Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

Executive Summary

The economic situation in the euro area continues to improve, but there are also indications of slowing growth in the majority of other major global economies. The Consensus forecasts for the euro area remain stable, while the monthly developments in activity and confidence indicators were also positive in April and May. At the same time the Consensus and OECD forecasts suggest a slowdown in expected growth in the US, Japan and the BRIC countries, which is increasing the risk associated with growth in foreign demand. Recent events in Ukraine and Iraq have led to a sharp increase in US dollar oil prices, which alongside the simultaneous fall in the euro could increase the import component of inflation, with an adverse impact on growth in private consumption.

A gradual economic recovery has also continued this year in Slovenia. During the first quarter of this year, value-added was up in the vast majority of sectors, while the quarterly decline in GDP of 0.3% was solely the result of a lower estimate of taxes on products. Growth in investment in the public infrastructure continued, which in turn continues to facilitate rapid growth in the construction sector. In the context of favourable developments on the labour market and low inflation, activity is also recovering in the majority of private-sector services, while the increase in value-added in public services was the result of a slight increase in employment. At the same time growth in value-added in industry was weak, and below expectations compared with growth in exports. Growth in exports remains high, and is maintaining the current account surplus at just under 6% of GDP. According to the available monthly indicators, the gradual economic recovery continued in the second quarter of this year.

In April the workforce in employment was up in year-on-year terms for the first time since the outbreak of the crisis at the end of 2008, primarily on account of certain service sectors. The labour market figures remained favourable in May, as inflows into unemployment continued to fall and outflows from unemployment into employment continued to increase. Gradual growth in nominal wages continues, which is contributing positively to household purchasing power as inflation remains low.

As measured by the HICP, year-on-year inflation stood at 1.0% in May, up 0.5 percentage points on April. The largest contributions to higher inflation came from energy prices, a rise in excise duties on tobacco and alcohol, and changes in administered prices. Despite rising, core inflation remains low and is largely attributable to government and administrative measures.

For the moment, the consolidated general government deficit is narrowing this year as a result of relatively high growth in revenues. This is only partly a reflection of the more favourable economic situation, revenues having increased in year-on-year terms in part due to past rises in certain tax rates and a halt to cuts in the corporate income tax rate. The payment of concession fees for mobile telephony radio frequencies had a positive impact on revenues in May. Investments co-financed by European funds were up on the expenditure side, while the interest servicing burden on past borrowing continues to rise. By the middle of June, the required yield on Slovenian long-term bonds had fallen to around 3%.

The banking system's total assets declined in March and April. The main factors in the April's decline in total assets were the early repayment of liabilities to the Eurosystem from 3-year LTROs and debt repayments to the rest of the world. The contraction in loans to non-financial corporations continued, albeit at a slower pace. Since the transfer of certain non-performing claims to the Bank Asset Management Company (BAMC) last December, the banking system's net interest margin has improved significantly this year. Impairment and provisioning costs are sharply down on the same period last year. The banks recorded a pre-tax profit of EUR 88 million over the first four months of 2014.

1 | International Environment

In the first quarter of 2014, the situation on the labour market improved again as the gradual economic recovery continued. Consumer confidence and the economic sentiment are rising, and are above their long-term averages, while monthly developments in retail, industry and construction are also favourable. With economic activity strengthening in individual core euro area countries, the situation in individual periphery countries has continued to stabilise. Consensus's June forecasts confirm the expectation of continuing recovery in the euro area, but the expectations for economic growth in a number of other major economies have deteriorated slightly, which is increasing the risk to growth in foreign demand. The euro again fell against the US dollar in May, while events in Ukraine and Iraq brought a sharp rise in oil prices in June, which could increase the import component of inflation.

Economic sentiment

Economic sentiment in the euro area improved in May, while consumer confidence rose again as a result of favourable developments on the labour market. In the first quarter, employment in the euro area was up 0.1% in quarterly terms and 0.2% in year-on-year terms. The unemployment rate continued its gradual fall in April. It reached 11.7%, the lowest figure since November 2012. The gradual improvement in the situation on the labour market had a positive impact on consumer confidence, which rose again in May for the third consecutive month. After declining in April, the economic sentiment indicator rose in May, reaching its highest level since the second half of 2011. Confidence improved in all sectors of the economy other than retail, where it remained unchanged.

The aggregate PMI for the euro area declined slightly in May, but nevertheless remained high. The main factors in the decline in the index measured by Markit were slowdowns in growth in activity and growth in orders in industry. The services index rose again, reaching its

highest level since June 2011. The developments varied from country to country. The most notable rises in the PMI were in Germany, Spain and Italy, while it declined again in France as a result of a fall in new orders in the service sector.

Economic activity and forecasts

In the early part of the second quarter, economic developments in the euro area were again relatively favourable. In April, turnover in the retail sector was up for the fourth consecutive month, by 0.4% in monthly terms and by 2.4% in year-on-year terms. Turnover in France and Spain was up 1.1% and 2.4% respectively in monthly terms and 0.8% and 2.3% respectively in year-on

Projections of GDP growth in Slovenia's main trading partners for the year 2014

-year terms, a reflection of the gradual recovery in private consumption in these countries. Developments in industry were also favourable in April, as industrial production rose by 0.8% in monthly terms, primarily as a result of strong growth in production of intermediate goods. Industrial production in April was also up in year-on-year terms, by 1.4%, which alongside the relatively strong growth in production of intermediate goods and consumer non-durables was also attributable to a 1% increase in the production of consumer durables. Alongside Germany, activity in industry increased in the majority of the periphery countries. Activity in the construction sector was up just under 1% in monthly terms and up 8% in year-on-year terms, the largest increase this year.

The release of the economic figures for the first quarter of this year did not result in a change in the forecast for the pace of the economic recovery in the euro area, while the forecasts for other major economies were revised slightly downwards. According to Consensus's June forecasts, euro area GDP is expected to increase by 1.1% this year, unchanged from the May forecast. At the same time Consensus lowered its forecasts for economic growth in the US and eastern Europe, and again raised its economic growth forecast for the UK. Of Slovenia's main trading partners, Consensus reduced its forecasts for this year's economic growth for Russia, Italy and Austria, and raised its forecasts for Germany,

the Czech Republic and Hungary. In its spring forecasts, the OECD reduced its forecasts for this year's economic growth for Brazil, China, Japan and India.¹ In June, the World Bank reduced its forecast for this year's global economic growth from 3.2% in January to 2.8%.

Euro exchange rate and commodity prices

The euro again fell against the US dollar in May. Events in Ukraine brought a rise in the price of Brent crude, while after rising for a quarter food prices fell. The euro's average exchange rate against the US dollar fell in May, largely as a result of the ECB's statements

¹ In its spring report the OECD revised its economic growth forecasts downwards from last autumn's report, by 1.8 percentage points for Russia, 0.8 percentage points for China, 0.4 percentage points for Brazil, and 0.3 percentage points for Japan and India.

about the introduction of additional stimulus measures. The euro also fell against the majority of major global currencies, recording sharper falls against the Japanese yen and the Russian ruble. The deepening political tensions in Ukraine led to the largest monthly rise in US dollar prices of Brent crude this year.² The crisis in Ukraine also led to a rise in the price of gold at the beginning of the month, which then fell sharply in the second half of the month as supply increased on the market. After rising sharply in the previous three months, prices of primary commodities on global markets fell in May. This was attributable to the fall in food prices caused by increased supply of major agricultural products. Industrial commodity prices, metals in particular, rose again.

² The rising tensions in Iraq brought a further rise in oil prices in June (the price of a barrel of Brent crude had reached USD 115 by 20 June).

2 | Economic Activity

In the first quarter of this year, value-added in the Slovenian economy increased in quarterly terms, the vast majority of sectors contributing to the increase. The construction sector was most prominent, as investment in public infrastructure with the help of EU funds saw high growth continue. Growth in value-added in industry was relatively weak and lower than expected, in light of the growth in exports and stable domestic private consumption. Quarterly growth in total value-added stood at 0.6%, while GDP declined by 0.3% as a result of a low estimate of direct taxes on products. Inventories were the main factor in the decline in domestic consumption, and investment in machinery and equipment remained weak in line with the high uncertainty in the economy. According to the available monthly indicators at least, the gradual economic recovery continued in the second quarter of this year.

Gross domestic product

Value-added was up in the vast majority of sectors during the first quarter of this year. Quarterly growth in total value-added stood at 0.6%, while the decline of 0.3% in GDP was solely the result of a lower estimate of taxes on products. Growth in value-added in industry slowed significantly, which was in contrast to the high growth in exports and stable domestic private consumption. Growth in value-added in construction remained high, at more than 4% in quarterly terms. The main factor in the continuing recovery in construction is the increased investment in public infrastructure with the help of EU funds. Activity in the service sector also continued to gradually increase. Value-added in private-sector and public services increased by 0.3% in quarterly terms. The most significant contribution to this growth from private-sector services was made by transportation and storage in connection with export growth. Relative to the previous quarters there was a notable change in the dynamics of value-added in the financial and insurance activities sector, which coincided with the recovery and resolution of

the banking system. Value-added in the financial sector was up 0.3% in quarterly terms. The main factor in the growth in value-added in public services was a small rise in employment. GDP in the first quarter was up 1.9% in year-on-year terms, with comparable contributions from industry, construction and the service categories of wholesale and retail trade, transportation and storage, and accommodation and food service activities. There was also a notable contribution from the forestry sector, as a result of the clear-up of the effects of the ice storms. In contrast to the final quarter of last year, net taxes on products made a negative contribution of 0.3 percentage points to year-on-year growth in GDP.

Aggregate demand

In the first quarter of this year, the significant quarterly decline in domestic demand was primarily the result of changes in inventories. After a recovery last year, domestic demand declined by just under 2% in the first quarter of this year. This was primarily the result of a decline of more than 9% in gross investment, most notably inventories. Gross fixed capital formation was down just 0.3%. Within the latter, investment in machinery and equipment continued to decline, primarily as a result of the continuing uncertainty in the economy and the constraints on access to financing. At the same time, at 80% production capacity utilisation in manufacturing is now approaching its level of the period of balanced economic growth before 2006. Growth in investment in transport

equipment was high at almost 20%, as there were notable imports of aircraft, although these figures fluctuate sharply between quarters. Investment into residential construction continued to decline in line with expectations, while there was renewed high growth in investment in other buildings and structures in connection with the public infrastructure investments. The quarterly decline in final consumption was small at just 0.2%, and was the result of the government's continuing austerity policies. Household consumption has stabilised in recent quarters in line with developments in the real wage bill, in which low inflation and the easing of the situation on the labour market were the main factors.

Exports remain the main engine of economic growth.

The contribution made to quarterly GDP growth by net trade stood at 1.2 percentage points in the first quarter, while the contribution made to year-on-year GDP growth stood at 2 percentage points. Total real exports increased again by 1% in quarterly terms; growth in merchandise exports has been the sole contributory factor in this increase since the second quarter of last year. Merchandise exports are increasing rapidly as a result of stronger demand on EU markets. At the same time, exports of services have seen a significant downturn, which according to balance of payments figures was caused primarily by a decline in exports of intermediation services. In the first quarter of this year, imports were down in quarterly terms, while due to low domestic demand import growth was also slightly outpaced by export growth in year-on-year terms. Imports of services have otherwise increased significantly in the last two quarters. Alongside imports of construction services, other significant factors in this growth were imports of business services and, in part, imports in connection with the recovery and resolution of the domestic banking system.

Monthly indicators of activity

Monthly growth in total industrial production was weak in April, although the outlook for future months is improving. Total industrial production was up 0.3% on March, as a result of growth in the energy sector and a pronounced increase in estimated stocks in the mining sector. Output in the manufacturing sector declined by 0.5%. Total industrial production was up 3% in year-on-

year terms in April, but only as a result of a significant increase in the production of intermediate goods, demand for which is increasing on the domestic and foreign markets according to sales revenue figures. Industrial production is expected to continue growing gradually over the coming months, as firms anticipate further growth in exports, while the domestic market is also expected to continue its recovery.

After a small decline in the first quarter, turnover in the retail sector increased in monthly terms in April, although the gradual decline in turnover in vehicles continued. Real turnover in the retail sector (excluding vehicles) was up 1.4% on March, but only as a result of increased sales of motor fuels, which fluctuate sharply between individual months. At the same time sales of food products and non-food products declined by just under 2%. Turnover in the retail sector (excluding vehicles) was also up in year-on-year terms in April for the first time since June 2012, by just under 2%, but again solely as a result of turnover in fuels. Turnover in the trade and repair of motor vehicles has mostly been declining this year. After declining by just under 2% in the first quarter, turnover recorded a similar monthly decline

in April. Year-on-year growth in turnover in vehicles had also slowed to just over 2% by April.

Nominal turnover in most categories of private-sector services other than trade increased in monthly terms in March. Total turnover in services was up 2.6% on February, largely as a result of transportation and storage, in line with the growth in merchandise exports. After several months of decline, there was a notable reversal, at least temporarily, in turnover in professional, scientific and

Notes: Data are working days adjusted.

* Volume of industrial production. ** Real value of construction put in place. *** Excluding trade and financial services. + Nominal turnover.

++: 3-month moving average compared to the corresponding average 3 months earlier. Data are seasonally and working days adjusted (except for construction where data are seasonally adjusted).

technical activities. Growth in information and communication activities was slightly weaker, while activity in administrative and support service activities is continuing to decline. Year-on-year growth in total turnover reached just under 6% in March, which was partly attributable to a low basis. The high growth was primarily the result of the high level of activity in the transportation and storage sector.

The rapid growth in the amount of construction put in place continued in April. Total activity was up almost 7% on March, which alongside further rapid growth in the amount of civil engineering work put in place was also attributable to a sharp increase in residential construction, despite the frozen housing market. The amount of residential construction put in place fluctuates hugely, and in light of its very low level is very much subject to the intensity of reporting by construction firms. Activity was up in year-on-year terms in all segments of construction in April, although civil engineering work was notable for its increase of almost 70% in the amount put in place.

Nominal turnover in private sector services excluding trade

Construction

3 | Labour Market

Developments on the labour market remain more favourable than in the same period last year. Inflows into unemployment are continuing to decline in year-on-year terms, while outflows from unemployment into work remain up in year-on-year terms. This is producing monthly falls in the number of registered unemployed. The indicators of labour demand are also gradually improving. In April, the workforce in employment was up in year-on-year terms for the first time since the outbreak of the crisis at the end of 2008. Nominal wages in the private sector are continuing to rise gradually, which in light of the low inflation is contributing positively to household purchasing power.

Unemployment, labour market flows and workforce in employment

In May, the number of registered unemployed continued to fall more quickly than in the same month last year. By the end of the month, the number of registered unemployed reached 119,700, down 3.2% on April and up just 0.9% on last May. The registered unemployment rate stood at 13.4% in April, down 0.5 percentage points on March.

The structure of flows on the labour market remains favourable. In May, the number of people newly registering as unemployed was again down in year-on-year terms, by almost 12%. The number of deregistrations for reason of new hires was up 17% in year-on-year terms, and accounted for the largest proportion of deregistrations from the Employment Service. Just over a year since the introduction of severance pay for temporary employees, the number of people newly registering as unemployed for reason of the loss of temporary employment is down around 10% on a year earlier. The number of deregistrations for reasons other than employment is continuing to decline sharply in year-on-year terms. Of the indicators of demand for labour, the main year-on-year increases were recorded by capacity utilisation in

manufacturing and the indicator of the shortage of skilled workers, while the indicator of the shortage of all workers remains unchanged.

Structure of labour force

Source: SORS.

The workforce in employment in April was up in year-on-year terms for the first time since the outbreak of the crisis at the end of 2008. The long-lasting year-on-year fall in the workforce in employment thus came to an end, as April saw a year-on-year increase of 0.5%. The

workforce in employment in the private sector increased by 0.4%. The workforce in employment was up on March in the majority of sectors, agriculture recording the largest increase of almost 4,900, which neutralised around two-thirds of the impact of the downward revision in the estimated number of farmers on the year-on-year change in the total workforce in employment. The largest increase in the workforce in employment in other sectors was recorded by construction, where it was actually down in year-on-year terms owing to even more pronounced increase last April. The workforce in employment in public services also increased in year-on-year terms, by 0.6%. The workforce in employment in public administration was down 0.8% in year-on-year terms, while the workforce in employment in the education sector and the health sector increased by more than 1%.

Wage developments

Moderate growth in the average wage has continued.

The average nominal gross wage per employee stood at EUR 1,531 in April, up 0.9% on last April, and up 0.3% on March. Year-on-year growth in the nominal gross wage in the private sector stood at 1.4% in April. The highest rates of growth were recorded by the mining sector (7.2%), information and communication activities (3.6%), financial and insurance activities (2.8%) and manufacturing (2.5%). The largest year-on-year decline was the 2% recorded by the other service activities sector.³ Wages in public services were down just 0.3% in year-on-year terms in April. The decline was largest in the human health and social work sector at 0.8%, while the public administration, defence and compulsory social security sector actually recorded an increase of 0.5% in wages. In addition to the positive nominal developments, low inflation meant that the average real gross wage was up 0.5% in year-on-year terms in April, while the rise in employment entailed an increase of 1.1% in the real gross wage bill.

³ The other service activities sector includes activities of membership organisations, repair of computers and personal and household goods, and other personal service activities.

4 | Price Developments

As measured by the HICP, year-on-year inflation stood at 1.0% in May, up 0.5 percentage points on April. The largest contribution to the rise in inflation came from energy prices, which after falling for several months were up again in year-on-year terms as a result of developments in euro oil prices. The other factors in May's rise in inflation were mostly of a non-market nature: the higher growth in prices of processed food was largely the result of a rise in excise duties on alcohol and tobacco, while the higher growth in services prices was the result of changes in administered prices. These factors produced a rise in core inflation indicators, despite an increased year-on-year fall in prices of non-energy industrial goods. Core inflation nevertheless remains low, and was primarily positive because of government and administrative measures, while there are no significant upward pressures on the demand side or the supply side.

Headline inflation and structure of inflation

As measured by the HICP, year-on-year inflation was up 0.5 percentage points in May at 1.0%, primarily as a result of higher growth in energy prices and a rise

in excise duties on alcohol and tobacco. After slowing for several months, year-on-year growth in energy prices increased to 1.1% in May, primarily as a result of a rise in euro oil prices on global markets. Year-on-year growth in services prices also increased slightly, to 2.3%, sewage charges having risen sharply. Prices of accommodation and food services also rose, while passenger air transport prices fell after rising sharply for several months. Year-on-year growth in prices of processed food increased, by 1.1 percentage points to 2.7%, as a result of the rise in excise duties on alcohol and tobacco. The year-on-year fall in prices of unprocessed food deepened by 1.6 percentage points to 3.3% in May, as prices of vegetables fell

Note: Figures may not sum up to official figures due to rounding.

again. The year-on-year fall in prices of non-energy industrial goods also deepened slightly, to 0.5%, primarily as a result of a more pronounced year-on-year fall in prices of sports equipment, telephone and other equipment, and falls in prices of new cars. In contrast to Slovenia, year-on-year inflation across the euro area fell in May, by 0.2 percentage points to 0.5%.

Core inflation and inflation trends

Core inflation rose slightly in May as a result of non-market factors, but remains low. Year-on-year growth in the HICP excluding energy, food, alcohol and tobacco rose by 0.1 percentage points in May to 1.1%. This was the result of a year-on-year rise in services prices in sectors with limited competition, while prices of non-energy industrial goods fell further. Higher year-on-year growth in prices of processed food, primarily as a result of higher excise duties on alcohol and tobacco, was an additional factor in the rise of 0.3 percentage points in core inflation as measured by the HICP excluding energy and unprocessed food to 1.4%, while core inflation as measured by the HICP excluding energy remained virtually unchanged. In the absence of inflationary pressures on the supply side, and in light of the weak growth in private consumption and high unemployment, no major rise in core inflation can be expected in the future. The narrowest core inflation indicator in the euro area fell to 0.7% as a result of lower year-on-year growth in services prices.

5 | Public Finances

In the first quarter of the year, consolidated general government revenues and expenditure were up in year-on-year terms, while the deficit narrowed. The proportion of expenditure accounted for by interest is rising, while expenditure on investment has been increasing since the middle of last year, contributing to economic growth. Revenues were also up according to the figures for the first five months of the year. The increase in revenues is a reflection of the rise in certain tax rates and tax increases last year, more favourable settlements of corporate income tax, May's payment of the concession fees for mobile telephony radio frequencies, and, in part, the slight improvement in the economic situation. The required yield on Slovenian long-term bonds continued to fall, and had reached approximately 3% by the middle of June. The interest rates achieved on treasury bills in the June auctions were lower than those in the previous month.

Consolidated general government revenues and expenditure

In the first quarter, the consolidated general government deficit was narrower in year-on-year terms as a result of high growth in revenues, the position improving further in April and May. Over the first three months of the year, the consolidated general government deficit amounted to EUR 658 million, EUR 59 million narrower in year-on-year terms. The state budget figures reveal a further significant year-on-year improvement in the position in April (improved corporate income tax settlements) and May (payment of the concession fees for mobile telephony radio frequencies). Over the first five months of the year, the state budget deficit amounted to EUR 707 million, EUR 431 million narrower in year-on-year terms. Over the first four months of the year, the position of the Health Insurance Institute was approximately balanced, an improvement of EUR 34 million compared with the same period last year. During the first quarter, local government recorded a surplus of EUR 11

million, slightly less than in the same period last year. Local government saw an increase in revenues as a result of disbursements of EU funds from the state budget, while on the expenditure side there was an increase in funding for investment.

In the first quarter, consolidated general government revenues were up 6.2% in year-on-year terms as a result of more favourable developments in revenues from taxes and contributions, which continued to record significant growth up to and including May.

For the first five months of the year, the figures indicate that growth in revenues from taxes and contributions remained similar to the first quarter. According to the available figures, it stood at 6.8%, taxes and contributions having increased by just over EUR 340 million in year-on-year terms. Approximately half of the increase in revenues was attributable to more favourable final settlements of corporate income tax. They were negative last year in the amount of EUR 148 million, but were positive this year in the amount of EUR 20 million. Higher taxation (VAT, lottery tax, tax on financial services) and rises in

certain health insurance contributions were also factors in the year-on-year increase in revenues. During the first five months of the year, VAT revenues were up almost a tenth in year-on-year terms, while income tax revenues were up just under 5% and social security contributions were up 2.3%. Of the major categories of taxes, only excise duties recorded a decline, the level of excise duties on fossil fuels, which account for the majority of excise duties, having declined in year-on-year terms. In May, non-tax revenues increased significantly as a result of the payment into the budget of the concession fees for mobile telephony radio frequencies in the amount of EUR 149 million. During the first five months of the year, net revenues from the EU budget amounted to EUR 130 million, up slightly on the same period last year.

In the first three months of the year, consolidated general government expenditure was up 3.7% in year-on-year terms, largely on account of interest and expenditure on investment, while expenditure on goods and services kept falling. The largest year-on-year increase was recorded by interest, as a result of the recent

increase in general government debt. Expenditure on investment has been increasing in year-on-year terms since last summer. In the first quarter of this year, it was up more than a third, as both the state budget and the local government sector increased their investment expenditure. The increase in expenditure on wages was related to the first instalment of the wage settlement on the basis of the Supreme Court judgement (in connection with the elimination of the third quarter of wage disparities for civil servants). The second half of the settlement will be made by next January. In the first quarter, expenditure on goods and services was down approximately 5%, while expenditure on social transfers to individuals and households also declined. Developments within this category nevertheless varied. There was an increase in pension expenditure, which accounts for two-thirds of the aggregate figure, as a result of a rise in the number of pensioners. Expenditure on unemployment benefits has continued to decline, but transfers for social welfare (financial social assistance) began rising in the final quarter of last year.

Financing of the state budget

In the first five months, state budget borrowing of the year amounted to EUR 5.1 billion, and was primarily executed via bond issues, although the stock of issued treasury bills also increased. Bond issues in February and April increased the debt by around EUR 4.6

Spreads on 10-year government bonds as compared to Germany

Note: Spread is calculated as a difference between yield of 10-year government bond and the yield of reference German bond on a daily basis and is used as a measure of country's credit risk. *In the picture, SLOREP 09/24 is used after 1. January 2013.

ruary and April increased the debt by around EUR 4.6 billion (EUR 2.6 billion of which was in February). The remaining borrowing relates to the issue of treasury bills of various maturities. EUR 138 million worth of treasury bills were issued in June. The largest proportion again comprised 12-month treasury bills, the interest rates on which were lower than in the previous auctions. The interest rate on the 12-month treasury bills was 0.65%, and the nominal value of the issue was EUR 100 million. The current stock of principal of issued treasury bills amounts to just over EUR 1.9 billion, although principal of 18-month treasury bills in the amount of just over EUR 1.0

billion matures in October, and represents the majority of the debt maturing by the end of the year. State budget debt of EUR 1.8 billion was repaid during the first five months of the year. The government increased its deposits at banks by EUR 2.5 billion during the first five months of the year.

After the interest rate cut and announcement of additional measures by the ECB, the required yield on 10-year Slovenian government bonds fell to around 3% by mid-June. The average yield in the first half of June was down approximately 0.3 percentage points on May. After the announcement of additional measures by the ECB, the yields on other countries' government bonds also fell.

6 | Current Account

The current account surplus remained high in April. It amounted to EUR 256 million, down just EUR 15 million in year-on-year terms. The surplus of trade in services continued its rapid decline, largely as a result of high growth in imports of services. Favourable demand from EU Member States has simultaneously brought an even sharper increase in the merchandise trade surplus. The surplus in transfers also widened in year-on-year terms in April. Another factor alongside services holding back the widening current account surplus is the faster growth in the deficit in capital income caused by the increase in net payments of interest on the government's external debt and the coverage of losses on outward FDI. Following the revision of the figures for 2012 and 2013, the cumulative 12-month current account surplus narrowed. It remained at around 5.7% of GDP over the first four months of this year.

Merchandise trade

Year-on-year growth in merchandise exports in April was down significantly on March, while growth in imports also slowed slightly. Year-on-year growth in merchandise exports was down just over 3 percentage points on March at 2.2%, partly as a result of the high basis. At the same time, growth in merchandise imports slowed by 0.4 percentage points to 1.8%. The merchandise trade surplus thus remained relatively high, at EUR 143 million. The cumulative merchandise trade surplus over the last 12 months reached EUR 870 million or 2.4% of GDP in April, 1.6 percentage points more than a year earlier. The widening surplus is being generated by trade with EU Member States outside the euro area and by a narrowing deficit in trade with the euro area.

Total merchandise exports are continuing to rise as a result of exports to the EU, most notably those Member States with their own currencies. According to SORS figures, total merchandise exports in the first four

months of the year increased by 5.4% in year-on-year terms, as a result of an increase of 8% in exports to EU Member States. As the economic recovery continued, there was a sharp increase of more than 10% in exports of capital goods and intermediate goods to the EU during the first quarter. At the same time, average year-on-year growth in exports of consumer goods has remained relatively weak. Year-on-year growth in merchandise exports to EU Member States outside the euro area has notably been increasing since the second half of last year, exceeding 15% in the first quarter of this year. Of these EU Member States, exports to Croatia and Hungary saw the most notable growth. Exports to non-EU countries have been declining since last June, and were down just under

1% in the first quarter of this year. Only consumer goods continued to record growth in exports.

According to SORS figures, merchandise imports were down just under 1% in year-on-year terms. The largest year-on-year decline was in imports of capital goods, primarily as a result of the high basis caused by last year's imports of equipment for the energy sector. Despite the ongoing recovery in industry, nominal imports of intermediate goods were down in year-on-year terms, which was probably attributable to price factors. Imports of consumer goods alone were up in year-on-year terms.

Trade in services

The year-on-year decline in exports of services came to an end in April, while growth in imports remained high. Exports of services were up 3.8% in year-on-year terms in April, while year-on-year growth in imports of services remained close to its level of the first quarter at almost 9%. The surplus of trade in services is thus continuing to narrow. The surplus over the first four months of this year was EUR 103 million narrower in year-on-year terms at EUR 560 million, taking the cumulative surplus over the last 12 months to 5.2% of GDP.

Exports of transport services continued to increase in April while imports remained unchanged. Exports of transport services in April were up just under 6% in year-on-year terms, while the figure for the first four months of the year was up 7.4% in year-on-year terms. There was a sharp increase in exports of freight transport services by air, rail and road. Passenger road transport services also increased sharply in March and April, by more than 60% on average. Imports of transport services in April were up merely 0.2%, while the figure for the first four months of the year was up more than 5%. Imports of road and maritime freight transport services were down in year-on-year terms, while imports of rail freight transport services have increased sharply in the last two months. Over the first four months of the year, the surplus of trade in transport services was up EUR 21 million in year-on-year terms at EUR 226 million.

Exports of travel services were unchanged in April, while the year-on-year decline in imports of travel services deepened further. Although there was a rise of more than 15% in the number of arrivals and the number of overnight stays by foreign tourists in Slovenia in April, exports were merely unchanged in year-on-year terms according to the current balance of payments figures. The increase in exports was also relatively weak in the first four months of the year, at just 1.7%. Imports of travel services remain profoundly affected by lower purchasing power. They were down more than 6% in year-on-year terms in April, comparable to the decline in the first four months of the year. The surplus of trade in travel services thereby widened by EUR 20 million in year-on-year terms to just under EUR 400 million.

In the first four months of the year, developments in trade in other services were unfavourable. After declining in year-on-year terms in the first quarter, exports of other services (excluding transport and travel services) increased by 5.8% in year-on-year terms in April. This growth was attributable to high growth in exports of communication services, financial and insurance services, and services related to intellectual property rights. Exports of intermediation services declined again. Imports of other services were up more than 17% in year-on-year terms in April, as a result of an increase in imports of insurance and other business services. Trade in other services was practically balanced in April, compared with the surplus of EUR 15 million recorded last April. Trade in

other services recorded a deficit of EUR 63 million over the first four months of this year, compared with a surplus of EUR 80 million in the same period last year.

Factor income and current transfers

The deficit in net factor income has been widened this year by interest payments on general government debt and a deficit in net income from FDI. The deficit in capital income over the first four months of the year widened by EUR 180 million in year-on-year terms to EUR 406 million. The main factor in this year's widening deficit has been increased net payments of interest on government bonds, where the deficit widened by EUR 100 million in year-on-year terms to EUR 168 million. The deficit in net income from FDI over the first four months of the year amounted to EUR 193 million, EUR 82 million wider than in the same period last year.⁴ In contrast to the government sector, as a result of its debt repayments and the low interest rates the private sector's net payments of interest to the rest of the world declined by EUR 4 million to EUR 45 million. Over the first four months of the year, the surplus in labour income was unchanged in year-on-year terms at EUR 125 million. At the same time, the deficit in net factor income amounted to EUR 281 million, taking the deficit over the last 12 months to more than 2% of GDP.

A large surplus in March and April meant that the deficit in current transfers in the first four months of the year narrowed to EUR 53 million. After increasing in March, the surplus in current transfers also widened in year-on-year terms in April, to EUR 30 million. There was a net inflow in government transfers in the amount of EUR 32 million in April, primarily as a result of funds in the amount of EUR 67 million received from the EU budget for implementing the common agricultural and fishery policies, while the private sector's deficit was significantly narrower in year-on-year terms.

⁴ The net outflow of reinvested earnings accounted for three-quarters of the widening of the deficit from FDI, while net payments of dividends and profits to the rest of the world accounted for the remainder.

7 | Capital and Financial Account

The trend of net outflows from the private sector to the rest of the world continued in April, when it amounted to EUR 0.4 billion, primarily as a result of an increase in claims. Claims thus increased by EUR 1.5 billion over the first four months of the year, most notably from currency and deposits, but also partly from investments in securities and trade credits granted. Liabilities declined by EUR 0.5 billion, largely on account of the repayment of loans and a decline in short-term trade credits; the sole increase was recorded by FDI. The government sector recorded net borrowing of EUR 3.9 billion over the same period, EUR 1 billion of which was in April. The net external debt amounted to EUR 12.4 billion at the end of April, more or less unchanged from the end of 2013, while the gross external debt was up EUR 3.8 billion at EUR 43.4 billion.

Private sector's claims

The private sector's claims against the rest of the world increased by EUR 1.5 billion over the first four months of the year, EUR 0.5 billion of which was in April alone. The largest increases in April were recorded by holdings of currency and deposits abroad (EUR 174 million), and investments in securities and derivatives (EUR 153 million), mostly on account of debt securities of banks and other sectors. Trade credits granted also increased (by EUR 98 million), as to a lesser extent did FDI (by EUR 40 million). Loans granted remained at the March level. The trend of increase in total claims against the rest of the world has continued in 2014: the increase in the first four months of the year was just over half of the total increase in the last 12 months. The largest outflows were recorded by currency and deposits (EUR 0.7 billion), trade credits (EUR 337 million) and investments in securities and derivatives (EUR 386 million).

Private sector's liabilities

The private sector reduced its liabilities to the rest of the world by EUR 0.5 billion over the first four

months of the year, despite an increase of EUR 49 million in April. The largest increase in April was recorded by liabilities from FDI, at EUR 271 million (almost half of which comprised a contribution of equity to a major domestic firm by an Austrian firm). The largest declines were in liabilities from trade credits (EUR 69 million), deposits at banks (EUR 62 million), and liabilities from investments in domestic securities and derivatives (EUR 53 million). Over the first four months of the year there were loan repayments in the amount of EUR 393 million, while liabilities from trade credits declined by EUR 244 million and non-residents' deposits at banks declined by EUR 192 million. FDI was the sole instrument to record an increase in debt over the first four months of the year (by EUR 344 million), EUR 162 million of which comprised an increase in equity.

External debt

The net external debt stood at EUR 12.4 billion at the end of April, more or less unchanged over the first four months of the year. The gross external debt increased by EUR 3.8 billion this year to EUR 43.4 billion, while gross external claims increased by approximately the same amount to EUR 30.9 billion. The government sector accounted for by far the largest proportion of the net external debt at the end of April at EUR 17.7 billion (up EUR 8.9 billion on a year earlier). The next largest figure was recorded by the banking sector, at EUR 0.4 billion (down EUR 2.9 billion on a year earlier). Other sectors increased their net external debt to EUR 1.8 billion by the end of April (up EUR 0.9 billion on a year earlier), while capital affiliates held net debt of EUR 2.3 billion to the rest of the world, up EUR 0.4 billion on a year earlier.

8

Banking System *

The banking system's total assets declined slightly in April. The main factors in the decline in total assets were the early repayment of liabilities to the Eurosystem from the 3-year LTROs and debt repayments to the rest of the world. Government deposits increased temporarily as a result of a rise in overnight placements with banks. After recording a relatively sharp increase in the first two months of the year, household deposits declined slightly in March and April. The year-on-year rate of growth nevertheless remained positive. Loans to non-financial corporations continued to decline, albeit at a slower pace, while bank lending activity to households was unchanged. The banking system's net interest margin has improved significantly this year. Impairment and provisioning costs are sharply down on the same period last year. The banking system recorded a pre-tax profit of EUR 88 million over the first four months of the year.

Total assets

The banking system's total assets declined in March and April. Total assets declined by EUR 60 million in April to end the month at EUR 40 billion. The year-on-year decline in total assets stood at 12.2% in April. April's contraction was the result of the ongoing partial early repayments of 3-year LTROs and a decline in the banks' liabilities to the rest of the world. April's debt repayments to the rest of the world were at the level of this year's average. There was an increase in government deposits, but solely as a result of a renewed increase in overnight placements. On the asset side, loans to non-financial corporations continued to decline, while loans to households also declined slightly. The largest decline on the asset side was recorded by financial assets and securities, while the largest increase was temporarily recorded by liquid assets, cash at the central bank and, to a lesser extent, claims against banks.

Investment activity

Lending activity to the non-banking sector declined again in April. Loans to the non-banking sector (NBS) declined by EUR 60 million in April, taking the decline over the first four months of the year to EUR 400 million. The year-on-year decline in loans was slightly slower than the previous month, at 20.6%. The year-on-year decline in loans to the NBS reached 10.1%, if the effects of the transfer of loans to the BAMC, the additional impairments created after the AQR and the two banks undergoing the orderly wind-down process are excluded. All sectors other than non-residents recorded a contraction in loans in April.

The contraction in loans to non-financial corporations (NFCs) has continued, albeit more slowly than in previous months. The stock of loans to NFCs declined by EUR 36 million in April. The year-on-year contraction in loans to NFCs was slightly smaller than in March, at 29.8%. The decline in loans to corporates (NFCs and OFIs) would have stood at 11.5% if the aforementioned effects were excluded. Only the banks under majority foreign ownership recorded an increase in loans to NFCs in April, although the year-on-year rates of growth also improved at the large domestic banks. The trend of positive growth in loans to NFCs continued at the

* This section uses data from the banks that report to the Bank of Slovenia in accordance with the Guidelines for implementing the regulation on reporting by monetary financial institutions. Because of methodological differences, these figures differ from the published statistics.

savings banks in April, where it approached 30% in year-on-year terms, although the proportion of the banking system that they account for is relatively low; loans to NFCs at the savings banks have increased by EUR 9.4 million this year.

Bank lending activity to households stagnated in April. While the stock of household loans recorded a small decline of EUR 9 million, the year-on-year contraction remained close to 4% for the fourth consecutive month. Household loans contracted by EUR 75 million over the first four months of this year, the banks under majority foreign ownership recording the largest decline of EUR 50 million. As was the case for corporate loans, the savings banks were notable for recording positive growth in loans to households. Household loans at savings banks increased by EUR 4.8 million in April, and were up 12.7% in year-on-year terms. Consumer loans declined by 9.7% across the banking system in April, while housing loans continued to record low positive growth (0.8%).

Financial assets and securities declined by EUR 281 million in April. Government debt securities held to maturity, most notably RS65 Slovenian government bonds, accounted for half of this decline. The proportion of the banking system's total assets accounted for by securities remains relatively high at a fifth.

Funding

The banks again reduced their liabilities to the Eurosystem in April, having continued making partial early repayments of 3-year LTROs. Liabilities to the Eurosystem declined by EUR 286 million in April, as they had in March, taking the overall decline in the first four months of the year to EUR 994 million. The banks continued to make repayments of these liabilities in May and June.

The debt repayments to foreign banks in April were slightly higher than this year's average. Liabilities to foreign banks declined by EUR 124 million, most evidently at the banks under majority foreign ownership. Net repayments of liabilities to banks in the rest of the world have amounted to EUR 452 million this year, just over half of the net repayments made in the same period last

year. The banks under majority foreign ownership accounted for just over a half of the repayments. The banks made debt repayments of EUR 82 million via issued debt securities over the first four months this year. The banks' net debt repayments via wholesale funding amounted to EUR 0.5 billion over the first four months of the year.

Deposits by the non-banking sector increased in April, as a result of the increase in government deposits. April's increase of EUR 542 million in deposits by the non-banking sector was the result of an increase of EUR 474 million in government deposits, and more particularly an increase of EUR 387 million in overnight placements by the Ministry of Finance at the end of April, the latter figure having amounted to just EUR 39 million in the previous month. The year-on-year contraction in deposits by the non-banking sector thus slowed by 3.2 percentage points to 2.0%. There was still a moderate increase in deposits by OFIs and non-residents, while other sectors recorded a decline in deposits.

Growth in household deposits stalled in March and April, although the year-on-year rate of growth nevertheless remained positive. The stock of household deposits was down EUR 11 million on the previous month, although the increase in household deposits over the first four months of the year remained relatively solid: the cumulative total of EUR 242 million is equivalent to half of last year's outflow of household deposits from the banking system. The year-on-year rate of growth turned positive, improving from -1.7% in March to 0.1% in April. This was partly the result of a base effect from last year, household deposits having declined by EUR 422 million in March and April last year owing to the developments in Cyprus, and the general instability and speculation that Slovenia would seek a bailout. The main factor in April's relatively small outflow of deposits was the decline of EUR 17 million in deposits at the large domestic banks. The year-on-year rate of growth is nevertheless improving: at the end of April it was 5 percentage points up on December at -3.4%. The outflow of deposits at the small domestic banks was again the result of a decline at the two banks undergoing the orderly wind-down process. The savings banks increased their stock of household deposits by EUR 7 million in April, and by 32% in year-on-

year terms, while similarly the banks under majority foreign ownership have continued to record very solid growth, the year-on-year rate standing at close to 10% in April.

Banking system's P&L account

The Slovenian banking system ended the first four months of 2014 with a profit. Growth in net interest and net non-interest income is continuing to increase the banking system's gross income, which was up 11% on the same period last year. The year-on-year increase of 6.9% in net interest was the result of a larger decline in interest expenses (33%) than in interest income (14%). The main factors in the decline in interest income were the contraction in lending activity and the fall in interest rates, while the main factors in the decline in interest expenses were the fall in interest rates and the decline in funding. The banks also realised very solid growth in non-interest income, which was up a fifth on the same period last year, partly as a result of the realisation of revaluation gains. Having improved sharply as a result of the transfer of claims to the BAMC last December, the interest margin on interest-bearing assets during the first four months of the year stood at 2.2%, up 0.4 percentage points on the same period last year and 0.5 percentage points higher than the overall figure for 2013. Operating costs were down just over 6% on the same period last year. Impairment and provisioning costs were down sharply on the same period last year, by 39%. They nevertheless still account for more than a quarter (27%) of the disposal of the banks' gross income. The banking system's pre-tax profit increased slightly in April to EUR 88 million.

9 | Financial Markets

The SBI TOP breached the 800 mark after more than three years, hitting 813 points in May. The market capitalisations of shares and bonds on the Ljubljana Stock Exchange are returning to their levels before the onset of the declining trend in mid-2011, at EUR 6,419 million and EUR 15,307 million respectively. The positive trend has also seen the volume of trading in securities on the Ljubljana Stock Exchange reach its level of the first half of 2011. The positive mood on the stock exchange is the result of the announcement of the privatisation of several companies under majority government ownership. After leaping in April, non-residents' interest in investing in Slovenian securities remains positive. Slovenian residents made investments in foreign securities in April, although households mostly recorded sales, primarily of euro area shares and bonds. There were inflows of EUR 4 million into mutual funds in April, which brought a rise of 1.3% in the average unit price. The mood on the global financial markets improved, which brought a rise in indices in Europe and the US.

Developments on the Ljubljana Stock Exchange

The SBI TOP rose again in May, by 8.9% to 813 points, thereby breaching the 800 mark for the first time since the beginning of 2011. The year-on-year change stood at +32.9%. At the same time the market capitalisation of shares on the Ljubljana Stock Exchange rose by 8.4% to EUR 6,419 million, its highest level since the first half of 2011. The rises in the SBI TOP and the market capitalisation of shares indicate a restoration of confidence in the domestic capital markets, but are also a reflection of the announcement of the sell-off of listed companies under majority government ownership. The volume of trading in shares is also growing as a consequence: the figure of EUR 45.9 million was the highest since the first quarter of 2011 with the exception of this

April. The volume of trading was up 155.6% in year-on-year terms. Krka and Zavarovalnica Triglav, both listed on the prime market, accounted for just half of the total volume of trading in shares. The dividend yield on the prime market stood at 3.3% in May. The largest volume of trading on the standard market was recorded by Letrika, still under the influence of the binding bid submitted by investors for the 54% interest in the government-owned company, and by Aerodrom Ljubljana and Žito, both on the list of 15 companies identified for privatisation. The largest volume of trading on the entry market was recorded by Cinkarna Celje, which is also one of the 15 companies listed for privatisation, while shares in Helios also remain

in demand, primarily as a result of the takeover bid submitted by Austria's Ring International Holding for the remaining 22% interest.

The market capitalisation of bonds on the Ljubljana Stock Exchange remained approximately unchanged in May at EUR 15,307 million, up 0.7%. The volume of trading in bonds amounted to EUR 4.4 million, again the lowest figure this year. More than half of the volume was in 68th-issue Slovenian government bonds. The three most heavily traded bonds accounted for 76.7% of the total volume. In the middle of the month KD Group issued its KDH3 bonds with a total nominal value of EUR 4.3 million and a fixed annual yield of 6%. The Ministry of Finance did not issue bonds or money-market instruments on the domestic or foreign capital markets in May.

Inward investments by non-residents

Non-residents made net purchases of EUR 29.8 million in Slovenian bonds and EUR 0.6 million in Slovenian shares in May. The largest net purchasers of bonds were residents of Luxembourg (EUR 67.3 million), while residents of France recorded net purchases of half this amount (EUR 33.3 million). The largest net sellers of Slovenian bonds were residents of the UK and Belgium, with sales of EUR 33.7 million and EUR 30.2 million respectively. Non-residents made purchases and sales of both short-term and long-term debt securities. The largest net purchasers of Slovenian shares were residents of Croatia, whose purchases of EUR 8.4 million were primarily the result of the acquisition of EUR 7.9 million worth of shares in Zavarovalnica Triglav. By contrast, residents of Cyprus made net sales of EUR 11.5 million in Slovenian shares, Zavarovalnica Triglav accounting for EUR 9.3 million of this. The next largest figures were recorded by residents of Montenegro and Hungary, whose respective net sales of EUR 8.4 million and net purchases of EUR 7.8 million in Slovenian shares were largely attributable to the sale of EUR 8.4 million worth of shares in AG to Hungarian residents. Non-residents recorded their largest net purchases of shares in Krka and Gorenje in the total amount of EUR 3 million, and net sales of shares in Telekom Slovenije and Zavarovalnica Triglav in the total amount of EUR 2.1 million. The propor-

Source: Central Securities Clearing Corporation, Bank of Slovenia calculations.

Source: Bank of Slovenia.

tion of market capitalisation on the Ljubljana Stock Exchange accounted for by non-residents fell to 16.5% in May.

Outward investments by residents

Slovenian residents made net purchases of EUR 147.5 million in foreign debt securities and EUR 20 million in foreign equities in April. The largest net purchasers of foreign bonds were the banks (EUR 88.8 million), followed by insurance corporations (EUR 57.9 million). Households recorded the largest net sales of foreign bonds, at EUR 2.5 million, while pension funds also made significant sales in the amount of EUR 1.8 million. The banks also recorded the largest net purchases of

foreign shares, at EUR 11.2 million, while households were the largest net sellers of foreign equities, a reflection of the negative mood on foreign financial markets in the last two months. Households primarily recorded net sales of euro area shares and US bonds, while the banks mostly made net purchases of euro area securities.

Domestic mutual funds

The domestic mutual funds' assets under management increased to EUR 1,893 million in April, as the average unit price rose by 1.3% and net inflows amounted to EUR 4 million, the largest figure since September 2012. The largest net inflows of EUR 5.6 million were recorded by equity funds, which recorded a rise of 1.5% in the average unit price, while balanced funds recorded net withdrawals of EUR 3.8 million, although the average unit price nevertheless rose by 1.8%. The largest investors in mutual funds were other financial intermediaries (EUR 3.6 million) and households (EUR 3.5 million). Slovenian investments were primarily favoured, as a result of the privatisation in progress at 15 companies under majority government ownership and the resulting anticipated rise in share prices. The proportion of the domestic mutual funds' assets under management accounted for by liquid assets⁵ increased to 10.5% in April.

Global financial markets

The mood on the global financial markets remained positive in May. The majority of stock market indices in Europe and the US rose in May, the European indices approaching their highest levels of the last six years. The rise was primarily the result of expectations of stimulus measures by the ECB and increased corporate M&A activity. The market yields on German and US government bonds fell, particularly over the longer part of the yield curve, owing to the rhetoric of the ECB and the Fed, the adverse political situation in Ukraine and the expected results of the European elections. The premiums on government bonds in the euro area periphery over German benchmark government bonds reached record lows at the beginning of the month, but then rose as a result of the deterioration in the provisional figures for economic

growth in the euro area. They fell again at the end of the month in response to the favourable election results. The largest monthly rises were recorded by Russia's RTSI (12.1%) and Hungary's BUX (10.5%). The MSEMEE index for eastern Europe also recorded a high rise of 7.4%. The largest rise in the western European indices was the 3.5% recorded by Germany's DAX. In the US the NASDAQ was up 3.1%, the S&P 500 up 2.1% and the Dow Jones up 0.8%. The S&P reached a record high of 1,923 points. The majority of indices in the former Yugoslav republics fell.

⁵ Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary. The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical

documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Note 1: With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) pre-

sents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds
General

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term. Short-term ones include all instruments of monetary market with original maturity of one year or less. Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities. Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund. Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up. Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests. Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives. Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The **repo interest rate** for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The **overnight-deposit interest rate** is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A **penalty rate** is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “**Euribor®**” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was

based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF. The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion »shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions.«

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

“Loans to households for other purposes” include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT and from January 2007 in EUR, by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. “credit institutions”) apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18 (amended by Regulation ECB/2009/7), which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 101 interest rate

indicators with the corresponding volumes are collected, of which 87 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. APRC is calculated in accordance with the provisions of Articles 22 and 23 of the Consumer Credit Act. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Exchange rates (Tables 2.6.1–2.6.2)

Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.6.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008, the conversion rate for the Slovak koruna as of 1 January 2009 and the conversion rate for the Estonian kroon as of 1 January 2011.

Payment systems (Tables 2.7 to 2.13)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system. As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system. As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.8 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Note 5: Data on payment cards DINERS, issued by Diners Club SLO d.o.o. are not included from the third quarter 2013,

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.9 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.10 Electronic Banking

Note 1: Only credit transfers debited from payers' accounts are included.

Note 2: Payments by Bank of Slovenia as payment service provider for non-MFI subjects are also included from 2011 on.

Table 2.11 Credit Transfers

A **paper-based order** is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

A **special payment order** is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A **non-paper-based credit transfer** is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A **standing order** is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.12 Debit Transfers

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

Note 1: A special money order was used until the end of 2009. Special money order was a standardised paper-based debit instrument used to remit money to the named payee. A special money order was issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.13: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000. Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

- Revisions in monthly data are published with the release of:
 - the following month's data;
 - the corresponding quarterly data;
 - the corresponding revised quarterly data;
 - the international investment position and external debt data for the corresponding year; and
 - the revised international investment position and external debt data for the corresponding year.
- Revisions in quarterly data are published with the release of:
 - the following month's data;
 - the data on the following quarter;
 - the international investment position and external debt data for the corresponding year; and
 - the revised international investment position and external debt data for the corresponding year
- Revisions for the annual balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

The **external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the **Intrastat reporting**. The source of data on trade in goods with other countries is the single administrative document (**Extrastat reporting**).

Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):

- report on account balances at domestic banks – PPV (until 31 December 2004),
- report on account balances abroad – C (until 31 December 2006),
- report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
- report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST) are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.

Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD) are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.

Reports on purchased/sold foreign debt securities without domestic brokers (DVP) are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.

Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR) are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obta-

ined the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.

Reports on monetary financial institutions (PORFI) are the source for data on loans, cash and deposits of the banking sector since 2005.

Reports on credits received and granted and deposits with non-residents (KRD) are the source for data regarding loans and deposit of all sectors, except banks, since 2007.

Reports on short-term receivables and liabilities from operations with non-residents (SKV) are the source for short-term trade credits and advances since 2002.

Reports on investments (SN) are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.

Report on Modern Payment Instruments (SPI) for data on acquisition of fuel by nonresident transport operators at Slovene petrol stations settled via payment cards of foreign issuers from 2008 onwards.

Accounting data of the Bank of Slovenia

Accounting data of banks (KNB)

Budget data on the transactions of government sector between the Republic of Slovenia and EU (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (from 2007 onwards). For banks this data source was used until 2010 (in 2011 it was replaced by PORFI), for government sector this data source was used until 2012 (in 2013 it was replaced by direct reportinf of the Ministry of Finance).

Estimates and other sources

- estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
- estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
- estimate of Italian pensions (IMAD) until the end of 1998,
- estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
- estimate of labour income (SORS),
- data on pensions paid to non-residents (ZPIZ),
- survey on the write-downs of debt from trade in goods and services abroad,
- estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
- estimate of cash transactions on tourism and labour income (from 2007 onwards),
- quarterly data on consumption of foreign embassies in Slovenia (SORS, from 2008 onwards),
- migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
- households' transfers (SORS, from 2008 onwards),
- assets acquired directly by tenders and programmes of EU (SORS, from 2008 onwards),
- data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards),
- data on purchases/sales of real-estate in Croatia (Croatian National Bank, from 2008 onwards),
- data on direct investment of Slovene households in the form of real estate abroad (main data source Household Budget Survey, SORS)
- data on purchases/sales of emission allowances between residents and nonresidents (Slovenian Environment Agency, from 2008 onwards until 2011, From 2012 onwards data is collected by BST monthly report).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad. The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists. Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SORS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists; three-year's survey -last conducted in 2009)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SORS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SORS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SORS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SORS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows and inflows (data provided by foreign central banks) and transfers of households (SORS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SORS, Annual survey on investment in tangible assets). Cross border transactions in emission allowances are included in capital account (as purchases and sales of non-produced non-financial assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards). From 2007 onwards, data on foreign direct investments of households in the form of real estate are included.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From the same year data on Slovenian residents' purchases/sales of real-estate in Croatia are included (data source is Croatian National Bank).

Since 2001, there is a break in the data series in the category »Direct Investments - Other Capital«. Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category »Other Investments«. Since 2002, the category »Direct Investments - Other Capital« also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart). For financial derivatives of banks from 2011 onwards the data source is PORFI and for financial derivatives of the government from 2013 onwards the source is the reporting of the Ministry of Finance.

Other investments**Short-term trade credits**

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]}
- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]}

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1988 – 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in “Other sectors”.

Note 2: For 1988 through 1990, “Statistical errors” include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the “Other changes” category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to “Liabilities to government”.

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500 million)
- March 1999 (EUR 400 million)
- March 2000 (EUR 400 million)
- February 2001 (EUR 100 million)
- April 2001 (EUR 450 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000 million)
- February 2008, RS63 (EUR 1000 million)
- February 2009, RS64 (EUR 1000 million)
- March 2009, RS65 (EUR 1500 million)
- September 2009, RS66 (EUR 1500 million)
- January 2010, RS67 (EUR 1500 million)
- March 2010, RS68 (EUR 1000 million)
- January 2011, RS69 (EUR 1000 million)
- March 2011, RS70 (EUR 1000 million)
- October 2012 (USD 2250 million)
- May 2013 (USD 1000 million)
- May 2013 (USD 2500 million)
- November 2013 (EUR 1500 million)
- February 2014 (USD 1500 million)
- February 2014 (USD 2000 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading “Direct investments”, while other commercial credits are included in “Other investments/trade credits”.

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in

reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2013 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2010 to 2012 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2014, the estimate will be replaced with actual data on reinvestment of earnings for 2013; the estimate for 2014 shall take into consideration the new three year average (2011 to 2013).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". From 2005 onwards loans of banking sectors are not included. Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From 2007 data on foreign direct investment of households in the form of real estate are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment-other capital". Intercom-

pany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portofolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN). From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart). For financial derivatives of banks from 2011 onwards the data source is PORFI and for financial derivatives of the government from 2013 onwards the source is the reporting of the Ministry of Finance.

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items. From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available. From 2007 onwards, the level of foreign currency holdings of domestic household sector equals the level that was reached at the end of the year 2006 (2.948,6 EUR million), when Slovenia joined the European Monetary Union.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on direct investment of Slovenian households. From 2007 onwards only estimation of the value of real estate direct investment abroad by Slovenian household sector is included,
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities, financial derivatives and monetary gold are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table »Net External Debt«, data are sorted by sectors, maturities and instruments; in the table »International Investment Position«, data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers. From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community. ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data. Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia. The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Note 4: On 1 October 2011, the Tax Administration of the Republic of Slovenia (DURS) introduced new information system and due to that, large number of recorded data on the tax and social security contribution revenues remained on unallocated fund accounts, while totals for those two categories were unaffected. We are publishing the data where certain categories of taxes and social security contributions were estimated by the Ministry of finance. The funds are expected to be correctly allocated already next month. Source: <http://www.mf.gov.si>

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors. Net financial assets present difference between financial assets and liabilities (stocks). Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances. Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;

- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions. Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products. From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Note 1: In 2013, the Statistical Office of Republic of Slovenia stopped publishing data on industrial new orders.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries. Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1 – ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper »Calculations of harmonised competitiveness indicators«, on the Web site of Bank of Slovenia: <http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown

Notes:

* The period to which data relate is shown in the parenthesis. NLT stands no-later-than.

¹ The data on interest rates are published by the Bank of Slovenia and the Ministry of Finance separately. The data on representative interest rates of the BoS and interbank money market rates are disseminated whenever the change occurs.

² The data are disseminated daily on Bank of Slovenia's page Currency Exchange rates (for display) and on Archive of financial data.
