Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

Executive Summary

Geopolitical tensions and a slowdown in global economic activity brought renewed reductions in forecasts of global economic growth for this year and next year. The economic situation also remained unfavourable in the euro area. The euro fell again in September, while prices of certain commodities also fell, and oil prices reached its lowest level of the last four years.

Economic growth in Slovenia will slow in the third quarter. This is in line with the Bank of Slovenia forecasts; a slowdown is suggested by the majority of the available indicators. This is primarily attributable to the weakness of the economic recovery in the euro area and the gradual completion of works on local public infrastructure, which are curbing growth in industrial production and construction. Firms are also becoming more cautious in their assessments of future demand. By contrast, the improvement in consumer confidence is raising domestic private consumption, which is primarily being reflected in growth in turnover in the retail sector. Although the cooling of the euro area means that some signs can be seen of a slowdown in export growth, it is still outpacing growth in imports from trading partners, which is confirmation of the competitiveness of the export sector.

Developments on the labour market remain favourable. The number of registered unemployed is still falling, while outflows from unemployment are still increasing, primarily as a result of new hires. The workforce in employment in August was up again in year-on-year terms, which was primarily attributable to private-sector services and manufacturing. The average nominal wage and the wage bill are continuing to record moderate year-on-year growth. The latter has also been increasing in real terms in recent months, which is having a beneficial impact on consumer confidence and on household purchasing power and consumption.

Year-on-year inflation as measured by the HICP fell by a further 0.1 percentage points in September to -0.1%, i.e. moderate deflation. These developments were largely the result of a fall in commodity prices on the global market, and the fierce competition that given the merely moderate recovery in purchasing power is not allowing domestic prices to be raised. The contribution made to headline inflation by services remained unchanged, as a result of which core inflation is still falling.

According to the Ministry of Finance forecasts in the October draft budget plan for 2015, this year's general government deficit is expected to stand at 4.4% of GDP, or 3.5% of GDP excluding bank recapitalisations, while the general government debt will stand at 82.2% of GDP at the end of the year. In October the government is drawing up a revised budget for this year, revising the deficit upwards by 0.2% of GDP from the previous forecast. The final major instalment of debt maturing this year also fell due for payment in October: EUR 1 billion from 18-month treasury bills. The state budget replaced half of the maturing amount by issuing new 18-month treasury bills at a significantly lower interest rate. The required yield on long-term government bonds fell in the first half of October.

After increasing in July, the banking system's total assets declined by EUR 321 million in August to stand at just under EUR 40 billion. The banks continued with debt repayments to the rest of the world in August, and with the early repayment of liabilities to the Eurosystem from the 3-year LTROs. On the funding side, household deposits are continuing to grow; their increase over the first eight months of the year compensated for their decline over the whole of 2013. The developments in deposits were particularly favourable at the large domestic banks, where after falling for two and a half years they recorded positive year-on-year growth again in August.

There were no major changes in corporate lending. Demand for loans in the first half of this year indicates a slightly smaller fall in demand than in previous years. Excess corporate demand nevertheless remains high, particularly for loans for investment. The banks are maintaining credit standards at the previous high level, including interest rates, which are not adjusting sufficiently to falling liability interest rates. Modest corporate lending is being reflected in a decline in the quality portion of the banking system's portfolio. In the absence of new lending, owing to the corporate deleveraging process at the banks the proportion of non-performing claims has remained at 14.8% in the last five months other than June, despite a decline in the stock of non-performing claims in recent months.

The banks recorded a pre-tax operating profit of EUR 137 million over the first eight months of 2014.

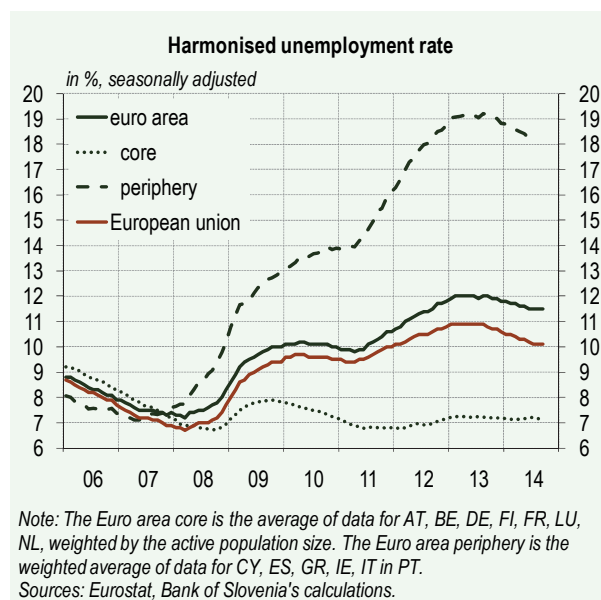

1 | International Environment

In the wake of geopolitical tensions and a slowdown in economic activity in individual developed and developing countries, economic growth forecasts for 2014 and 2015 were reduced for the global economy and for some of Slovenia's major trading partners. Industrial production declined sharply in August in individual euro area countries, while developments in the retail sector and in construction remained favourable. The harmonised unemployment rate in the euro area remained stable, but the economic sentiment and consumer confidence indicators nevertheless declined again. The euro fell again in September, while certain commodity prices also fell. Oil prices fell sharply, reaching their lowest level of the last four years.

Economic sentiment

Economic sentiment in the euro area declined again in September to below its long-term average, while consumer confidence also declined again. The unemployment rate in the euro area remained unchanged for the third consecutive month in August at 11.5%, the lowest level since September 2012. Consumer confidence as measured by the European Commission nevertheless declined for the fourth consecutive month in September, and is now at its lowest level of the last seven months. The indicator of economic sentiment in the euro area as measured by the European Commission also declined in September, by 0.7 percentage points, to its lowest level since last December, already slightly below its long-term average. The sole sectors to record increased confidence were construction and services, while industry, retail and financial services recorded deteriorations.

The aggregate PMI for the euro area declined again in September. The aggregate PMI as measured by Markit, an analytical house, declined in September to its lowest level of the year. This was attributable to a slowdown in activity in industry and services, while new orders also declined to their lowest level of the last year. The services index also declined, growth in activity and in new deals in

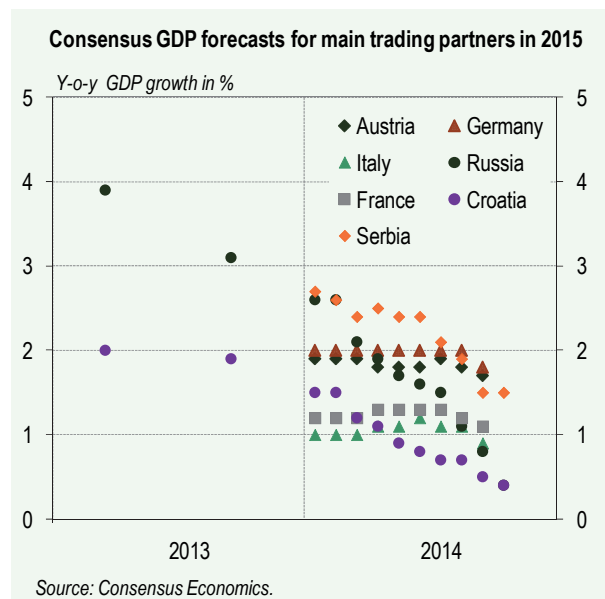

services having slowed to the lowest level of the last six months. Industry also saw a deterioration, production having remained unchanged from August, while new orders declined for the first time in the last 15 months. Developments varied from country to country: while the PMIs for Ireland and Spain continue to suggest a robust recovery, and activity remained solid in Germany, the situation deteriorated in France and Italy. In France activity as measured by the PMIs declined in both industry and services, while in Italy services alone recorded a decline.

Economic activity and forecasts

Developments in the retail sector and in construction in the euro area remained favourable in August, while industrial production declined sharply. Despite a decline in consumer confidence in the third quarter, turnover in the retail sector was up in August, by 1.2% in monthly terms and by 1.9% in year-on-year terms. An additional factor was the sharp increase in turnover in the majority of the euro area core countries. Developments in industry were weaker. Industrial production in August was down by just under 2% in both monthly and year-on-year terms. This was the first year-on-year decline in industrial production of this year. Production of capital goods declined sharply, the largest such decline in the last six months. The largest decline in industrial production in the euro area core countries was recorded by Germany. The amount of construction put in place declined each month between March and June, when the year-on-year decline stood at just under 1%. The amount of construction put in place strengthened slightly in monthly terms in July and August, taking the year-on-year decline to just 0.3% in August. Of the major euro area countries, the largest decline in the amount of construction put in place in August was recorded by Germany, while Spain recorded the largest year-on-year increase of 22%.

Economic growth forecasts for 2014 and 2015 were reduced for the global economy and for some of Slovenia's major trading partners. In light of the geopolitical tensions and the slowdown in economic activity in individual developed and developing countries, in October the IMF again cut its forecasts for real global GDP growth. It cut its forecasts to 3.3% for 2014 and 3.8% for 2015, down 0.1 percentage points and 0.2 percentage points respectively on the July forecasts. It also cut its forecasts for the euro area to 0.8% for 2014 and 1.3% for 2015, down 0.3 percentage points and 0.2 percentage points respectively on July. Having already sharply reduced its forecasts for individual trading partners of Slovenia in July, the IMF again reduced its growth forecasts for France and Italy in October. It sharply reduced its growth forecasts for Germany, by 0.5 percentage points to 1.4% in 2014 and by 0.2 percentage points to 1.5% in 2015. Consensus also reduced certain forecasts in Octo-

ber. Consensus again reduced its 2014 forecast for Serbia, to -0.5%, down 0.3 percentage points on September, but left its forecast for Croatia unchanged at 0.6%. Consensus actually raised its equivalent forecast for Russia, by 0.1 percentage points to 0.2%, but sharply reduced its forecast for 2015 to 0.4% (down from 0.8% in September). Consensus also reduced its 2015 forecast for Croatia, by 0.1 percentage points to 0.4%, while leaving its 2015 forecast for Serbia unchanged at 1.5%.

Euro exchange rate and commodity prices

The euro fell again against the US dollar in September. Prices of Brent crude fell to their lowest level of this year, while prices of certain other commodities fell again. The euro averaged USD 1.2901 in September, down 3.1% in monthly terms and down 3.3% in year-on-year terms. The price of Brent crude fell sharply for the third consecutive month. The price of a barrel averaged USD 97.3 in September, down 4.5% on August and down 12.8% on last September. The fall in oil prices deepened in the first half of October, when the price of a barrel fell to below USD 85, the lowest level in the last four years. In addition to oil, prices of other commodities also fell in September, most notably food prices. US dollar food prices were down 5.2% in monthly terms and 7.1% in year-on-year terms in September. The fall in food prices since May can primarily be attributed to good harvests and large inventories.

2 | Economic Activity

The available indicators of activity are currently suggesting a slowdown in economic growth in the third quarter. This is attributable to the weakness of the economic recovery in the euro area and the gradual completion of works on local public infrastructure, which are curbing growth in industrial production and construction. At the same time, in line with the recovery in purchasing power and the improvement in consumer confidence, private consumption is continuing to gradually rise, which is primarily being reflected in growth in turnover in the retail sector. In recent months firms have become more cautious in their assessments of future demand, which could indicate a slowdown in economic activity even in the final quarter of this year.

Economic sentiment

According to the confidence indicators, the economic situation could deteriorate slightly towards the end of the year. The economic sentiment indicator stood at -1 percentage point in September, comparable to the average over the last five months and up 11 percentage points on September 2013. Confidence deteriorated in manufacturing, in line with the weaker economic outlook in the international environment and the corresponding reduced expectations in connection with current and future demand. According to survey figures, a downward reversal is also evident in construction, as total value of orders and employment expectations declined. Both are related to the gradual completion of works on public infrastructure co-financed by European funds. The retail confidence indicator in September was close to its average level of this year, while confidence in other services has stabilised in recent months and is significantly higher than a year ago, although there are signs of a slowdown in growth in demand. The economic sentiment indicator thus remains at a relatively favourable level primarily as a result of rising consumer confidence, which is most likely related to the improvement in the situation on the labour market and a slight increase in purchasing power relative

to a year earlier.

Insufficient demand remains the main limiting factor in the performance of firms in all sectors, although its intensity is gradually diminishing. The proportion of firms facing weak demand remained highest in the retail sector in September, and lowest in construction. More than half of firms were faced with weak demand in September in retail and other services, compared with figures of just under 40% in manufacturing and construction.

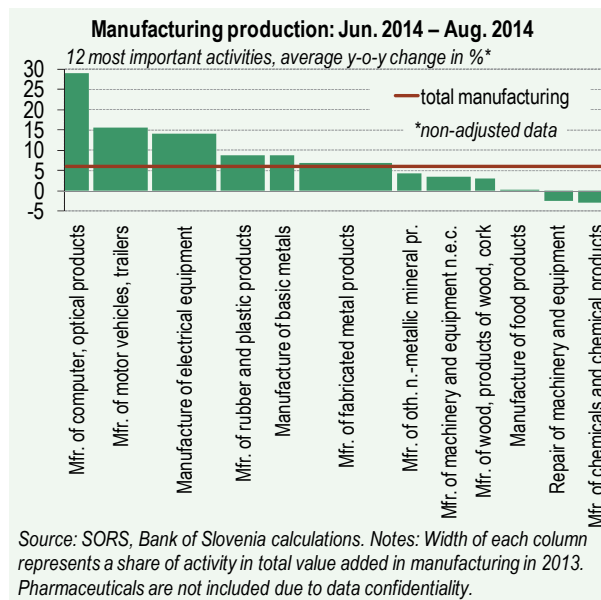

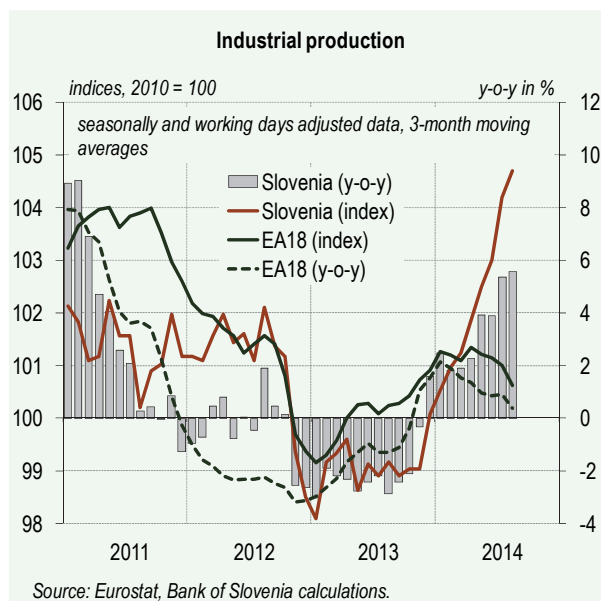

Firms are of the opinion that problems with financing are diminishing, despite the ongoing decline in bank loans. The proportion of firms with financing problems or problems in obtaining loans in the third quarter was down

just under 10 percentage points on the beginning of the year, at just over 20% in the private sector excluding services and at 30% in the service sector, the lowest figures since 2011. The stock of bank loans to corporates in July was down just under 13% in year-on-year terms.¹

Industry

After two months of solid growth, activity in industry declined in monthly terms in August. The decline exceeded 2%, and was evident in the energy sector and in manufacturing. In the wake of weaker economic activity and the downward reversal in the confidence indicators in the narrower international environment, growth in merchandise exports slowed in August, while at the same time the run-down in inventories indicates that firms are partly covering current demand by means of products produced in advance. Despite the monthly decline, year-on-year growth in industrial production remained relatively high in August at almost 5%, significantly more than the euro area average. The main factors in the year-on-year growth in overall output were the manufacture of electrical equipment and the automotive industry, the latter in connection with the production of new models at Revoz. In addition to exports, further evidence that year-on-year growth in foreign demand remains positive for the moment comes from sales revenues on foreign markets.

Private-sector services

Turnover in trade sector increased also in August.

Real turnover in the retail sector was up just over 1% in monthly terms, and just under 2% in year-on-year terms. This was attributable to increased turnover in non-food products, which has been rising since the end of last year. This has coincided with an increase in the indicator of the propensity to make major purchases. At the same time consumers have continued to reduce their purchases of food products. Sales of vehicles are continuing to record rapid growth, the year-on-year rate standing at almost 17% in August.

¹ Net stock of bank loans excluding the effects of the transfer of non-performing claims to the BAMC, measures in connection with Factor banka and Probanka, and the asset quality review.

Volume turnover in trade sectors

Source: SORS.

Nominal turnover in private sector services excluding trade

Source: SORS.

Current developments in nominal turnover in services excluding wholesale and retail trade have been relatively weak in recent months. Monthly growth in total turnover reached just under 2% in July, although this was significantly attributable to high growth in professional, scientific and technical activities, which was the result of a one-off factor. In the aforementioned sector the largest increase in turnover was recorded by advertising and market research, primarily as a result of an increase

in advertising during the World Cup. At the same time the monthly developments in recent months suggest a stagnation in turnover in transportation and storage and in accommodation and food service activities, and a decline in turnover in information and communication activities. Year-on-year growth in total turnover in services excluding wholesale and retail trade exceeded 5% in July, but primarily as a result of high growth in transportation and storage in the first quarter.

Notes: Data are working days adjusted.

* Volume of industrial production. ** Real value of construction put in place. *** Excluding trade and financial services. + Nominal turnover.

++: 3-month moving average compared to the corresponding average 3 months earlier. Data are seasonally and working days adjusted (except for construction where data are seasonally adjusted).

Construction

Construction activity has been gradually declining in recent months. This was primarily the result of a decline in activity in civil engineering work in connection with the gradual completion of work on local utilities infrastructure. The decline in civil engineering work is also indicated by a decline in the value of new contracts for such structures. Construction of non-residential buildings is continuing to strengthen, while the contraction in residential construction is continuing, in line with the long-term freeze in the new-build housing market. Total construction activity peaked in April, but had declined by approximately 5% by August, which according to reporting by firms was significantly attributable to bad weather. Having stood at around 45% between March and May, year-on-year growth had slowed to 27% by August, while the amount of construction put in place has already approached the average from 2011.

3 | Labour Market

Labour market developments remain favourable. The number of registered unemployed has been falling in monthly terms, and in September it was also down in year-on-year terms for the third consecutive month after an interruption of two years. Outflows from unemployment are continuing to increase, primarily on account of new hires. The workforce in employment in August was up again in year-on-year terms, which was primarily attributable to private-sector services and manufacturing. The average nominal wage and the wage bill are continuing to moderately increase, the latter having also recorded real growth recently.

Unemployment, labour market flows and workforce in employment

The number of registered unemployed continued to fall in September. The number of registered unemployed has been falling since this February, reaching 112,560 by the end of September. The fall in registered unemployment since the beginning of the year has been expected because of the seasonal effect, but the overall fall during the first nine months of the year is the largest since 2008. The number of registered unemployed was down in year-on-year terms for the third consecutive month in September, by 1.8%. The registered unemployment rate is also falling, and stood at 12.5% in August.

The most notable flows on the labour market are the high number of new hires. Outflows from unemployment have been increasing in year-on-year terms since February of this year, the increase reaching 3.4% in September. The main factor in the increase in outflows was new hires, which during the first nine months of the year were up 15% in year-on-year terms, and were up 4.4% in September. The increase in deregistrations for reason of first-time employment, which were up a fifth in year-on-year terms, is particularly encouraging. The number of deregistrations for reason of retirement has been falling continually since the end of 2012. By contrast, inflows

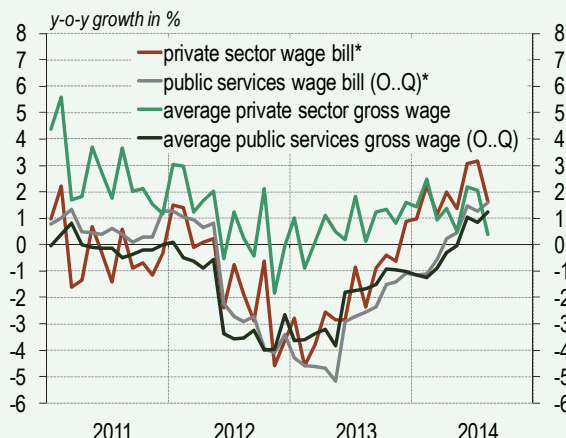

into unemployment were up slightly in year-on-year terms in September, primarily as a result of a 10% rise in the number of first-time job-seekers. Another likely factor in the increase is certain students deciding to enter the labour market before the expiry of their student status, because of the improvement in the economic situation and because they meet the conditions for inclusion in active employment policy. Those registering as unemployed because their temporary employment has ended continue to account for the largest proportion of the inflows, namely a half. These inflows increased by 2% in September, but the total number of inflows for reason of the loss of temporary employment this year was nevertheless down 6% on the same period last year. The number of those newly registering as unemployed for reason of redundancy and bankruptcies has continued to fall.

The workforce in employment in August remained unchanged from July, and was up just over 1% in year-on-year terms. Year-on-year growth in the workforce in employment has been increasing for five consecutive months, and strengthened to just over 1% in August. The main engine of growth is the private sector, where the workforce in employment is primarily increasing in year-on-year terms in services. Year-on-year growth in the workforce in employment in manufacturing is also strengthening, and reached 0.7% in August. The positive developments in private-sector services and manufacturing more than neutralised the 0.8% year-on-year decline in employment in construction. Growth in the workforce in employment in public services slowed to just under 0.5% in August, and is still being driven by health and education services, while the workforce in employment in public administration, defence and compulsory social security is declining.

Wage developments

Year-on-year growth in the average nominal gross wage remains moderate. The average nominal gross wage per employee stood at EUR 1,517 in August, up 0.7% in year-on-year terms. The year-on-year growth rate was down on the previous month in almost all sectors, primarily on account of the lower number of working days. Year-on-year growth in wages in the private sector slowed to 0.4%, although the mining and quarrying sector

Total wage bill and average monthly gross wage per employee

Note *The wage bill is calculated as the product of the average gross wage for employees of legal persons who received pay and the total number of employees of legal persons.

Source: SORS, Bank of Slovenia calculations.

Note: Wage bill is calculated as the product of average gross monthly wages for employees of legal persons who received pay and the total number of employees of legal persons.

Source: SORS, Bank of Slovenia calculations.

and the electricity, gas and steam supply sector recorded large year-on-year wage increases of more than 10%. The end of a base effect meant that wages in mostly public services also increased in year-on-year terms, by 1.2% in August. The average nominal gross wage per employee increased by almost 1.9% in August in the public administration, defence and compulsory social security sector, by 0.8% in the education sector and by 1.2% in the human health and social work activities sector. Developments in the nominal gross wage bill remain positive: both the private sector and public services recorded growth of 1.5% in August. The real gross wage bill is continuing to record year-on-year growth, the rate standing at 1.7% in August.

Price Developments

Year-on-year inflation as measured by the HICP fell by additional 0.1 percentage points in September to -0.1%. Unusual developments in prices of seasonal products further deepened the year-on-year fall in prices of non-energy industrial goods, while the ongoing fall in oil prices on global markets reduced energy prices again. By contrast, year-on-year growth in food prices increased as a result of a sharp rise in prices of unprocessed food. The contribution made to headline inflation by services prices remained unchanged. Core inflation fell again, as a result of the decline in year-on-year growth in prices of non-energy industrial goods.

Headline inflation and structure of inflation

Year-on-year inflation as measured by the HICP fell in September by 0.1 percentage points, and is now in the deflation zone at -0.1%. The fall in prices of industrial goods deepened sharply, while year-on-year growth in food prices increased slightly. Year-on-year inflation as measured by the HICP also fell by 0.1 percentage points in the euro area overall, reaching 0.3% in September. The main reason for the fall in inflation in

Slovenia was a sharper fall in prices of industrial goods. Prices of non-energy industrial goods in September were down 1.6% in year-on-year terms, 0.7 percentage points more than in August. As a result of an atypically low seasonal rise in prices of clothing and footwear, year-on-year growth in prices of clothing and footwear was negative again in September. In addition the year-on-year fall in prices of sports equipment and car prices deepened. Energy prices also fell more sharply: year-on-year growth in energy prices declined by further 0.7 percentage points in September to stand at -2.7%. Despite a rise in excise duties, the sharp falls in oil prices on global markets have

Note: Figures may not sum up to official figures due to rounding.

reduced prices of all motor fuels and heating oil. Year-on-year growth in services prices remained unchanged from August at 1.4% in September. A sharp fall in prices of transport services caused by year-on-year growth in prices of air transport services slowing from 16.5% to 4.3% acted to reduce growth in services prices. This effect was balanced by increased year-on-year growth in prices of arts, recreation and sports services, package holidays and transport insurance services. Year-on-year growth in food prices increased by 0.9 percentage points in September to 0.8%. The rise was the result of the dynamics in growth in prices of unprocessed food, which increased by 2.9 percentage points to -0.5%. Prices of fruit rose sharply and the year-on-year fall in prices of vegetables and meat slowed.

Core inflation and inflation trends

Core inflation fell further in September, and remains below the euro area average. The narrowest core inflation indicator also fell in the euro area overall, to stand at 0.7% in September according to initial figures. Year-on-year growth in the HICP excluding energy, food, alcohol and tobacco in Slovenia declined by 0.3 percentage points to 0.2%. This was largely attributable to a year-on-year fall in prices of clothing and footwear. Growth in the HICP excluding energy and unprocessed food also slowed, by 0.2 percentage points to 0.5%. Growth in the HICP excluding energy stood at 0.4%, up 0.1 percentage points on the previous month, as a result of September's slowdown in the year-on-year fall in prices of unprocessed food. The positive developments on the labour market are for the moment not being reflected in significant growth in domestic demand, as the uncertainties surrounding future household disposable income remain high. At the same time the continuing fall in import prices does not indicate any upward pressures on prices of domestic suppliers. This economic environment does not for now suggest any rise in core inflation.

5 | Public Finances

According to the Ministry of Finance forecasts in the October draft budget plan for 2015, this year's general government deficit according to the ESA 2010 methodology is expected to stand at 4.4% of GDP, or 3.5% of GDP excluding bank recapitalisations, while the general government debt will stand at 82.2% of GDP at the end of the year. The primary deficit excluding expenditure on bank recapitalisations in the first half of the year narrowed by approximately 1 percentage point in year-on-year terms, while the deficit excluding expenditure on bank recapitalisations was at a similar level. This means that interest payments are hindering fiscal consolidation. In October the government is drawing up a revised budget for this year, revising the deficit upwards by 0.2% of GDP. The state budget undertook its borrowing in September and October by issuing treasury bills. The final major instalment of debt maturing this year fell due for payment in October: EUR 1 billion from 18-month treasury bills. The state budget partly replaced this sum by issuing new 18-month treasury bills. The interest rates on treasury bills and the required yields on long-term government bonds continued to fall in the first half of October.

General government deficit and debt in the first half of the year, and MoF forecasts for this year

The general government deficit in the first half of the year (excluding one-off effects) was similar to last year. The Ministry of Finance is forecasting a deficit of 4.4% of GDP this year, and a general government debt of 82.2% of GDP at the end of the year. The general government deficit in the first half of the year amounted to EUR 996 million (5.5% of GDP), similar to the same period last year, when it amounted to EUR 1,001 million excluding expenditure on bank recapitalisations. The primary deficit, i.e. the deficit excluding interest payments (and one-off effects in 2013) declined by 1 GDP percentage point, indicating the degree to which the interest payment burden is hindering fiscal consolidation.

October's draft of the budget plan for 2015 is forecasting a deficit of 4.4% of GDP over the whole of this year, or 3.5% of GDP excluding expenditure on bank recapitalisations. Interest payments are forecast at 3.3% of GDP (compared with 2.5% last year). Having reached 78.3% of GDP by the end of June, the general government debt is forecast to reach 82.2% of GDP by the end of the year. The figures for previous years have been revised because of the changeover to the ESA 2010 methodology and because of the regular revisions to data. The deficit in 2013 thus amounted to 14.6% of GDP according to the latest estimate, or 4.5% of GDP excluding bank recapitalisations, and 3.9% of GDP excluding recapitalisations and other one-off effects related to court judgements (the deficit had previously been estimated at 14.7% of GDP). The latest estimate for the general government debt at the end of last year was 70.4% of GDP (previously 71.7% of GDP).

Consolidated general government revenues and expenditure

The consolidated general government deficit over the first seven months of the year was significantly smaller than in the same period last year, as a result of increased revenues. The deficit amounted to EUR 947 million, compared with EUR 1,317 million in the same period last year. Revenues were up 6.2%, while expenditure was up 1.4%. The increase in revenues was the result of increased tax revenues, most notably VAT and

corporate income tax. Non-tax revenues were also higher, as a result of the payment of the concession fee for the mobile telephony radio spectrum. The state budget deficit over the first nine months of the year amounted to EUR 998 million, slightly less than estimated in the adopted budget for 2014 (EUR 1,018 million). Given the significant deviations from the forecasts for revenues, expenditure and budget structure, the government will draw up a revised budget for 2014 in the second half of October, which will raise the deficit by around EUR 200 million to EUR 1.2 billion or 3.4% of GDP. The Health Insurance Institute recorded a surplus of EUR 10 million over the first eight months of the year, having recorded a deficit in the same period last year. The improvement in its position was the result of growth in social security contributions. Local government recorded a deficit of EUR 30 million over the first seven months of the year as a result of increased investment activity, having recorded a surplus over the same period last year.

Consolidated general government revenues during the first seven months of the year were up in year-on-year terms as a result of increases in tax revenues and non-tax revenues. Revenues increased by 6.2%, or EUR 506 million. The largest increases were in revenues from corporate income tax (EUR 182 million) and VAT revenues (EUR 146 million). The year-on-year increase in corporate income tax was primarily the result of an improvement in tax settlements for last year made in April, while current inflows were also higher. The increase in VAT revenues is a reflection of the rise in tax rates as of the middle of last year, more-favourable developments in private consumption and the effects of measures to curb the grey economy. Revenues from personal income tax and social security contributions were also up in year-on-year terms, as a result of the improvement in the situation on the labour market. Excise duties are recording negative growth: revenues over the first seven months of the year were down EUR 12 million in year-on-year terms. Non-tax revenues were up EUR 150 million as a result of the concession fees paid in May for the mobile telephony

radio spectrum. Net revenues from the EU budget amounted to EUR 146 million over the first eight months of the year according to state budget figures, down slightly in year-on-year terms. According to provisional figures, growth in tax revenues over the first nine months of the year slowed slightly to 5%, primarily as a result of the increase in VAT revenues in the second half of last year when the higher rates were already in force.

General government expenditure over the first seven months of the year was up in year-on-year terms, but significantly less than revenues. The rise was primarily the result of higher interest payments and investment. Expenditure increased by 1.4%, or EUR 137 million. The main year-on-year increase was recorded by investments, at EUR 206 million, largely at local government level. Interest payments increased by EUR 56 million, as a result of rising debt. Expenditure on pensions also increased, although the rise in the number of pensioners is slowing, while the fall in the number of policyholders is also slowing. Some categories of expenditure are falling, most notably expenditure on goods and services, and to a lesser extent expenditure on transfers to the unemployed, subsidies to private firms, and certain other expenditure.

Spreads on 10-year government bonds as compared to Germany

Sources: Bloomberg, Bank of Slovenia calculations.

Note: Spread is calculated as a difference between yield of 10-year government bond and the yield of reference German bond on a daily basis and is used as a measure of country's credit risk. *In the picture, SLOREP 09/24 is used after 1. January 2013.

Financing of the consolidated general government position and state budget

Net borrowing by the consolidated general government sector amounted to EUR 3.4 billion over the first seven months of the year. EUR 5.4 billion of debt was issued, mostly in the form of bonds. EUR 1.9 billion of debt was repaid. Some of the funds flowed to banks (EUR 1.9 billion), while the remainder was earmarked for covering the deficit in expenditure over revenues and for the lending and repayments account. The lending and repayments account recorded a large deficit of EUR 549

Note: *All bond issues disbursed on domestic market are counted under domestic borrowing, despite of the residency of buyers.

million over the first seven months of the year, as a result of the final instalment of the payment of capital into the ESM in April and the calling of a guarantee in connection with procedures to stabilise the banking system in June. The deficit in this account will be reduced in October on account of the proceeds of the sale of Aerodrom Ljubljana. The state budget continued its regular issues of treasury bills with maturities of up to 1 year in September and October. EUR 215 million of treasury bills were issued, and the interest rates continued to show a declining trend. An 18-month treasury bill with a principal of close to EUR 1 billion matured in October. New treasury bills with the same maturity were issued at the same time, albeit with a nominal value a half lower, and an interest rate that was significantly lower at 0.45% (previously 4.15%).

The required yield on Slovenian long-term bonds has been roughly stable and relatively low since the beginning of September. Yields rose slightly on a temporary basis before October's first meeting of the ECB, when the financial markets reflected the uncertainty surrounding the continuation of expansionary monetary policy. After the meeting the required yields on government bonds of Slovenia and of other euro area periphery countries fell. They rose slightly again in the middle of October as a result of the uncertainties in connection with Greece and its exit from the assistance programme, and the uncertainty surrounding the recovery of the global economy. The required yield on Slovenian 10-year government bonds averaged 2.5% over the first half of October; the premium over the German benchmark was 159 basis points.

6 | Current Account

The current account surplus narrowed sharply in year-on-year terms in August. It amounted to EUR 101 million, just over a third narrower in year-on-year terms. The surplus of trade in services widened as a result of improved results in construction services and intermediation services. Alongside the small increase in the deficit in factor income and transfers, the largest factor in the narrowing of the current account surplus was merchandise trade, which swung from a small surplus last August to a deficit of EUR 22 million this August. The cumulative current account surplus over the 12 months to August amounted to EUR 1.9 billion or 5.4% of GDP, compared with a surplus of 5.9% GDP a year earlier.

Merchandise trade

Year-on-year growth in merchandise trade has been gradually slowing since its peak in June, more rapidly on the export side for the second consecutive month. Year-on-year growth in merchandise exports declined to just 2.5% in August. Year-on-year growth in imports slowed significantly less, to 4.6%. The more pronounced slowdown in exports than in imports reduced July's merchandise trade surplus, and resulted in a shift to a small deficit in August. Despite the less favourable developments in the last two months, the cumulative merchandise trade surplus in the 12 months to August remained high at EUR 828 million or 2.3% of GDP, 0.5 percentage points more than last August.

Year-on-year growth in merchandise exports to EU Member States slowed sharply in August, while exports to non-EU countries declined again in year-on-year terms after recording high growth in June. According to SORS figures, year-on-year growth in merchandise exports to EU Member States fell to 3.5%, less than half the average rate over the first seven months of the year, while exports to non-EU countries declined by more than 1%, having recorded growth of more than 10% in June.

With the exception of June, exports to EU Member States have recorded faster growth than exports to non-EU countries. In addition to the more favourable economic situation in the EU and the more favourable developments in export prices, this is also attributable to Croatia's entry into the EU. Merchandise exports to EU Member States during the first eight months of the year were up more than 7% in year-on-year terms, while exports to non-EU countries declined by just over 1% in year-on-year terms. Growth in exports to non-EU countries is being curbed by the uncertain economic situation in the former Yugoslav republics, and the Ukraine crisis, which primarily hit exports to Ukraine, and also to Russia to a slightly lesser extent.

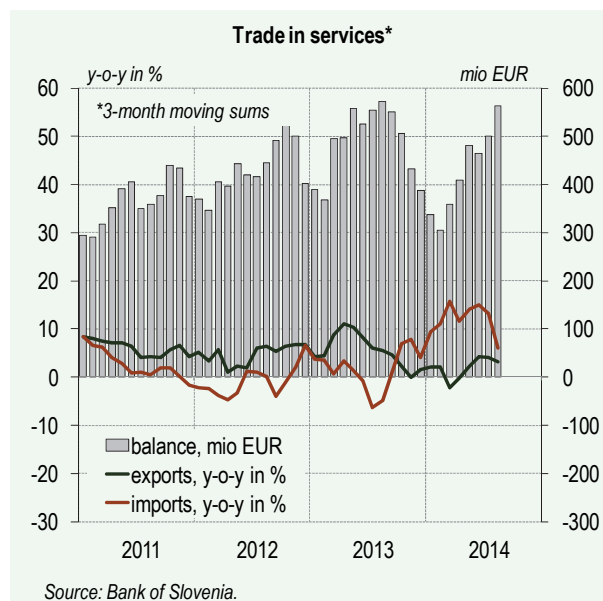

Growth in merchandise exports compared with the economic dynamics in trading partners indicates an increase in the competitiveness of the export sector.

Exports of capital goods recorded the largest year-on-year increase over the first eight months of the year. They were up almost 7% in year-on-year terms, primarily as a result of high growth in exports to EU markets, despite relatively weak capital expenditure on these markets. Total exports of consumer goods were up more than 5%, which is relatively favourable given the weak recovery in final consumption in the narrower international environment. Exports of intermediate goods over the first eight months of the year were up just under 5%, the rate of growth having declined significantly since June, albeit by less than the slowdown in industrial production dynamics in the EU.

According to SORS figures, year-on-year growth in merchandise imports has been gradually slowing since June, and over the first eight months of the year stood at slightly more than 1%. After declining in year-on-year terms in the first half of this year, growth in merchandise imports from EU Member States has picked up in recent months, while growth in imports from non-EU countries leapt to almost 9% in August after a decline in July. In the wake of faster economic growth in the first half of this year, which in addition to export demand was also supported by growth in domestic consumption, growth in imports of intermediate goods strengthened slightly, although imports over the first eight months of the year were down 1.8% in year-on-year terms. Growth in imports of capital goods has also strengthened again in recent months, to just under 3%. As economic activity has grown and the situation on the labour market has improved, the largest increase this year was in imports of consumer goods, at just under 9%.

Trade in services

The surplus of trade in services in August widened in year-on-year terms for the first time this year. This was even more the result of a decline of 4% in imports than it was the result of a rise of more than 3% in exports. The degree to which import growth has outpaced export growth this year thereby diminished, but remained large. Exports of services over the first eight months of the year

were up 1.9% in year-on-year terms, while imports were up just over 11%. As a result of these developments the surplus of trade in services declined by EUR 177 million in year-on-year terms to EUR 1.2 billion. The cumulative surplus of trade in services over the last 12 months remained at the level of EUR 1.8 billion or around 5.0% of GDP, having stood at 5.5% last July.

Growth in exports of transport services has been relatively high this year. The year-on-year rates of growth in imports and exports increased over the first six months of the year, but have been slowing since. Imports over the first eight months of the year were up 7.2% in year-on-year terms, while exports were up 7.7%. The most notable increases were in freight rail transport and sea and coastal freight water transport, and to a lesser extent freight transport by road. Revenues from the transportation of energy products are contracting, transportation of electricity and transportation of oil and gas by pipeline having declined the most. The surplus of trade in transport services over the first eight months of the year widened by EUR 37 million in year-on-year terms to EUR 484 million.

Developments in trade in travel services were less favourable. The number of arrivals by foreign visitors over the first eight months of the year was up 5.6% in year-on-year terms, while the number of overnight stays was up just over 1%, an indication of the increasingly transitory nature of tourism in Slovenia. Accordingly, ex-

ports of travel services over the first eight months of the year increased by 1.9% in year-on-year terms. Growth in imports of travel services remained at almost 14%, primarily as a result of high growth in the number of business trips abroad. The surplus of trade in travel services declined by EUR 53 million in year-on-year terms to EUR 848 million.

Trade in other services was the largest factor in the narrowing of the surplus of trade in services. Exports of other services (excluding travel and transport) declined by 1.3% in year-on-year terms, while imports increased by more than 12%. The deficit over the first eight months of the year amounted to EUR 94 million, compared with a surplus of EUR 68 million in the same period last year, which entails a year-on-year deterioration of EUR 161 million. The largest contributions to the deterioration were the year-on-year widening of EUR 102 million in the deficit in business and technical services and the decline of EUR 61 million in the surplus in foreign trade intermediation services to EUR 131 million.

Factor income and current transfers

The deficit in factor income widened rapidly over the first eight months of the year with the exception of July,² reaching its largest figure since 2008. The deficit over the first eight months of the year widened by EUR 142 million in year-on-year terms to EUR 582 million. The surplus in labour income amounted to just under EUR 260 million, while the deficit in capital income widened by EUR 175 million in year-on-year terms to EUR 840 million. Just under half of the deficit in capital income comprised the deficit in income from FDI, which widened by just EUR 20 million in year-on-year terms to EUR 412 million. The largest contribution to the widening deficit in factor income came from the increase in net payments of income from investments in securities. The deficit in income from investments in securities widened by EUR 171 million to EUR 342 million. As a result of high government indebtedness, the costs of financing the external general government debt increased by EUR 176 million in year-on-year terms to EUR 523 million. As a result of debt repayments, particularly by banks, net interest payments to

the rest of the world in the private sector declined by EUR 16 million to EUR 86 million. The cumulative overall deficit in factor income over the 12 months to August increased by a third in year-on-year terms to EUR 706 million or 2.0% of GDP.

The deficit in current transfers has also been widening this year. It widened by a further EUR 32 million in August, net outflows of government transfers and private transfers each accounting for a half. The deficit over the first eight months of the year widened by EUR 41 million in year-on-year terms to EUR 143 million, as a result of government transfers. While government transfers to the rest of the world remained virtually unchanged, disbursements from the EU budget declined by EUR 90 million in year-on-year terms.

² July's year-on-year increase in the deficit was lower, because the basis increased in the same month last year as a result of payments of earnings to foreign owners in the amount of around EUR 150 million.

7 | Capital and Financial Account

The net financial outflows of all sectors over the first eight months of the year amounted to EUR 1.5 billion, compared with EUR 1.9 billion in the same period last year. There has been a net outflow this year in loans and trade credits (EUR 1 billion in total), and currency and deposits (EUR 5.6 billion), while FDI and investments in securities have recorded a net inflow (EUR 5.3 billion in total). The net outflow to the rest of the world from all sectors amounted to EUR 145 million in August. The net external debt did not change significantly over the first eight months of the year and stood at EUR 12.1 billion at the end of August, although the breakdown by sector reveals borrowing by the general government sector (EUR 5.2 billion since the end of 2013) while all other sectors made net debt repayments to the rest of the world.

Private sector's claims

The private sector's claims against the rest of the world remained almost unchanged in August. There was a notable decline in claims from trade credits (EUR 146 million) that is seasonally typical. The private sector's claims rose by EUR 2.7 billion overall during the first eight months of the year, slightly more than in the same period last year. The largest factors in the increase in claims were an outflow of EUR 1.9 billion in domestic sectors' holdings of currency and deposits, primarily from the banks (EUR 1.2 billion), and an outflow of investments in securities and financial derivatives (EUR 0.6 billion). Capital transfers increased by EUR 283 million, EUR 62 million more than in the same period last year. The only instrument to record a decline in claims over the first eight months of the year was loans to the rest of the world (EUR 235 million), which was down almost two-thirds on the same period last year.

Private sector's liabilities

The private sector's liabilities to the rest of the world declined by EUR 102 million in August, mostly as a

result of loan repayments by the banking sector (EUR 251 million). The increase in liabilities in the aforementioned month entailed an inflow of FDI in the amount of EUR 88 million. There was a minimal increase in the private sector's net liabilities over the first eight months of the year (EUR 107 million), the figure having declined continuously between 2009 and 2013 (by EUR 7.8 billion in total). There was a pronounced increase in liabilities over the first eight months of the year via FDI (EUR 773 million), as EUR 630 million of non-residents' equity holdings flowed into Slovenia. The main decline in liabilities over the same period comprised loan repayments (EUR 826 million). Compared with the first eight months of 2013, there was a significant difference in the develop-

ments in FDI: last year there was a net decline in inward FDI in Slovenia (primarily as a result of negative reinvested earnings caused by larger losses on the part of foreign owners, and payments of earnings and debt repayments to foreign owners), while this year has seen an increase. Liabilities from loans increased slightly relative to the same period last year (EUR 0.3 billion), primarily as a result of corporate borrowing, while the banks' repayments of debt in the form of loans were similar in both periods (EUR 0.7 billion).

External debt

The net external debt increased by EUR 382 million in August to stand at EUR 12.1 billion at the end of the month. Liabilities increased by EUR 356 million in August, while claims declined by EUR 36 million. The gross external debt increased by EUR 4.3 billion this year to

EUR 44.3 billion, while gross external claims increased by EUR 4.3 billion to EUR 32.2 billion. The largest com-

Signs: inflows or increases in liabilities (+), outflows or increases in claims (-).

ponent of the net external debt at the end of August was the general government sector's net liabilities at EUR 18.4 billion (up EUR 7.8 billion on a year earlier), followed by the net liabilities of capital affiliates, which were unchanged from the same period last year at EUR 2.0 billion. The banking sector's position moved from net debt to net claims in June, the net claims reaching EUR 0.8 billion by August (compared with net liabilities of EUR 2.3 billion at the end of August of last year). The Bank of Slovenia held EUR 5.8 billion of net external claims at the end of August (up EUR 4.2 billion on a year earlier), while other sectors held claims of EUR 1.6 billion (up EUR 0.5 billion on a year earlier).

8

Banking System*

Total assets contracted in August, as a result of a decline in the banks' liabilities to the ECB and the ongoing repayment of debt at banks in the rest of the world. On the investment side, there was a decline in liquid forms of claims and loans to the non-banking sector, and an increase in investments in securities. Loans to non-financial corporations continued to contract, while the decline in bank lending activity to households is slowing. The banks recorded a pre-tax profit over the first eight months of the year.

Total assets

The banking system's total assets declined by EUR 321 million in August. The year-on-year decline was similar to the previous month, at 10.6% (up 0.3 percentage points). The decline in total assets was the result of a decline in the banks' liabilities to the ECB and the ongoing repayment of debt at banks in the rest of the world. On the investment side, the largest declines were recorded by cash and loans to the non-banking sector, while investments in securities recorded an increase. After increasing in June and July, claims against banks declined slightly in August.

Investment activity

Loans to the non-banking sector (NBS) continued to decline in August. The contraction in lending to the NBS in August was slightly smaller than this year's average: net loans declined by EUR 129 million. Loans to the NBS declined by 5.4% over the first eight months of this year. The year-on-year decline in loans to the NBS stood at 21.3% in August, at the level of this year's average, but would be a half lower at 10.5% if the effects of the transfer of loans to the BAMC and the additional impairments following the AQR were excluded, and Factor banka and Probanka were excluded. The decline in loans to the NBS

continues to be the result of a decline in loans to non-financial corporations (NFCs).

The contraction in loans to NFCs has continued. The stock of net loans to NFCs declined by EUR 119 million in August, slightly less than this year's average. The year-on-year decline in loans to NFCs in August was comparable to previous months at 30%. The banks under majority foreign ownership recorded the largest decline in year-on-year growth in loans to NFCs in August, at 1.6 percentage points. However, the rate of -17.8% was still better than those at the small domestic banks and savings banks (-38.7%) and at the large domestic banks (-39.5%). Developments in 2013 were a factor in the size of the year-on-year contraction recorded by both domestic bank groups: the wind-down process at Factor banka and Probanka last September, and the transfer of claims at NLB and NKBM to the BAMC last December. Net loans to NFCs declined by 9% over the first eight months of this year.

The decline in bank lending activity to households continued to slow in August. Loans to households increased slightly in August, which further reduced the year-on-year decline to 3.1%. The small domestic banks and savings banks accounted for the majority of the increase (EUR 7.2 million). The aforementioned bank group is also notable for its positive growth in loans to households,

* This section uses data from the banks that report to the Bank of Slovenia in accordance with the Guidelines for implementing the regulation on reporting by monetary financial institutions. Because of methodological differences, these figures differ from the published statistics.

which stood at 5.4% in August. Year-on-year growth stood at 21% at the savings banks. There were no major changes in terms of the different types of loan: housing loans continued to record positive year-on-year growth, at 1.3%, while consumer loans continued to decline, by 9.2% in year-on-year terms.

Financial assets and securities increased by EUR 137 million in August. The banks recorded their largest increase in investments in available-for-sale debt securities, by EUR 96 million net. Securities account for more than 20% of total assets.

Funding

The banks continued to reduce their liabilities to the Eurosystem in August. They made early repayments of 3-year LTROs amounting to EUR 270 million in August. The banking system's liabilities to the Eurosystem declined by EUR 2.4 billion over the first eight months of the year, to 3.3% of total assets (down from 9.2% last December).

Debt repayments to foreign banks have continued, although the pace is slower than last year. The banks reduced their liabilities to foreign banks by EUR 117 million in August, taking the total over the first eight months of the year to EUR 846 million, down a half on the reduction of EUR 1.6 billion recorded in the same period last year. This year the banks under majority foreign ownership have been making faster debt repayments than the banks under majority domestic ownership. The most likely reasons for the slower pace of debt repayments to the rest of the world are that the banks were more actively repaying the 3-year LTROs, and that the amount of maturing debt is declining as a result of the banks' repayments in previous years.

Deposits by the non-banking sector were unchanged in August. Year-on-year growth in deposits by the NBS remains negative at -1.5%, while the proportion of total liabilities that they account for is continuing to increase because of the faster contraction in total assets; deposits by the NBS accounted for almost 63% of total bank funding in August. Within the category of deposits by the NBS, deposits by NFCs recorded relatively solid year-on-year growth of 13.2%, primarily as a result of one-off fac-

tors in the previous month. Government deposits declined by EUR 81 million in August, primarily as a result of a decline of EUR 283 million in the Ministry of Finance's overnight placements.

Year-on-year growth in household deposits has been positive since April, and reached 3.2% by the end of August. The increase in growth is the result of current increases in deposits in recent months, and also a base effect, household deposits having recorded minimal growth or negative growth in the summer months of last year. The large domestic banks recorded positive year-on-year growth for the first time after a long period of decline: the rate stood at 0.4%, up 8 percentage points on last December. Growth in deposits is also positive at the banks under majority foreign ownership at 13%, while the small domestic banks and savings banks recorded negative growth of -2.8%. Within this group the savings banks are notable for growth of 31% in household deposits, having recorded year-on-year growth of more than 30% continuously since January.

Banking system's operating result

The Slovenian banking system generated a profit over the first eight months of this year. The banks' gross income during the first eight months of the year was up almost 14% in year-on-year terms. The trends in net interest and non-interest income remain favourable. Year-on-year growth in net interest stood at 11% in August. The main factor in the positive growth was a decline

of just under 37% in interest expenses, while interest income declined by 14%. The large decline in interest expenses was largely attributable to the fall in interest rates on deposits by the non-banking sector and the contraction in funding, while the decline in interest income was attributable to the ongoing contraction in lending activity, and in recent months to the fall in interest rates. Net non-interest income during the first eight months of the year was up 19% in year-on-year terms. On the cost side, operating costs have continued to decline. Impairment and provisioning costs during the first eight months of the year amounted to EUR 284 million, down 58% on the same period last year. The decline compared with last year will increase further in September, the two banks undergoing the orderly wind-down process (Factor banka and Probanka) since last September having created high impairments during that month. Impairment and provisioning costs accounted for a third of the disposal of the banks' gross income during the first eight months of the year. The Slovenian banking system generated a pre-tax profit of EUR 137 million in August, and an ROE of 5.4%. Despite the positive result, five banks recorded a loss in August.

9 | Financial Markets

The SBI TOP ended September at 838 points, confirming the positive trend seen on the domestic market since the beginning of the year. The market capitalisations of shares and bonds on the Ljubljana Stock Exchange increased to EUR 6,448 million and EUR 15,674 million respectively. In August the volume of trading in shares rapidly approached its peak of June, while the volume of trading in bonds increased again after declining for two months. The completion of the early elections and the relaunch of the privatisation process had a positive impact on domestic stock market developments. Non-residents continued to invest primarily in Slovenian shares in September, focusing on shares in firms in the final phase of privatisation. Slovenian residents invested in foreign securities in August, mostly from the euro area: households and investment funds primarily invested in shares, while banks primarily invested in bonds. Insurance corporations were the most active in selling foreign shares, while households were the main sellers of bonds. This year's growth in the mutual funds' assets under management continued in August. The rise of 3.9% in the average unit price and the net inflows of EUR 7 million were both factors in the increase. There was renewed strong volatility on foreign financial markets in September. This was attributable to the mixed and unfavourable macroeconomic results released in the US and China and to the renewed increase in global geopolitical tensions.

Developments on the Ljubljana Stock Exchange

The SBI TOP gained 2.3% in September, to end the month at 838, taking the year-on-year change to +36.2%. After declining for two months, the market capitalisation of shares on the Ljubljana Stock Exchange increased by 1.1% to EUR 6,448 million. The main factors in the increase were the hearings of the candidates for the positions of finance minister and minister of economic development and technology, which confirmed that priva-

Source: Ljubljana Stock Exchange, Securities Market Agency, Bank of Slovenia calculations.

Source: Ljubljana Stock Exchange.

Note: *TR – turnover ratio; turnover of last 12 months divided by market capitalisation in that period.

tisation would press ahead. The volume of trading in shares amounted to EUR 83 million, the second-highest figure of this year. It was up 56.1% on the previous month, and up 284.2% in year-on-year terms. Shares in Letrika (EUR 19.3 million), Pivovarna Laško (EUR 17.2 million) and Krka (EUR 11.3 million) accounted for 57.6% of the total volume of trading in shares. The five most heavily traded shares on the prime market account for 37.3% of the total volume of trading. The high volume of trading on the standard market was the result of the final phase of the takeover of Letrika by Mahle, a German concern (the takeover bid applies until 22 October) and the disposal of shares in Pivovarna Laško by Gorenjska banka d.d.

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 0.3% in September to EUR 15,674 million. After declining for two months, the volume of trading in bonds finally strengthened to EUR 7.2 million. Trading in 2nd-issue Slovenska odškodninska družba bonds accounted for 92.6% of the total volume (EUR 6.68 million). The next-heaviest trading was recorded by 1st-issue Agrogorica d.d. bonds (3.2% of total volume) and 2nd-issue KD holding bonds (3% of total volume). The Ministry of Finance issued 3-month, 6-month and 12-month treasury bills on the domestic capital market with nominal annual interest rates of 0.05%, 0.08% and 0.29% respectively. The total value of issued treasury bills amounted to EUR 116.2 million. The Ministry of Finance did not undertake any borrowing on foreign capital markets in September.

Inward investments by non-residents

Non-residents made net sales of EUR 19.1 million in Slovenian bonds and net purchases of EUR 137.5 million in Slovenian shares in September. The largest net sellers of Slovenian bonds were residents of Belgium and Liechtenstein, with sales of EUR 171.6 million and EUR 103.6 million respectively, while the largest net purchasers were residents of Luxembourg and France, with purchases of EUR 137.7 million and EUR 64.9 million respectively. Non-residents made purchases and sales of both short-term and long-term debt securities. The market in shares is still relatively active between non-residents, largely because of privatisation. The largest net purchasers of Slovenian shares were residents of Croatia, with purchases of EUR 88.2 million, primarily as a result of the completion of the takeover of Mercator by Croatia's Agrokor (the takeover bid expired on 1 September). The next largest purchasers were residents of Austria, with purchases of EUR 60.1 million. Shares in Letrika were also the target of Austrian purchases on this occasion. Residents of the US also recorded above-average activity, making net sales of EUR 4.8 million of investments, most notably shares in the Mercator Group. Non-residents most notably purchased shares in Mercator and Letrika, in the net amounts of EUR 68.2 million and EUR 62.8 million respectively, for reason of takeovers. The proportion of the market capitalisation of the Ljubljana Stock

Exchange accounted for by non-residents rose to 20.6% in September.

Outward investments by residents

Slovenian residents made net purchases of EUR 70.5 million in foreign debt securities and EUR 26.7 million in foreign equities in August. The largest net purchasers of foreign shares were households, with purchases of EUR 18.3 million, but investment funds also made significant net purchases (EUR 8.4 million). Households primarily purchased shares from the euro area, while investment funds focused more on shares from the BRIC countries. The largest net sales of foreign shares of EUR 3.6 million were recorded by insurance corporations, again

mostly shares from the euro area. The largest net purchasers of foreign bonds were the banks (EUR 40.8 million), followed by insurance corporations (EUR 14.0 million), both with a focus on the euro area. Households were the largest sellers of bonds, with net sales of EUR 0.7 million.

Domestic mutual funds

The domestic mutual funds' assets under management increased to EUR 2,111 million in August, as a result of a rise of 3.9% in the average unit price and net inflows of EUR 7 million. The year-on-year change in the average unit price stood at +17.4%. The largest net inflows of EUR 2.5 million were recorded by equity funds, whose average unit price rose by 3.9% in monthly terms. Bond funds, money-market funds and balanced funds also recorded net inflows, and all recorded positive growth in the average unit price. Balanced funds recorded the highest rise in the average unit price, at 4.2%. The largest net investments in mutual funds were made by households, at EUR 6.2 million, followed by insurance corporations and pension funds, at EUR 1.2 million. The largest net withdrawals of EUR 0.4 million were recorded by other financial intermediaries. Investors are still favouring Slovenian investments, which is a reflection of the overall increase in trading on the Ljubljana Stock Exchange caused by the privatisation of firms under government ownership. The proportion of the domestic mutual funds' assets under management accounted for by liquid assets³ declined slightly to 9.4% in August.

Global financial markets

Increased volatility was the main feature of September's developments on the financial markets. The major US stock market indices reached new record levels in the first half of the month (the S&P 500 reached 2,019 points during one trading day), on account of the release of encouraging economic data. The trend reversed sharply in the second half of the month. The S&P 500 lost 1.6% and the NASDAQ 1.9% in September. Developments in Europe were less volatile. European stock market indices recorded minimal changes in September. Germany's DAX gained 0.04%, France's CAC gained 0.8%,

and the UK's UKX lost 2.8%. The increased political tensions in the Middle East, the release of weaker economic data in the EU and fresh concerns surrounding possible retaliatory measures by Russia against new sanctions were again to the fore. The Governing Council of the ECB unexpectedly reduced interest rates at its September meeting, and announced new non-standard measures in October. The ECB's decision brought a fall in yields on government bonds in the euro area. September was an extremely bad month for corporate shares in emerging markets. The worst performance was in Brazil, where the main index lost 11.7%. China also recorded some of the worst share performance. The HIS, China's main index, lost 7.3% last month. Investors were unnerved by the world's second-largest economy recording its slowest growth in industrial production of the last five years in August.

³ Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary. The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical

documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Note 1: With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006)

presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	Title	share of euro		
					31.12.2004	31.12.2005	31.12.2006

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds
General

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term. Short-term ones include all instruments of monetary market with original maturity of one year or less. Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities. Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund. Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up. Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests. Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives. Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred

interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The **repo interest rate** for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The **overnight-deposit interest rate** is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A **penalty rate** is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “**Euribor®**” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia

and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF. The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion »shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions.«

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

“Loans to households for other purposes” include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT and from January 2007 in EUR, by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. “credit institutions”) apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18 (amended by Regulation ECB/2009/7), which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies

and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 101 interest rate indicators with the corresponding volumes are collected, of which 87 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. APRC is calculated in accordance with the provisions of Articles 22 and 23 of the Consumer Credit Act. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Exchange rates (Tables 2.6.1–2.6.2)

Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.6.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008, the conversion rate for the Slovak koruna as of 1 January 2009 and the conversion rate for the Estonian kroon as of 1 January 2011.

Payment systems (Tables 2.7 to 2.13)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system. As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system. As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.8 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Note 5: Data on payment cards DINERS, issued by Diners Club SLO d.o.o. are not included from the third quarter 2013,

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.9 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.10 Electronic Banking

Note 1: Only credit transfers debited from payers' accounts are included.

Note 2: Payments by Bank of Slovenia as payment service provider for non-MFI subjects are also included from 2011 on.

Table 2.11 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.12 Debit Transfers

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

Note 1: A special money order was used until the end of 2009. Special money order was a standardised paper-based debit instrument used to remit money to the named payee. A special money order was issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.13: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000. Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

- Revisions in monthly data are published with the release of:
 - the following month's data;
 - the corresponding quarterly data;
 - the corresponding revised quarterly data;
 - the international investment position and external debt data for the corresponding year; and
 - the revised international investment position and external debt data for the corresponding year.
- Revisions in quarterly data are published with the release of:
 - the following month's data;
 - the data on the following quarter;
 - the international investment position and external debt data for the corresponding year; and
 - the revised international investment position and external debt data for the corresponding year
- Revisions for the annual balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year $t-1$ and $t-2$. In the case of major methodological changes or discrepancies among the data sources, data for the year $t-3$ will be revised as well.

Data sources

The external trade statistics (Statistical Office of the Republic of Slovenia) is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the **Intrastat reporting**. The source of data on trade in goods with other countries is the single administrative document (**Extrastat reporting**).

Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):

- report on account balances at domestic banks – PPV (until 31 December 2004),
- report on account balances abroad – C (until 31 December 2006),
- report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
- report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. From 2009 to March 2014 banks which conduct international payment transactions reported only transactions that exceeded threshold EUR 50.000. From April 2014 onwards banks report all payments without transaction codes. Data are used for quality control purposes only.

Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST) are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.

Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD) are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.

Reports on purchased/sold foreign debt securities without domestic brokers (DVP) are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.

Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR) are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A

registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.

Reports on monetary financial institutions (PORFI) are the source for data on loans, cash and deposits of the banking sector since 2005.

Reports on credits received and granted and deposits with non-residents (KRD) are the source for data regarding loans and deposit of all sectors, except banks, since 2007.

Reports on short-term receivables and liabilities from operations with non-residents (SKV) are the source for short-term trade credits and advances since 2002.

Reports on investments (SN) are the source for reinvested earnings of direct investments until 2007. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.

Report on Modern Payment Instruments (SPI) is the source for data on acquisition of fuel by nonresident transport operators at Slovene petrol stations settled via payment cards of foreign issuers from 2008 onwards.

Accounting data of the Bank of Slovenia

Accounting data of banks (KNB) until 2010

Budget data on the transactions of government sector between the Republic of Slovenia and EU (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (from 2007 onwards). For banks this data source was used until 2010 (in 2011 it was replaced by PORFI). **Estimates and other sources**

- estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
- estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
- estimate of Italian pensions (IMAD) until the end of 1998,
- estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
- estimate of labour income (SORS),
- data on pensions paid to non-residents (ZPIZ),
- survey on the write-downs of debt from trade in goods and services abroad,
- estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
- estimate of cash transactions on tourism and labour income (from 2007 onwards),
- quarterly data on consumption of foreign embassies in Slovenia (SORS, from 2008 onwards),
- migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
- households' transfers (SORS, from 2008 onwards),
- assets acquired directly by tenders and programmes of EU (SORS, from 2008 onwards),
- data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards),
- data on purchases/sales of real-estate in Croatia (Croatian National Bank, from 2008 onwards),
- data on direct investment of Slovene households in the form of real estate abroad (main data source Household Budget Survey, SORS)
- data on purchases/sales of emission allowances between residents and nonresidents (Slovenian Environment Agency, from 2008 until 2011. From 2012 onwards data is collected by BST monthly report).

Current account

Goods

Data regarding general goods are obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value are adjusted to FOB value on the basis of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments include data for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad. The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists. Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SORS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists; three-year's survey -last conducted in 2009).
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same-day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SORS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same-day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same-day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of Slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SORS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SORS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SORS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - a three year monthly average of actual data on total earnings, less extraordinary incomes (the source being annual reports on investments), is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and reserve assets have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports, and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows and inflows (data provided by foreign central banks) and transfers of households (SORS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SORS, Annual survey on investment in tangible assets). Cross border transactions in emission allowances are included in capital account (as purchases and sales of non-produced non-financial assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards). From 2007 onwards, data on foreign direct investments of households in the form of real estate are included.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From 2007 data on Slovenian households' purchases/sales of real-estate abroad are included (data source is Croatian National Bank and SORS).

Since 2001, there is a break in the data series in the category »Direct Investments - Other Capital«. Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category »Other Investments«. Since 2002, the category »Direct Investments - Other Capital« also includes short-term commercial credits between affiliated companies.

Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart). For financial derivatives of banks from 2011 onwards the data source is PORFI.

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]}
- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]}

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source). Data on loans of households borrowed from the banks abroad (Austria, Italy, Germany) are included from 2012 onwards. The source is ECB database.

Currency and deposits

Until the adoption of Euro currency (1 January 2007) the foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1 January 2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of domestic households in BIS Member State banks.

With adoption of Euro in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998–1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500 million)
- March 1999 (EUR 400 million)
- March 2000 (EUR 400 million)
- February 2001 (EUR 100 million)
- April 2001 (EUR 450 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000 million)
- February 2008, RS63 (EUR 1000 million)
- February 2009, RS64 (EUR 1000 million)
- March 2009, RS65 (EUR 1500 million)
- September 2009, RS66 (EUR 1500 million)
- January 2010, RS67 (EUR 1500 million)
- March 2010, RS68 (EUR 1000 million)
- January 2011, RS69 (EUR 1000 million)
- March 2011, RS70 (EUR 1000 million)
- October 2012 (USD 2250 million)
- May 2013 (USD 1000 million)
- May 2013 (USD 2500 million)
- November 2013 (EUR 1500 million)
- February 2014 (USD 1500 million)
- February 2014 (USD 2000 million)
- April 2014, RS71 (EUR 1000 million)
- April 2014, RS72 (EUR 1000 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (Slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2014 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2011 to 2013 of actual data on total earnings less extraordinary incomes (the source being annual reports on investments), less dividends and other profits paid in the current month). In 2015, the estimate will be replaced with actual data on reinvestment of earnings for 2014; the estimate for 2015 shall take into consideration the new three year average (2012 to 2014).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". From 2005 onwards loans of banking sectors are not included. Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payments of Slovenia to the EMU the presentation of the category net of errors and omissions is not applicable.

Tables 3.3 and 3.4: Current account and Capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

International Investment Position of Slovenia

General notes

The international investment position shows the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments' financial account: here as well are assets and liabilities first classified by instruments, followed by sectors and finally by maturity. The change to the balance of assets and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting

standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From 2007 data on foreign direct investment of households in the form of real estate are included (source SORS).

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment – other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portofolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN). From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included from VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart). For financial derivatives of banks from 2011 onwards the the data source is PORFI.

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items. From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Data on loans of households borrowed from the banks abroad (Austria, Italy, Germany) are included from 2012 onwards. The source is ECB database.

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the international investment position, mature and unpaid loans and long-term commercial credits are included in other claims and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the international investment position and the balance of payments for other liabilities and claims of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The international investment position includes data of the Bank for International Settlements (BIS) on deposits of domestic households at BIS Member State banks. Since 2001, an estimate of the stock of foreign currency held by households at home is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available. From 2007 onwards, the level of foreign currency holdings of domestic household sector equals the level that

was reached at the end of the year 2006 (2.948,6 EUR million), when Slovenia joined the European Monetary Union.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on direct investment of Slovenian households. From 2007 onwards only estimation of the value of real estate direct investment abroad by Slovenian household sector is included,
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the international investment position. The sources for equities, financial derivatives and monetary gold are not used because these types of instruments are not included in the external debt statistics according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table »Net External Debt«, data are sorted by sector, maturity and instrument; in the table »International Investment Position«, data are sorted by instrument, sector and maturity.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given day, is the outstanding amount of current liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers. From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community. ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data. Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia. The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Note 4: On 1 October 2011, the Tax Administration of the Republic of Slovenia (DURS) introduced new information system and due to that, large number of recorded data on the tax and social security contribution revenues remained on unallocated fund accounts, while totals for those two categories were unaffected. We are publishing the data where certain categories of taxes and social security contributions were estimated by the Ministry of finance. The funds are expected to be correctly allocated already next month. Source: <http://www.mf.gov.si>

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1. to 5.6.)

Tables 5.1., 5.2., 5.4. and 5.5. show stocks and transactions in financial assets and liabilities held by individual institutional sectors in individual financial instruments. The basis for the financial accounts methodology is ESA2010.

Tables 5.3. and 5.6. present net items by individual sectors. Net financial assets present difference between financial assets and liabilities (stocks). Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Financial instruments in financial accounts

Each individual financial instrument that a particular unit holds as a financial asset has a counterpart item in the liabilities of another unit, and vice-versa. The only financial asset that does not have a counterpart in liabilities is Gold Bullion, included in instrument Monetary gold.

Instrument Monetary gold and special drawing rights (SDRs) comprises:

- monetary gold, which is gold to which monetary authorities have title and which is held in reserve assets. It includes gold bullion, and unallocated gold accounts with non-residents that give title to claim the delivery of gold;
- special drawing rights, which are international reserve assets created by the International Monetary Fund (IMF) and which are allocated to its members to supplement existing reserve assets.

Instrument Currency and deposits consists of three sub-categories of financial instruments:

- currency, which presents notes and coins that are issued by the resident monetary authorities as national currency in circulation held by residents and non-residents, and notes and coins issued by non-resident monetary authorities as foreign currencies in circulation and held by residents;
- transferable deposits, which are deposits, both in national currency and in foreign currencies. Transferable deposits are deposits exchangeable for currency on demand at par and which are directly usable for making payments by cheque, draft, giro order, direct debit/credit, or other direct payment facility, without penalty or restriction;
- other deposits, which are deposits, both in national currency and in foreign currencies and cannot be used to make payments except on maturity or after an agreed period of notice, and they are not exchangeable for currency or for transferable deposits without some significant restriction or penalty.

Instrument Debt securities are negotiable financial instruments serving as evidence of debt. Debt securities are divided by original maturity into two sub-categories:

- short-term debt securities are securities with an original maturity of one year or less;
- long-term debt securities are securities with an original maturity of more than one year.

Instrument Loans is created when creditors lend funds to debtors. Main features of loans are:

- the conditions governing a loan are either fixed by the financial corporation granting the loan or agreed by the lender and the borrower directly or through a broker;
- the initiative to take out a loan normally lies with the borrower;
- a loan is an unconditional debt to the creditor which has to be repaid at maturity and which is interest-bearing.

Loans can be categorised into two types:

- short-term loans consist of loans with an original maturity of one year or less;
- long-term loans consist of loans with an original maturity of more than one year.

Short-term loans granted to deposit taking corporations, are classified as transferable deposits or as other deposits, and short-term loans accepted by institutional units other than deposit taking corporations, are classified as short-term loans.

If subjects other than monetary financial institutions accept deposits from individual subjects, the deposits are classified as loans. As deposits are thought only bank deposits or deposits of different subjects accepted by banks (other monetary financial institutions). Placements of funds between deposit taking corporations are always recorded as deposits.

Instrument Equity and investment fund shares or units are residual claims on the assets of the institutional units that issued

the shares or units, and it is divided into four sub-categories:

- listed shares;
- unlisted shares;
- other equity, which comprises all forms of equity other than those classified in sub-categories listed shares and unlisted shares, and it also includes government investments in the capital of international and supranational organisations, with the exception of the IMF, even if these are legally constituted as corporations with share capital;
- investment fund shares or units are shares of an investment fund if the fund has a corporate structure. They are known as units if the fund is a trust.

Instrument Insurance, pension and standardised guarantee schemes include:

- non-life insurance technical reserves, which are financial claims that non-life insurance policy holders have against non-life insurance corporations in respect of unearned premiums and claims incurred;
- life insurance and annuity entitlements, which consist of financial claims that life insurance policy holders and beneficiaries of annuities have against corporations providing life insurance;
- pension entitlements, which comprises financial claims that current employees and former employees hold against either their employers, an insurer and a scheme designated by the employer to pay pensions as part of a compensation agreement between the employer and the employee;
- claims of pension funds on pension managers;
- entitlements to non-pension benefits;
- provisions for calls under standardised guarantees, which are financial claims that holders of standardised guarantees have against institutional units providing them.

Instrument Financial derivatives and employee stock options are divided into two sub-categories:

- financial derivatives, which can be categorised by instruments such as options, warrants as a special form of options, forwards, futures, forward rate agreements (FRAs), swaps, credit derivatives and credit default swaps;
- employee stock options.

Instrument Other accounts receivable/payable are financial assets and liabilities created as counterparts to transactions where there is a timing difference between these transactions and the corresponding payments, and it comprises:

- trade credit and advances, which are financial claims arising from the direct extension of credit by the suppliers of goods and services to their customers, and advances for work that is in progress or is yet to be undertaken, in the form of prepayment by customers for goods and services not yet provided. They include:
 - financial claims relating to the delivery of goods or services where payment has not taken place;
 - trade credit accepted by factoring corporations except when regarded as a loan;
 - rent of buildings accruing over time;
 - arrears concerning the payment of goods and services, when not evidenced by a loan.

Trade credit and advances do not include loans to finance trade credit. They are classified in loans.

- other accounts receivable/payable, excluding trade credits and advances, which includes financial claims created as a result of the timing difference between accrued transactions and payments made in respect of, for example wages and salaries, taxes and social contributions, dividends, rent and purchase and sale of securities. As a rule accrued interest is included in the instrument to which the interest relates, however, should it be impossible to include the interest in the relevant instrument, it is disclosed in instrument Other accounts receivable/payable, except trade credits and advances.

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification,
- other methodological differences.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication

K	Financial and insurance activities
L	Real estate activities
M	Professional, scientific and technical activities
N	Administrative and support service activities
O	Public administration and defence, compulsory social security
P	Education
Q	Human health and social work activities
R	Arts, entertainment and recreation
S	Other service activities
T	Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
U	Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products. From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Note 1: In 2013, the Statistical Office of Republic of Slovenia stopped publishing data on industrial new orders.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries. Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1 – ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper »Calculations of harmonised competitiveness indicators«, on the Web site of Bank of Slovenia: <http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
1.5. Selected Assets of Other Monetary Financial Institutions by Sector	2.6 MFI holdings of securities, breakdown

Addendum				
Population			NLT 30 (for Q3 2014)	

Notes:

* The period to which data relate is shown in the parenthesis. NLT stands no-later-than.

** Due to changes in weighting system will data for January 2015 be published in February 2015

¹ The data on interest rates are published by the Bank of Slovenia and the Ministry of Finance separately. The data on representative interest rates of the BoS and interbank money market rates are disseminated whenever the change occurs.

² The data are disseminated daily on Bank of Slovenia's page Currency Exchange rates (for display) and on Archive of financial data.
