## Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

## Executive Summary

*The economic situation in Europe deteriorated during the second quarter as a result of stagnation in the euro area core countries. The latest economic growth forecasts, which do not yet take full account of this stagnation, were down for global growth and for some of Slovenia's main trading partners, particularly the Balkan countries and Russia. Despite the unfavourable developments in the rest of the world, the economic recovery continued in Slovenia in the second quarter according to the partly available figures and in July according to the economic sentiment indicators, although in recent months some trends have started to lose strength. Industry continued to record solid positive growth until the end of the first half of the year, while transportation and related activities recorded even stronger growth. Meanwhile other service sectors indicated only moderate growth at best, and turnover in the retail sector excluding trade in vehicles continued to contract throughout the first half of the year. Monthly indicators suggest a continuation of overall growth in the construction sector in the second quarter, but there have been signs of a slowdown in the last two months.*

*Developments on the labour market remain favourable. The number of registered unemployed has been declining in current terms, and in July it was down in year-on-year terms for the first time since October 2012. Outflows from unemployment are continuing to increase in year-on-year terms, primarily on account of new hires, while inflows into unemployment are declining, primarily as a result of smaller inflows of those whose temporary employment contracts have expired. The workforce in employment was up 0.7% in year-on-year terms in June, largely driven by the private sector. Growth in the workforce in employment was notable in private-sector services, and in most export-oriented manufacturing sectors.*

*Year-on-year inflation as measured by the HICP stood at 0.3% in July, down 0.7 percentage points on June. This fall was expected, and was primarily the result of last year's rise in VAT dropping out of the inflation calculation. The main factors that contributed to the fall in inflation were prices of services, processed food and energy, where the last year's rise in VAT had been most heavily reflected.*

*According to the available figures, the consolidated general government deficit over the first seven months of the year according to the cash flow methodology narrowed. The main factors in the high growth in revenues, alongside the improved economic situation, were legislative changes, and also certain extraordinary revenues, most notably May's payment of concession fees for the mobile telephony radio spectrum. Although higher interest payments and a rise in investment expenditure were factors in the increase in expenditure, both at the level of the state budget and in local government, growth in revenues significantly outpaced growth in expenditure. The required yield on Slovenian long-term bonds rose slightly in the summer months, but remained low compared with the early part of the year, while the interest rates on treasury bills continued to fall in this period.*

*Despite an intensified increase in the merchandise trade surplus, the current account surplus in the first half of the year narrowed in year-on-year terms. It amounted to EUR 970 million, just under EUR 140 million less than in the same period last year. This was mainly attributable to a decline in the surplus of trade in services as a result of larger deficits in business and technical services and construction services, and a larger deficit in factor income as a result of the financing of the external debt of the government sector. This year has seen a strong positive contribution from merchandise trade: the merchandise trade surplus in the first half of the year doubled in year-on-year terms to EUR 637 million as imports stagnated and exports recorded good growth, particularly to EU Member States. The 12-month current account surplus remained at around 5.5% of GDP over this period.*

*June's net outflow of funds to the rest of the world from the private sector was up 12% on the monthly average over the last 12 months at EUR 351 million. Private sector claims increased in June, primarily as a result of an outflow to the rest of the world in currency and the banking sector's deposits. There were also increases in liabilities to the rest of the world, primarily as a result of an increase in FDI and non-resident investment in domestic securities and derivatives. The net outflow of the government sector amounted to EUR 169 million. The net external debt increased by EUR 210 million in the first half of the year to stand at EUR 12.3 billion at the end of June.*

*June's contraction in the banks' loans to non-financial corporations was the largest monthly figure in the first half of this year. The total assets of the Slovenian banking system recorded a sharp decline in June as a result of intensified early repayments of liabilities to the Eurosystem from 3-year LTROs and the repayment of debt to domestic and foreign banks. The banks also increased their short-term loans to banks in the rest of the world. The main factor in the notable increase in deposits by the non-banking sector was an above-average increase in deposits by non-financial corporations. After increasing in May, household deposits increased further in June. The banking system recorded a pre-tax profit of EUR 93 million in the first half of the year.*

## 1

## International Environment

Real GDP in the euro area in the second quarter was unchanged in quarterly terms, primarily as a result of a slowdown in activity in the core countries, while growth remained stable in the periphery countries. The unemployment rate remains high, but has declined slightly. Although the economic sentiment indicator remained almost unchanged in July at a relatively high level, the consumer confidence indicator declined again slightly. The latest economic growth forecasts were down for global growth and for some of Slovenia's main trading partners. The euro fell again slightly in July. Prices of certain commodities, most notably oil, reached their lows of the last year in July.

## Economic sentiment

The economic sentiment in the euro area remained stable in July and above its long-term average, but consumer confidence declined slightly. The unemployment rate remained high, but fell to 11.5% in June, its lowest level since September 2012. Although consumer confidence as measured by the European Commission deteriorated in July for the second consecutive month, it remained above its long-term average. The economic sentiment indicator in the euro area rose merely fractionally in July. The sole sectors to record increased confidence were manufacturing and construction, where it remains below the long-term average. Confidence declined in the retail sector and the service sector, most notably in financial services, where it declined to its lowest level in the last three months.

The aggregate PMI for the euro area rose slightly in July. The PMI compiled by Markit rose to its highest level of the last three months in July. This was primarily the result of increased activity in the service sector, the service index rising to its highest level since May 2011. Activity in industry also increased, albeit by slightly less than in the previous months. The developments varied from country to country. The PMI rose in Germany and

Spain, primarily as a result of growth in new orders. Activity remained positive in Italy, albeit less than in June. Activity stalled in France, as the contraction in manufacturing industry deepened, despite a modest recovery in the service sector.

## Economic activity and forecasts

Activity in the euro area slowed sharply in the second quarter, which was largely attributable to weak growth in the core countries, the situation in the periphery having remained stable. According to initial Eurostat estimates, real GDP in the euro area in the second quarter was unchanged in quarterly terms, while the year-on-year rate of growth slowed to 0.7%. The main

factors in the slowdown in growth were the declines of 0.2% in real GDP in Germany and Italy, and the stagnation in France. The slowdown in the euro area core countries was also the decisive factor in the decline in economic growth in the EU overall, which slowed to 0.2% in quarterly terms and 1.2% in year-on-year terms. Stronger growth was recorded by the Netherlands, Slovakia and Austria, while activity in the euro area periphery countries strengthened in Spain and Portugal, and the contraction in activity in Cyprus slowed. Of the major EU Member States outside the euro area, activity increased significantly in the UK and Sweden, by 3.2% and 1.9% in year-on-year terms respectively, while the largest year-on-year increases in eastern Europe were recorded by Poland and Hungary, at 3.2% and 3.7% respectively.

**Current developments in the retail sector in the euro area were favourable in June, while industrial production and the amount of construction put in place declined.** Turnover in the retail sector was up 0.4% in monthly terms and 2.4% in year-on-year terms overall, and by 2.7% in Germany and fully 4.9% in France. By contrast, industrial production was down in monthly terms for the second consecutive month in June, by 0.3%, year-on-year growth slowing to zero. Activity in the construction sector rose slightly in the first quarter of this year, but declined again in the second quarter, and in June was down 2.3% in year-on-year terms.

**As a result of the slowdown in economic activity in the euro area and the geopolitical tensions in the region, the latest growth forecasts for some of Slovenia's trading partners were cut.** In July the IMF cut its forecast for global GDP growth in 2014 by 0.3 percentage points to 3.4%. It cut its forecasts for France and Italy to 0.7% and 0.3% respectively, and cut its forecast for Russia by 1.1 percentage points to 0.2%. In its latest forecasts released in August, Consensus also cut its forecasts for the euro area to 1.0% for 2014 and 1.5% for 2015, cut its forecasts for economic growth in 2014 to 1.9% for Germany, 1.4% for Austria and 0.1% for Italy, and left its forecast for France unchanged at 0.7%. The forecasts for Croatia and Russia were cut to -0.5% and 0.0% respectively.

## Euro exchange rate and commodity prices

The euro fell again against the US dollar in July. The price of Brent crude also reached its lowest level of the last 12 months, while prices of certain other commodities fell by slightly less. The euro was down 0.4% against the US dollar in July, but was nevertheless up 3.5% in year-on-year terms. The price of a barrel of Brent crude fell to USD 106.9, the lowest figure since last July, and then fell further in the first half of August. In August the International Energy Agency reduced its forecast for demand for oil this year. Prices of other commodities also fell in July, most notably food prices, which were down 6.2% in year-on-year terms.

As a result of the latest geopolitical tensions and other uncertainty, there was increased volatility on the financial markets of certain developing countries. The currencies of Turkey, South Africa and Argentina fell sharply at the end of last year and the beginning of this year, but these trends slowed in the following months. The Russian ruble, and even more so, the Ukrainian hryvnia fell in March and April. In July the euro was up 50.3% in year-on-year terms against the Argentinian peso, 51.9% against the Ukrainian hryvnia and 9.6% against the Russian ruble.

## 2 | Economic Activity

Economic growth recovered in the second quarter according to the available monthly figures, and continued to do so in July according to the economic sentiment indicators. However, in recent months certain trends have started to lose strength. Industry continued to record solid positive growth until the end of the first half of the year, despite the EU sliding into stagnation at that time, and even more so in transportation and related activities. Meanwhile other service sectors suggested only moderate growth at best, and turnover in the retail sector excluding trade in vehicles continued to contract throughout the first half of the year. The monthly indicators suggest a continuation of overall growth in the construction sector in the second quarter, but there have been signs of a slowdown in the last two months.

### Economic sentiment

**The economic sentiment indicator was continuing to rise at the beginning of the third quarter.** In July it was up 15 percentage points in year-on-year terms, and has now surpassed its previous peak of three years ago. All segments of the private sector activities reported an improvement, and the consumer confidence indicator has also risen sharply in the last three months. General optimism has been rising among consumers, in the form of positive expectations of an improvement in the situation in the next 12 months, whereas the assessment of the current situation is still more reserved. This corresponds to the relatively weak growth in confidence in the retail sector, in contrast to the most pronounced increase in optimism in other services and in the construction sector.

In the manufacturing sector there was a sharp fall in the number of firms reporting major limits in production in July. Firms have long cited insufficient domestic demand followed by foreign demand as the main limiting factors, while financial constraints are ranked lower. The intensity

of the majority of limiting factors, particularly domestic factors, has reversed and eased significantly in recent months.

### Industry

**Industrial production continued to increase in the second quarter, with minor impetus coming in June.** The rate of growth was not particularly intense, although seasonally adjusted quarterly growth stood at 1.5%, significantly higher than the comparable rate across the EU, where industry slid into stagnation in this period, and actually began to contract in May and June. Year-on-year growth stood at 4.3% in June, thereby also exceeding the rate across the EU. This was most notably attributable to

the high year-on-year growth in the energy sector, but was also attributable to the manufacturing sector, where the rate stood at 3.7%.

The manufacturing sector had previously shifted away from euro area markets to non-euro markets, but turnover picked up again in the euro area in June. Real turnover on the domestic market also increased slightly in June, but remained broadly unchanged in year-on-year terms.

Of the major sectors, and in the absence of the figures for the pharmaceutical sector, growth is being driven by the energy sector, the manufacture of basic metals and the manufacture of rubber and plastic products. The manufacture of vehicles had not emerged from stagnation by June.

Sources: SORS, Eurostat, Bank of Slovenia calculations.

Notes: Data are working days adjusted.

\* Volume of industrial production. \*\* Real value of construction put in place. \*\*\* Excluding trade and financial services. + Nominal turnover.

++: 3-month moving average compared to the corresponding average 3 months earlier. Data are seasonally and working days adjusted (except for construction where data are seasonally adjusted).

## Private sector services

**Turnover in the retail sector continued to gradually decline in the second quarter of this year.** The year-on-year decline in real turnover reached 2.6% in June, but stood at 0.9% overall in the first half of the year. The two year-on-year rates were negative in trade in non-food products, and more notably in trade in food products, beverages and tobacco products, where they stood at more than 3% in June and slightly less for the first half of the year overall. These figures do not include trade in motor vehicles, where revenues were down more than 7% in year-on-year terms in June, albeit primarily as a result of a spike in sales last June, just before the rise in VAT. The year-on-year rates in this market have been strongly positive this year, and turnover in June was up on the previous month.

**The figures for other services are available to May only, and suggest a continuation of positive dynamics from the first quarter.** The year-on-year increase in nominal turnover stood at 3.5% overall in the first five months of the year, and 5.7% in May. Developments have varied significantly within this aggregate. There was exceptionally strong growth in the transportation and storage sector, where land transportation recorded year-on-year growth of 7% in May and warehousing and support activities for transportation recorded year-on-year growth of 20%. In the majority of the other major sectors year-on-year growth was merely moderately positive or even negative, the computer programming and consultancy sector alone recording better figures. Year-on-year growth in the accommodation and food service activities sector stood at around 3% over the first five months of the year and in May.

## Construction

**Quarterly growth in the amount of construction put in place strengthened again in the second quarter, albeit with strong signs of a slowdown.** The q-o-q growth reached zero in the second quarter, and the seasonally adjusted monthly growth rate in May and June was slightly negative. Year-on-year growth was still very high in June at almost 29%, but well below the average

over the entire first half of the year of 37.5%. This year's growth has been driven almost entirely by civil engineering work, where year-on-year growth stood at 40.5% in June, compared with 2.5% in the construction of buildings. In this segment only the construction of non-residential buildings has continued to record moderately positive growth, while residential construction has continued to decline.

### 3 | Labour Market

Developments on the labour market remain favourable. The number of registered unemployed has been declining in current terms, and in July it was down in year-on-year terms for the first time since October 2012. Outflows from unemployment are continuing to increase in year-on-year terms, primarily on account of new hires, while inflows into unemployment are declining. The workforce in employment was up 0.7% in year-on-year terms in June. The average nominal wage and wage bill are continuing to record moderate growth, while in recent months the latter has also recorded real year-on-year growth.

#### Unemployment, labour market flows and workforce in employment

The number of registered unemployed continued to fall in June and July. The number of registered unemployed stood at just over 117,000 at the end of June, and at just over 116,000 at the end of July. In July the number of registered unemployed was down in year-on-year terms for the first time since October 2012, by just under 1%. The decrease in the number of unemployed has also been accompanied by a decrease in the registered unemployment rate, which fell from 13.9% in March to 12.8% in June, although a large part of this decrease was seasonal in nature.

Outflows from unemployment are continuing to increase in year-on-year terms, while inflows into unemployment are declining. In June the number of people newly registering as unemployed recorded a year-on-year increase for the first time since February, at more than a tenth, which was attributable to job losses caused by corporate bankruptcies, most notably Mura. Inflows into unemployment declined again in year-on-year terms in July, by almost 15%, primarily as a result of a decline in the number of people registering as unemployed after the loss of temporary employment. The trend of increase in outflows from unemployment has continued: they were

up just over a tenth in year-on-year terms in June, and just over 5% in July. The number of deregistrations for reason of employment, which accounted for two-thirds of the deregistrations recorded by the Employment Service, was up a fifth in year-on-year terms in June and up 7% in July.

**The workforce in employment is continuing to increase.** The workforce in employment was up in year-on-year terms for the third consecutive month in June, by 0.7%. Growth was approximately equal in the private sector and in public services in both May and June. In the private sector the main year-on-year increases in the workforce in employment were recorded by manufacturing and non-financial services, while the construction sector saw stagnation. In public services the workforce in employment was down 0.5% in year-on-year terms in the public administration, and up 1% in the education sector and the health sector.

### Wage development

**The average nominal gross wage per employee has continued to record slow growth.** The average nominal gross wage per employee stood at EUR 1,521 in June, year-on-year growth increasing to 1.7%, the highest since February 2012. This was partly attributable to the low basis from last year, when it declined by 0.7% in monthly terms. In the private sector year-on-year growth stood at 2.2%, the mining and manufacturing sectors recording the highest rates of 7.3% and 4.3% respectively. Gross wages in public services increased for the first time since the beginning of 2012, by 1%. Wages in the public administration, defence and compulsory social security sector increased by almost 2%, while wages in the health and social work sector and education sector increased by approximately 0.5%. The nominal wage bill in May was up 2.5% in year-on-year terms, as both the private sector (3.1%) and public services (1.5%) recorded increases. The real gross wage bill was up in year-on-year terms for the first time in more than three years, by 1.5% in June.

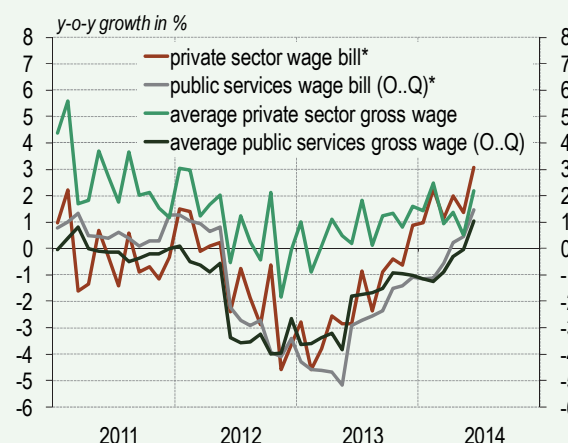

**Total wage bill and average gross wage per employee**

Note: Wage bill is calculated as the product of average gross monthly wages for employees of legal persons who received pay and the total number of employees of legal persons.

Source: SORS, Bank of Slovenia calculations.

**Total wage bill and average monthly gross wage per employee**

Note \*The wage bill is calculated as the product of the average gross wage for employees of legal persons who received pay and the total number of employees of legal persons.

## 4 | Price Developments

Year-on-year inflation measured by the HICP stood at 0.3% in July, down 0.7 percentage points on June. This fall was expected, and was primarily the result of the rise in VAT dropping out of the inflation calculation. The main factors in the fall in inflation were prices of services, processed food and energy, which last year also recorded the largest pass-through of the rise in VAT into final consumer prices. This was reflected most strongly in price-inelastic products under the administered prices regime, such as energy, tobacco products and alcoholic beverages, and among marketable products in prices of telephone and internet services. All three core inflation indicators also fell in July.

### Headline inflation and structure of inflation

Year-on-year inflation as measured by the HICP was down by 0.7 percentage points in July at 0.3%, primarily as a result of the effects of last year's rise in VAT dropping out of the calculation. The main factors in the fall were services prices, prices of processed food and energy prices. Year-on-year growth in services prices was down 0.9 percentage points at 1.5%, which was a larger fall than the VAT effect alone. The contribution made to inflation by services prices declined by 0.3 percentage points to 0.6 percentage points, but they remain the largest individual component. The main factors in the decline were a year-on-year fall in prices of telephone and internet services, and a fall in prices of certain services that had risen sharply in the first half of the year. By contrast, prices of package holidays rose again in year-on-year terms. The drop-out of the VAT effect also sharply reduced year-on-year growth in energy prices, which recorded the largest pass-through of the VAT rise into final consumer prices last July as a result of low price elasticity in the administered prices regime. In the context of low monthly growth, their contribution to year-on-year inflation became neutral. The sharp decline

of 0.2 percentage points in the contribution made by prices of processed food to 0.3 percentage points was also largely attributable to the VAT effect dropping out of the calculation for inelastic prices such as tobacco products and alcoholic beverages. The year-on-year fall in prices of non-energy industrial goods deepened again in June, as year-on-year growth in prices of cars and household appliances slowed while year-on-year growth in prices of sports equipment and prices of telephone and internet equipment remained sharply negative. Prices of unprocessed food, which recorded high growth last year but have been falling sharply this year, are also recording negative year-on-year growth. They made the largest negative contribution to inflation in July at 0.3 percentage points. There was a slowdown in year-on-year growth in prices of meat and sharper decline in prices of vegetables. After the effects of last year's rise in VAT dropped out of the calculation, year-on-year inflation in Slovenia fell below the euro area average, which slowed further in July by 0.1 percentage points to 0.4%.

### Core inflation and inflation trend

**Core inflation fell below the euro area average in July.** Year-on-year growth in the HICP excluding energy, food, alcohol and tobacco declined by 0.6 percentage points in July to 0.4%. The other two core inflation indicators also declined. The HICP excluding energy and unprocessed food was down 0.6 percentage points at

0.8%, while the HICP excluding energy was down 0.7 percentage points at 0.3%. This was largely attributable to the effect of last year's rise in VAT dropping out of the calculation, and also to further slowdowns in marketable prices. They remain under the influence of low household disposable income, where sustained growth cannot be expected in the short term, other than temporarily, as a result of seasonal factors. On the supply side also no major price pressures can be expected: commodity prices on global markets are falling, and the input costs of manufacturers and retailers are thus not rising.

### Impact on inflation of indirect taxes

**A major factor in the year-on-year growth in prices in the first half of the year was the rise in taxes.** The contribution made by taxes was again positive this year, and was increasing until June. Year-on-year inflation as measured by the HICP exceeded growth in the HICP at constant tax rates by 1.2 percentage points on average over the first six months of the year. This means that average inflation over this period would have stood at -0.5% had taxes remained unchanged. The largest factor in this gap was last July's rise in VAT rates. The contribution made by taxes to inflation has also increased in recent months as a result of the increase in excise duties on alcohol and tobacco in spring. After the effect of the rise in VAT dropped out of the calculation, the gap between the two inflation indicators stood at 0.2 percentage points in July, year-on-year growth in the

HICP at constant tax rates turning positive. The gap by which the HICP indicator has exceeded the HICP indicator at constant tax rates has averaged 0.2 percentage points across the euro area this year.

### Producer prices on the domestic market

**The year-on-year fall in industrial producer prices on the domestic market deepened further in the second quarter.** The growth rate averaged -1.4% in the third quarter, 0.4 percentage points less than in previous quarter. The largest increase in the year-on-year fall was recorded by energy prices, by 3.1 percentage points to 7.4%. This was the result of a further fall in prices in the electricity, gas and steam supply sector, while growth in prices in the water supply sector strengthened further. The year-on-year fall in prices also deepened slightly in the category of consumer durables, where the manufacture of furniture and the manufacture of computer, electronic and optical equipment both recorded a sharper fall in prices. Prices of consumer non-durables also fell in year-on-year terms for the first time in four years. Growth in prices in the manufacture of chemicals and chemical products and in other manufacturing is slowing, while growth in prices in printing and the manufacture of pharmaceutical products turned negative. Prices of capital goods also fell further. By contrast, there was a slight decline in the year-on-year fall in commodity prices, mainly as a result of a decline in the negative growth in prices of metals and fabricated metal products.

# 5 | Public Finances

According to the available figures, the consolidated general government deficit over the first seven months of the year narrowed. The main factors in the high growth in revenues, alongside the improved economic situation, were legislative changes, and also certain extraordinary revenues, most notably May's payment of concession fees for the mobile telephony radio spectrum. Growth in expenditure was significantly lower than growth in revenues; the main factors were higher interest payments and a rise in investment expenditure, both at the level of the state budget and in local government. The required yield on Slovenian long-term bonds rose slightly in the summer months, but remained low compared with the early part of the year, while the interest rates on treasury bills continued to fall in this period.

## Consolidated general government revenues and expenditure

The figures for the consolidated general government position are only available for the first four months of the year, when the deficit was significantly smaller than in the same period last year on account of

Note: \* Consolidated central government budget, local government budgets and social security funds (pension and disability insurance fund and health insurance fund) in cash accounting principle.

**significant growth in revenues.** It stood at EUR 707 million, having narrowed by EUR 276 million. Growth in revenues stood at 6.8%, while expenditure increased by 0.6%. More favourable final settlements this year meant that corporate income tax revenues accounted for more than half of the increase in revenues.

**According to the available figures, the consolidated general government position also improved between May and July.** This can be concluded from the developments in the state budget, which suggest a continuation of higher year-on-year growth in revenues than in expenditure. According to the available figures, the largest year-on-year growth in this period was recorded by revenues from domestic taxes on goods and services, which are primarily attributable to VAT revenues, and non-tax revenues. The main year-on-year increases on the expenditure side were recorded by investment expenditure and transfers.

#### State budget position, revenues and expenditure

**The state budget deficit over the first seven months of the year narrowed in year-on-year terms.** On the revenue side tax and non-tax revenues both increased, while revenues from the EU budget were down slightly. The state budget deficit over the first seven months of the year amounted to EUR 919 million, EUR 417 million less than in the same period last year. Alongside the increase

in most categories of tax revenues, non-tax revenues also increased as a result of the payment of the concession fees for the mobile telephony radio spectrum.

**State budget revenues in the first seven months of the year were up in year-on-year terms as a result of the more favourable economic situation and certain legislative changes, and also as a result of one-off non-tax revenues.** The largest increases in taxes were recorded by corporate income tax revenues (up around EUR 180 million in year-on-year terms), primarily a reflection of this year's significantly better final tax settlements. There was also a sharp increase in revenues

Note: \*All bond issues disbursed on domestic market are counted under domestic borrowing, despite of the residency of buyers.

from domestic taxes on goods and services (up EUR 162 million in year-on-year terms), primarily as a result of last July's rise in VAT rates, and partly as a result of measures to combat the grey economy. Of the other major categories of tax, there were also increases in revenues from personal income tax and revenues from social security contributions, the situation on the labour market this year having improved compared with previous years. Non-tax revenues were up EUR 151 million, most notably as a result of May's payment of the concession fees for the mobile telephony radio spectrum in the amount of EUR 149 million, which was a one-off revenue. Net revenues from the EU budget during the first seven months of the year amounted to EUR 152 million, slightly more than in the same period last year.

**The largest year-on-year increases in state budget expenditure in the first seven months of the year were recorded by interest payments and by investment expenditure and transfers.** Interest payments were up by EUR 58 million, investment expenditure by EUR 53 million and investment transfers by EUR 99 million. Investment expenditure is also increasing in the local government sub-sector. In the other major categories of expenditure in the state budget there were reductions in expenditure on wages and employee contributions, on goods and services, and on subsidies. Of the transfers to individuals and to households, social security transfers have been increasing in year-on-year terms since the final quarter of last year, while transfers to the unemployed have been declining for some time. According to the figures of the Pension and Disability Insurance Institute, payments of pensions in the first seven months of the year were up just over 1%. Growth in the number of pensioners is continuing to slow: the year-on-year increase over the first seven months of the year stood at 1.3% as the number of old age pensioners rose by 2.1%, less than last year's average figures (of 2.9% for all pensioners and 4.1% for old age pensioners).

### Financing of the state budget

**Bond issues accounted for the majority of state budget borrowing in the first seven months of the year, although regular auctions of treasury bills were**

**Spreads on 10-year government bonds as compared to Germany**

Sources: Bloomberg, Bank of Slovenia calculations.

Note: Spread is calculated as a difference between yield of 10-year government bond and the yield of reference German bond on a daily basis and is used as a measure of country's credit risk. \*In the picture, SLOREP 09/24 is used after 1. January 2013.

**also held.** State budget borrowing over the first seven months of the year amounted to EUR 5.3 billion, of which bonds accounted for EUR 4.6 billion. EUR 122.5 million worth of treasury bills were issued in July. Interest rates in this market fell again: the rate on 12-month treasury bills, which recorded the largest volume of trading, stood at 0.59%. Debt repayments during the first seven months of the year amounted to EUR 1.9 billion. Approximately EUR 1 billion of 18-month treasury bills matures in October, which will further increase this year's repayments. In addition to the deficit in revenues and expenditure, it was also necessary to finance a deficit in the balance of net loans and net acquisitions of equity, which amounted to EUR 546 million over the first seven months of the year. This relates primarily to June's calling of the government guarantee issued under the ZUKSB in the amount of EUR 428 million. Placements in accounts increased by EUR 2.0 billion during this period. As in certain other euro area periphery countries, the required yield on Slovenian long-term bonds rose slightly during the summer months. It stood at 3.2% in the first half of August, significantly less than at the beginning of the year.

# 6 | Current Account

Despite an intensified increase in the second quarter, the current account surplus in the first half of the year narrowed in year-on-year terms. It amounted to EUR 970 million, just under EUR 140 million less than in the same period last year. This was mainly attributable to a decline in the surplus of trade in services as a result of larger deficits in business and technical services and construction services, and a larger deficit in factor income as a result of the financing of the external debt of the government sector. This year has seen a strong positive contribution from merchandise trade: the merchandise trade surplus in the first half of the year doubled in year-on-year terms to EUR 637 million as imports stagnated and exports recorded solid growth, particularly to EU Member States. The 12-month current account surplus remained at around 5.5% of GDP over this period.

## Merchandise trade

After two months of relatively modest growth, merchandise imports and exports increased sharply in year-on-year terms in June. Year-on-year growth in merchandise exports jumped to 8.0%, and growth in merchandise imports to 5.7%. As a result of the weaker developments in the previous two months, the quarterly rates of growth slowed. Year-on-year growth in exports slowed from 6.2% in the first quarter to 4.2% in the second quarter, while growth in imports slowed from 3.1% to 2.7%. The quarterly merchandise trade surplus nevertheless widened from EUR 302 million to EUR 335 million. The 12-month surplus reached EUR 911 million or 2.6% of GDP in June, 1.3 percentage points more than a year earlier.

**Year-on-year growth in merchandise exports to EU Member States continued in June, while exports to non-EU countries were also up in year-on-year terms for the first time this year.** According to SORS figures, year-on-year growth in merchandise exports to EU Member States stood at 7.6% in June, compared with

11% for exports to non-EU countries. The main factor in the latter was a base effect caused by last year's contraction in trade with Croatia prior to it joining the EU. Year-on-year growth in merchandise exports to EU Member States slowed from 9.2% in the first quarter to 5.8% in the second quarter. The largest slowdown was in exports to EU Member States with their own currency, from 16.5% in the first quarter to 8.3% in the second quarter. Growth in exports of intermediate goods and consumer goods slowed in both markets, while exports of capital goods increased by more than 10%. The contraction in merchandise exports to non-EU countries slowed from 1.2% to 0.2%. The significant slowdown in economic activity in the former Yugoslav republics and

the countries of the former Soviet Union is preventing faster growth in this segment.

**According to SORS figures, merchandise imports from EU Member States in the first half of the year were down in year-on-year terms, while growth in imports from non-EU countries exceeded 7%. Imports of capital goods were unchanged, while the year-on-year contraction in imports of intermediate goods halved to 1.9%. Imports of consumer goods have been alone in recording a year-on-year increase this year, by just under 9%, largely as a result of an increase of just under 30% in imports from non-EU countries.**

### Trade in services

**Year-on-year growth in exports of services strengthened in the second quarter, but remains lower than growth in imports.** Year-on-year growth in exports of services increased from -2.1% in the first quarter to 4.8% in the second quarter. Growth in imports slowed by just under 3 percentage points to 13% over the same period. Imports of services were up more than 14% overall in the first half of the year, while exports were up 1.5%. The surplus of trade in services narrowed by EUR 176 million in year-on-year terms to EUR 846 million. There was a slight year-on-year decline in the cumulative 12-month surplus, which stood at EUR 1,784 million or around 5% of GDP in June.

**Year-on-year growth in exports of transport services remained unchanged in the second quarter, while imports strengthened.** Growth in exports of transport services stood at just over 8% in both quarters, while growth in imports was up 2 percentage points on the first quarter at 8.9% in the second quarter. There was a sharp increase in exports of freight transport services: freight rail transport was up more than 40%, sea and coastal freight water transport was up around 20% and freight transport by road was up around 10%, while freight air transport recorded the sole decline. By contrast, exports of all the sub-categories of passenger transport other than road transport, which increased sharply, are declining. On the import side, there was a year-on-year decline in air and road freight transport, while sea and coastal freight water transport and, notably this year,

freight rail transport increased. The surplus of trade in transport services in the first half of the year increased by EUR 27 million in year-on-year terms to EUR 354 million.

**Exports of travel services increased slightly in the second quarter, while imports of travel services declined sharply relative to the first quarter.** The number of arrivals by foreign visitors in Slovenia in the first half of the year was up just over 7%, while the number of overnight stays was up 3%. Year-on-year growth in exports of travel services stood at 3.1%, an indication of the decline in average spending by foreign visitors. Growth in imports of travel services slowed sharply in the second quarter, but the rate over the first half of the year nevertheless stood at just under 20%. The surplus of trade in travel services narrowed by EUR 24 million in year-on-year terms to EUR 580 million, while the cumulative 12-month surplus was up only slightly in June at EUR 1,321 million.

**The largest contribution to the decline in the surplus of trade in services in the first half of the year came from other services.** Exports of other services (services other than travel and transport) were down 4.5% in year-on-year terms, while imports were up more than 15%. This swung the position from a surplus of EUR 93 million in the first half of last year to a deficit of EUR 87 million in the first half of this year, a year-on-year deterioration of EUR 180 million. The main factors were a year-on-year widening of the deficits in business and technical services

and construction services in the total amount of EUR 125 million, and a decline of EUR 76 million in the surplus in foreign trade intermediation services from EUR 180 million in the first half of last year to EUR 104 million in the first half of this year.

### Factor income and current transfers

**The overall deficit in factor income in the first half of the year doubled in year-on-year terms to EUR 477 million.** The deficit in capital income widened by just under a third in year-on-year terms to EUR 634 million. The main factor in the widening deficit was net payments of income on investments in securities, where the deficit widened by EUR 133 million in year-on-year terms to EUR 251 million. As a result of government borrowing at unfavourable interest rates, payments for financing the government sector's external debt recorded a year-on-year increase of just under EUR 140 million to EUR 390 million. As a result of debt repayments, particularly by the banks, the private sector's net payments of interest to the rest of the world declined by EUR 9 million in year-on-year terms to EUR 66 million. The deficit in net income from FDI widened sharply, by EUR 94 million to EUR 316 million. In connection with the growth in utilities construction and the corresponding employment of non-residents in the second half of last year and the first half of this year, there was an increase in outflows of labour income. As inflows stagnated, the surplus in labour income in the first half of the year narrowed by EUR 12 million in year-on-year terms to EUR 157 million. The overall deficit in factor income in the 12 months to June widened by just over two-fifths in year-on-year terms to EUR 793 million or 2.2% of GDP, having been just under 1 percentage point lower a year earlier.

**As a result of a surplus in the second quarter, the deficit in current transfers in the first half of the year narrowed.** The surplus in current transfers in the second quarter was EUR 8 million wider in year-on-year terms at EUR 39 million. Government transfers accounted for EUR 32 million of this surplus, and private transfers for EUR 7 million. The deficit of EUR 38 million in the first half of the year was EUR 2 million narrower than that recorded in the same period last year.

# 7 | Capital and Financial Account

June's net outflow of funds to the rest of the world from the private sector was up 12% on the monthly average over the last 12 months at EUR 351 million. The private sector's claims increased in June, primarily as a result of an outflow to the rest of the world in the banking sector's currency and deposits. There were also increases in liabilities to the rest of the world, primarily as a result of an increase in FDI and non-residents' investments in domestic securities and derivatives. The net outflow of the government sector amounted to EUR 169 million. The net external debt increased by EUR 210 million in the first half of the year to stand at EUR 12.3 billion at the end of June.

## Private sector's claims

The private sector's claims against the rest of the world increased for the sixth consecutive month. The main factor in June's increase of EUR 1.1 billion was the outflow of currency and deposits at domestic banks, which amounted to EUR 687 million. After a temporary decline in May, investments in foreign securities and derivatives increased by EUR 160 million in June. Capital transfers, FDI and trade credits increased by EUR 163 million, while loans and other claims declined by EUR 71 million. Net outflows to the rest of the world amounted to EUR 2.7 billion in the first half of the year, which is almost the same as in the same period last year.

## Private sector's liabilities

The private sector's liabilities to the rest of the world increased by EUR 700 million in June, primarily as a result of FDI and investments in securities and derivatives. Non-residents made net purchases of EUR 388 million of securities and increased their FDI by EUR 181 million, almost entirely as a result of the acquisition of equity in a major Slovenian retailer by a Croatian firm. There was also a significant increase in liabilities of EUR 144 million in June as a result of trade credits. Domestic firms recorded net borrowing via loans in the rest of the

world in the amount of EUR 77 million, while banks made repayments of EUR 52 million. The outflow of non-residents' deposits at the domestic banks continued in June, and amounted to EUR 39 million. The net increase in total liabilities to the rest of the world amounted to EUR 312 million over the first half of the year, the largest contributions coming from FDI (EUR 668 million), and investments in securities (EUR 338 million). The largest net outflows over the same period were recorded by the banking sector, in the amount of EUR 425 million as a result of debt repayments in the rest of the world, and EUR 262 million as a result of a decline in non-residents' holdings of deposits.

## External debt

The net external debt increased by EUR 210 million in the first half of the year to stand at EUR 12.3 billion at the end of June. The gross external debt increased by EUR 4 billion to EUR 44 billion, while gross external claims increased by almost the same amount to EUR 32 billion. The largest component of the net external debt at the end of June was the government sector's net liabilities at EUR 18 billion (up EUR 7.4 billion on a year earlier), followed by the net liabilities of capital affiliates at almost EUR 1.9 billion. Other sectors recorded net external claims in the amount of EUR 1.2 billion at the end of June (up EUR 0.5 billion on a year earlier), while the banking sector's net claims amounted to EUR 0.6 billion (compared with net liabilities of EUR 2.6 billion at the end of last June).

## Banking System \*

The total assets of the Slovenian banking system recorded a sharp decline in June as a result of intensified early repayments of liabilities to the Eurosystem from 3-year LTROs and the repayment of debt to domestic and foreign banks. The main factor in the notable increase in deposits by the non-banking sector was an above-average increase in deposits by non-financial corporations. After increasing in May, household deposits increased further in June. The banks increased their short-term loans to banks in the rest of the world, while the monthly contraction in loans to non-financial corporations was the largest figure in the first half of this year. The banking system recorded a pre-tax profit of EUR 93 million in the first half of the year.

The total assets of the Slovenian banking system recorded a sharp decline in June as a result of intensified early repayments of liabilities to the Eurosystem from 3-year LTROs and the repayment of debt to domestic and foreign banks. The main factor in the notable increase in deposits by the non-banking sector was an above-average increase in deposits by non-financial corporations. After increasing in May, household deposits increased further in June. The banks increased their short-term loans to banks in the rest of the world, while the monthly contraction in loans to non-financial corporations was the largest figure in the first half of this year. The banking system recorded a pre-tax profit of EUR 93 million in the first half of the year.

### Total assets

**The contraction in total assets strengthened sharply in June.** Total assets declined by EUR 604 million to EUR 39.3 billion, down 12.6% on last June. The reason was the intensified early repayment of liabilities to the

Eurosystem and further debt repayments to domestic and foreign banks. The decline in total assets was mitigated by an increase in deposits by the non-banking sector, non-financial corporations and households in particular. On the investment side, the aforementioned repayments of liabilities meant that the banks reduced their liquid assets at the central bank. The contraction in loans to the non-banking sector, in particular non-financial corporations, strengthened. By contrast, there was a notable increase in the stock of short-term investments at banks in the rest of the world, partly as a result of measures taken by the ECB in the first half of June (see below).

### Investment activity

**There was an increase in the banks' short-term investments at banks in the rest of the world.** The stock of loans to banks increased by EUR 533 million in June, primarily on account of short-term investments in banks in the rest of the world. The most notable increases in these investments were recorded by the banks under majority foreign ownership, which usually place their funds overnight at their parent banks, and by the domestic banks that despite the financial crisis have been able to retain business links with banks in the rest of the world, and have managed to place their surplus liquidity on the money market despite a deterioration in the conditions of competition.

\* This section uses data from the banks that report to the Bank of Slovenia in accordance with the Guidelines for implementing the regulation on reporting by monetary financial institutions. Because of methodological differences, these figures differ from the published statistics.

**June's decline in loans to the non-banking sector was the largest in the first half of this year.** They declined by EUR 434 million, and were down 21.3% in year-on-year terms. Excluding the transfers of non-performing claims to the BAMC, December's impairments as a result of the AQR, and the two banks undergoing the orderly wind-down process, the year-on-year decline in loans to the non-banking sector was 10.6%. All sectors recorded a decline in the stock of loans, non-financial corporations again recording the largest decline in June. The banks wrote off EUR 35 million of loans in June and a total of EUR 127 million in the first half of the year, 54% more than in the same period last year.

**The contraction in lending to non-financial corporations strengthened in June.** The stock of loans to non-financial corporations was down EUR 303 million on May, the largest monthly decline in the first half of the year. The year-on-year decline reached 31%. Excluding the transfers of non-performing claims to the BAMC, the creation of additional impairments after the AQR and the two banks undergoing the orderly wind-down process, the contraction in corporate loans (NFCs + OFIs) stood at 12.6%. The stock of loans to non-financial corporations declined at all the bank groups in June with the exception of the savings banks. Despite an increase of EUR 13 million in their stock of loans in the first half of the year, the proportion of total loans to non-financial corporations accounted for by the savings banks remains very small.

**The banks reduced their loans to households in June, although there was no increase in the year-on-year contraction.** Although June's contraction in the amount of EUR 28 million was slightly larger than May's, the year-on-year decline in household loans remained slightly below 4%. The year-on-year contraction remained at 4.6% at the large domestic banks, while at the banks under majority foreign ownership the contraction eased slightly to 3.5%. The small domestic banks and savings banks recorded increased positive year-on-year growth of 2.3%. The savings banks increased their household loans by EUR 4 million in June, taking the total increase over the first half of the year to EUR 23 million. Year-on-year growth in their household loans increased by 4

percentage points over this period to 14%. Only housing loans continued to record positive year-on-year growth, at 0.9%, although the stock of housing loans declined slightly in the first half of the year. The decline in consumer loans is continuing: the year-on-year contraction is fluctuating at just over 9%.

## Funding

**The repayment of liabilities to the Eurosystem strengthened in June.** The stock of these liabilities declined by EUR 726 million, taking the overall decline in the first half of the year to EUR 1.8 billion. Liabilities to the Eurosystem have halved compared with the end of 2013. The reason was the repayment of funds obtained in the 3-year LTROs maturing in the first quarter of next year. Slovenian banks were most likely encouraged to intensify the partial early repayment of these liabilities by the ECB's recent monetary policy measures,<sup>1</sup> which have introduced a negative interest rate on the deposit facility and have abolished the 1-week placement of funds with the Eurosystem, which had been used regularly by Slovenian banks because of their large surplus liquidity.

**Debt repayments to foreign banks slowed in June, while debt repayments to domestic banks increased.** Liabilities to foreign banks declined by EUR 54 million, while liabilities to domestic banks declined by EUR 158 million. The debt repayments were primarily made by the large domestic banks, which earmarked some of the surplus liquid assets that they had previously placed with the Eurosystem for the repayment of liabilities. The year-on-year decline in liabilities to foreign banks reached 27% in June, while the decline in liabilities to domestic banks was slightly lower at 25%.

**After a small decline in May, deposits by the non-banking sector increased significantly again in June.** The stock was up EUR 341 million on May, taking the overall increase in the first half of the year to EUR 1.5 billion. Sight deposits accounted for two-thirds of June's increase. Deposits by the non-banking sector were down 3.2% in year-on-year terms in June, almost a half less than in the previous month. The main factor in the monthly increase was deposits by non-financial

<sup>1</sup> The measures are presented in detail in the press releases on the ECB website (5 June 2014).

corporations, which increased by an above-average EUR 247 million, the banks under majority foreign ownership recording the largest increase. Government deposits and household deposits also increased in June, while deposits by OFIs and non-residents declined.

**Growth in household deposits strengthened slightly in June.** The stock was up EUR 98 million, taking the overall increase during the first half of the year to EUR 397 million. The positive year-on-year growth strengthened to 1.6% in June. The large domestic banks accounted for two-thirds of June's increase and a little less of the increase in the first half of the year, an indication of the gradual restoration of confidence in their performance. The year-on-year decline slowed from 8.4% to just 0.9% over the first half of the year. The banks under majority foreign ownership recorded high positive year-on-year growth in household deposits of 9.9% in June, while household deposits at the small domestic banks and savings banks declined by 2.1%. June's increase in household deposits was almost entirely the result of an increase in sight deposits, while short-term deposits declined. This was partly attributable to the fall in deposit rates. Short-term interest rates on household time deposits have more than halved over the last year and a half, from 2.2% to 1.0%. Interest rates were 0.3 percentage points below the average in the euro area, where the comparable rates also halved over the same period.

### Banking system's operating result

**The Slovenian banking system ended the first half of the year with a profit.** Growth in net interest and net non-interest income has increased the banking system's gross income, which in the first half of this year was up 12.8% on the same period last year. The reasons for the increase in net interest, which was up 9.4% in year-on-year terms, were the same as in previous months. There has been a larger decline in interest expenses than in interest income. The main factors in the year-on-year decline of 13.6% in interest income remained the contraction in lending activity and the fall in interest rates, while the year-on-year decline of 33.9% in interest expenses was the result of a decline in funding in addition to the fall in interest rates. The net interest

margin on interest-bearing assets was unchanged for the fourth consecutive month at 2.2%. Operating costs were down just over 4% on the same period last year. After recording slow growth in the two previous months, impairment and provisioning costs increased sharply in June to EUR 79 million. They amounted to EUR 220 million over the first half of the year, half of the figure in the same period last year. The banking system's pre-tax profit was down slightly in June, taking the figure over the first half of the year to EUR 93 million.

## 9 | Financial Markets

Despite falling by 1.5%, the SBI TOP remained above 800 points in July. The market capitalisation of shares on the Ljubljana Stock Exchange also declined, to EUR 6,462 million, while the market capitalisation of bonds rose to EUR 15,452 million. The volume of trading in shares on the Ljubljana Stock Exchange reached its highest level since the middle of 2008, while the volume of trading in bonds set a new low for the year. The early elections and the temporary stalling of privatisation had an adverse impact on the mood on the stock exchange. In July non-residents continued to invest primarily in Slovenian shares, concentrating on large interests in Slovenian firms. Residents continued to invest in foreign securities in June, mostly from the euro area, the banks in particular having invested in bonds and shares. Households primarily made net sales of foreign securities. The mutual funds recorded net inflows of EUR 2.8 million in June, which resulted in a rise of 1.8% in the average unit price. The mutual funds' assets under management thus exceeded EUR 2 billion for the first time in three years. The mood on the global financial markets was volatile in July, primarily on account of the current global geopolitical tensions.

### Developments on the Ljubljana Stock Exchange

The SBI TOP fell in July, the second monthly fall of the year, by 1.5% to 810 index points. The year-on-year change nevertheless remained positive, at +27.7%. For the second time this year there was also a fall in the market capitalisation of shares on the Ljubljana Stock Exchange, which was down 1.4% at EUR 6,462 million. Both falls were caused by the temporary stalling of privatisation and the change of government. The volume of trading in shares nevertheless stood at EUR 85.3 million, the largest figure of the year and again a new high since the outbreak of the crisis. It was up 153.2% on the previous month, and up 202.8% in year-

on-year terms.

Krka accounted for a quarter of the total volume of trading in shares, while the five most heavily traded companies on the prime market accounted for just over half of the total volume. The dividend yield on the prime market rose to 3.75% in July. Agrokor, a Croatian firm, announced a takeover bid at the end of the month for the remaining 47% share in Mercator, a retailer, at a price of EUR 86 per share. The heaviest trading on the standard market was again recorded by Letrika, which accounted for 29% of the total volume of trading in shares. The largest volume of trading on the entry market was recorded by Cinkarna Celje, one of the 15 firms listed for privatisation.

**The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 1.0% in July to EUR 15,452 million.** The volume of trading in bonds amounted to EUR 3.2 million, the lowest figure of the year. Just under two-thirds of the volume comprised 2<sup>nd</sup>-issue Slovenska odškodninska družba bonds, while 2<sup>nd</sup>-issue KD Holding bonds accounted for a quarter. In the early part of the month NLB issued international government-guaranteed 3-year bonds with a nominal value of EUR 300 million and a fixed annual nominal yield of 2.875%. The bonds were rated at BB-/BB- (Fitch/S&P). The Ministry of Finance did not borrow on the domestic or foreign capital markets in July.

#### Inward investments by non-residents

**Non-residents made net sales of EUR 12.8 million in Slovenian bonds, and net purchases of EUR 85.7 million in Slovenian shares in July.** The largest net sellers of Slovenian bonds were residents of Austria and France, with sales of EUR 15.6 million and EUR 9.0 million respectively, while the largest net purchasers were residents of the UK and Luxembourg, with purchases of EUR 7.4 million and EUR 6.0 million respectively. Non-residents made purchases and sales of both short-term and long-term debt securities. The market in shares is still relatively active between non-residents, largely because of privatisation. The largest net purchasers of Slovenian shares were residents of Austria (with purchases of EUR 42.5 million) as a result of the acquisition of a 20% interest in Letrika by the Mahle Group, whose registered office is actually in Germany. Residents of Italy and Croatia also recorded significant net trades in Slovenian shares, at EUR 21.4 million and EUR 15.1 million respectively. The largest net purchase by non-residents was in shares in Salonit Anhovo, primarily as a result of the acquisition of a 25% interest by Buzzi Unicem, an Italian firm. Non-residents also made significant net purchases of shares in Letrika and Volksbank.

#### Outward investments by residents

**Slovenian residents made net purchases of EUR 166.7 million in foreign debt securities and EUR 5.6 million in foreign equities in June.** The largest net purchasers of foreign shares were the banks, with

purchases of EUR 13.1 million, but the government sector also made significant net purchases of EUR 7 million, primarily comprising shares from the euro area. The largest net sales of foreign shares of EUR 6.7 million were recorded by the pension funds, again primarily shares from the euro area. Non-financial corporations also recorded significant trading in foreign shares, with net sales of EUR 5.3 million. The largest net purchasers of foreign bonds were the banks (EUR 98.9 million), followed by insurance corporations (EUR 56.5 million), both with a focus on euro area securities. The largest net sales of foreign bonds (EUR 1.6 million) were recorded by households, who also recorded net sales of foreign equities. They primarily sold euro area securities, in

keeping with the negative mood on European financial markets.

### Domestic mutual funds

In June the domestic mutual funds' assets under management exceeded EUR 2 billion for the first time since June 2011, a rise of 1.8% in the average unit price and net inflows of EUR 2.8 million taking the figure to EUR 2,019 million. The year-on-year change in the average unit price stood at +13.7%. The largest net inflows of EUR 1.9 million were recorded by equity funds, which also recorded the highest rise in the average unit price (2.2%). Bond and money-market funds also recorded net inflows, but only the latter recorded positive growth in the average unit price. Balanced funds recorded net withdrawals of EUR 0.7 million. The largest net investments in mutual funds were made by households, at EUR 5.1 million, while the largest net withdrawals were made by banks (EUR 1.3 million) and non-financial corporations (EUR 1.1 million). Investors are still favouring Slovenian investments, which is a reflection of the overall strengthening of trading on the Ljubljana Stock Exchange caused by the privatisation of firms under government ownership. The proportion of the domestic mutual funds' assets under management accounted for by liquid assets rose to 9.3% in June.

### Global financial markets

The mood on the global financial markets was somewhat more volatile in July. The increased volatility was primarily the result of geopolitical tensions in Ukraine and the Middle East, and partly the result of concerns over developments at Portugal's Banco Espirito Santo. European stock market indices fell in response, as did the yield on German bonds, which ended the month at a record low of 1.12%. A positive impact on the markets came from the release of better figures from the labour market, the announcement of better corporate results, and the release of figures showing improved GDP growth in the second quarter in the US. The yields on US bonds rose, while share indices recorded small falls. The premiums of the bonds of the majority of the euro area periphery countries over the German benchmarks have continued to fall, reaching record lows. The largest

monthly rises were recorded by Shanghai's SHCOMP (7.5%) and Hong Kong's HIS (6.8%). Brazil's IBOV also recorded a large rise of 5%. It was mostly Asian and Balkan stock market indices that recorded monthly rises. The western European indices fell: Germany's DAX was down 4.3%. In the US the NASDAQ was down 0.9%, the S&P 500 down 1.5% and the Dow Jones down 1.6%. The MSELEEMEE for eastern Europe fell by 6.5%, while Russia's RTSI\$ fell by 10.7%.

# IV. NOTES ON METHODOLOGY

## General notes

### Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

### Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

## **Table: Republic of Slovenia: General Information**

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

## **1. MONEY AND MONETARY FINANCIAL INSTITUTIONS**

Data in all tables present stocks items at the end of the period. Last published data are preliminary. The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

### **Change of Methodology**

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

### **Description of the balance sheet instruments**

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

#### **Cash**

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

#### **Loans**

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

#### **Securities other than shares**

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical

documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

#### Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

#### Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

#### Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

#### Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

#### Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

#### Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

## Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

**Note 1:** With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

### Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) pre-

sents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

### Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

### Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	Title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%
2	1.3.	liabilities/ 4		Liabilities/ Deposits/ Domestic sectors/ Other MFIs/ Foreign currency	100%	100%	-

**Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments**

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

**Table 1.8.: Investment funds****General**

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

**Note 1:** Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

**Note 2:** Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

**Note 3:** Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

**Deposit**

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

**Debt securities**

Debt securities are short-term or long-term. Short-term ones include all instruments of monetary market with original maturity of one year or less. Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities. Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

**Shares and other equity**

The item includes shares and units/shares of investment fund. Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up. Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

**Other assets**

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests. Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

**Loans**

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

**Investment fund shares/units**

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

**Other liabilities**

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives. Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

## 2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

### Interest rates (tables 2.1–2.4)

**Table 2.1: Bank of Slovenia Interest Rates**

**Lombard loan:** Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The **repo interest rate** for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

**Interest rate on banks' obligatory reserves:** 1 percent per year since October 1991.

The **overnight-deposit interest rate** is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

**Long-term deposit** at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

**Tolar bills** are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

**Foreign currency bills** are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A **penalty rate** is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

**Interest rates** for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

**Table 2.2: Interbank Money Market Rates and Indexation Clause**

#### Interbank market

##### SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

##### EONIA/EURIBOR

**Eonia®** (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “**Euribor®**” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

#### Indexation clauses

##### TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was

based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

#### Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF. The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

### Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

**Main refinancing operations** are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

#### Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion »shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions.«

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

## 2.4: Monetary Financial Institutions Interest Rates

#### Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

“Loans to households for other purposes” include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

#### Data from May 2005–December 2006 covers business conducted in SIT and from January 2007 in EUR, by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. “credit institutions”) apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18 (amended by Regulation ECB/2009/7), which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 101 interest rate

indicators with the corresponding volumes are collected, of which 87 refer to new business and 14 to outstanding amounts.

**Outstanding amounts** are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

**New business** is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

**The annual percentage rate of charge (APRC)** is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. APRC is calculated in accordance with the provisions of Articles 22 and 23 of the Consumer Credit Act. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

**Weighting method:** The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

\* Households = sole proprietorships + individuals + non-profit institutions serving households

\*\*APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

## Exchange rates (Tables 2.6.1–2.6.2)

### Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

### Table 2.6.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008, the conversion rate for the Slovak koruna as of 1 January 2009 and the conversion rate for the Estonian kroon as of 1 January 2011.

1 EUR =	40.339900	BEF
	1.955830	DEM

## Payment systems (Tables 2.7 to 2.13)

### General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

### Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

**Note 1:** On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

**Note 2:** SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

**Note 3:** Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system. As of 19th November 2007 payments in TARGET 2 system are considered.

**Note 4:** As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system. As of 19th November 2007 payments in TARGET 2 system are considered.

**Note 5:** Gross value is the total value of all payment orders executed in the payment system.

**Note 6:** Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

### Table 2.8 Payment Cards

**Note 1:** Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

**Note 2:** Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

**Note 3:** Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

**Note 4:** Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

**Note 5:** Data on payment cards DINERS, issued by Diners Club SLO d.o.o. are not included from the third quarter 2013,

**Number of payment cards in circulation:** Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

**Number and value of payments refer** to the use of payment cards in each quarter/year.

**Domestic card:** Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

**Licence card:** Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

**Bank card:** Payment card issued by banks.

**Retailer card:** Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

**Personal card:** Payment card issued to a natural person (family cards included).

**Business card:** Payment card issued to a legal entity.

## Table 2.9 Other Payment Instruments and Innovative Payment Schemes

*Note 1:* Data refer to the end of each quarter.

*Note 2:* Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

## Table 2.10 Electronic Banking

*Note 1:* Only credit transfers debited from payers' accounts are included.

*Note 2:* Payments by Bank of Slovenia as payment service provider for non-MFI subjects are also included from 2011 on.

## Table 2.11 Credit Transfers

A **paper-based order** is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

A **special payment order** is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A **non-paper-based credit transfer** is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A **standing order** is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

**Direct credit** is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

## Table 2.12 Debit Transfers

**Direct debit** is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

*Note 1:* A special money order was used until the end of 2009. Special money order was a standardised paper-based debit instrument used to remit money to the named payee. A special money order was issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

## Table 2.13: Network of Commercial Banks

*Note 1:* Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000. Map of Slovenia by Geodetic Institute of Slovenia

*Note 2:* Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

### 3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

#### Balance of Payments

##### General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

##### Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

##### Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

- Revisions in monthly data are published with the release of:
  - the following month's data;
  - the corresponding quarterly data;
  - the corresponding revised quarterly data;
  - the international investment position and external debt data for the corresponding year; and
  - the revised international investment position and external debt data for the corresponding year.
- Revisions in quarterly data are published with the release of:
  - the following month's data;
  - the data on the following quarter;
  - the international investment position and external debt data for the corresponding year; and
  - the revised international investment position and external debt data for the corresponding year
- Revisions for the annual balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

##### Data sources

**The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the **Intrastat reporting**. The source of data on trade in goods with other countries is the single administrative document (**Extrastat reporting**).

##### Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):

- report on account balances at domestic banks – PPV (until 31 December 2004),
- report on account balances abroad – C (until 31 December 2006),
- report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
- report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

**Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.

**Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.

**Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.

**Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obta-

ined the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.

**Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.

**Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.

**Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.

**Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.

**Report on Modern Payment Instruments (SPI)** for data on acquisition of fuel by nonresident transport operators at Slovene petrol stations settled via payment cards of foreign issuers from 2008 onwards.

#### Accounting data of the Bank of Slovenia

##### Accounting data of banks (KNB)

**Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

**Quarterly data on financial account's statistics** are source for financial derivatives for all sectors except the central bank (from 2007 onwards). For banks this data source was used until 2010 (in 2011 it was replaced by PORFI), for government sector this data source was used until 2012 (in 2013 it was replaced by direct reportinf of the Ministry of Finance).

##### Estimates and other sources

- estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
- estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
- estimate of Italian pensions (IMAD) until the end of 1998,
- estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
- estimate of labour income (SORS),
- data on pensions paid to non-residents (ZPIZ),
- survey on the write-downs of debt from trade in goods and services abroad,
- estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
- estimate of cash transactions on tourism and labour income (from 2007 onwards),
- quarterly data on consumption of foreign embassies in Slovenia (SORS, from 2008 onwards),
- migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
- households' transfers (SORS, from 2008 onwards),
- assets acquired directly by tenders and programmes of EU (SORS, from 2008 onwards),
- data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards),
- data on purchases/sales of real-estate in Croatia (Croatian National Bank, from 2008 onwards),
- data on direct investment of Slovene households in the form of real estate abroad (main data source Household Budget Survey, SORS)
- data on purchases/sales of emission allowances between residents and nonresidents (Slovenian Environment Agency, from 2008 onwards until 2011, From 2012 onwards data is collected by BST monthly report).

## Current account

### Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

**Adjustments of CIF/FOB** – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

**Coverage adjustments** - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

## Services

### Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

### Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad. The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists. Data for the category "Expenditure on travel" come from the ITRS and estimations.

### Travel - methodology since 2005 onwards

**Main data** sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SORS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists; three-year's survey -last conducted in 2009)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

**Main data** source to estimate the **import** of travel is SORS's survey TU\_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU\_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

### Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

### Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

### Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SORS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

## Income

**Labour income – receipts.** Since 2002, data from the Labour Force Survey (SORS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

**Labour income - expenditures.** ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SORS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

**Capital income** – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

## Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows and inflows (data provided by foreign central banks) and transfers of households (SORS survey) are included from 2008 onwards.

## Capital and financial account

### Capital account

#### Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SORS, Annual survey on investment in tangible assets). Cross border transactions in emission allowances are included in capital account (as purchases and sales of non-produced non-financial assets).

### Financial account

#### Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards). From 2007 onwards, data on foreign direct investments of households in the form of real estate are included.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From the same year data on Slovenian residents' purchases/sales of real-estate in Croatia are included (data source is Croatian National Bank).

Since 2001, there is a break in the data series in the category »Direct Investments - Other Capital«. Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category »Other Investments«. Since 2002, the category »Direct Investments - Other Capital« also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

**Portfolio investment**

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

**Financial derivatives**

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart). For financial derivatives of banks from 2011 onwards the data source is PORFI and for financial derivatives of the government from 2013 onwards the source is the reporting of the Ministry of Finance.

**Other investments****Short-term trade credits**

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]}
- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]}

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

**Loans and long-term trade credits**

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

**Currency and deposits**

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

**International monetary reserves**

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

### Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1988 – 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in “Other sectors”.

Note 2: For 1988 through 1990, “Statistical errors” include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

### Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the “Other changes” category, which reconciles the international investment position in consecutive periods.

\* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to “Liabilities to government”.

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500 million)
- March 1999 (EUR 400 million)
- March 2000 (EUR 400 million)
- February 2001 (EUR 100 million)
- April 2001 (EUR 450 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000 million)
- February 2008, RS63 (EUR 1000 million)
- February 2009, RS64 (EUR 1000 million)
- March 2009, RS65 (EUR 1500 million)
- September 2009, RS66 (EUR 1500 million)
- January 2010, RS67 (EUR 1500 million)
- March 2010, RS68 (EUR 1000 million)
- January 2011, RS69 (EUR 1000 million)
- March 2011, RS70 (EUR 1000 million)
- October 2012 (USD 2250 million)
- May 2013 (USD 1000 million)
- May 2013 (USD 2500 million)
- November 2013 (EUR 1500 million)
- February 2014 (USD 1500 million)
- February 2014 (USD 2000 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading “Direct investments”, while other commercial credits are included in “Other investments/trade credits”.

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in

reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

**Note 8:** The data on reinvested earnings for 2013 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2010 to 2012 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2014, the estimate will be replaced with actual data on reinvestment of earnings for 2013; the estimate for 2014 shall take into consideration the new three year average (2011 to 2013).

**Note 9:** From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". From 2005 onwards loans of banking sectors are not included. Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

**Note 10:** Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

**Note 11:** In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

### Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

### Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

## International Investment Position of Slovenia

### General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

### Revision policy

See note "Revision policy" in the section "Balance of Payments".

### Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

### Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From 2007 data on foreign direct investment of households in the form of real estate are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment-other capital". Intercom-

pany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

#### **Portfolio investment**

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portofolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN). From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

#### **Financial derivatives**

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart). For financial derivatives of banks from 2011 onwards the data source is PORFI and for financial derivatives of the government from 2013 onwards the source is the reporting of the Ministry of Finance.

#### **Trade credits and loans**

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items. From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

#### **Currency and deposits, other assets, other liabilities and reserve assets**

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available. From 2007 onwards, the level of foreign currency holdings of domestic household sector equals the level that was reached at the end of the year 2006 (2.948,6 EUR million), when Slovenia joined the European Monetary Union.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

### Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on direct investment of Slovenian households. From 2007 onwards only estimation of the value of real estate direct investment abroad by Slovenian household sector is included,
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: [http://www.bsi.si/iskalniki/ecb\\_en.asp?Mapald=714](http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714).

### Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

## Gross External Debt

#### General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

#### Revision policy

See note "Revision policy" in the section "Balance of Payments".

#### Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities, financial derivatives and monetary gold are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

### Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table »Net External Debt«, data are sorted by sectors, maturities and instruments; in the table »International Investment Position«, data are sorted by instrument, sectors and maturities.

### Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

## International reserves

### Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers. From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

## 4. PUBLIC FINANCE

### General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

### General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community. ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data. Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia. The data on financial accounts are consolidated.

### Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

**EDP debt** is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

### Tables 4.2 and 4.3: Non-financial Account of the General Government sector

**Fiscal burden** is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

**Intermediate consumption** consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

### Tables 4.4 and 4.5: Financial Account of the General Government sector

**Change in EDP debt** is a difference between the current and preceding EDP debt figure.

**Deficit-debt adjustment (DDA)** is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

**Other liabilities** consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

**Other flows** are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

**Borrowing requirement** consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

### Table 4.6: Revenues and Expenditures of the General Government

*Note 1:* The data of the current and previous year are revised monthly until the data on the previous year become final.

*Note 2:* Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

*Note 3:* Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

*Note 4:* On 1 October 2011, the Tax Administration of the Republic of Slovenia (DURS) introduced new information system and due to that, large number of recorded data on the tax and social security contribution revenues remained on unallocated fund accounts, while totals for those two categories were unaffected. We are publishing the data where certain categories of taxes and social security contributions were estimated by the Ministry of finance. The funds are expected to be correctly allocated already next month. Source: <http://www.mf.gov.si>

### Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

*Note 1:* The data of the current and previous year are revised monthly until the data on the previous year become final.

**Table 4.8: Central budget debt**

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

**5. FINANCIAL ACCOUNTS****Financial accounts (Tables 5.1 to 5.6)**

**Tables 5.1, 5.2, 5.4 and 5.5** show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

**Tables 5.3 and 5.6** present net items by individual sectors. Net financial assets present difference between financial assets and liabilities (stocks). Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

**Financial instruments in financial accounts**

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances. Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;

- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions. Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

## 6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

### General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: [http://www.stat.si/skd\\_nace\\_2008.asp](http://www.stat.si/skd_nace_2008.asp) (in Slovene).

### General

Data prior to 2007 are published in tolaris; from 2007, data are published in euros.

## Non-financial accounts and general economic statistics

### Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

### Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

### Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products. From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

### Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Note 1: In 2013, the Statistical Office of Republic of Slovenia stopped publishing data on industrial new orders.

### Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

### Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries. Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

### Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

### Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1 – ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

### **Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators**

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper »Calculations of harmonised competitiveness indicators«, on the Web site of Bank of Slovenia: <http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

### **Tables 6.15 and 6.16: Consumer Price Index**

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

### **Tables 6.17 and 6.18: Industrial Producer Price Index**

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

## Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

<b>Tables in Monthly Bulletin of the Bank of Slovenia</b>	<b>Tables in Monthly Bulletin of the ECB</b>
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
1.5. Selected Assets of Other Monetary Financial Institutions by Sector	2.6 MFI holdings of securities, breakdown
1.6. Selected Obligations of Other Monetary Financial Institutions by Sector or	2.5 Deposits held with MFIs, breakdown
1.4. Balance Sheet of Other Monetary Financial Institutions	
1.8. Investment funds	2.9. Aggregated balance sheet of euro area investment funds
	2.10. Securities held by investment funds broken down by issuer of securities
2.2. Interbank Money Market Rates and Indexation Clause	4.6 Money market interest rates
2.3. European Central Bank Interest Rates	1.2 Key ECB interest rates
2.6.2a. European Central Bank exchange rates - Average Rates	8.2 Bilateral exchange rates
3.2. Balance of payments, capital and financial account	7.1 Balance of payments - summary
	7.2 Current and capital account
	7.3 Financial account
3.3. Current Account by countries	7.2.3 Current and capital account - geographical breakdown
3.4. Capital and Financial Account by countries	7.3.8 Financial account - geographical breakdown
3.5. Trade in goods by countries	7.5 Trade in goods

6.14. The Effective Exchange Rate - Nominal, Real	8.1 Effective exchange rates
6.15. Consumer price index	5.1.1. Harmonised Index of Consumer Prices
6.16. Consumer price index (growth rates)	
6.17. Industrial producer price index	5.1.2. Industry, construction, residential property and commodity prices
6.18. Industrial producer price index (growth rates)	

# ADVANCE RELEASE CALENDAR

## Economic and financial data for Slovenia - SDDS ADVANCE RELEASE CALENDER

National Summary Data Page: <http://www.bsi.si/imf/>

Information on SDDS are available on <http://dsbb.imf.org/>

Data Category	September 2014	October 2014	November 2014	December 2014
<b>REAL SECTOR</b>				
National accounts			28 (for Q3 2014)	
Production index	10 (for July 2014)	10 (for August 2014)	10 (for September 2014)	10 (for October 2014)
Forward-looking indicators	29 (for September 2014)	NLT 28 (for October 2014)	NLT 26 (for November 2014)	NLT 29 (for December 2014)
Labor market: Employment			28 (for Q3 2014)	
Labor market: Unemployment			28 (for Q3 2014)	
Labor market: Wages	15 (for July 2014)	15 (for August 2014)	17 (for September 2014)	15 (for October 2014)
Price indices: Consumer Price Index	30 (for September 2014)	30 (for October 2014)	28 (for November 2014)	30 (for December 2014)
Price indices: Producer Price Index	19 (for August 2014)	21 (for September 2014)	20 (for October 2014)	19 (for November 2014)
<b>FISCAL SECTOR</b>				
General government or public sector operations				
Central government operations	23 (for August 2014)	NLT 30 (for September 2014)	NLT 30 (for October 2014)	NLT 31 (for November 2014)
Central government debt				
Debt of the Direct Users of the Government Budget	23 (for August 2014)	NLT 30 (for September 2014)	NLT 30 (for October 2014)	NLT 31 (for November 2014)
Total Guarantees	23 (for Q2 2014)			NLT 31 (for Q3 2014)
<b>FINANCIAL SECTOR</b>				
Analytical accounts of the banking sector (Consolidated Balance Sheet of the Monetary System)	30 (for August 2014)	NLT 30 (for September 2014)	NLT 30 (for October 2014)	NLT 31 (for November 2014)
Analytical accounts of the central bank (Balance Sheet of the Bank of Slovenia)	12 (for August 2014)	NLT 14 (for September 2014)	NLT 13 (for October 2014)	NLT 12 (for November 2014)
Interest rates <sup>1</sup>	12 (for August 2014)	NLT 14 (for September 2014)	NLT 13 (for October 2014)	NLT 12 (for November 2014)
Financial soundness indicators	30 (for Q2 2014)			NLT 31 (for Q3 2014)
Stock market: Slovene-Blue Chip index (SBI TOP)	03 (for August 2014)	NLT 14 (for September 2014)	NLT 13 (for October 2014)	NLT 12 (for November 2014)
<b>EXTERNAL SECTOR</b>				
Balance of payments	12 (for July 2014)	NLT 30 (for August 2014)	NLT 30 (for September 2014)	NLT 31 (for October 2014)
Official reserve assets	05 (for August 2014)	NLT 07 (for September 2014)	NLT 06 (for October 2014)	NLT 05 (for November 2014)
International reserves and foreign currency liquidity	12 (for August 2014)	NLT 30 (for September 2014)	NLT 30 (for October 2014)	NLT 31 (for November 2014)
Merchandise trade	09 (for July 2014)	10 (for August 2014)	07 (for September 2014)	10 (for October 2014)
International investment position	12 (for Q2 2014)			NLT 31 (for Q3 2014)
External debt	12 (for July 2014)	NLT 30 (for August 2014)	NLT 30 (for September 2014)	NLT 31 (for October 2014)
<b>Exchange rates 2</b>				
Addendum				
Population		29 (for Q2 2014)		

Notes:

\* The period to which data relate is shown in the parenthesis. NLT stands no-later-than.

<sup>1</sup> The data on interest rates are published by the Bank of Slovenia and the Ministry of Finance separately. The data on representative interest rates of the BoS and interbank money market rates are disseminated whenever the change occurs.

<sup>2</sup> The data are disseminated daily on Bank of Slovenia's page Currency Exchange rates (for display) and on Archive of financial data.
