating situation on the labour market.

Economic sentiment

In March, the economic sentiment indicator rose for the first time since last December. The largest factor in this was consumer confidence, which is improving as a result of less pessimistic expectations about the economic situation in the country, household savings and the household financial position. The consumer confidence indicator thus returned to its level prior the announcement of the tougher government austerity measures last April. In contrast to construction, the service, retail and manufacturing confidence indicators all rose. The improvement in business confidence in the service sector was the result of an improved assessment of the business situation, while the indicators of current and expected demand declined. The indicator of current sales in the retail sector reached its lowest ever value in March, while the indicator of expected sales, which fluctuates sharply, rose notably. The improvement in business confidence in the manufacturing sector was negligible in March, as a result of a lower assessment of inventories, while the indicators of current demand remained unfavourable.

Industry

There was no significant change in industrial production in January compared with the previous month.

Industrial production declined by 0.2% as a result of lower activity in the mining sector, while growth in output in manufacturing and the energy sector was weak but positive. Total industrial production was down 1.8% in year-on-year terms, comparable to the decline in the EU. Export developments continue to indicate the manufacturing sector's refocusing on markets outside the EU, but the year-on-year decline in exports to the EU also slowed significantly in January.

Private sector services

Turnover in retail trade declined again in February, while growth in turnover in other service sectors was unexpectedly high. February's turnover in retail trade (excluding motor vehicles) was down 2% on January, all the main segments of trade continuing to record a decline. Turnover in trade in vehicles is continuing to decline sharply, in line with the fall in the number of new vehicle registrations. In January, monthly growth in nominal turnover in private sector services (excluding trade and financial services) was relatively high for the second consecutive month. It reached more than 3%. Only the information and communication sector recorded a slight decline in turnover. Total turnover in services in January was also up in year-on-year terms, by 1.5%.

Construction

After two months of monthly growth, activity in the construction sector declined sharply in January. The construction of buildings put in place was up on December, but this made little impact on the decline in total construction activity as the amount of civil engineering work declined sharply. The situation in the civil engineering segment has improved slightly since the second quarter of last year, at least in terms of weak trend growth during this period. The year-on-year movements remain unfavourable.

vourable. According to original figures, total activity was down more than a fifth on last January. The amount of residential construction put in place was down a half. The surveyed demand indicators also remain unfavourable.

3 | Labour Market

On the labour market, the early part of the year saw a rise in unemployment, a fall in the workforce in employment, a low number of vacancies and new hires, and a decline in the nominal wage bill. One of the rare positive signs came from the seasonal monthly fall in unemployment in February, which on this occasion was weak. The active population is also declining, which in addition to retirements is also an indication of people withdrawing from the formal labour market because of a lack of jobs.

Unemployment, vacancies and workforce in employment

The number of unemployed fell slightly, but was still in excess of 124,000. February's fall in the number of registered unemployed, which was rather weak this year, is a seasonal feature, and could indicate that the normal period of falling unemployment in the spring and summer months will not be absent this year. Year-on-year growth in the number of registered unemployed increased to 7.9% in February. The registered unemployment rate stood at 13.6% in January, the highest since February 1999.

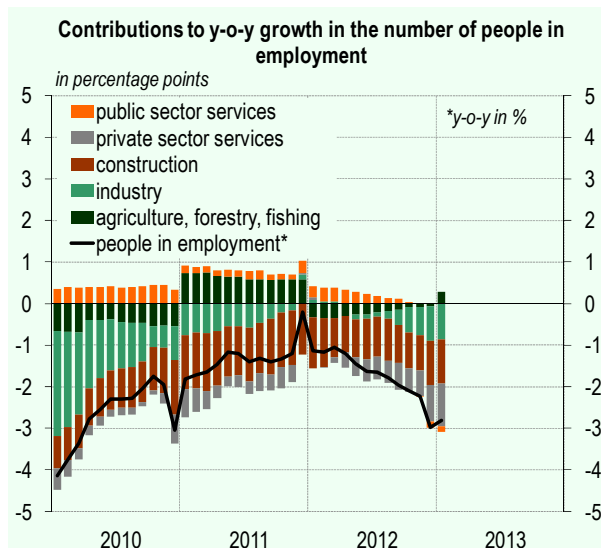

The number of notified vacancies and new hires remains very low. The largest number of people newly registering as unemployed was again those whose temporary employment contracts ended. The majority of new hires were also for temporary employment, as a result of the chaining of this type of contract. Temporary employment is prevalent because of the high uncertainty in the economy. In February, the number of notified vacancies was down almost 15% in year-on-year terms, at just over 11,000, very close to the levels seen at the end of 2009.

* number of registered unemployed persons, y-o-y change
Source: Employment Service of Slovenia, SORS, Bank of Slovenia calculations.

Source: Employment Service of Slovenia.

Source: SORS, Bank of Slovenia calculations.

This number of vacancies thereby continued to decline, as it has since April 2012. This has been tracked by a fall in the number of new hires, which in February was down almost 15% in year-on-year terms. It is a cause for concern that export-oriented manufacturing industries have also recorded a year-on-year fall in the number of vacancies, of more than 20%.

At the beginning of this year, the workforce in employment has continued to fall. In January, the workforce in employment was down almost 23,000 on a year earlier. There was a minor increase in the number of self-employed, but only as a result of a higher estimate for the number of farmers. The fall in the workforce in employment in Construction remains rapid, while in the manufacturing sector the year-on-year fall increased to 3.7%. The workforce in employment was down in year-on-year terms in the private sector and also in public services, by 3.4% and 0.7% respectively. The latter was again the result of a fall in the workforce in employment in public administration, while employment in education was un-

Total wage bill and average monthly gross wage per employee

*The wage bill is calculated as the product of the average gross wage for employees of legal persons who received pay and the total number of employees of legal persons.

Source: SORS, Bank of Slovenia calculations.

changed and employment in healthcare increased slightly. The fall in the workforce in employment is being reflected in a rise in unemployment, but also in increasing withdrawals from the formal labour market. This is being reflected in a fall in the active population.

Wage developments

The average nominal gross wage per employee stagnated in January. Wages in the public sector remain down just under 4%. The average gross wage in the private sector was up 1% in year-on-year terms, partly as a result of January's adjustment to the minimum wage, which increased by 2.7%. Average gross wages fell in year-on-year terms in all sectors other than manufacturing, water supply and energy, mining, and agriculture. The nominal wage bill was down 4.3% in year-on-year terms in public services, and 2.8% in the private sector. In the public sector, the decline was mainly driven by a decline in nominal wages, while in the private sector it was the result of a fall in the number of employees.

4 | Price Developments

Measured by the HICP, year-on-year inflation stood at 2.2% in March, down 0.7 percentage points on February. The fall in inflation was primarily the result of a year-on-year fall in prices of industrial goods due to lower prices of refined petroleum products and very low seasonal rises in prices of clothing and footwear. The last factor also brought a fall in the core inflation indicators, which remain low. Core inflation is thus still reflecting weak purchasing power and consumer caution.

Headline inflation and structure of inflation

Measured by the HICP, year-on-year inflation in March was down by 0.7 percentage points on February at 2.2%, primarily as a result of a sharp fall in prices of industrial goods. In March, year-on-year growth in prices of non-energy industrial goods was down 1.8 percentage points at -1.5%. This was largely the result of the exceptionally low seasonal rise in prices of clothing and footwear, after the season was shifted sharply in February. For the first time this year, prices of refined petroleum products fell in March as a result of lower oil prices on global markets. Year-on-year growth in

energy prices thus declined by 2.1 percentage points to 3.8%. Year-on-year growth in services prices increased by 0.2 percentage points to 1.9%, primarily as a result of the introduction of a tax on financial services, which the banks passed through into the final prices of their products. Year-on-year growth in food prices declined to a lesser extent in March, by 0.1 percentage points to 6.1%, although their contribution to inflation remained highest at 1.4 percentage points.

Core inflation

Core inflation fell in March. Year-on-year growth in the HICP excluding energy, food, alcohol and tobacco was down 0.7 percentage points at 0.4%. The other two core inflation indicators, the HICP excluding energy and unprocessed food and the HICP excluding energy, fell by 0.6 percentage points. The fall was primarily the result of lower year-on-year growth in prices of clothing and footwear. The low core inflation is a reflection of the ongoing adverse situation on the labour market and the low domestic demand.

Comparison with euro area

The year-on-year inflation rate in Slovenia rose in the middle of last year, exceeding the euro area average. Year-on-year inflation in Slovenia rose sharply in the second half of the year, becoming one of the highest in the euro area. The differences mainly derive from government measures related to fiscal consolidation, which con-

tributed 1.6 percentage points to year-on-year inflation in Slovenia in February. Of this, 0.6 percentage points came from excise duties on refined petroleum products and the introduction of a carbon tax. The main factor in the rise in prices of processed food were excise duties on tobacco, whose fourth increase in the period of one year contributed 0.5 percentage points to year-on-year inflation. The effects of the ZUJF and rises in prices under the control of local authorities with an impact on services prices and thus on core inflation made the same contribution to year-on-year inflation in February. In the absence of fiscal measures, the narrowest core inflation indicator would be around zero, and thus well below the average in the euro

area, which was 1.3% in February. In the second half of 2012 and the first months of this year, a significant difference also comes from the sharp growth in prices of unprocessed food in Slovenia.

5 | Public Finances

Last year's general government deficit narrowed sharply compared with the previous year, to 3.7% of GDP. This reduction was achieved by cuts in expenditure via measures under the ZUJF and discretionary government measures. In addition, expenditure of a one-off nature, primarily in relation to bank recapitalisations and corporate subsidies, was also down significantly. The deficit has continued to narrow in the early part of this year. The Ministry of Finance is expecting a general government deficit of 4.2% of GDP this year, including the measures to strengthen bank capital. Excluding the expenditure for strengthening bank capital, the deficit would amount to 3% of GDP. After complications with the resolution of Cyprus's debt problems, the yield-to-maturity on Slovenian long-term bonds rose towards the end of March.

General government deficit and debt in 2012 according to ESA95 methodology

Last year's general government deficit stood at 3.7%, less than the Ministry of Finance's October estimate, but slightly more than the figure from the Stability Programme. In its October report on the general government deficit and debt, the Ministry of Finance expected a deficit of 4.2% of GDP, while the figure from the Stability Programme published last April was 3.5% of GDP. The significant narrowing of the deficit compared with the previous year, when it stood at 6.4% of GDP, was mainly the result of a significant reduction of 5.7% in government expenditure, while revenues declined by 0.4%. The re-

duction in expenditure was the result of measures under the ZUJF and additional government austerity measures. Expenditure of a one-off nature, primarily in relation to bank and corporate recapitalisations, was also down significantly.

The general government debt reached 54.1% of GDP by the end of last year. It was up 7.2 GDP percentage points on the previous year, a larger rise than the primary deficit alone (1.6% of GDP). Most of the increase (5.6 GDP percentage points) was the result of the snow-ball effect, which is caused by differences between the implicit interest rate on debt and nominal GDP growth and by deficit-debt adjustment. The latter primarily comprise borrowing for the (pre-)financing of debt principal maturing in the future, and Slovenia's participation in bail-outs for euro area countries undergoing debt problems.

The Ministry of Finance is forecasting a general government deficit of 4.2% of GDP this year and a general government debt of 59.2% of GDP. April's report on the general government deficit and debt forecast this year's deficit at EUR 1.5 billion or 4.2% of GDP, including the strengthening of bank capital in the amount of 1.2% of GDP, i.e. the deficit would be 3% of GDP without the aforementioned expenditure. The general government debt is forecast to reach just over EUR 21 billion or 59.2% of GDP at the end of the year.

Consolidated general government position, revenues and expenditure

The general government deficit narrowed in year-on-year terms again in January. In January, the general government deficit amounted to EUR 276 million, EUR 33 million less in year-on-year terms as a result of a smaller state budget deficit. The latter has been displaying a narrowing trend (in year-on-year terms) since last March, which continued in February this year, when the deficit amounted to EUR 253 million. The deficit of the Health Insurance Institute, which amounted to EUR 3 million during the first two months of the year, was significantly less than in the same period last year (having narrowed by EUR 46 million) as a result of the agreed deferral of payments to healthcare service providers, reductions in prices of services and measures under the ZUJF. In January, local government recorded a budget surplus of EUR 23 million, compared with an almost balanced position in the same month last year.

January's general government revenues were approximately at the same level as in January 2012.

There was a year-on-year decline (of EUR 30 million) in tax revenues, primarily social security contributions and corporate income tax, while the disbursement of funding from the EU budget was more rapid. During the first two months of this year, payments into the EU budget exceeded disbursements by EUR 26 million. Usually, there is a net negative position against the EU budget in the early months of the year, as the majority of inward payments are made at the beginning of the year, while disbursements get larger in later months (other than agriculture subsidies). According to initial figures, payments of taxes and contributions during the first two months of the year will also be down in year-on-year terms.

Consolidated general government expenditure continued to decline in January. Expenditure was down EUR 32 million in year-on-year terms. All the major expenditure categories declined, most notably expenditure on goods and services, and subsidies. Transfers to indi-

Spreads on 10-year government bonds as compared to Germany

Sources: Bloomberg, Bank of Slovenia calculations.

Note: Spread is calculated as a difference between yield of 10-year government bond and the yield of reference German bond on a daily basis and is used as a measure of country's credit risk. *In the picture, SLOREP 01/21 is used after 11. January 2011.

viduals and households also continued to decline, as did investment expenditure. Interest payments, which last year were the only major component of expenditure to increase, were down in year-on-year terms in January. This was related to the different (slower) pace of interest payments during the first two months of the year. Payments into the EU budget in January were higher than last year.

Financing of the state budget

In the first three months of the year, state budget borrowing was undertaken via issues of treasury bills.

The state budget raised EUR 364 million via treasury bill issues during the first three months of the year. Since the final quarter of last year, the yields to maturity achieved at treasury bill auctions have been falling. The budget disclosed a major loan in the amount of EUR 100 million in the landing and repayments account in January. This involved the purchase of NKBM contingent convertible bonds, the bank having already announced that the bonds will be converted into equity. The deficit in revenue and expenditure account and the maturing debt exceeded borrowing, as a result of which they were financed via a reduction in budget deposits at banks, which amounted to EUR 750 million during the first two months of the year.

The yield-to-maturity on eight-year Slovenian government bonds was relatively stable until mid-March at close to 5.0%, then it increased, primarily as a result

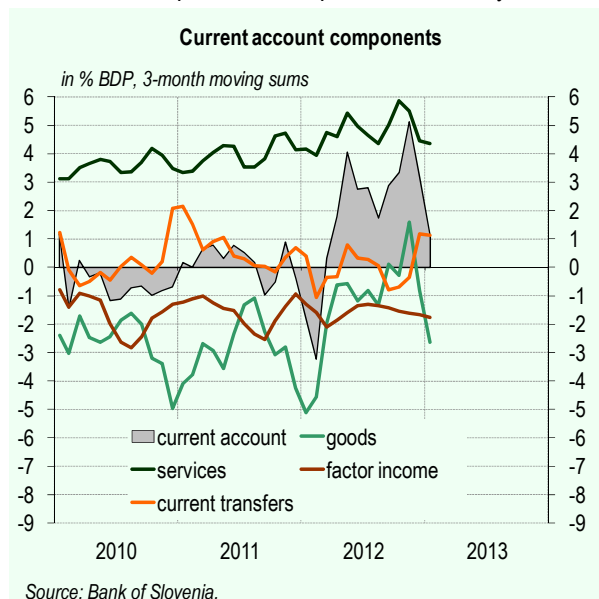

of the developments in the rest of the world. The movements since the beginning of the year have been similar to bonds of other euro area periphery countries. In March, they were primarily related to the uncertain political situation in Italy after parliamentary elections, and the resolution of the debt problems in Cyprus. The latter was also a factor in the rise in the yield-to-maturity in late March.

6 | Current Account

In January, the increase in the current account surplus seen in the second half of last year halted. January's deficit of EUR 69 million was just under a fifth larger in year-on-year terms. With the surplus of trade in services widening and the deficit in factor income and transfers narrowing, the main factor in the current account deficit was the large increase in the merchandise trade deficit. Despite January's deficit, the cumulative current account position over the last 12 months remained in surplus, at 2.3% of GDP.

Merchandise trade

After declining in the final two months of 2012, merchandise imports and exports increased in January. Merchandise imports were up 6% in January, while ex

Source: Bank of Slovenia.

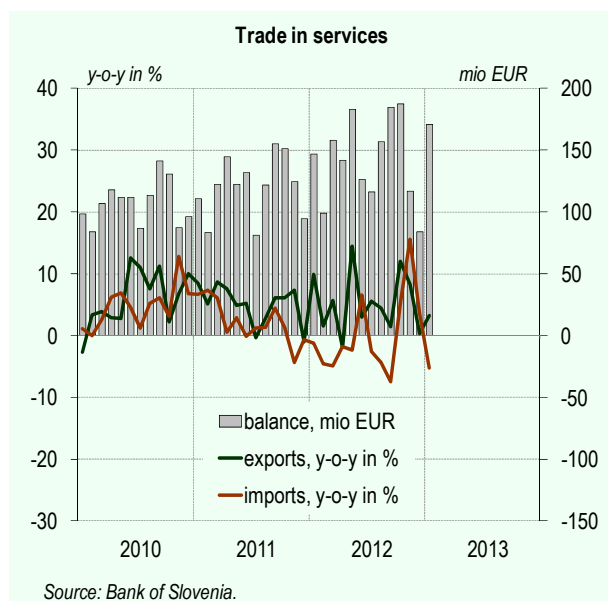

ports were up 3.6%. The rise in imports was primarily the result of a rise in the value of imported capital goods. January's merchandise trade deficit widened by EUR 44 million in year-on-year terms to EUR 163 million. The merchandise trade deficit over the last 12 months amounted to just over EUR 380 million or 1.1% of GDP, the smallest figure since 2002.

Merchandise trade with EU Member States stagnated in January, while growth in merchandise exports to non-EU countries accelerated. According to SORS figures, merchandise exports to EU Member States were unchanged in year-on-year terms in January, while exports to non-EU countries were up more than 13%. The proportion of total merchandise exports during the last 12 months accounted for by non-EU countries thus in-

creased by just under 2 percentage points to 31%. Merchandise imports from EU Member States increased by 7%, primarily as a result of import of a higher-value product, and imports from non-EU countries declined by more than 3%. Merchandise trade deficit in January reached EUR 215 million. The coverage of imports by exports stood at just over 88%.

Price factors also made a contribution to last year's decline in the merchandise trade deficit. The deterioration in the terms of trade in goods has been slowing since the first quarter of 2011. Growth in the indices of the average value of imports outpaced growth in the indices of the average value of exports by 3.5 percentage points in the first quarter of 2011, but by just 1 percentage point in the final quarter of last year. The index of the average value of imports was up 1.7% overall last year, while that of exports was up 1.4%, the negative terms of trade diminishing from 1.8% in 2011 to 0.3% last year. The terms of trade with non-euro-area countries deteriorated by 0.7%, significantly less than in 2011, while those for euro area countries deteriorated by 0.5%.¹

Trade in services

The year-on-year decline in imports of services and the slowdown in exports of services continued. In January, imports of services were down more than 5% in year-on-year terms, while exports were up more than 3%.

The surplus of trade in services was up EUR 24 million in year-on-year terms at EUR 177 million. Exports of transport services were unchanged in year-on-year terms in January, while imports of transport services declined by more than 5%. The surplus in transport services amounted to EUR 46 million. Exports of travel services were up 7.6% in year-on-year terms in January, while imports were up 1.6%. The result was a year-on-year narrowing of EUR 11 million in the surplus of trade in travel services to EUR 106 million. Trade in other services also recorded a surplus. Construction and assembly services recorded the fastest growth on both the import and export sides, while exports of foreign trade intermediation services also increased sharply.

Factor income and current transfers

In January, the deficit in factor income narrowed in year-on-year terms. The deficit stood at EUR 55 million in January, and amounted to 1.6% of GDP over the last 12 months. As the surplus in labour income remained unchanged, the deficit in capital income narrowed by just over a tenth in January to EUR 76 million. The net outflow of income from equity, largely reinvested and undistributed earnings, accounted for EUR 46 million of the deficit. As a result of the decline in loan commitments to the rest of the world, net interest payments to the rest of the world are continuing to fall, while net payments of income on

¹ The terms of trade are calculated on the basis of the indices of the average value of foreign trade, and may vary from the terms of trade calculated on the basis of the national accounts figures.

investments in debt securities are increasing as a result of borrowing via securities issues.

The deficit in current transfers narrowed in year-on-year terms to EUR 22 million in January. With private transfers in balance, there was a net outflow in government transfers. Net payments into the EU budget were high, largely on account of payments of gross national income, which exceeded EUR 39 million in January.

7 | Capital and Financial Account

The capital and financial account record a net outflow of EUR 388 million in January, largely generated by the private sector (EUR 609 million) and the government (EUR 172 million), while the central bank recorded net inflows of EUR 393 million, primarily as a result of ECB monetary policy operations. The private sector's net outflow over the last 12 months was compensated for by funding via the ECB and by government borrowing. The largest outflow was via the banking system: repayments of loans (EUR 1.3 billion) and a reduction in deposits by non-residents (EUR 0.7 billion). The net external debt stood at EUR 14.2 billion at the end of January, up EUR 0.6 billion on a year earlier. The gross external debt stood at EUR 40.7 billion at the end of January, comparable to last year.

Private sector's claims

The main factor in January's increase of EUR 278 million in claims against the rest of the world was the increase of EUR 189 million in the banking sector's holdings of currency and deposits in the rest of the world. Households' holdings of currency increased by EUR 90 million, trade credits by EUR 63 million and capital transfers by EUR 21 million. Only outward FDI recorded a large decline in claims (EUR 45 million), primarily in the form of increased borrowing by foreign corporates from domestic owners. The increase in claims over the 12 preceding months amounted to EUR 778 million, compared with EUR 84 million a year earlier.

Private sector's liabilities

The main factor in January's decline of EUR 330 million in the private sector's liabilities to the rest of the world was debt repayments by the corporate sector.

Corporates reduced their liabilities from trade credits by EUR 273 million and liabilities from loans by EUR 10 million. Non-residents reduced their deposits at banks by EUR 107 million. The only major increase in liabilities was recorded by FDI (EUR 72 million), mostly as a result of a major transaction in the equity of a firm in the rubber industry. The decline in liabilities over the 12 preceding months amounted to EUR 3.0 billion, compared with a third of this figure a year earlier.

External debt

The net external debt stood at EUR 14.2 billion in January, down EUR 153 million on the previous

month. All sectors except the central bank have reduced their debt during the month. The government sector reduced its debt by just over EUR 100 million as a result of maturing treasury bills, while the banks primarily reduced their short-term debt in the form of currency and deposits (EUR 284 million) and long-term debt in the form of loans (EUR 102 million). Other sectors primarily reduced their debt via liabilities for short-term trade credits (EUR 334 million). The central bank increased its debt to the rest of the world by EUR 421 million in January, mostly in the form of an increased negative net position against the Eurosystem. The central bank's debt to the Eurosystem was up EUR 2.8 billion on last January, while the banks' external debt was down EUR 3.9 billion and the government sector's debt was up EUR 0.7 billion. Public and publicly guaranteed debt accounted for nearly half (49.3%) of the gross external debt at the end of January, 6.6 percentage points more than a year earlier.

8

Banking System*

The main factors in the contraction in the banking system's total assets, which continued in January, were again the banks' debt repayments to the rest of the world and the decline in government deposits and deposits by non-financial corporations. The decline in household lending accelerated, while January's decline in loans to non-financial corporations was significantly less than at the end of last year. The stock of household deposits increased satisfactorily. The banking system ended the first month of the year with a modest profit.

Total assets

The banking system's total assets declined by EUR 88.5 million in January to EUR 46 billion. The figure was down 6.6% on a year earlier. The main factors in the contraction in total assets were the banks' debt repayments to foreign banks and the Eurosystem, and a decline in deposits by the non-banking sector. On the investment side, lending to the non-banking sector is continuing to decline, with an above-average decline in loans to households. The banks responded in part to the decline in funding by reducing investments in securities.

Lending activity

The decline in lending activity continued in January, albeit on a smaller scale. Loans to the non-banking sector declined by EUR 86 million. The largest declines were in loans to households and non-financial corporations, while loans to other financial institutions increased. The stock of loans to the non-banking sector was down 6.8% on January 2012.

January's decline in loans to non-financial corporations (NFCs) was less than in the final months of last year. The reason was that the banks created less impairments on these loans compared with the end of last year.

The stock of loans to NFCs was down EUR 24.3 million, while year-on-year growth declined by a further 0.8 percentage points to -10.8%. The decline was entirely recorded by the domestic banks; the banks under majority foreign ownership recorded a slight increase in loans to NFCs.

The contraction in loans to households accelerated in January. The decline of EUR 75 million in loans to households was significantly larger than the average negative change in the previous year. Year-on-year growth reached its lowest level ever at -2.8%. All the bank groups contributed to the decline, the domestic banks

* This section uses data from the banks that report to the Bank of Slovenia in accordance with the Guidelines for implementing the resolution on reporting by monetary financial institutions. Because of methodological differences, these figures differ from the published statistics.

accounting for 53%. Year-on-year growth in loans to households stood at -4.5% at the large domestic banks and -2.3% at the banks under majority foreign ownership, while the small domestic banks and savings banks recorded positive growth of 5.5%. Housing loans declined by EUR 29 million in January, taking the year-on-year rate of growth to 1%. The decline in consumer loans, which was a feature of last year, continued in January. The decline in loans to households was partly the result of the freeze on the real estate market, public sector wage cuts, high unemployment and the decline in consumption.

Funding

The banks' debt repayments on the wholesale markets strengthened in January. This was primarily the result of a decline in liabilities to foreign banks, which were down EUR 171 million, while the stock of issued debt securities declined by just EUR 14 million. The banks under majority foreign ownership were solely responsible for the contraction in liabilities to foreign banks, as the domestic banks recorded net borrowing of EUR 26 million.

Deposits by non-banking sectors declined by EUR 38 million in January, and were down 3% in year-on-year terms. The changes in the stock of deposits varied from sector to sector. While government deposits and deposits by non-financial corporations declined, by EUR 116 million and EUR 52 million respectively, household deposits and deposits by other financial institutions increased. The withdrawal of government deposits was largest at the large domestic banks, while government deposits at the banks under majority foreign ownership increased.

The stock of household deposits recorded a solid increase. It was up EUR 115 million, but was nevertheless unchanged in year-on-year terms. All the bank groups recorded an increase in household deposits, the small banks and savings banks recording the largest increase of EUR 57 million. Next came the banks under majority foreign ownership with an increase of EUR 43 million, even though their interest rates on new household short-term and long-term deposits are below the

system average. The small domestic banks offer the highest interest rates.

Banking system's operating result

The banking system's profit in January was less than in the same month of last year. Net interest was down 19.1% on last January, as interest income and interest expenses both declined. The decline in interest income was the result of the ongoing contraction in loans and the creation of impairments. The decline in interest expenses was the result of low interest rates and an improvement in funding structure compared with the same month last year when the banks did not yet have the cost-effective funding obtained from the Eurosystem, and had a larger proportion of more expensive debt securities. The banking system's gross income was down 14.3% in year-on-year terms, partly as a result of a slight decline in net non-interest income. Just under a third of January's gross income went to impairment and provisioning costs, which were down 1.2% on the same month last year at EUR 30.5 million. Operating costs were down 3%. The banking system's pre-tax profit was up a half on last January at EUR 9.9 million.

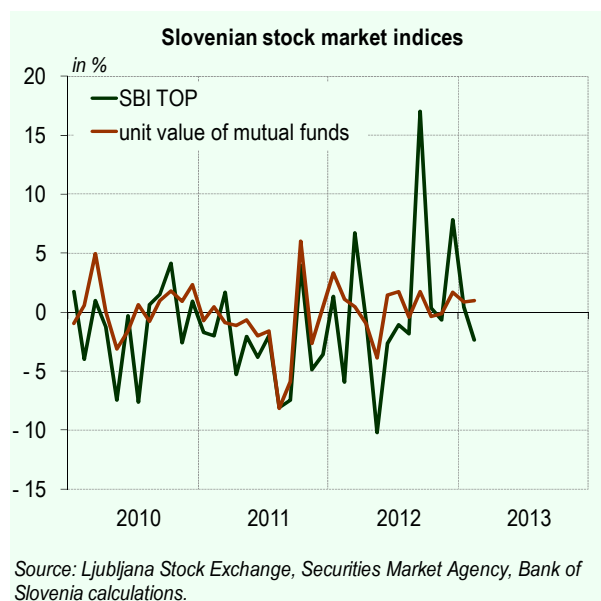

9 | Domestic Financial Markets

The SBI TOP fell again in February, by 2.4%. The market capitalisation of shares and bonds on the Ljubljana Stock Exchange fell, by 3.7% and 0.3% respectively. The volume of trading in shares was one of the lowest in the history of the Ljubljana Stock Exchange, partly as a result of the political uncertainty during the change in government. Non-residents made net sales of Slovenian securities, long-term government bonds in particular. Slovenian residents reduced their investments in foreign bonds. The domestic mutual funds' assets under management increased to EUR 1,865 million, as a result of net inflows of EUR 0.4 million and a rise of 1% in the average unit price.

Developments on the Ljubljana Stock Exchange

The SBI TOP was down 2.4% in monthly terms in February, while the year-on-year change stood at +11%. It ended the month at 623 points. The market capitalisation of shares on the Ljubljana Stock Exchange amounted to EUR 4,792 million in February, down 3.7% on the end of the previous month. The volume of trading in shares in February declined sharply, by 39.8%, partly as a result of the political uncertainty surrounding the formation of a new government. The monthly volume was one of the lowest in the history of the stock exchange, at just under EUR 19 million. There was no change in the breakdown of trading, despite poor liquidity. The most heavily traded shares were Krka, Telekom Slovenije, Zavarovalnica Triglav and Petrol. S&P downgraded its long-term rating of Zavarovalnica Triglav from A- to BBB+ as a result of Slovenia's sovereign downgrading. The capital increase process at Abanka Vipa d.d. undertaken between 13 December 2012 and 18 February 2013 was unsuccessful, as only 40.36% of the newly issued shares were paid up. NLB d.d. increased its share capital by EUR 72.7 million as a result of the conversion of a hybrid loan from the Slovenian government into shares. The Mercator Group and 38 creditor banks reached an agreement on which to base the long-term structure of financing for the group. The agreement is also needed because of the loss of financing from the project to monetise Mercator d.d.'s real estate, which has been suspended. Petrol d.d. made an early transfer of the second and third tranches in the amount of EUR 26 million to Istrabenz d.d., for the remainder of the price of a 51% holding in Instalacija d.o.o. The dividend yield on prime market shares stood at 3.9% in February.

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 0.3% in February, while the volume of trading in bonds was down 25.3%. The largest volume was in Banka Celje 13th-issue bonds, which accounted for 28.6% of total bond trading. Slovenska odškodninska družba 2nd-issue bonds also recorded volume of more than EUR 1 million. The Ministry of Finance issued TZ142 3-month treasury bills with a maturity date of 16 May 2013, a nominal value of EUR 66.2 million and a nominal annual interest rate of 0.75%. The

Ministry of Finance also issued 6-month and 1-year treasury bills with maturity dates of 16 August 2013 and 13 February 2014, nominal values of EUR 74.1 million and EUR 112.9 million, and nominal annual interest rates of 1.6% and 2% respectively. The proportion of total stock exchange volume accounted for by bonds stood at 17% in February.

Inward investments by non-residents

The proportion of the market capitalisation of the Ljubljana Stock Exchange accounted for by non-residents fell to 13.9% in February. Non-residents made net sales of EUR 33.4 million in Slovenian bonds, and net purchases of EUR 8.7 million in Slovenian

shares. Non-residents primarily made net sales of long-term government bonds, while their net purchases primarily comprised treasury bills, commercial paper and bank bonds. The largest net sellers of Slovenian bonds were residents of Belgium (EUR 55.9 million of sales), while the largest net purchasers of bonds were residents of Luxembourg (EUR 38.6 million of purchases). The main purchasers of Slovenian shares were residents of Croatia, whose net purchases of EUR 3.5 million primarily comprised shares in Krka, Mercator and Zavarovalnica Triglav.

Outward investments by residents

Slovenian residents made net purchases of EUR 6.2 million in foreign equities, and net sales of EUR 42.3 million in foreign debt securities in February. The majority of the net sales of bonds (EUR 39.2 million) were recorded by banks, while corporates, insurance corporations and pension funds recorded total net sales of bonds of EUR 4.3 million. The heaviest trading was in bonds of European countries outside the euro area. Other financial intermediaries and households made net purchases of EUR 1.8 million in foreign bonds in February. Insurance corporations and pension funds compensated for their reduced exposure on the debt market by increasing their investments in foreign equity investments in the net amount of EUR 9.3 million in February. The loss of confidence in the capital markets and declining purchasing power meant that households made net sales of EUR 4.3 million in equities, and reduced their exposure across practically all geographic areas.

Domestic mutual funds

The domestic mutual funds' assets under management increased to EUR 1,865 million in February, as a result of net inflows of EUR 0.4 million and a rise of 1.0% in the average unit price. Despite the declining prices on the domestic capital market and the mixed sentiment on global financial markets, investors were willing to accept greater risk by investing in equity funds, in which they made net investments of almost EUR 5 million in February. Investors recorded net withdrawals from the other types of funds. The largest net withdrawals of EUR

2.8 million were made from balanced funds. Insurance corporations and pension funds were the sole sector to act as a net investor in February, in the amount of EUR 6.3 million. Other sectors recorded net withdrawals, households recording the largest figure of EUR 2.6 million. The proportion of the domestic mutual funds' assets under management accounted for by liquid assets² stood at 11% in February.

² Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary. The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical

documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Note 1: With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) pre-

sents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	Title	share of euro

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds**General**

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term. Short-term ones include all instruments of monetary market with original maturity of one year or less. Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities. Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund. Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up. Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests. Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives. Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred

interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The **repo interest rate** for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The **overnight-deposit interest rate** is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A **penalty rate** is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “**Euribor®**” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia

and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF. The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion »shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions.«

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

“Loans to households for other purposes” include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT and from January 2007 in EUR, by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. “credit institutions”) apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18 (amended by Regulation ECB/2009/7), which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies

fies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 101 interest rate indicators with the corresponding volumes are collected, of which 87 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. APRC is calculated in accordance with the provisions of Articles 22 and 23 of the Consumer Credit Act. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Exchange rates (Tables 2.6.1–2.6.2)

Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.6.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008, the conversion rate for the Slovak koruna as of 1 January 2009 and the conversion rate for the Estonian kroon as of 1 January 2011.

Payment systems (Tables 2.7 to 2.13)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system. As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system. As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.8 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with

foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.9 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.10 Electronic Banking

Note 1: Only credit transfers debited from payers' accounts are included.

Note 2: Payments by Bank of Slovenia as payment service provider for non-MFI subjects are also included from 2011 on.

Table 2.11 Credit Transfers

A **paper-based order** is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

A **special payment order** is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A **non-paper-based credit transfer** is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A **standing order** is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.12 Debit Transfers

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

Note 1: A special money order was used until the end of 2009. Special money order was a standardised paper-based debit instrument used to remit money to the named payee. A special money order was issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.13: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000. Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

- Revisions in monthly data are published with the release of:
 - the following month's data;
 - the corresponding quarterly data;
 - the corresponding revised quarterly data;
 - the international investment position and external debt data for the corresponding year; and
 - the revised international investment position and external debt data for the corresponding year.
- Revisions in quarterly data are published with the release of:
 - the following month's data;
 - the data on the following quarter;
 - the international investment position and external debt data for the corresponding year; and
 - the revised international investment position and external debt data for the corresponding year
- Revisions for the annual balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

The external trade statistics (Statistical Office of the Republic of Slovenia) is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the **Intrastat reporting**. The source of data on trade in goods with other countries is the single administrative document (**Extrastat reporting**).

Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):

- report on account balances at domestic banks – PPV (until 31 December 2004),
- report on account balances abroad – C (until 31 December 2006),
- report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
- report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST) are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.

Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD) are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.

Reports on purchased/sold foreign debt securities without domestic brokers (DVP) are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.

Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR) are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obta-

ined the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.

Reports on monetary financial institutions (PORFI) are the source for data on loans, cash and deposits of the banking sector since 2005.

Reports on credits received and granted and deposits with non-residents (KRD) are the source for data regarding loans and deposit of all sectors, except banks, since 2007.

Reports on short-term receivables and liabilities from operations with non-residents (SKV) are the source for short-term trade credits and advances since 2002.

Reports on investments (SN) are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.

Report on Modern Payment Instruments (SPI) for data on acquisition of fuel by nonresident transport operators at Slovene petrol stations settled via payment cards of foreign issuers from 2008 onwards.

Accounting data of the Bank of Slovenia

Accounting data of banks (KNB)

Budget data on the transactions of government sector between the Republic of Slovenia and EU (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

Estimates and other sources

- estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
- estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
- estimate of Italian pensions (IMAD) until the end of 1998,
- estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
- estimate of labour income (SORS),
- data on pensions paid to non-residents (ZPIZ),
- survey on the write-downs of debt from trade in goods and services abroad,
- estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
- estimate of cash transactions on tourism and labour income (from 2007 onwards),
- quarterly data on consumption of foreign embassies in Slovenia (SORS, from 2008 onwards),
- migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
- households' transfers (SORS, from 2008 onwards),
- assets acquired directly by tenders and programmes of EU (SORS, from 2008 onwards),
- data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards),
- data on purchases/sales of real-estate in Croatia (Croatian National Bank, from 2008 onwards),
- data on direct investment of Slovene households in the form of real estate abroad (main data source Household Budget Survey, SORS)
- data on purchases/sales of emission allowances between residents and nonresidents (Slovenian Environment Agency, from 2008 onwards until 2011, From 2012 onwards data is collected by BST monthly report).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad. The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists. Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SORS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists; three-year's survey -last conducted in 2009)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SORS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SORS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SORS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SORS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SORS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SORS, Annual survey on investment in tangible assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards). From 2007 onwards, data on foreign direct investments of households in the form of real estate are included.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From the same year data on Slovenian residents' purchases/sales of real-estate in Croatia are included (data source is Croatian National Bank).

Since 2001, there is a break in the data series in the category »Direct Investments - Other Capital«. Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category »Other Investments«. Since 2002, the category »Direct Investments - Other Capital« also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- $\{[\text{export of goods FOB} + \text{coverage adjustments} - (\text{export payments} + \text{free export of goods} + \text{direct investments in goods} + \text{drawings of granted long-term trade credits})]\}$
- $\{[\text{import of goods FOB} + \text{coverage adjustments} - (\text{import payments} + \text{free import of goods} + \text{direct investments in goods} + \text{drawings of received long-term trade credits})]\}$

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1988 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)
- October 2012 (USD 2250.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)
- January 2011, RS69 (EUR 1000.0 million)
- March 2011, RS70 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2012 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2009 to 2011 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month).

In 2013, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2013 shall take into consideration the new three year average (2010 to 2012).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From 2007 data on foreign direct investment of households in the form of real estate are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment

of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portofolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN). From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items. From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available. From 2007 onwards, the level of foreign currency holdings of domestic household sector equals the level that was reached at the end of the year 2006 (2.948,6 EUR million), when Slovenia joined the European Monetary Union.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on direct investment of Slovenian households. From 2007 onwards only estimation of the value of real estate direct investment abroad by Slovenian household sector is included,
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt**General notes**

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities, financial derivatives and monetary gold are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table »Net External Debt«, data are sorted by sectors, maturities and instruments; in the table »International Investment Position«, data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves**Table 3.12.: International reserves**

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers. From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE**General**

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community. ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data. Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are

compiled by the Bank of Slovenia. The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Note 4: On 1 October 2011, the Tax Administration of the Republic of Slovenia (DURS) introduced new information system and due to that, large number of recorded data on the tax and social security contribution revenues remained on unallocated fund accounts, while totals for those two categories were unaffected. We are publishing the data where certain categories of taxes and social security contributions were estimated by the Ministry of finance. The funds are expected to be correctly allocated already next month. Source: <http://www.mf.gov.si>

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional

sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors. Net financial assets present difference between financial assets and liabilities (stocks). Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances. Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions. Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products. From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Note 1: In 2013, the Statistical Office of Republic of Slovenia stopped publishing data on industrial new orders.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries. Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1 – ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper »Calculations of harmonised competitiveness indicators«, on the Web site of Bank of Slovenia: <http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tabels in Monthly Bulletin of the Bank of Slovenia	Tabels in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
1.5. Selected Assets of Other Monetary Financial Institutions by Sector	2.6 MFI holdings of securities, breakdown
1.6. Selected Obligations of Other Monetary Financial Institutions by Sector or	2.5 Deposits held with MFIs, breakdown
1.4. Balance Sheet of Other Monetary Financial Institutions	
1.8. Investment funds	2.9. Aggregated balance sheet of euro area investment funds
	2.10. Securities held by investment funds broken down by issuer of securities
2.2. Interbank Money Market Rates and Indexation Clause	4.6 Money market interest rates
2.3. European Central Bank Interest Rates	1.2 Key ECB interest rates
2.6.2a. European Central Bank exchange rates - Average Rates	8.2 Bilateral exchange rates
3.2. Balance of payments, capital and financial account	7.1 Balance of payments - summary
	7.2 Current and capital account
	7.3 Financial account
3.3. Current Account by countries	7.2.3 Current and capital account - geographical breakdown
3.4. Capital and Financial Account by countries	7.3.8 Financial account - geographical breakdown
3.5. Trade in goods by countries	7.5 Trade in goods
