Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

Summary

Slovenia's economic recovery continued in the first quarter of this year. Growth remains driven by the export sector, which is successfully exploiting the merely gradual recovery in the euro area. This is also being reflected in the current account, where an extremely high merchandise trade surplus was recorded in March. A large contribution by construction was evident, as a result of further growth in investment in public infrastructure. The situation in retail trade and other service sectors primarily tied to domestic final consumption deteriorated slightly relative to the end of last year. Firms are continuing to cite weak domestic consumption as the main limiting factor in their performance.

Developments on the labour market were stable in the first quarter of this year. The number of registered unemployed has continued to fall. Inflows into unemployment have primarily been falling as a result of a decline in the numbers of those losing temporary employment, which is at least partly a consequence of last year's labour market reform. The number of new hires is rising on the outflow side. These developments are reducing the year-on-year fall in the workforce in employment, which had virtually come to an end by March. Wage growth increased in the first quarter in the export-oriented part of the economy, which alongside the rise in employment is an indication of an improvement in the export sector's business conditions.

Inflation fell below the euro area average in April. It stood at just 0.5%, down 0.1 percentage points on March. The largest factor in the slight fall in inflation was a fall in prices of non-energy industrial goods, which also reduced core inflation. Excluding the effect of taxes, Slovenia would have been in deflation since last September. The deflation rate would have averaged 0.5% over the first quarter of this year. These figures might indicate that, after a certain lag, some firms have reduced their margins significantly more than was suggested in the first months after the rise in VAT, when the pass-through into prices was higher than expected.

The consolidated general government deficit was stable in the early part of the year. While revenues have been growing as a result of the improvement in the economic situation, the interest servicing burden on the public debt has also been increasing. The public debt is expected to exceed 80% of GDP this year according to the latest European Commission forecasts. In the period before the formation of a new government it is vital to prevent any increase in uncertainty, in particular surrounding the commitments to meeting the fiscal consolidation targets and carrying out the privatisation of government-owned firms. It is important that these commitments are met transparently, which will further strengthen the government's credibility on the international financial markets.

After increasing for two consecutive months, the banking system's total assets declined again in March. The decline was the result of the renewed repayment of liabilities to the Eurosystem from the 3-year LTROs, and a decline in the government's overnight placements at banks. The banks made larger debt repayments to domestic banks than to the rest of the world. There was an above-average increase in deposits by non-financial corporations, while the rise in household deposits came to a halt. The contraction in loans to non-financial corporations continued, partly as a result of the additional creation of impairments. The banking system ended the first quarter with a pre-tax profit of EUR 59 million.

1 | International Environment

Real GDP in the euro area grew in the first quarter of this year, but economic activity remained relatively weak in the majority of euro area members. The European Commission's spring forecast for economic growth in the euro area in 2014 remained unchanged, but the forecasts for some of Slovenia's major trading partners were revised downwards. The harmonised unemployment rate in the euro area remained high during the first three months of the year, but unchanged from December 2013. In April, the indicators of economic sentiment and consumer confidence in the euro area remained above their long-term averages. There was no significant change in the euro or in oil prices in April compared with March. In April, food prices again recorded the largest rise among commodity prices.

Economic developments

The economic sentiment indicator in the euro area fell slightly in April, but remained above its long-term average. According to European Commission figures, it fell by 0.5 percentage points, the first decline since the first half of last year. Confidence was down slightly in April in all sectors other than financial services, where it rose to its highest level of the last three months. The unemployment rate in the euro area remained stable, but high, at 11.8% in March. With the stabilisation of the labour market, the consumer confidence indicator is also rising. It has been above its long-term average since the beginning of this year, but in April it rose to its highest level since the second half of 2007.

In contrast to the European Commission's indicators, the aggregate PMI for the euro area rose slightly in April. According to Markit's figures, the services index recorded its highest value for more than two years, while the manufacturing index recorded its largest rise since January. April's largest rises in the aggregate index were recorded by Ireland and Spain, while new orders and activity also rose strongly in Germany and Italy.

Economic recovery in the euro area remained weak in the first quarter of 2014. On the basis of Eurostat's initial estimates, euro area GDP in the first quarter of this year was up 0.9% in year-on-year terms, while in quarterly terms it recorded its second consecutive rise of 0.2%. Further evidence of the slow economic recovery in the euro area comes from the developments in the monthly indicators of activity in March.

The growth in the euro area in the first quarter was driven primarily by strong growth in Germany. German GDP was up by 2.3% in year-on-year terms, and by 0.8% in quarterly terms. Economic activity in the other core euro area countries was significantly weaker. Quarterly GDP growth in France was zero, while GDP was down in quarterly terms in the Netherlands and Finland, by 1.4% and 0.7% respectively. Spain was alone among the euro area periphery countries in recording a quarterly rise in GDP, at 0.4%, while GDP fell by 0.1% in Italy and 0.7% in Portugal. There was a similar quarterly decline in GDP in Cyprus, while GDP in Greece was down just over 1% in year-on-year terms. These figures nevertheless suggest a gradual stabilisation of the situation, as the contractions in activity in Cyprus and Greece in the first quarter of this year were the smallest of the last year.

Economic growth in the first quarter of 2014 across the EU remained relatively low, albeit primarily as a result of the weak growth in the euro area. GDP was up 0.3% in quarterly terms, 0.1 percentage points less than in the final quarter of 2013. Of the EU countries outside the euro area, quarterly GDP growth remained high in the UK, at 0.8%, and in Poland and Hungary, at 1.1%.

There was no significant change in the latest economic growth forecasts for the euro area for 2014 and 2015. In May, the European Commission left its GDP growth forecast for the euro area in 2014 unchanged at 1.2%. It slightly lowered its forecast for 2015 to 1.7%, down 0.1 percentage points on the winter forecasts. In its forecasts, the European Commission's assessment was that domestic demand would increase given the stabilisation of the labour market and an increase in real income as a result of low inflation, which should help strengthen the economic recovery in the euro area as structural reforms are continued. Of Slovenia's major euro area trad-

ing partners, the European Commission raised its 2014 economic growth forecast for Austria, by 0.1 percentage points to 1.6%, and left its forecasts for Germany, France and Italy unchanged. It revised its 2015 forecast for France down by 0.2 percentage points to 1.5%, and left its 2015 forecasts for Germany, Italy and Austria unchanged at 2.0%, 1.2% and 1.8% respectively. In May, Consensus only slightly reduced its economic growth forecasts for the euro area for 2014 and 2015 to 1.1% and 1.4%, both down 0.1 percentage points on April.

While remaining stable for the euro area, the economic growth forecasts for Slovenia's other major trading partners were revised sharply downwards. Of the major trading partners outside the euro area, the European Commission sharply lowered its forecasts for Croatia: the forecast for 2014 was down 1.1 percentage points on the winter forecasts at -0.6%, while the forecast for 2015 was down 0.5 percentage points at 0.7%. The main reason was an anticipated contraction in private consumption, in light of the situation on the labour market and the sharp decline in government consumption as a result of the need for fiscal consolidation. The weak domestic demand is expected to be partly mitigated by more favourable export developments. The European Commission also revised its economic growth forecasts for Russia for 2014 and 2015 downwards from the previous forecasts, by 1.3 percentage points and 0.7 percentage points to 1.0% and 2.0% respectively. The downward revision was the result of the unfavourable outlook for domestic demand, and external factors, mostly in connection with the escalation of tensions in Ukraine. The European Commission also lowered its economic growth forecasts for Serbia for both years, by 0.2 percentage points and 0.3 percentage points to 1.1% and 1.9%. The downward revision was the result of expectations of a contraction in private consumption and government consumption, while growth in exports is expected to remain high. In May, Consensus also lowered its economic growth forecasts for Slovenia's most important trading partners outside the euro area: its forecast for Serbia was down 0.1 percentage points at 1.1%, for Russia by 0.6 percentage points at 0.3% and for Croatia by 0.1 percentage points at -0.3%.

Euro exchange rate and commodity prices

There was no significant change in the euro exchange rate against the US dollar in April, or in oil prices, while food prices continued to rise. ECB monetary policy remained expansionary in May, albeit unchanged, while the Fed continued tapering its asset purchase programme. The euro fell by 0.1% against the US dollar in April compared with March, but was up 6.0% in year-on-year terms. The euro averaged USD 1.3813 over the month. In April, the price of a barrel of Brent crude was up 0.4% in monthly terms, to average USD 107.9 over the month. It was also up in year-on-year terms, by just under 5%, but only as a result of a base effect. After falling last year as a result of high production, food prices rose significantly between February and April this year. They were up 2.5% in year-on-year terms in April. According to the FAO, this year's rise in food prices was mostly the result of adverse weather conditions in the US, Australia, Brazil and south-east Asia, and the tensions in Ukraine.

2 | Economic Activity

According to the available monthly indicators, the economic recovery continued in the first quarter of this year. Growth was based primarily on increased activity in the export sector, although there was also a notable contribution from the construction sector as a result of the continuing increase in investment in public infrastructure. The situation in wholesale and retail trade and other service sectors primarily tied to domestic final consumption deteriorated slightly relative to the end of last year, which coincided with a rise in registered unemployment at the turn of the year. Firms are continuing to cite weak domestic consumption as the main limiting factor in their performance. Although uncertainty in the economy remains high, for the moment the confidence indicators suggest further growth in activity in the second quarter of this year.

Economic sentiment

The economic sentiment improved significantly in May. The indicator reached a neutral value, its highest since 2008. Confidence increased in all segments of the private sector, and among consumers. In the manufacturing sector, assessments of current and expected demand on the domestic and foreign markets improved. Firms in the service sector and the construction sector also saw a strengthening of demand. At the same time there was a slight improvement in households' assessments of the economic situation and unemployment in the next 12 months.

Firms are continuing to cite weak domestic consumption as the main factor limiting economic activity. Despite declining in recent months, the proportion of firms facing weak demand remains highest in the retail sector, where it has exceeded 55% since the end of 2012. The proportion of firms in other marketable services facing these problems has increased in the last six months, and now exceeds 50% again. After a strong improvement last year, signs of weakening demand also increased slightly

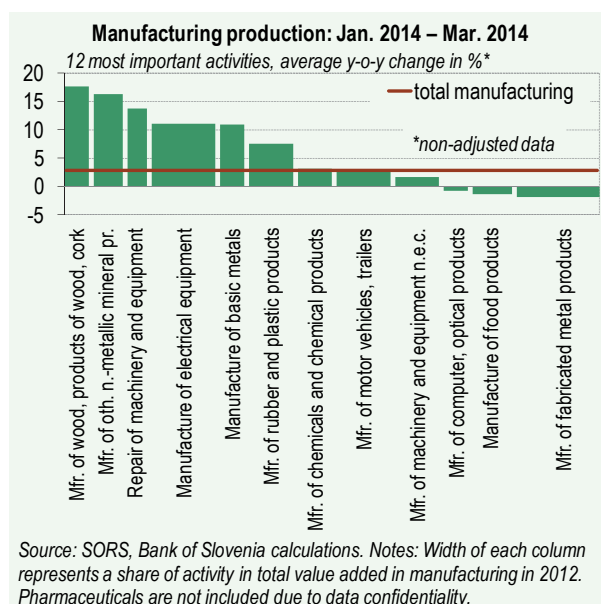

in the construction sector, although at 40% the proportion of firms facing this limiting factor is still significantly smaller than in the 2009 to 2012 period. Problems as a result of insufficient demand have significantly declined in manufacturing, despite the still-uncertain economic situation. Access to financing remains constrained, but the proportion of firms facing such problems reveals an improvement in the situation in the last six months.

Industry

The recovery in industrial production continued in the first quarter of this year. A solid increase in March took the quarterly rise in industrial production to 0.8%, higher than the EU average, and was the result of higher output in the manufacturing sector. As demand weakened on markets outside the EU, exports to EU Member States have continued to increase rapidly. At the same time, sales on the domestic market have also increased somewhat, albeit from a low level. Growth in industrial production was solid, particularly given that firms have partly covered the increased demand by running down inventories. In the first quarter, output in the energy sector was unchanged in quarterly terms, but only as a result of a fall at the turn of the year. At the same time, year-on-year growth in total industrial production stood in the first quarter. It was relatively high in the majority of the major segments of manufacturing, most notably in the wood processing industry as a result of the clear-up in the aftermath of the freezing rain storms, while output in the energy sector remained unchanged also in year-on-year terms.

Private sector services

After increasing at the end of last year, turnover in the retail sector was down in quarterly terms. The quarterly decline in turnover in the retail sector was small, at 0.2%, and was solely the result of a decline in sales of motor fuels. Volume turnover in the retail sector has been gradually stabilising, the year-on-year decline slowing to just under 1%, significantly less than a year earlier. Turnover in the trade and repair of motor vehicles was down 2% in quarterly terms, as a result of a decline in sales in January and February, which picked up further pace in

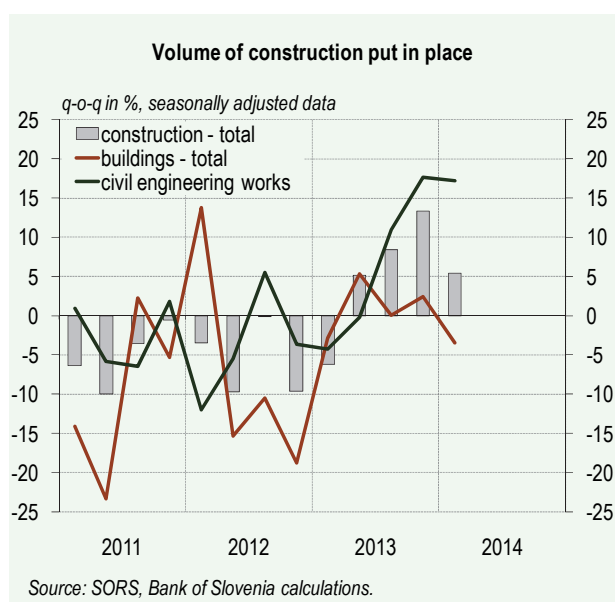

March. Year-on-year growth nevertheless remained high, at more than 7%, partly as the result of the low basis.

Nominal turnover in February was down in monthly terms in the vast majority of marketable services other than trade. After increasing in January, total turnover fell by 1.4% in monthly terms in February. The largest fall of more than 2% was recorded by the transportation and storage sector, as a result of the decline in land transportation caused by bad weather conditions. Having recorded high growth in January, there was a slight decline in turnover in the information and communication sector, while turnover was stable in the administrative and support service activities sector. Activity has continued to decline in the professional, scientific and technical activities sector, where turnover in February was down in monthly terms for the third consecutive month, taking the year-on-year decline to almost 9%. Year-on-year growth in total turnover in marketable services other than trade slowed to just 0.2% in February.

Construction

In the first quarter of this year, quarterly growth in the amount of construction put in place slowed, but nevertheless remained high. Construction activity was up 5.5% in quarterly terms, partly as a result of a monthly increase of almost 9% in March, and was up almost two-fifths in year-on-year terms. The recovery in activity from a very low basis continued to be based on the construction of public infrastructure, co-financed from European

Notes: Data are working days adjusted.

* Volume of industrial production. ** Real value of construction put in place. *** Excluding trade and financial services. + Nominal turnover.

++: 3-month moving average compared to the corresponding average 3 months earlier. Data are seasonally and working days adjusted (except for construction where data are seasonally adjusted).

funds. The construction of non-residential buildings also increased, but to a lesser extent. Activity in residential construction has remained weak as expected, partly in connection with the decline in consumer purchasing power and the large stock of unsold new housing. Activity in the construction of buildings is expected to remain weak, as the number of building permits issued in the first quarter and the corresponding floorspace of buildings declined in quarterly terms for the third consecutive quarter, and were down around 11% in year-on-year terms.

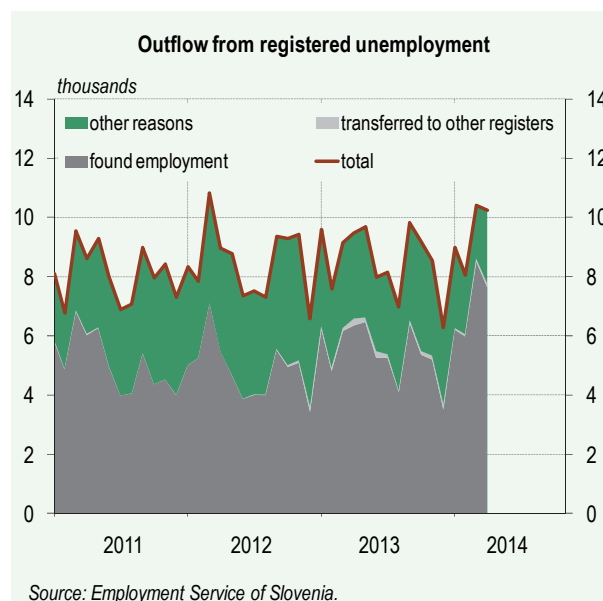

3 | Labour Market

The decrease in the number of registered unemployed on a monthly basis is continuing, and faster than during the same months of last year. Inflows into unemployment have primarily been falling as a result of the decline in the numbers of those losing temporary employment, which is most likely the consequence of last year's labour market reform. The number of new hires is continuing to increase on the outflow side. This is reducing the year-on-year fall in the workforce in employment, which had virtually come to an end by March. Wages are growing faster, mostly in the manufacturing sector and in sectors with a certain degree of monopoly power.

Unemployment, labour market flows and workforce in employment

The decrease in the number of registered unemployed continued in April, the figure reaching 123,600. After allowing for seasonal factors, the monthly developments in the number of registered unemployed are also more favourable than in previous years, as the falls in March and April were more than a thousand larger than last year, and larger than the average of the last three years. The year-on-year increase in the number of registered unemployed thus slowed from 3.3% to 1.9%. The high registered unemployment rate began to decline accordingly, falling 0.3 percentage points in March to 13.9%.

Inflows into unemployment are continuing to decline, while outflows from unemployment remain up in year-on-year terms. The number of people newly registering as unemployed in April was down 12.5% in year-on-year terms, primarily as a result of the large inflow caused by the expiry of temporary employment contracts last April. The structural factors in the decline in the number of people newly registering as unemployed include a decline in

the number of those losing temporary employment, which is most likely the result of last year's reform of the labour market. Outflows from registered unemployment in April were up 8.1% on last year. The main factor was again the number of new hires. Outflows for reasons other than employment have continued to decline, and were down 14.1% in year-on-year terms in April.

The decrease in the workforce in employment slowed sharply over the first three months of the year.¹ By March the year-on-year contraction stood at just 0.3%, compared to just under 1% at the beginning of the year.

¹ For a detailed explanation of the change in the workforce in employment in the agricultural sector, see the March 2014 Bulletin, p 11-I (<http://www.bsi.si/iskalniki/publications-monthly-bulletin.asp?Mapald=210>).

This indicates that increased employment in other sectors has already partly neutralised the impact of the decline in the estimated number of farmers on year-on-year developments in the total workforce in employment. The year-on-year decrease in the workforce in employment across

the quarter also slowed, to 0.6%. The workforce in employment in March was up compared to February in almost all sectors, most notably by 3.8% in construction and by 3.3% in professional, scientific and technical activities. The increase in employment in the construction sector is seasonal in nature, and in March construction was the most likely factor in non-residents accounting for almost 20% of all new hires. In terms of the type of employment, the number of self-employed was down 2.6% in year-on-year terms in March, while the number of employees was unchanged in year-on-year terms.

Wage developments

Year-on-year growth in wages recorded its lowest rate of the first three months of the year in March. The average nominal gross wage per employee stood at EUR 1,526 in March, up just 0.4% on last March. The average wage in the private sector was up 1%, as an increasing number of sectors recorded modest wage growth. Year-on-year wage growth exceeded 2% in

March in the sectors of manufacturing, electricity, gas and steam, wholesale and retail trade, professional, scientific and technical activities, and administrative and support service activities. Elsewhere wages are continuing to decline, most notably in the sectors of information and communication, and real estate activities. A comparison of wages at the quarterly level reveals that the largest rises were recorded by the electricity, gas and steam sector, at 5.2%, and the manufacturing sector, at 3.9%. Wages are continuing to rise predominantly in sectors with greater monopoly power, and in sectors recording faster increases in productivity. The nominal gross wage in March was down by 0.9% in year-on-year terms in public services overall, and by 1.0% in the government sector.

Total wage bill and average monthly gross wage per employee

Note *The wage bill is calculated as the product of the average gross wage for employees of legal persons who received pay and the total number of employees of legal persons.

4 | Price Developments

Year-on-year inflation as measured by the HICP stood at 0.5% in April, down 0.1 percentage points on March. The main factors in the fall in inflation were prices of non-energy industrial goods, which following a rise in March, decreased again in year-on-year terms, and prices of unprocessed food, primarily as a result of a fall in prices of vegetables. Along with unchanged year-on-year growth in prices of services and processed food, these factors reduced all three core inflation indicators. Energy prices in April were up in monthly terms, primarily as a result of the rise in excise duties on refined petroleum products, but their contribution to headline year-on-year inflation remained negative. Excluding the effects of government and administrative measures, prices in Slovenia would continue to fall in April.

Headline inflation and the structure of inflation

Year-on-year inflation as measured by the HICP fell by 0.1 percentage points in April to 0.5%, primarily as a result of lower prices of non-energy industrial goods and unprocessed food. After rising in year-on-year terms in March, prices of non-energy industrial goods fell again in April, by 0.4%, primarily due to lower rises in prices of clothing and footwear compared to the same month last year, and seasonally unusual reductions in prices of sports equipment. For the first time since October 2004 car prices were up in year-on-year terms, whereby prices of new cars rose, while the prices of used vehicles continued to decrease at the same rate in year-on-year terms. The decline in growth in unprocessed food prices, that started this year, continued in April, slowing by additional 1.4 percentage points to just -1.7%. After recording high growth last year, prices of vegetables have notably fallen. By contrast, year-on-year growth in prices of processed food remained unchanged, as did year-on-year growth in services prices. Prices of package holidays and prices of cultural services rose sharply in April, while prices of passenger transport by air continued to

record high growth. Slovenian Railways also raised its prices for the first time in three years. In terms of headline inflation, these rises were mainly balanced by the year-on-year fall in prices of refuse collection, these prices having risen last April but fallen sharply this April. In contrast to the other sub-categories, the negative contribution made by energy prices declined, but it nevertheless remained the main factor in the low inflation rate. The main factor in the smaller year-on-year decline was a rise in excise duties, together with the rise in certain prices of refined petroleum products and the rise in prices of solid fuels. In contrast to Slovenia, year-on-year inflation in the euro area rose by 0.2 percentage points to 0.7%.

Core inflation and inflation trends

Core inflation fell in April, and was equal to the average level in the euro area. Year-on-year growth in the HICP excluding energy, food, alcohol and tobacco fell by 0.4 percentage points in April to 1.0%. The other two core inflation indicators also fell. The HICP excluding energy and unprocessed food slowed by 0.2 percentage points to 1.2%, while the HICP excluding energy slowed by 0.4 percentage points to 0.9%. This was the result of the year-on-year fall in prices of non-energy industrial goods, while year-on-year growth in services prices remained unchanged. Inflationary pressures remain low, as import prices and prices of industrial goods continue to fall in year-on-year terms, while at the same time there are no major pressures from domestic consumption. Year-on-year growth in the core inflation indicators was equal to the euro area average in April.

Price developments excluding the effect of changes in taxation

If the effect of taxes is excluded, Slovenia would have been in deflation since last September, while average inflation in the euro area has also remained at low levels. Average inflation in the euro area has been falling since the end of 2011, while average inflation in Slovenia has been falling since the end of 2012. The lag derives from domestic factors in Slovenia, most notably from the rise in excise duties on tobacco and refined petroleum

products, and changes in the subsidizing of school meals. These factors were also an underlying reason for Slovenia's inflation rate staying above the euro area average between June 2012 and February 2014. Had taxes with an impact on inflation remained constant, prices in Slovenia would have been declining since the end of 2011, and would have moved broadly in line with the euro area average until July 2013. Year-on-year inflation excluding the effects of changes in taxation began falling sharply in Slovenia after the rise in VAT last July, and had turned negative by September. The indicator has signalled deflation ever since, except in November. Excluding the effect of taxes, the year-on-year fall in prices

would have averaged 0.5% in the first quarter of this year, while average prices across the euro area would have risen by 0.4%. These figures may indicate that, after a certain lag, some retailers and perhaps also some producers have reduced their margins significantly more than was reflected in the initial months after the rise in VAT, when the pass-through into prices was higher than expected.

Industrial producer prices on the domestic market

The year-on-year fall in industrial producer prices on the domestic market strengthened this year, with the prices down 1% in year-on-year terms in the first quarter. Compared to the previous quarter, prices in all broad categories recorded a decrease in year-on-year growth rates, except for prices of durable consumer goods. The largest acceleration was recorded in the year-on-year fall in energy prices, which deepened by 3.1 percentage points to 4.3%, as a result of a sharp fall in prices in the electricity, gas, steam and air conditioning supply sector. The fall in commodity prices also accelerated sharply, by 0.8 percentage points to 1.3%. This was primarily the result of a sharper year-on-year fall in prices in the manufacture of basic metals and fabricated metal products, in the manufacture of computer, electronic and optical products, and in other mining and quarrying. Prices of capital goods also fell further. The fall in prices in these categories is in line with the dynamics of import prices. Year-on-year growth in prices of consumer non-durable goods remained almost unchanged, since the fall in prices in the manufacture of food products and beverages balanced out the rise in prices in the manufacture of leather and in printing. At the same time year-on-year growth in prices of consumer durable goods increased by 0.9 percentage points to 0.4%, as a result of a rise in prices in other manufacturing.

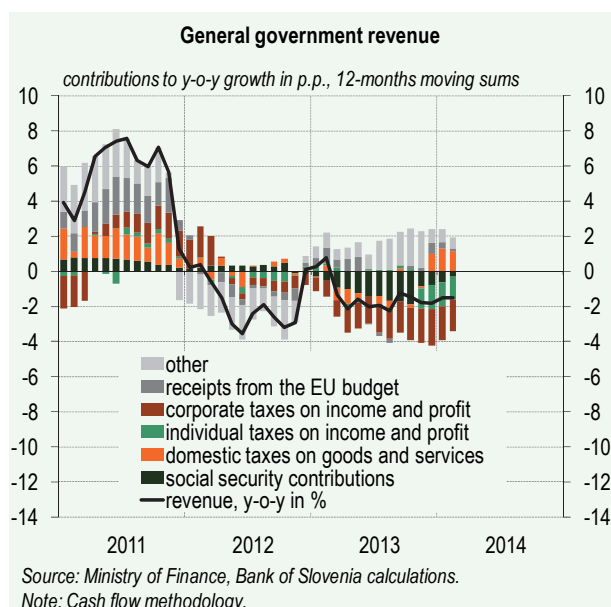

5 | Public Finances

Consolidated general government revenues and expenditure in the first two months of the year were up in year-on-year terms, while the deficit remained at approximately the same level. The main factors in the rise in expenditure were interest payments and payments of wages as a result of the first instalment of the third quarter of the elimination of wage disparities, which under the agreement with the unions the government was obliged to make by February. Revenues also rose according to the figures for the first four months of the year. Most notably there was high growth in VAT, which was partly a reflection of the last July's rise in VAT rates, and in corporate income tax, as a result of last year's high refunds during final settlement. The required yield on Slovenian long-term bonds rose temporarily at the end of April as a result of increased political uncertainty, but began to fall again in the first half of May. According to the European Commission's latest forecasts, this year's general government deficit is expected to stand at 4.3% of GDP, or 3.4% of GDP excluding bank recapitalisation costs. The general government debt is forecast to exceed 80% of GDP this year.

European Commission forecasts for general government deficit and debt

In its spring forecasts the European Commission is forecasting a general government deficit in Slovenia of 4.3% of GDP this year, and debt of 80.4% of GDP at year end. The recapitalisations of Banka Celje and Abanka are forecast to contribute 0.9 GDP percentage points to the deficit this year. The deficit forecast for 2015 is 3.1% of GDP. The main factors in the narrowing of the deficit are higher economic growth and the anticipated end to the banks' need for recapitalisation. Slovenia must reduce its general government deficit to below 3% of GDP in 2015, in line with its commitments made to eliminate the excessive deficit. The debt is forecast to increase to 80.4% of GDP by the end of this year, which

includes the partial prefinancing of the debt principal maturing in the next two years, but does not include potential revenues from privatisation.

Consolidated general government revenues and expenditure

The consolidated general government deficit in the first two months of this year was approximately equal to the deficit in the same period of 2013. Consolidated general government revenues and expenditure were both up around EUR 100 million in year-on-year terms, while the deficit amounted to EUR 488 million. The state budget deficit in the first four months of the year amounted to EUR 722 million, EUR 203 million narrower in year-on-year terms, primarily as a result of a smaller deficit in April. The deficit recorded in the first four months of the year is already equivalent to 71% of the deficit forecast in the budget. The large budget deficit in the first months of the year is partly attributable to seasonal factors, and relates to the payment of agricultural subsidies and interest. The Health Insurance Institute recorded a

deficit of EUR 8 million over the first three months of the year, significantly narrower than last year's figure of EUR 36 million. The improvement is the result of an increase in revenues, and also a decline in expenditure. Local government recorded a surplus of EUR 19 million during the first two months of the year, similar to the same period last year.

Consolidated general government revenues in the first two months of the year were up 4.3% in year-on-year terms. The largest contribution to the rise came from increases in VAT, social security contributions and non-tax revenues, the latter primarily as a result of February's realisation of the surplus generated in the management of the government's single treasury account last year. The figures for inflows of taxes and contributions over the first four months of the year reveal a continuation of favourable growth in revenues, taxes and social security contributions in the first four months of the year having increased by just under 3% in year-on-year terms. Growth in VAT revenues was close to 6%, while this year's growth in corporate income tax has been signifi-

cantly better than last year. Corporate income tax revenues during the first four months of the year were up EUR 172 million on the same period last year. The latter was primarily the result of an absence of major tax repayment to taxpayers at the settlements for the previous year; these were prevalent last year, primarily as a result of an increase in tax allowances and a reduction in the tax rate. The tax rates have remained unchanged this year, and there has been a slight improvement in the economic situation. Of the major revenue categories, there has been a notable year-on-year decline in revenues from excise duties, which is a reflection of the lower consumption of excise products. Net revenues from the EU budget in the first three months of the year amounted to EUR 47 million, a similar level to last year.

Consolidated general government expenditure in the first two months of the year was up in year-on-year terms, primarily as a result of higher payments of wages and interest. Year-on-year growth in consolidated general government expenditure in the first two months of the year amounted to 3.7%. The largest increase was the result of higher wage payments (EUR 49 million), which is related to the first instalment of the payment of the third quarter wage disparities settlement to public sector employees. The second portion of the settlement will be made by next January. Interest payments were up EUR 43 million, a reflection of last year's increase in govern-

ment debt. There were also increases in investment and expenditure on goods and services. Budget expenditure was also up in year-on-year terms in March and April.

Financing of the state budget

State budget borrowing in the first four months of the year amounted to around EUR 5 billion, and was primarily executed via bond issues in February and April. February's issue of bonds denominated in US dollars brought budget financing of around EUR 2.6 billion, while April's issue of euro-denominated bonds yielded EUR 2 billion. The remaining borrowing relates to the

issue of treasury bills of various maturities. EUR 130 million of treasury bills were issued in May. The largest proportion again comprised 12-month treasury bills, the interest rates on which were the same as in the April auction. The lending and repayments account (the so-called B-balance) saw a major transaction in April as a result of the payment of the final capital contribution to the ESM in the amount of EUR 68 million.

The required yield on 10-year Slovenian government bonds rose temporarily as political uncertainty increased. It averaged 3.5% in April, less than in March. As political uncertainties increased in Slovenia towards the end of April, it temporarily rose by around 0.3 percentage points, and then resumed the trend of gradual decline seen in the majority of other euro area periphery countries. It averaged 3.4% over the first two weeks of May.

6 | Current Account

After stalling in February, the year-on-year increase in the current account surplus resumed in March. The surplus amounted to EUR 342 million, almost three-quarters of the cumulative surplus in the first quarter of this year. In March there was a sharp increase in the merchandise trade surplus, which at EUR 194 million was actually larger than the surplus of trade in services for the first time since July 2002. This was primarily attributable to the export sector, which is successfully exploiting increased demand in EU markets. Growth in imports remains relatively weak at the same time, in line with the gradual recovery of domestic demand. The surplus of trade in services in the first quarter narrowed by just under a fifth in year-on-year terms, primarily as a result of the continuing decline in net exports of foreign trade intermediation services. The deficit in factor income has widened rapidly in the early part of this year, largely as a result of the financing costs of past government borrowing. The deficit in current transfers narrowed slightly as disbursement of European funds increased in March. The cumulative current account surplus over the preceding 12 months remained at a level of 6.2% of GDP for the second consecutive month in March.

Merchandise trade

Year-on-year growth in merchandise exports has been increasing since the second half of last year, while growth in imports is weaker, as a result of the merely gradual recovery in domestic consumption. Year-on-year growth in merchandise exports was up 0.5 percentage points on February at 5.1% in March, while growth in merchandise imports declined significantly to just 1.6%. The merchandise trade surplus thus widened to EUR 194 million in March, a third higher than the overall surplus recorded in the previous two months.

Growth in Slovenia's merchandise exports has been strengthening since the second quarter of last year,

primarily as a result of increased demand from the EU. Year-on-year growth in merchandise exports had approached 6% by the first quarter of this year according to balance of payments figures. The escalation of export growth is primarily attributable to the economic recovery in the EU, while at the same time weaker economic developments and the fall in a number of currencies against the euro have dampened demand for Slovenian products in certain major markets outside the EU. In line with the growth in exports and the recovery in domestic demand, imports began gradually increasing towards the end of last year, although the year-on-year growth was largely attributable to the effect of a low basis. Only imports from non-EU countries actually increased, as the latter became more competitive as a result of a fall in their currencies,

while in this manner importers also saw a reduction in their input costs. Growth in imports during the first quarter of this year slowed to just over 2% according to balance of payments figures. Of the broad economic categories, only imports of consumer goods continued to record a year-on-year increase. Given the weakness of domestic final consumption, this indicates growth in re-exports to EU Member States.

Merchandise trade with EU Member States with their own currencies is growing faster than that with euro area countries. Although the euro has appreciated against the currencies of the majority of EU trading partners from outside the euro area since the second quarter of last year, growth in merchandise trade with the aforementioned countries has been higher on average than

with the euro area countries. Year-on-year growth in merchandise exports to euro area countries increased from 1.8% in the second quarter of last year to 7.1% in the first quarter of this year, while growth in exports to other EU Member States increased from 5% to fully 11.4%. The euro exchange rate against the currencies of countries outside the euro area seems to have a minor role in the supply chain in which Slovenian firms are included as suppliers. At the same time, the euro's appreciation was a factor in the switch in merchandise imports away from euro area countries and towards EU Member States with their own currencies.

Trade in services

The year-on-year decline in exports of services deepened again in March, while growth in imports remained relatively high. Exports of services in the first quarter of this year were down 2.1% in year-on-year terms. Imports of services, which have displayed a trend of increase since the second half of last year, were up just under 10% in year-on-year terms in the first quarter of this year, driven by payments for services in connection with the recovery of the banking system. The surplus of trade in services thus narrowed by EUR 96 million in year-on-year terms to EUR 407 million, taking the cumulative surplus over the 12 months to March to 5.4% of GDP.

Growth in trade in transport services has again closely tracked developments in merchandise trade in the early part of this year. The low growth in exports and the sharp decline in imports of transport services in February were merely temporary in nature, and the result of bad weather conditions. Exports were up 9% in year-on-year terms in March, while imports were up more than 6%. Exports of transport services in the first quarter of this year were up 7.6% in year-on-year terms. Exports of rail freight transport services rose sharply, by more than 40%, while growth in maritime freight transport services was half of this rate, and exports of road freight transport were up 11%. At the same time there was a sharp decline in electricity transmission and air passenger transport. Growth in imports of transport services was more than 6%. In the context of relatively low growth in imports of road and maritime freight transport services, railway

transport services almost doubled. The surplus of trade in transport services in the first quarter of this year was up EUR 16 million in year-on-year terms at EUR 164 million.

Growth in exports of travel services in the first quarter of this year remained at its average level from the second half of last year. Exports of travel services were up 2.9% in year-on-year terms, only slightly less than the rise of 3.1% in the number of arrivals by foreign visitors. The number of foreign visitors in transit is rising, as evidenced by the fall of 0.5% in the number of overnight stays. Falling consumer purchasing power brought a decline of 5.7% in imports of travel services in the first quarter. While imports of business travel services have remained at the level of the previous year, private travel is

down more than 7%. The surplus of trade in travel services thereby widened by EUR 20 million in year-on-year terms to EUR 308 million.

The decline in the surplus of trade in services was the result of a widening deficit in trade in other services. Trade in other services (excluding transport and travel services) recorded a surplus of EUR 62 million in the first quarter of last year, but a deficit of EUR 64 million in the first quarter of this year. The main factors in this deterioration were a sharp year-on-year decline in exports of intermediation services, a narrower surplus of trade in construction services as a result of a decline in exports and an increase in imports, caused by the investment in Block 6 of Šoštanj power station, and of an increase in imports of professional, business and technical services.

Factor income and current transfers

The sharp widening of the deficit in net factor income in the first quarter of this year was mostly the result of the increased burden of interest payments on the public debt. The deficit in net factor income widened in year-on-year terms from EUR 72 million to EUR 181 million, as the deficit in capital income widened in year-on-year terms from EUR 185 million to EUR 279 million. The main factor in the widening deficit was net payments of income on investments in debt securities, where the deficit in the first quarter widened by EUR 73 million in year-on-year terms (compared with EUR 123 million over the whole of last year) to EUR 124 million. The most notable element was the government sector, partly as a result of its rapid growth in borrowing and its funding conditions, which were particularly adverse last year. At the same time the private sector continued to see a reduction in its net interest payments to the rest of the world. Just under a fifth of the increase in the deficit in capital income came from FDI, which recorded a year-on-year increase of EUR 23 million to EUR 122 million. Half of the increase was the result of growth in net payments of income on debt capital between affiliates, while the other half of the increase comprised reinvested earnings and dividend payments.

Source: Bank of Slovenia.

Source: Bank of Slovenia.

The recovery in the construction sector is also reducing the net surplus in labour income. Given the reduced employment opportunities at home, the number of Slovenian citizens working in the rest of the world began to rise after the outbreak of the crisis. Inflows of labour income accordingly increased until the first quarter of last year. Inflows of labour income then began to decline, and in the first quarter of this year were down just under 10% in year-on-year terms. Given that there was no significant change in emigration, this is an indication that emigration is increasingly translating into a permanent loss of domestic labour. At the same time the strengthening of the construction sector is increasing employment of foreign workers, which is already increasing outflows of labour

income. The surplus in labour income in the first quarter of this year narrowed by EUR 15 million in year-on-year terms to EUR 99 million.

The deficit in current transfers in the first quarter of this year widened by EUR 9 million in year-on-year terms to EUR 87 million. March saw a surplus of EUR 42 million in current transfers, primarily as a result of the high disbursement of EU funds in the amount of EUR 130 million, which nevertheless did not fully compensate for the reduced disbursement during the previous two months. The deficit in private sector transfers in the first quarter narrowed by EUR 5 million in year-on-year terms, while the deficit in government transfers widened by EUR 14 million in year-on-year terms.

7 | Capital and Financial Account

The trend of net outflows from the private sector to the rest of the world continued in March, as a result of an increase in claims (EUR 0.2 billion) and a decline in liabilities (EUR 0.2 billion). Claims from all instruments other than loans increased in the first quarter of this year, currency and deposits recording the largest increase. Liabilities declined, largely on account of the repayment of loans and a decline in short-term trade credits; the sole increase was recorded by FDI. The government sector recorded net borrowing of EUR 2.7 billion over the same period, almost twice as much as the debt repayments by the private sector. The net external debt amounted to EUR 13.2 billion at the end of March, up EUR 0.7 billion on the end of 2013.

Private sector's claims

The private sector's claims against the rest of the world increased by more than EUR 1 billion in the first quarter, EUR 238 million of which was in March.

The largest increases in March were recorded by holdings of currency and deposits in the rest of the world (EUR 92 million), and claims from short-term trade credits (EUR 81 million). Loans granted to the rest of the world declined for the second consecutive month, by EUR 48 million. The trend of increase in total claims against the rest of the world has continued in 2014: the increase in the first quarter was almost half of the total increase in the last 12 months. The largest outflows were recorded by currency and deposits (EUR 0.5 billion), trade credits (EUR 243 million) and investments in securities and derivatives (EUR 226 million).

Private sector's liabilities

The private sector has continued to reduce its liabilities to the rest of the world: they declined by EUR 0.5 billion in the first quarter of this year, of which almost a half came in March. The largest debt repayments were made by banks in the first two months of the year, and by corporates in March. A total of EUR 354 million of loans were repaid in the first quarter, while non-residents' de-

posits at banks declined by EUR 129 million and liabilities from trade credits declined by EUR 174 million. FDI was the sole financial instrument to record an increase during this period, at EUR 78 million. All financial instruments other than trade credits recorded net outflows in March. The largest outflow was in the corporate sector, which repaid EUR 156 million of financial loans. Non-residents reduced their holdings of deposits at banks by EUR 45 million, and there was also a decline in FDI, of EUR 33 million.

External debt

The net external debt declined by EUR 1.9 billion in 2013, but increased by EUR 0.7 billion in the first quarter of this year, primarily as a result of the issue of government bonds. The gross external debt increased by EUR 2.4 billion this year to EUR 42 billion, while gross external claims increased by EUR 1.7 billion to EUR 28.8 billion. The government sector accounted for EUR 17.5 billion of the net debt at the end of March (up EUR 8.6 billion on last year). The next largest figure was recorded by the banking sector, at EUR 0.7 billion (down EUR 2.6 billion on last year). Other sectors increased their net external debt to EUR 1.7 billion by the end of March (up EUR 0.4 billion on last year), while capital affiliates held net debt of EUR 2.1 billion to the rest of the world, down EUR 0.4 billion on the previous year.

8

Banking System*

The main factors in March's decline in total assets were the early repayment of liabilities to the Eurosystem from the 3-year LTROs, and the contraction in government deposits. Debt repayments to the rest of the world slowed, while growth in household deposits stalled. Additional impairments accounted for half of the contraction in loans to non-financial corporations, while lending activity to households stagnated in March. The banking system recorded a pre-tax profit of EUR 59 million in the first quarter.

Total assets

After two consecutive months of increases, growth in total assets came to a halt in March. The stock declined by EUR 585 million to EUR 40.2 billion. The year-on-year contraction hit its largest figure to date, at 12.9%. March's contraction was the result of the partial early repayment of the funds obtained in the 3-year LTROs at the Eurosystem, and a decline in government deposits at banks. Debt repayments to the rest of the world slowed in March. On the investment side, the stock of loans to non-financial corporations continued to decline, while loans to households remained unchanged from February. The aforementioned repayments of liabilities meant that the banks saw a decline in the stock of liquid assets at the central bank and in claims against banks.

Investment activity

Lending activity to the non-banking sector continued to decline in March. The stock of loans to the non-banking sector declined by EUR 191 million, taking the year-on-year decline to 21.1%. Excluding the transfers of non-performing claims to the BAMC, December's impairments as a result of the AQR, and the two banks undergoing the orderly wind-down process, the year-on-year decline in loans to the non-banking sector was 10.8%.

The banks recorded just EUR 8 million of write-offs in March, bringing the total in the first quarter of this year to EUR 48 million. All sectors saw a contraction in loans, although non-financial corporations continued to record the largest contraction.

The creation of additional impairments accounted for half of March's contraction in loans to non-financial corporations (NFCs). The stock of loans to NFCs declined by EUR 115 million in March. The last monthly increase in loans to NFCs across the banking system was recorded in January 2012. March's year-on-year contraction was similar to that in February, at 30.5%. Excluding the transfers of non-performing claims to the BAMC, the additional impairments as a result of the AQR, and the two banks undergoing the orderly wind-down process, the decline in corporate loans² stood at 12.6%. The creation of additional impairments accounted for half of March's contraction in loans to NFCs: excluding the impairments, loans to NFCs would have declined by just EUR 58 million. All the bank groups recorded a decline in loans to NFCs in March, most notably the banks under majority foreign ownership (EUR 51 million) and the large domestic banks (EUR 48 million).

The savings banks, which are included in the group of small domestic banks, continued to display a trend of increase in loans to NFCs, albeit slightly slower than in

* This section uses data from the banks that report to the Bank of Slovenia in accordance with the Guidelines for implementing the regulation on reporting by monetary financial institutions. Because of methodological differences, these figures differ from the published statistics.

² Includes non-financial corporations and other financial institutions.

previous months. The stock of loans to NFCs increased by just under EUR 1 million in March, as the positive year-on-year rate of growth slowed by just over 6 percentage points to 33.6%, as a result of a larger increase in loans in the same month last year.

Lending activity to households stagnated in March.

As the stock of household loans recorded a minimal decline of EUR 0.3 million, the year-on-year rate of growth in household loans remained unchanged for the third consecutive month at -3.9%. Household loans contracted by EUR 67 million in the first quarter, the banks under majority foreign ownership accounting for two-thirds of the decline. The large domestic banks continued to record the largest year-on-year decline in household loans, at 4.6%, although the decline was almost as large at the banks under majority foreign ownership at 4.2%, while the small banks and savings banks recorded positive growth of 1.7%. This was primarily attributable to the savings banks. Their household loans increased by just under EUR 7 million in March, taking the year-on-year increase to 12%. The year-on-year contraction in consumer loans slowed over the preceding four months to 8.8% in March, while housing loans continued to record year-on-year growth of 1%.

Funding

The banks continued to make debt repayments to the Eurosystem in March. Liabilities to the Eurosystem were down EUR 287 million. Some banks used their excess liquidity for the partial early repayment of the liabilities from the 3-year LTROs at the Eurosystem, which mature in the first quarter of 2015. Slovenian banks had repaid a total of 29% of these liabilities by the end of this March, four banks having repaid their liabilities in full.

Debt repayments to foreign banks slowed in March, while debt repayments to domestic banks were larger. Liabilities to foreign banks declined by EUR 41 million, almost entirely at the banks under majority foreign ownership, while liabilities to domestic banks declined by EUR 81 million, as the large domestic banks made corresponding repayments.

After two consecutive monthly increases, deposits by the non-banking sector declined again in March. They

were down EUR 149 million, as the year-on-year contraction deepened by 2 percentage points to 5.2%. The largest decline of EUR 280 million was recorded by government deposits, which was the result of a reduction in overnight placements at banks by the Ministry of Finance at the end of March. In contrast to other sectors, deposits by non-financial corporations increased by an above-average amount of EUR 228 million, more than two-thirds of which was at the large domestic banks.

Growth in household deposits ceased in March. The stock of household deposits was down EUR 37 million on the previous month, although the increase in household deposits over the first quarter remained solid at EUR 253 million. Despite March's decline, year-on-year growth in household deposits improved to -1.7%, a significantly larger decline having been recorded last March as a result of developments in Cyprus. Withdrawals of deposits were largest at the small domestic banks and savings banks, at EUR 22 million, which was also reflected in a decline in the year-on-year rate of growth at this bank group to -2%. The savings banks have continued to display a positive trend of growth in household deposits. The stock of household deposits increased by EUR 10 million in March, the year-on-year rate of growth remaining high at 31.2%. The large domestic banks saw a decline of EUR 17 million in household deposits, although the aforementioned base effect meant that the year-on-year rate of growth improved to -5.7% (up 1.3 percentage points). The banks under majority foreign ownership have continued to record year-on-year growth in household deposits, at 9.3%.

Banking system's operating result

The Slovenian banking system ended the first quarter of 2014 with a profit. Growth in net interest and net non-interest income has increased the banking system's gross income, which in the first quarter of this year was up 9.4% on the same period last year. The year-on-year increase of 6.1% in net interest was the result of a larger decline in interest expenses than in interest income. The main factors in the year-on-year decline of 14.5% in interest income remain the contraction in lending activity and the fall in interest rates, while the decline in funding was a factor in the year-on-year decline of 32% in interest ex-

penses, alongside the fall in interest rates. As total assets contracted and net interest increased, there was a slight increase in the net interest margin on interest-bearing assets to 2.2%. Operating costs were down 6% on the same period last year. They accounted for 52% of the disposal of gross income, 10 percentage points less than last year's average figure. Impairment and provisioning costs in March were three times those of the previous month at EUR 90 million, which is still down 13.5% on the same month last year. The banking system's pre-tax profit fell slightly in March to end the first quarter at EUR 59 million.

9 | Financial Markets

The SBI TOP rose to 747 in April, its highest level since June 2011. The volume of trading in shares reached EUR 84.8 million, its highest level since the outbreak of the crisis. The market capitalisation of shares on the Ljubljana Stock Exchange fell by 15.4%, while the market capitalisation of bonds fell by 6.3%. Having declined in March, demand from non-residents for Slovenian securities increased sharply in April. Despite a slight deterioration in the situation on foreign financial markets, Slovenian residents were still investing in foreign securities in March, primarily in shares and bonds from the euro area. Although investors recorded net sales of EUR 2.9 million in mutual fund units, the mutual funds recorded a rise of 1.1% in the average unit price in March. The situation on the global financial markets was still being affected by the tensions in Ukraine in March and April. Indices in Europe and the US thus recorded moderate growth in April.

Developments on the Ljubljana Stock Exchange

The SBI TOP rose by 4.2% in April, taking the year-on-year change to +17.5%. At 747, it reached its highest level since the middle of 2011. The market capitalisation of shares on the Ljubljana Stock Exchange fell by 15.4% to EUR 4,784 million. The rise in market prices was primarily the result of the announcement of sales of listed companies under majority government ownership, and is a reflection of the moderate restoration of confidence in the domestic capital market. Another result of the sale of the aforementioned firms is an increase in the volume of trading in shares, which at EUR 84.8 million was the highest figure since the outbreak of the crisis, up 170.9% on the previous month. The initial offering of Helios, one of the 15 firms listed for privatisation, accounted for just over half of the volume of trading in shares. Austria's Ring International Holding paid the agreed price last autumn for a 78% interest in the firm. The Austrians published a prospectus at the end of April detailing a takeover bid for the remaining 22% of the firm, offering EUR

520 per share, at a premium to the closing price at the end of the month of EUR 512. Krka, Telekom Slovenije and Gorenje, all listed on the prime market, accounted for just under a third of the total volume of trading in shares. The dividend yield on prime market shares stood at 3.6% in February. The heaviest volume of trading in shares on the standard market was recorded by Letrika, as a result of a non-binding offer from investors for the 54% government-held interest.

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 6.3% in April to EUR 12,377 million. The volume of trading in bonds amounted to EUR 5.5 million, the lowest figure this year. Almost half of the volume was recorded by 11th-issue Factor banka

bonds, while the five most heavily traded bonds accounted for 85.1% of the total volume of trading. In early March Telekom Slovenije successfully completed the initial sale of 9-month commercial paper with a ticker symbol of TSK01, a total nominal value of EUR 50 million and an annual interest rate of 3%. Petrol successfully issued 6-month commercial paper at the end of March with a ticker symbol of PEK05 and a total nominal value of EUR 50 million, the annual interest rate offered on its 6-month commercial paper falling from 3.4% to 2.75%. Gorenje successfully issued 9-month commercial paper with a ticker symbol of GRV02, a total nominal value of EUR 35 million, and an annual interest rate of 4%. SID banka made a partial prepayment of its bonds with the ticker symbol of SEDABI 3 04/21/15 on the Luxembourg stock exchange, repaying a nominal value of EUR 53 million in cash. The remainder was replaced by new a 3-year bond with a total nominal value of EUR 96.8 million and an annual coupon rate of 2.25%. The Slovenian government successfully borrowed on the euro area debt securities market by issuing EUR 2 billion of 5-year and 10-year bonds, thereby obtaining funds at significantly better terms for the repayment of 5-year bonds in the amount of EUR 1.5 billion with a coupon rate of 4.375%, which matured in early April. The two new bond issues, each of EUR 1 billion, maturing in October 2017 and April 2021, have coupon rates of 1.75% and 3%, and premiums of 115 basis points and 173 basis points over the middle interest rate swap rate. The Ministry of Finance issued 3-, 6- and 12-month treasury bills on the domestic capital market with nominal annual interest rates of 0.25%, 0.40% and 0.75% respectively. The total nominal value of the treasury bill issues was EUR 127.8 million. In April the Ministry of Finance issued a total of EUR 2.1 billion of debt instruments on the domestic and foreign capital markets.

Inward investments by non-residents

Non-residents recorded net purchases of EUR 990.7 million in Slovenian bonds and EUR 106 million in Slovenian shares in April. The majority of net purchases of bonds in the amount of EUR 904.5 million were made by residents of Belgium, while residents of Luxembourg were the largest net sellers of bonds with sales of

EUR 19.7 million. Non-residents primarily purchased and sold long-term bonds. Demand for Slovenian treasury bills declined in April. Residents of Austria were dominant on the stock market with purchases of EUR 107.1 million, primarily as a result of the payment of the consideration for a majority interest in Helios. The largest net sales of Slovenian shares were made by residents of Belgium in the amount of EUR 2.3 million, mostly Krka and Telekom Slovenije shares. Excluding Helios, the largest net purchases made by non-residents comprised shares in Krka, in the amount of EUR 2.3 million. The proportion of the market capitalisation of the Ljubljana Stock Exchange accounted for by non-residents increased to 19.6% in April.

Outward investments by residents

Slovenian residents made net purchases of EUR 11 million in foreign debt securities and EUR 14.7 million in foreign equities in March. The largest net purchases of foreign bonds in the amount of EUR 47.2 million were made by insurance corporations. Pension funds were the main net sellers of foreign bonds, with sales of EUR 31.1 million, but also recorded the largest net purchase of foreign shares in the amount of EUR 8.4 million. Households recorded a large increase in their investments in foreign shares with net purchases of EUR 6.7 million, primarily because of the extremely positive developments in stock markets in developed markets in previous months. Slovenian residents recorded their heaviest trading in bonds and shares from the euro area.

Domestic mutual funds

The domestic mutual funds' assets under management increased to EUR 1,887 million in March, despite net withdrawals of EUR 2.9 million, as the average unit price rose by 1.1%. Investors' largest net withdrawals in the amount of EUR 5.6 million were from balanced funds, which recorded the largest rise in the average unit price at 1.7%. Investors again had greater appetite for risk in March, as equity funds recorded net inflows of EUR 3.3 million. Households were the largest investors in mutual funds, with purchases of EUR 3 million. Speculation surrounding a rise in market share prices, which is expected to be driven by the announcement of the sale of firms listed for privatisation, meant that households almost exclusively made net purchases of mutual funds investing in Slovenian assets. The proportion of the domestic mutual funds' assets under management accounted for by liquid assets stood at 9.4% in March.

Global financial markets

A negative mood prevailed on the global financial markets in March, which then turned mildly positive in April. After falling in March, the majority of European and US stock market indices rose in April, largely as a result of the decisions by the ECB and the Fed to hold their key interest rates at low levels for the longer term. The global financial markets continued to be affected by

the adverse political situation in Ukraine, which reached a peak in the middle of March and then eased. The market yields on German and US government bonds consequently fell, particularly over the longer part of the yield curve. Another factor in the rising markets was the release of improved economic figures in Europe, although news of the deterioration in China's figures prevented larger rises. Demand for government bonds from euro area periphery countries increased. Their premiums over the benchmark German government bonds declined as a result of well-received issues of government securities by euro area periphery countries, and sovereign upgradings. The largest monthly rises were recorded by Turkey's XU100, at 5.9%, and Serbia's BELEX 15, at 3.6%. There were moderate rises in the S&P and Dow Jones in the US (0.6% and 0.8% respectively) and in Germany's DAX (0.5%), while the NASDAQ fell by 2%, primarily as a result of the release of weaker results by tech firms. The MSEELEEMEE for eastern Europe fell by 3.9%.

1511 Ljubljana

Brüll Kallmus Bank AG,
Bančna podružnica v Sloveniji
Partizanska cesta 31
6210 Sežana

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary. The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical

documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Note 1: With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) pre-

sents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds**General**

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term. Short-term ones include all instruments of monetary market with original maturity of one year or less. Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities. Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund. Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up. Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests. Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives. Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The **repo interest rate** for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The **overnight-deposit interest rate** is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A **penalty rate** is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “**Euribor®**” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was

based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF. The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion »shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions.«

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

“Loans to households for other purposes” include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT and from January 2007 in EUR, by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. “credit institutions”) apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18 (amended by Regulation ECB/2009/7), which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 101 interest rate

indicators with the corresponding volumes are collected, of which 87 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. APRC is calculated in accordance with the provisions of Articles 22 and 23 of the Consumer Credit Act. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Exchange rates (Tables 2.6.1–2.6.2)

Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.6.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008, the conversion rate for the Slovak koruna as of 1 January 2009 and the conversion rate for the Estonian kroon as of 1 January 2011.

Payment systems (Tables 2.7 to 2.13)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system. As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system. As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.8 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Note 5: Data on payment cards DINERS, issued by Diners Club SLO d.o.o. are not included from the third quarter 2013,

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.9 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.10 Electronic Banking

Note 1: Only credit transfers debited from payers' accounts are included.

Note 2: Payments by Bank of Slovenia as payment service provider for non-MFI subjects are also included from 2011 on.

Table 2.11 Credit Transfers

A **paper-based order** is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

A **special payment order** is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A **non-paper-based credit transfer** is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A **standing order** is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.12 Debit Transfers

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

Note 1: A special money order was used until the end of 2009. Special money order was a standardised paper-based debit instrument used to remit money to the named payee. A special money order was issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.13: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000. Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

- Revisions in monthly data are published with the release of:
 - the following month's data;
 - the corresponding quarterly data;
 - the corresponding revised quarterly data;
 - the international investment position and external debt data for the corresponding year; and
 - the revised international investment position and external debt data for the corresponding year.
- Revisions in quarterly data are published with the release of:
 - the following month's data;
 - the data on the following quarter;
 - the international investment position and external debt data for the corresponding year; and
 - the revised international investment position and external debt data for the corresponding year
- Revisions for the annual balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

The external trade statistics (Statistical Office of the Republic of Slovenia) is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the **Intrastat reporting**. The source of data on trade in goods with other countries is the single administrative document (**Extrastat reporting**).

Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):

- report on account balances at domestic banks – PPV (until 31 December 2004),
- report on account balances abroad – C (until 31 December 2006),
- report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
- report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST) are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.

Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD) are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.

Reports on purchased/sold foreign debt securities without domestic brokers (DVP) are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.

Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR) are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obta-

ined the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.

Reports on monetary financial institutions (PORFI) are the source for data on loans, cash and deposits of the banking sector since 2005.

Reports on credits received and granted and deposits with non-residents (KRD) are the source for data regarding loans and deposit of all sectors, except banks, since 2007.

Reports on short-term receivables and liabilities from operations with non-residents (SKV) are the source for short-term trade credits and advances since 2002.

Reports on investments (SN) are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.

Report on Modern Payment Instruments (SPI) for data on acquisition of fuel by nonresident transport operators at Slovene petrol stations settled via payment cards of foreign issuers from 2008 onwards.

Accounting data of the Bank of Slovenia

Accounting data of banks (KNB)

Budget data on the transactions of government sector between the Republic of Slovenia and EU (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (from 2007 onwards). For banks this data source was used until 2010 (in 2011 it was replaced by PORFI), for government sector this data source was used until 2012 (in 2013 it was replaced by direct reportinf of the Ministry of Finance).

Estimates and other sources

- estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
- estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
- estimate of Italian pensions (IMAD) until the end of 1998,
- estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
- estimate of labour income (SORS),
- data on pensions paid to non-residents (ZPIZ),
- survey on the write-downs of debt from trade in goods and services abroad,
- estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
- estimate of cash transactions on tourism and labour income (from 2007 onwards),
- quarterly data on consumption of foreign embassies in Slovenia (SORS, from 2008 onwards),
- migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
- households' transfers (SORS, from 2008 onwards),
- assets acquired directly by tenders and programmes of EU (SORS, from 2008 onwards),
- data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards),
- data on purchases/sales of real-estate in Croatia (Croatian National Bank, from 2008 onwards),
- data on direct investment of Slovene households in the form of real estate abroad (main data source Household Budget Survey, SORS)
- data on purchases/sales of emission allowances between residents and nonresidents (Slovenian Environment Agency, from 2008 onwards until 2011, From 2012 onwards data is collected by BST monthly report).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad. The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists. Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SORS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists; three-year's survey -last conducted in 2009)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SORS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SORS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SORS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SORS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows and inflows (data provided by foreign central banks) and transfers of households (SORS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SORS, Annual survey on investment in tangible assets). Cross border transactions in emission allowances are included in capital account (as purchases and sales of non-produced non-financial assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards). From 2007 onwards, data on foreign direct investments of households in the form of real estate are included.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From the same year data on Slovenian residents' purchases/sales of real-estate in Croatia are included (data source is Croatian National Bank).

Since 2001, there is a break in the data series in the category »Direct Investments - Other Capital«. Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category »Other Investments«. Since 2002, the category »Direct Investments - Other Capital« also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart). For financial derivatives of banks from 2011 onwards the data source is PORFI and for financial derivatives of the government from 2013 onwards the source is the reporting of the Ministry of Finance.

Other investments**Short-term trade credits**

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]}
- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]}

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1988 – 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in “Other sectors”.

Note 2: For 1988 through 1990, “Statistical errors” include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the “Other changes” category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to “Liabilities to government”.

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500 million)
- March 1999 (EUR 400 million)
- March 2000 (EUR 400 million)
- February 2001 (EUR 100 million)
- April 2001 (EUR 450 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000 million)
- February 2008, RS63 (EUR 1000 million)
- February 2009, RS64 (EUR 1000 million)
- March 2009, RS65 (EUR 1500 million)
- September 2009, RS66 (EUR 1500 million)
- January 2010, RS67 (EUR 1500 million)
- March 2010, RS68 (EUR 1000 million)
- January 2011, RS69 (EUR 1000 million)
- March 2011, RS70 (EUR 1000 million)
- October 2012 (USD 2250 million)
- May 2013 (USD 1000 million)
- May 2013 (USD 2500 million)
- November 2013 (EUR 1500 million)
- February 2014 (USD 1500 million)
- February 2014 (USD 2000 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading “Direct investments”, while other commercial credits are included in “Other investments/trade credits”.

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in

reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2013 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2010 to 2012 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2014, the estimate will be replaced with actual data on reinvestment of earnings for 2013; the estimate for 2014 shall take into consideration the new three year average (2011 to 2013).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". From 2005 onwards loans of banking sectors are not included. Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From 2007 data on foreign direct investment of households in the form of real estate are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment-other capital". Intercom-

pany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portofolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN). From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart). For financial derivatives of banks from 2011 onwards the data source is PORFI and for financial derivatives of the government from 2013 onwards the source is the reporting of the Ministry of Finance.

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items. From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available. From 2007 onwards, the level of foreign currency holdings of domestic household sector equals the level that was reached at the end of the year 2006 (2.948,6 EUR million), when Slovenia joined the European Monetary Union.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on direct investment of Slovenian households. From 2007 onwards only estimation of the value of real estate direct investment abroad by Slovenian household sector is included,
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities, financial derivatives and monetary gold are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table »Net External Debt«, data are sorted by sectors, maturities and instruments; in the table »International Investment Position«, data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers. From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community. ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data. Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia. The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Note 4: On 1 October 2011, the Tax Administration of the Republic of Slovenia (DURS) introduced new information system and due to that, large number of recorded data on the tax and social security contribution revenues remained on unallocated fund accounts, while totals for those two categories were unaffected. We are publishing the data where certain categories of taxes and social security contributions were estimated by the Ministry of finance. The funds are expected to be correctly allocated already next month. Source: <http://www.mf.gov.si>

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS**Financial accounts (Tables 5.1 to 5.6)**

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors. Net financial assets present difference between financial assets and liabilities (stocks). Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances. Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;

- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions. Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products. From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Note 1: In 2013, the Statistical Office of Republic of Slovenia stopped publishing data on industrial new orders.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries. Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1 – ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper »Calculations of harmonised competitiveness indicators«, on the Web site of Bank of Slovenia: <http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown

Addendum				
Population		30 (for Q1 2014)		

Notes:

* The period to which data relate is shown in the parenthesis. NLT stands no-later-than.

¹ The data on interest rates are published by the Bank of Slovenia and the Ministry of Finance separately. The data on representative interest rates of the BoS and interbank money market rates are disseminated whenever the change occurs.

² The data are disseminated daily on Bank of Slovenia's page Currency Exchange rates (for display) and on Archive of financial data.
