Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

Consensus cut its economic growth forecast for this year for the euro area by 0.2 percentage points to 1.5% because of very low economic growth in the second quarter, while it raised its forecast for the US by 0.1 percentage points to 1.6%. Year-on-year inflation in July was unchanged in the euro area, but rose in the US. With economic figures for the euro area less favourable than expected, the euro gradually depreciated against the US dollar in August. The gradual decline in oil prices was the result of market participants' concerns over slower global economic growth.

The majority of economic indicators in Slovenia point to a slowdown. Growth in industrial production is gradually slowing, while inventories are increasing. In the construction sector the number of building permits issued in the second quarter for the construction of buildings was down 11% on the same period last year. Growth in the tourism sector is also slowing: the number of arrivals in the first half of the year was up 4% on the same period last year, and the number of overnight stays was up 3%. The economic sentiment and confidence indicators continue to show a slow decline in optimism. However, revenues in the retail sector and revenues from services are still recording solid growth.

In line with trends in the structure of growth in value-added, the sectors of construction and real estate, renting and business activities continue to record the highest increases in employment, having accounted for more than half of the 3.3% year-on-year increase in employment over the last year. The current rate of growth in wages slowed in May and June, but the year-on-year rate remained somewhat high, at 8.8% in June for gross wages. The relatively high wage growth in the early part of this year was partly the result of advance wage increases in the private sector, even though the collective agreement had not been signed.

August's fall in inflation in Slovenia is in line with the movement of inflation in the euro area, where year-on-year inflation fell to 3.8% in August. There was no increase in the gap between the 12-month average of growth in the HICP in Slovenia (6.0% in August), and the Maastricht price stability criterion of 3.9% calculated in July. Apart from low industrial production, the indicators point to the further possibility of lower growth in certain other sectors, while the slowdown in economic activity in the coming medium term could contribute to the continuing gradual slowdown in core inflation. Growth in nominal labour costs remains the largest risk in the dynamics of core inflation in the future.

The current account deficit is continuing to expand, the figure for the last 12 months now exceeding 6% of estimated GDP. A major contribution to this was the slowdown in exports as a result of the cooling economies in Slovenia's major partners, and the relatively strong pace of imports resulting from the still-high domestic investment demand. Merchandise exports were up 6.6% year-on-year in the first half of the year, while merchandise imports were up 11.5%. With the surplus in trade in services recording favourable growth, the current account is deteriorating further as a result of the expanding deficit in factor income and the net outflow in transfers. The use of debt instruments to finance the deficit means that the net external debt is increasing at an unchanged pace, reaching EUR 7.7 billion at the end of June.

The slowdown in the current rate of growth in lending to non-banking sectors continued in June and July. Banks secured the majority of the financial resources for lending growth via relatively high borrowing in the rest of the world in June and via short-term government deposits in July. The banking system's pre-tax profit in the first seven months of the year was down 16% on the same period last year, primarily as a result of a decline of almost one-third in non-interest income. The SBI 20 fell by 30.7% in the first half of the year, and by a further 0.7% in July. The market capitalisation of shares on the Ljubljana Stock Exchange declined in June and July, while the total assets of domestic mutual funds had declined to EUR 2.3 billion by the end of July.

1 | International Environment

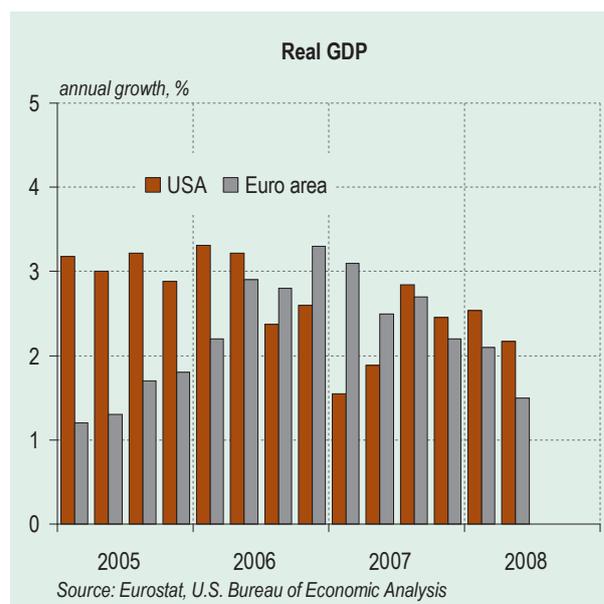

Quarterly economic growth in the euro area was estimated at -0.2% in the second quarter, compared with quarterly rates of 0.8% and -0.6% over the same period for the US and Japan respectively. As a result of the poor second-quarter results in the euro area, Consensus cut its forecast for this year's economic growth for the euro area. The latest forecast is 0.2 percentage points lower than the June forecast at 1.5%. Consensus's August forecast for this year's economic growth in the US was 1.6%, up 0.1 percentage points from the June forecast. The uncertainty on global financial markets remains, and indicators of business and consumer confidence are declining in the euro area.

The ECB raised its interest rate by 0.25 percentage points in July, while the Federal Reserve left its interest rate unchanged. The ECB's key refinancing rate was left unchanged in August at 4.25%, while the key interest rate in the US was 2%. Analysts do not expect any more interest rate changes by the Federal Reserve this year.

The euro / US dollar exchange rate was rather volatile in July, but the US dollar began appreciating against the euro in the last days of the month. The euro averaged USD 1.5768 in July, and USD 1.4995 in August. The release of poorer economic results in the euro area was a major factor in the euro's fall of 4.9% against the

US dollar in August. Other important factors include the decline in the Ifo index, which measures the general state of the German economy, and the decline in retail sales in Germany.

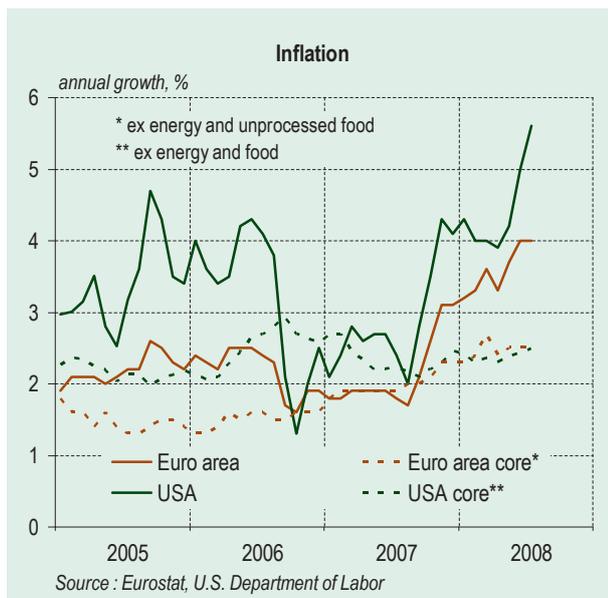

Inflation remained unchanged in the euro area in July, but rose in the US. Year-on-year inflation as measured by the HICP stood at 4.0% in the euro area in July, the same as in June. The main factor in year-on-year inflation was growth in prices of transport services, food prices and housing prices. Core inflation as measured by growth in prices excluding energy and unprocessed food has also stabilised, remaining at 2.5% since May. Year-on-year inflation in the US stood at 5.6% in July, up 0.6 percentage points on June. The main factor in July's increase was energy prices, while year-on-year core inflation (excluding energy and food) rose to 2.5%.

The average oil price remained practically unchanged from the previous month in July, but began to decline in August. A barrel of Brent crude averaged USD 139.90 in July, the average price then declining to USD 113.85 in August. The main factors in the decline in oil prices were the appreciation of the US dollar, market participants' concerns over slower global economic growth, and declining demand in the US. Year-on-year growth in other commodities prices (excluding oil) is slowing, and reached 28.0% in July. The main factors in the decline were slower growth in prices of industrial commodities, which stood at 4% year-on-year in July, and in prices of metals, which

have fallen 2.5% year-on-year. Growth in food prices stood at 55% year-on-year in July, and is slowing slightly.

2 | Economic Activity and Labour Market

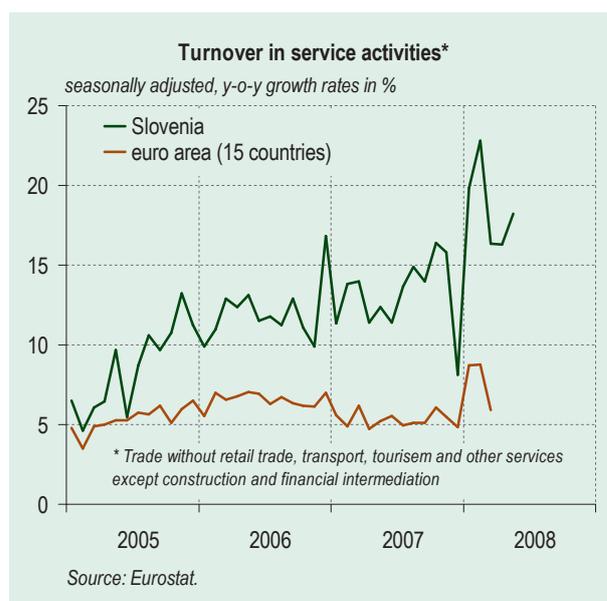

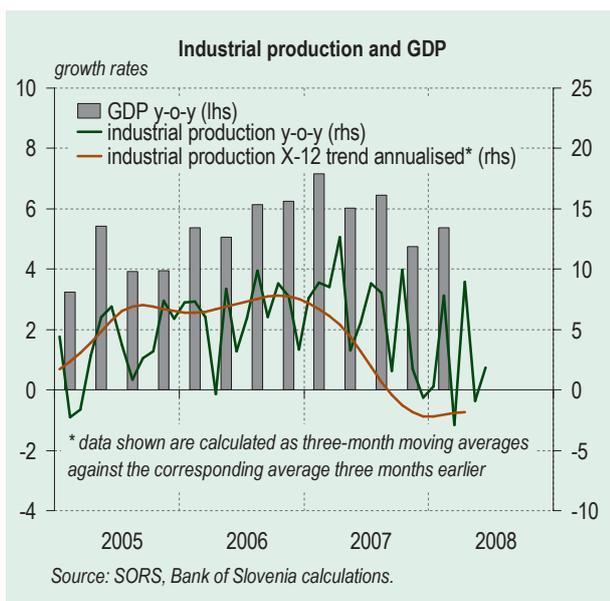

Construction was the most dynamic sector in the first half of the year, while manufacturing, trade and tourism were the slowest sectors. In the construction sector, growth was high both in the civil engineering segment, where the real value of work performed in the first half of the year was up 25.4% in year-on-year terms, and in the buildings segment, which recorded year-on-year growth of 20.1%. The figures for building permits indicate a probable slowdown in the buildings segment in the future, as the number of building permits for buildings issued in the second quarter of this year was down 11% on the same period last year. The number of building permits issued for housing in the second quarter was down 34%. Inventories in industry increased by 9.7% in the first half of the year, while industrial production was up 2.3% on the same period last year. The real value of work performed in the construction sector was up 23% in year-on-year terms in the first six months of the year, and 14.9% in year-on-year terms in June. Revenues in the retail sector are showing solid growth, having recorded, in real terms, year-on-year growth of approximately 6% during the first six months of the year, and monthly year-on-year growth

of 4.5% in June. Real growth in revenues during the first six months of the year was highest in the sector of trade in motor vehicles, at 23.8% year-on-year, while real revenues in the sector were up 17.5% in year-on-year terms in June. The dynamic in the tourism sector was slightly slower: the number of arrivals during the first six months of the year was up 4% on the same period last year, while the number of overnight stays was up 3%. The number of arrivals at tourist accommodation in June was down 2% on the same month last year.

Industrial production recorded relatively low year-on-year growth in June, while the current rate of growth was very high, growth thus remaining reasonably solid compared with the EU overall. Industrial production in the first half of the year recorded year-on-year growth of 2.3%. The figures adjusted for the number of working days show that industrial production was up 1.9% in year-on-year terms in June, more than 2 percentage points less than the long-term average. Nevertheless this is still solid growth compared with the trend in industrial production in the EU as a whole, which declined by 0.3% year-on-year in June according to Eurostat figures, the euro area recording a year-on-year decline of 0.5%. Industrial production in Slovenia was 2.5% higher in June than in May, while a similar dynamic was also shown by manufacturing output. Revenues in manufacturing were up 2.5% in year-on-year

Sources: SORS, Bank of Slovenia calculations.
Number in parenthesis refers to the month of last available data.

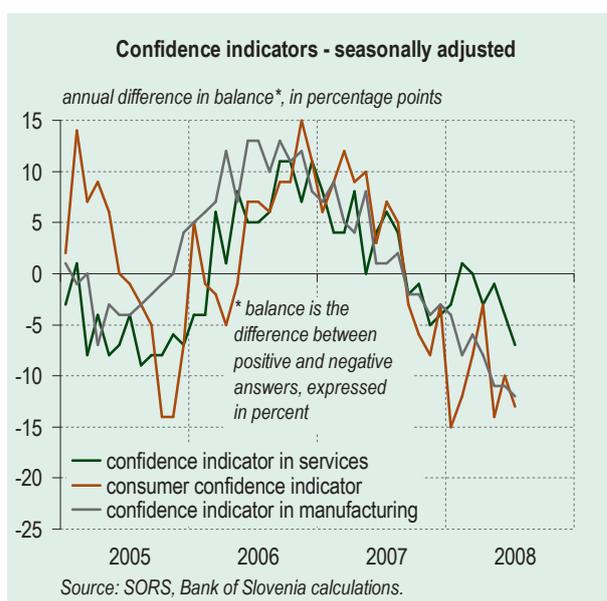

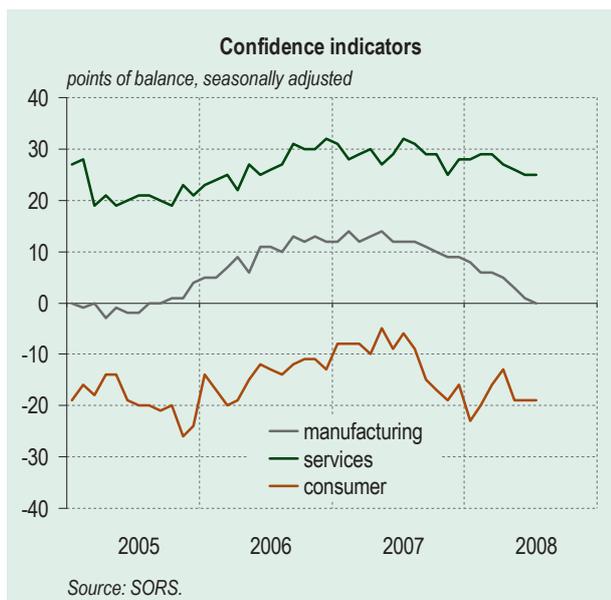

terms in June. Manufacturing companies recorded an increase in sales revenues on both the domestic market (up 2.9% year-on-year), and foreign markets (up 2.4 year-on-year). The value of new orders in industry declined in June in both current terms and year-on-year terms. The value of new orders received in June was down 5.2% from May, and down 19.4% year-on-year. The value of orders from the domestic market in June declined by 6.5% in year-on-year terms, while those from foreign markets declined by 22.3%, which is in line with the figures showing an economic slowdown in Slovenia's main trading partners.

May and June saw high growth in revenues in almost all branches of the service sector. May's largest year-on-year increases in revenues from sales of services other than retail, construction and financial intermediation were recorded by technical consultancy (13.2%), data processing and related activities (17.8%) and other business activities (16.1%). The only significant decline in sales revenues in the service sector was recorded by land transport (11.7% year-on-year). According to the figures for the current rates of growth, the largest increase in sales revenues in the service sector was recorded by tourism, at 18.9%.

The economic sentiment indicator was unchanged in July from the previous month, and was down 10 percentage points year-on-year, but still remained 2 percentage points above its long-term average. The main year-on-year deterioration in confidence was

recorded by the manufacturing sector. The manufacturing confidence indicator was down 13 percentage points in year-on-year terms in July, reaching its lowest value since September 2005. The largest year-on-year decline was recorded by export orders and total orders. The export expectations and total demand expectations indicators recorded year-on-year declines of 14 and 11 percentage points respectively. Capacity utilisation stood at 83.6% in July, 2.6 percentage points above the long-term average, but the indicator has been displaying a trend of gradual decline since the end of last year. In July approximately one-third of companies cited insufficient domestic demand as the largest limiting factor in their business. The construction confidence indicator in July was down 9 percentage

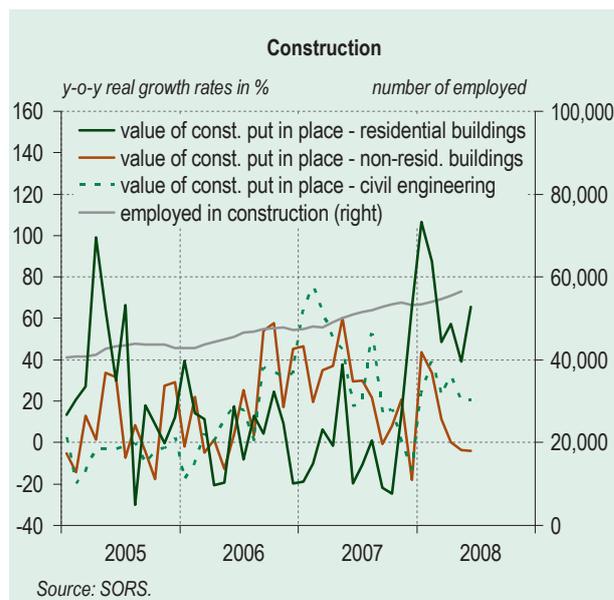

points in year-on-year terms, despite the high activity in the sector, but was up 1 percentage point on June. The largest decline in July was recorded by the amount of construction work, which was down 19 percentage points in year-on-year terms. There were also significant declines in the indicators of total orders, employment and employment expectations. Most construction firms are citing a lack of trained labour, fierce competition, high labour costs and high material costs as limiting factors.

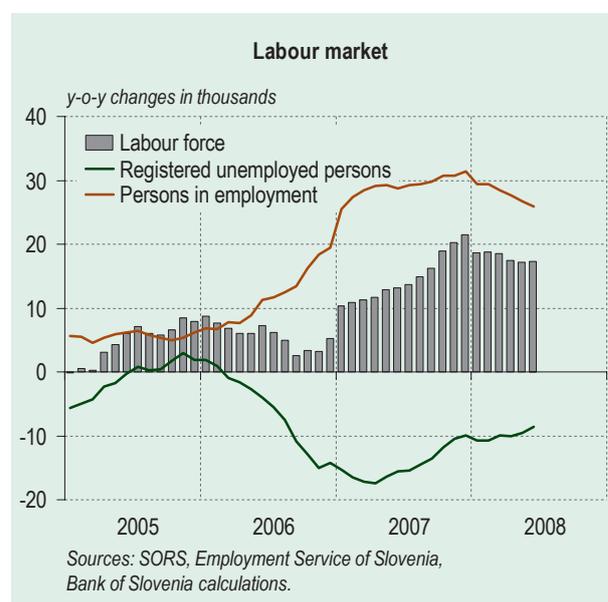

The services confidence indicator reveals a slight decline in optimism. It was down 7 percentage points in year-on-year terms in July, but was unchanged from June. Companies in the service sector are mainly pessimistic with regard to the present business situation, the indicator having declined by 13 percentage points year-on-year. The retail confidence indicator was up 3 percentage points in year-on-year terms in July, the largest improvement being recorded by expectations of sales prices and sales. The largest declines in the retail sector in July were recorded by the indicators of total purchase expectations (7 percentage points) and employment expectations (9 percentage points). There was a slight improvement in the current dynamic in the retail confidence indicator in July, primarily as a result of increased optimism with regard to the expected business/financial situation and competitiveness.

Consumer confidence remained unchanged in the summer months, but was down 13 percentage points

in year-on-year terms in July. The consumer confidence indicator in July was unchanged from May and June. A large year-on-year decline of 29 percentage points was recorded by the major purchases suitability indicator. There was little encouragement in the year-on-year movements in the indicators measuring consumer feelings about the movement of prices in the previous and coming 12 months in July, although they were almost unchanged from June.

The trend of moderate growth in the workforce in employment continued in June. The workforce in employment was up 3.3% in year-on-year terms, and was up 0.3% on the previous month, slightly below the current rates of growth seen in 2006 and 2007, but in

line with the current rates of growth in June in previous years. Growth in the workforce was moderate in June, at 1.9% in year-on-year terms, and 0.2% in current terms. In line with trends in the last year, the largest year-on-year increases in employment were recorded by the sectors of construction (11.8%) and real estate, renting and business activities (7.8%). These sectors contributed 1.1 percentage points and 0.7 percentage points respectively to the year-on-year increase in employment of 3.3%. The registered unemployment rate in June was down 0.1 percentage points on May, a slightly smaller decline than usually seen in June, at 6.4%. The surveyed unemployment rate declined by 0.9 percentage points during the second quarter to 4.2%, the lowest rate since Slovenia achieved independence. Seasonal factors mean that the second quarter usually sees a significant decline in surveyed unemployment, and the current decline is comparable with the current dynamic in the last four years.

Although growth in gross wages was high in year-on-year terms in May and June, the current rates of growth were relatively low. Year-on-year wage growth stood at 8.8% in June, with rates of 9.4% in the private

sector and 7.4% in the public sector. Year-on-year growth in net wages was slightly lower, at 8.7% in the private sector and 7.0% in the public sector. The current rate of growth in the average gross wage was relatively low, particularly in the private sector, where it was just 0.15% higher in May than in the previous month. The increase was particularly small given the collective agreement between employers and unions on the extraordinary wage increase for 2007 and the adjustment method for wages, work-related expenses and other personal benefits for 2008 and 2009. This states that in May 2008 employers were obliged to increase wages by the difference between 5.2% and the wage increase realised in 2007, and that they were also obliged to make a backdated wage settlement for the first four months of the year. Given that the wage increase of 5.2% had been envisaged in the negotiations in January 2008 (but the agreement had not been signed at that stage), it can be concluded that the relatively high wage growth in the early part of 2008 was partly the result of advance wage increases by employers. The largest year-on-year increases in gross wages in June were recorded by the sectors of real estate and business services (11.3%), public administration (10.4%) and construction (9.5%). By contrast, wage growth in the health and education sectors was relatively low, at 6.2% and 6.0% respectively.

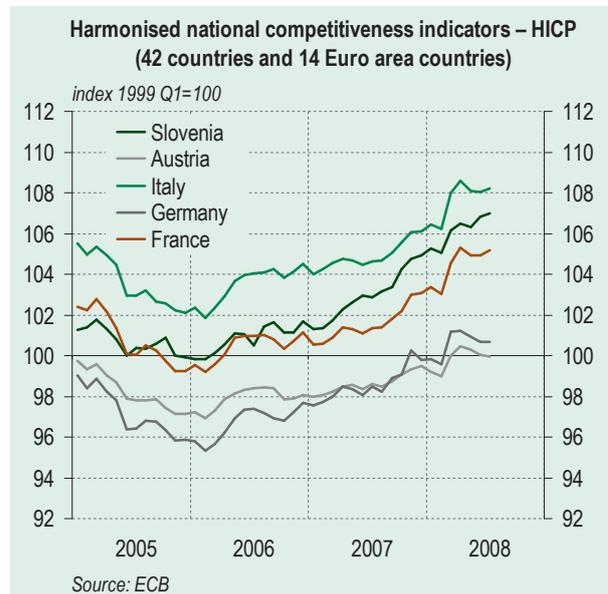

The index of the nominal effective exchange rate measured by the harmonised competitiveness indicator remained almost unchanged in June and

* sections of SKD classification

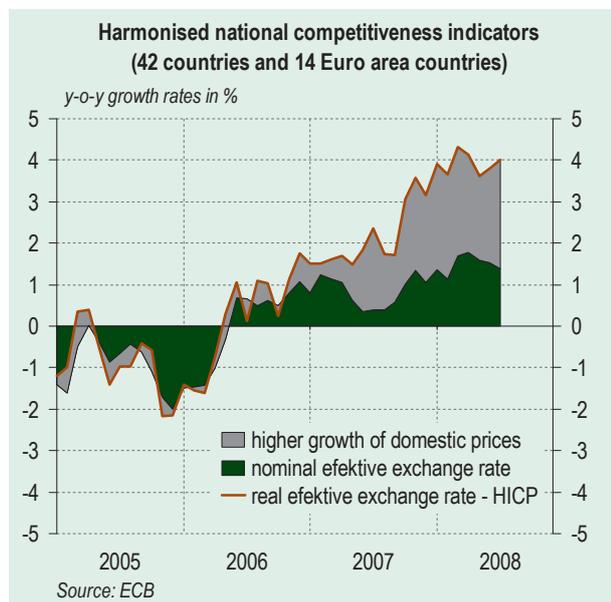

** CPI deflator.

July. It depreciated by 0.1% in June, primarily as a result of the euro's falls of 0.1% against the pound sterling and 0.7% against the Swiss franc, the euro remaining unchanged against the US dollar. The nominal effective exchange rate was unchanged in July, despite the euro's rise of 1.4% against the US dollar. There is still appreciation over the long term. The overall year-on-year appreciation in the nominal effective exchange rate in June and July was down 0.2 percentage points from May at 1.4%, still 1 percentage point more than in the same period last year.

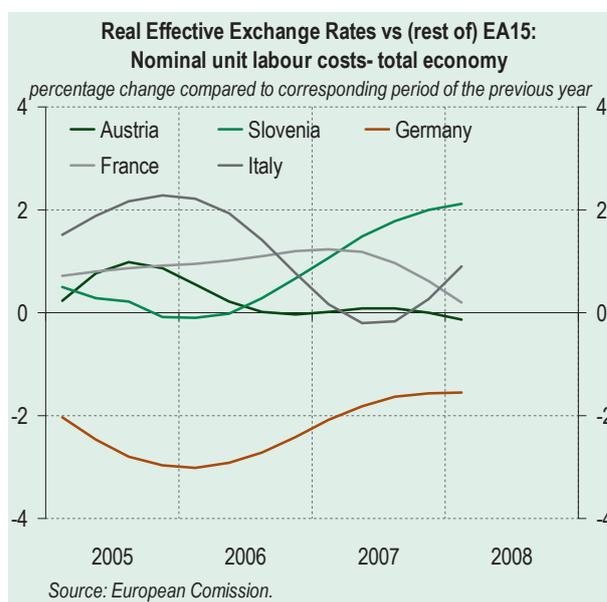

The price competitiveness indicator of the Slovenian economy as measured by consumer prices (the HICP) appreciated by 0.6% overall in June and July. The main factor in the appreciation was domestic prices

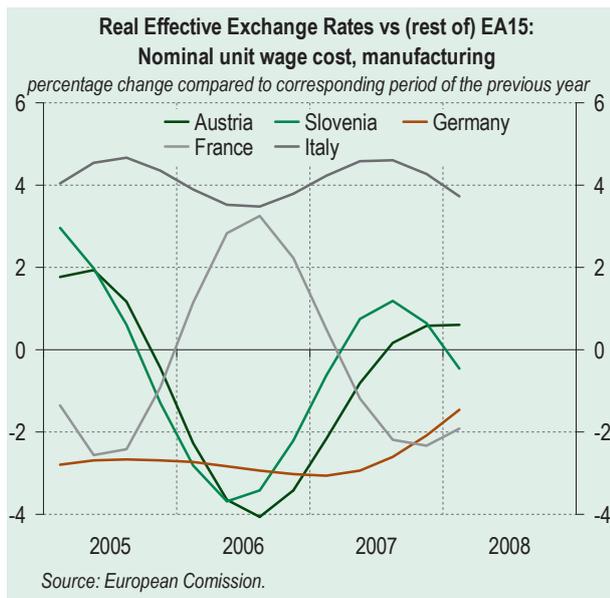

recording faster current growth than the basket of foreign prices. Under the current movements the year-on-year appreciation rose from 3.6% in May to 4.0% in July, having stood at 2.3% last July. Domestic prices growing faster than the basket of foreign prices accounted for 60% of the appreciation in the real effective exchange rate over the last year, the remainder coming from the appreciation in the nominal effective exchange rate.

Over the long term, the movement in the price competitiveness indicator in Slovenia has been similar to that in the most important euro area trading partners (Austria, Germany, Italy and France). Although there has been an appreciation in the real effective exchange rate as measured by the HICP in all the comparable countries recently, it should be noted that year-on-year rates of growth in the indicator in Slovenia have been slightly higher than those in the other countries in the last year. The Slovenian indicator was up in year-on-year terms to 4.0% in July, while it was unchanged or even recorded a decline in the other countries. The higher appreciation in the price competitiveness indicator in Slovenia is primarily the result of its higher inflation compared with other euro area countries.

Slovenia's cost competitiveness indicator as measured by unit labour costs in the economy as a whole has displayed a trend of appreciation since the second half of 2006. The year-on-year appreciation stood at 2.0% at the end of last year, and rose to 2.1% in the first quarter

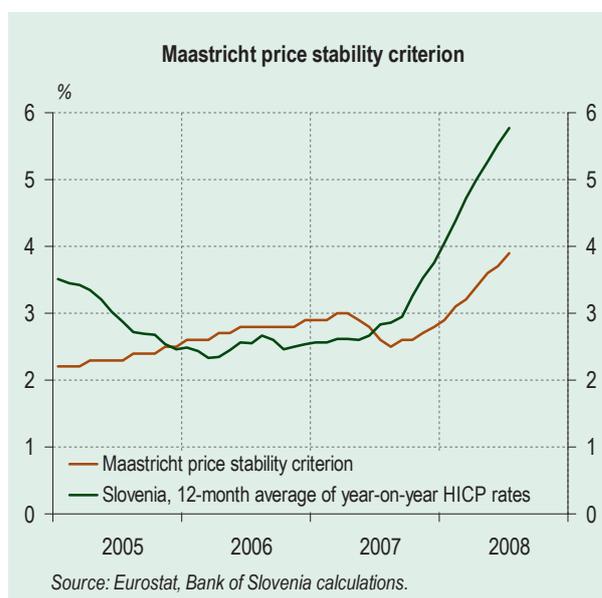

of this year. Slovenia's cost competitiveness has moved in parallel with that of Germany, with a minor increase in the gap towards the end of the observation period. It deteriorated slightly compared with France and Austria at the beginning of this year, but improved compared with Italy in the last two quarters. The gap between the year-on-year rates of growth in the price competitiveness indicators of Slovenia and Italy stood at 2 percentage points in the third quarter of 2007, and declined to 1.2 percentage points in the first quarter of this year.

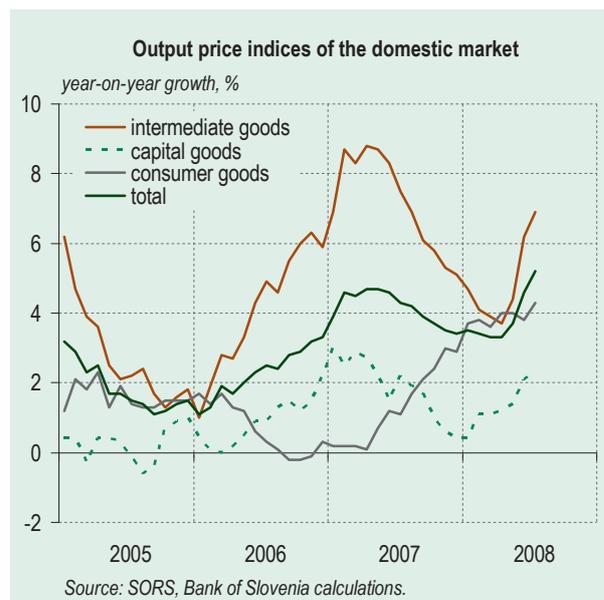

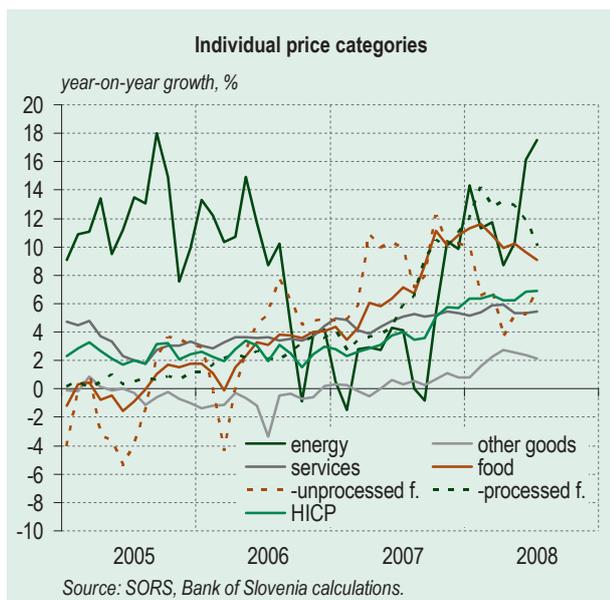

The manufacturing cost competitiveness indicator shows that Slovenia's competitive position compared with its most important trading partners in the euro area has been gradually improving since the end of last year. The real effective exchange rate as measured by unit labour costs in manufacturing in Slovenia appreciated strongly between the second half of 2006 and the third quarter of last year inclusive. During this period the cost competitiveness of the Slovenian economy declined in relation to all the major euro area trading partners. Since the final quarter of last year Slovenia's cost competitiveness based on wage costs in manufacturing has gradually been improving. Competitiveness improved by 0.5% in the first quarter, despite year-on-year growth of 8.2% in gross wages in the manufacturing sector.

3 | Price Developments

Year-on-year inflation as measured by the HICP stood at 6.0% in August, down 0.9 percentage points on July. There was a decline in year-on-year growth in all the price components of inflation. Year-on-year growth in energy prices declined from 17.5% to 14.3% in August, taking the contribution made to annual inflation by this sub-category from 2.2 to 1.9 percentage points. In addition, growth in food prices declined from 9.0% to 7.7%. The decline in growth in food prices came primarily from falls in prices of vegetables, fruit, dairy products, and bread and other cereal products. Year-on-year growth in services prices also declined, from 5.5% to 5.3%. The main factor was the lower growth in prices of package holidays, and prices in the hotels and restaurants sector, compared with last August. There was a decline in growth in prices of non-energy industrial goods for the second consecutive month, primarily as a result of basis effects from the previous year. Growth in the prices of the latter declined from 2.1% to 1.6% in August, taking the contribution made to headline inflation by this sub-category from 0.7 to 0.6 percentage points.

The movement of the core inflation indicators was again more favourable in August, in line with the

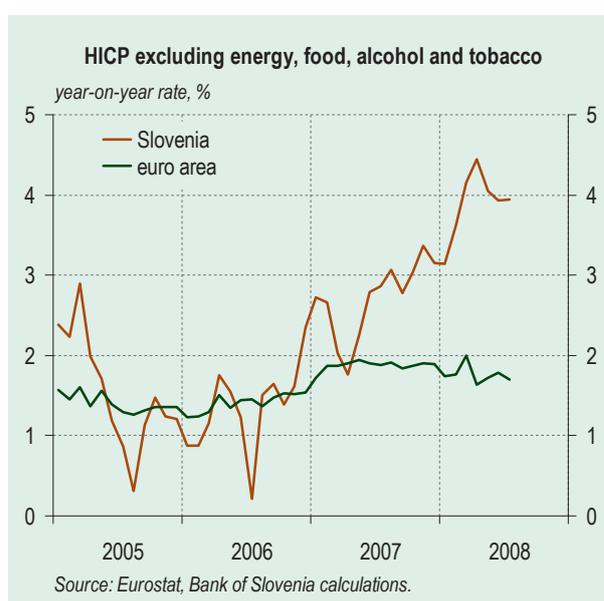

recent economic slowdown. Year-on-year growth in the harmonised index of prices excluding energy, food, alcohol and tobacco declined again in August, to 3.6%. The slowdown in the index remains a reflection of both the decline in growth in prices of non-energy industrial goods, and the slower growth in services prices. Core inflation expressed as the index of price growth excluding energy and unprocessed food declined from 5.1% to 4.7% in August.

Growth in producer prices of manufactured goods on the domestic market remained high at 6.9% in year-on-year terms in July, up 0.4 percentage points on June. The high monthly growth is primarily a result of faster growth in prices of consumer goods, while

growth in prices of capital goods and intermediate goods was slower than in the same period last year. The main factor in the higher year-on-year growth in prices of manufactured goods was again commodities prices, which recorded high growth of 8.4% in July. Prices of intermediate goods recorded year-on-year growth of 7.8%, while prices of consumer goods recorded growth of 6.3%. The main factors in this price growth were higher prices in the manufacture of textiles, the manufacture of fabricated metal products, the manufacture of rubber and plastic products and the manufacture of machinery and equipment. Prices of capital goods increased by 4.5% in year-on-year terms in July. As in Slovenia, year-on-year growth in prices of manufactured goods increased in the

Sources: SORS, Eurostat, Bank of Slovenia calculations. Figures may not sum up to official figures due to rounding

euro area in June, to 8%. The largest increases in the euro area were in energy prices (21.4%), and prices of consumer non-durables and intermediate goods (4.8%).

August's fall in inflation in Slovenia is in line with the movement of inflation in the euro area, where year-on-year inflation fell to 3.8% in August. There was no increase in the gap between the 12-month average of growth in the HICP in Slovenia (6.0% in August), and the Maastricht price stability criterion of 3.9% calculated in July. Apart from low industrial production, the indicators point to the further possibility of lower growth in certain other sectors, while the slowdown in economic activity in the coming medium term could contribute to the continuing gradual slowdown in core inflation. Growth in nominal labour costs remains the largest risk in the dynamics of core inflation in the future.

4 | Balance of Payments

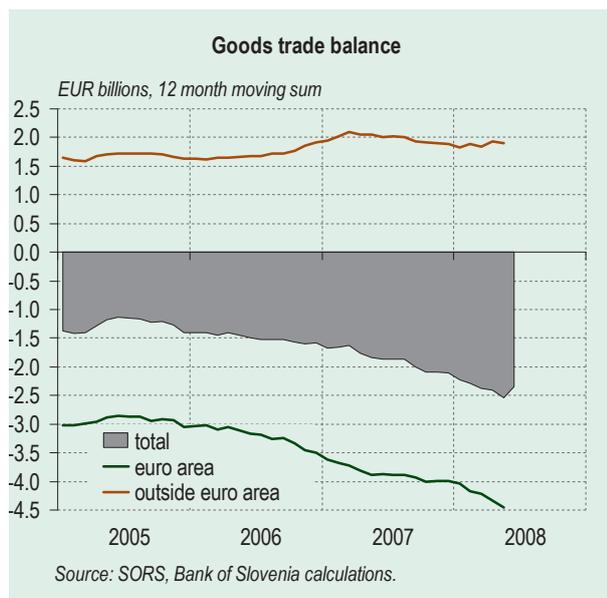

After slowing in April, the trend of a widening deficit in the current account continued in May and June. The deficit in these two months accounted for more than one-third of the total current account deficit in the first half of the year. June's current account deficit amounted

to EUR 151 million, which contributed entirely to the year-on-year increase in this year's current account deficit, a small surplus of EUR 2 million having been generated in the same month last year. The cumulative deficit in the first six months of the year increased to EUR 995 million, twice as large as that recorded in the same period last year. The cumulative current account deficit in the last 12 months widened further in May and June to exceed EUR 2.1 billion, or 6.1% of estimated GDP, up 0.3 percentage points on April. Despite the favourable movements in trade in services, the current account deficit was the result of the large increase in the merchandise trade deficit and net outflows in factor income and transfers.

The current rate of growth in merchandise exports picked up slightly at the end of the second quarter, to approximately 7% annualised, while the current rate of growth in merchandise imports slowed to around 11% annualised. Despite this decline in the gap by which growth in merchandise imports outpaces growth in merchandise exports, the merchandise trade deficit is widening. Growth in merchandise imports outpaced exports by around 10 percentage points in April and May, but the gap narrowed to 4 percentage points in June in the context of annualised current rates of growth of 7% for merchandise exports and 11% for merchandise imports. Year-on-year comparisons also reveal merchandise imports outpacing exports. Merchandise exports amounted to EUR 1.77 billion in June, up 3.4% on the same month last year, while imports were up 9.2% at EUR 1.96 billion. The result of these movements in merchandise trade was a deficit of EUR 0.19 billion,¹ more than double that recorded in the same month last year.

The slowdown in economic activity in Slovenia's major EU trading partners is reflected both in slower growth, and in changes to the regional breakdown of merchandise imports and exports this year. Merchandise exports were up 6.6% year-on-year in the first half of the year, while merchandise imports were up 11.5%. Under the influence of the economic slowdown in Slovenia's most important trading partners from the euro

¹ According to the SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix to the bulletin), the merchandise trade deficit in June stood at EUR 234 million.

area, merchandise exports to the EU27 recorded a year-on-year increase of just 5.1%, less than half the increase of 10.3% recorded by merchandise exports to non-EU countries. By contrast, year-on-year growth in merchandise imports from both regions during the first six months of the year was just over 11%, growth in merchandise imports from non-EU countries having outpaced imports from the EU27 last year.

The deficit in merchandise trade in the first six months of the year was up more than two-thirds in year-on-year terms. June's deficit of EUR 234 million in merchandise trade took the cumulative deficit in the first six months of the year to EUR 1,368 million, EUR 565 million (just over two-thirds) more than in the same period last year. Coverage of imports by exports fell by 4 percentage points compared with the same period last year to stand at 88.2%.

The main factor in the year-on-year increase in the current account deficit in the first half of the year was the widening merchandise trade deficit with the EU27, while the trade surplus with non-EU countries actually increased by a further EUR 20 million in year-on-year terms from last year's figure of EUR 524 million.

The decline in foreign demand had greatest impact on exports of consumer goods. There was a sharp decline in growth by end use of products in merchandise exports in the first five months of the year compared with the same period last year. The most pronounced decline in export

growth was recorded by consumer goods, from 23.2% last year to 6.2% in the first five months of this year. As a result of the economic slowdown in the rest of the world, year-on-year growth in exports of intermediate goods halved to 6.7%, while growth in exports of capital goods remained at last year's level at 15%.

Strong domestic demand, particularly investment demand, meant that year-on-year growth in imports of capital goods was up 2 percentage points on last year at 20.1%. Year-on-year growth in imports of intermediate goods was down 3 percentage points on last year at 11%. Given the high correlation between imports of intermediate goods and exports, the decline in growth in imports of intermediate goods would have been even greater this year had there not been simultaneous growth in prices of oil, commodities and food on global markets. Growth in imports of consumer goods declined by more than half, from 26% last year to 11% in the first five months of this year.

The dynamic in trade in services slowed in the second quarter, slightly faster on the export side than on the

Source: Bank of Slovenia.

import side, but with export growth outpacing import growth, the results from trade in services nevertheless continue to improve. Exports of services were up 20.3% in year-on-year terms in June, while imports were up 13.0%, the gap by which exports outpace imports thus narrowing to 7 percentage points, having averaged 11 percentage points over the first six months of the year. Exports of services were up 25.8% year-on-year at EUR 2.3 billion in the first six months of the year, while imports were up 14.7% at EUR 1.5 billion. There was a year-on-year increase of EUR 0.29 billion in the surplus of trade in services to EUR 0.83 billion, or 3.8% of estimated GDP in the first half of this year. On the export side, there were above-average increases in the first six months of the year in growth in services of operating leasing, foreign trade intermediation, and construction and assembly work performed abroad. There were sharper year-on-year increases in exports of transport services (19.7%) and tourism revenues (28.5%). In the context of relatively moderate growth of just over 9% in imports of transport and tourism services, total net transport and tourism revenues reached EUR 0.9 billion.

The net deficit in factor income and transfers increased by EUR 130 million in June, taking the total for the first six months of the year to EUR 715 million, which accounted for two-thirds of the current account deficit, or 4% of estimated GDP during this period. Labour income recorded the only surplus in factor income, of EUR 7 million. The deficit in capital income widened by EUR 84 million in June to EUR 459 million, or 2.6% of estimated GDP during the period. Until 2006 the main factor in the deficit in factor income was the net outflow of income from FDI. As a result of the rapid growth in foreign debt and interest rates in the last year and a half, the main factor in the deficit in factor income is now net payments of interest on net foreign debt. Net interest paid in the amount of EUR 370 million accounted for four-fifths of the deficit in factor income in the first half of the year. In addition to labour income, there is also a net surplus in income from investments in securities, which reached EUR 136 million over the first six months of the year. The deficit in transfers widened by an additional EUR 46 million in June to reach EUR 263 million over the first six months of the year. Transfers consisting

primarily of private transfers recorded a net outflow of EUR 34 million, while official transfers recorded a net outflow of EUR 229 million. Just over one-quarter of the net outflow in official transfers (just under EUR 60 million) came from transactions related to the EU budget.

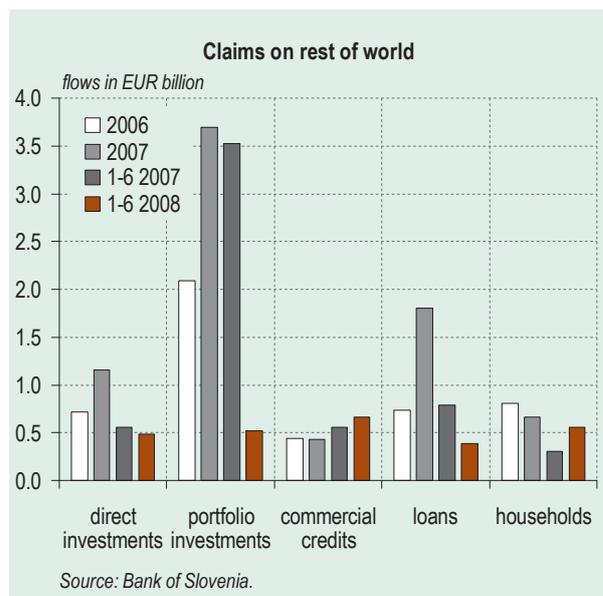

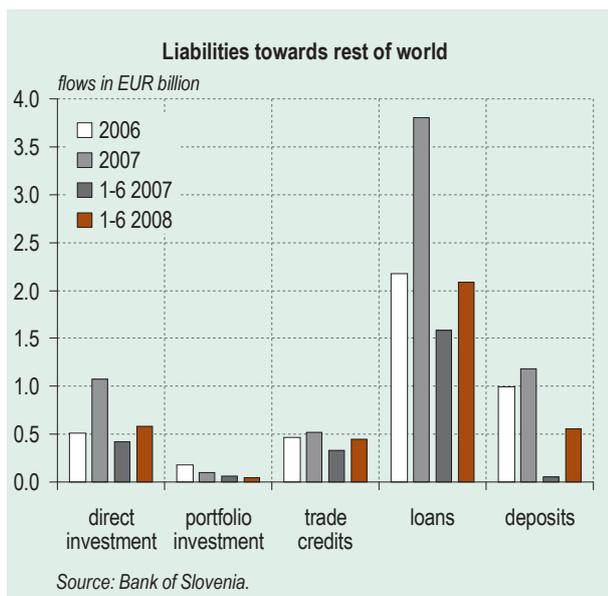

The net financial inflow, the surplus of financial flows from the rest of the world over financial flows to the rest of the world, in the first half of this year was similar to that in the second half of last year. The net financial inflow in the year to June was approximately 9% of estimated GDP. The inflow was primarily into the private sector in the second half of last year, and into both the private sector and the government sector in the first half of this year. The large net financial inflow into the government sector was primarily the result of February's release of government bonds, when the net financial inflow into the government sector amounted to EUR 1.1 billion, compared with a figure of EUR 0.8 billion overall in the first half of the year.

The net financial inflow into the private sector has gradually increased in recent months. There was a net financial outflow of EUR 0.1 billion from the private sector

Source: Bank of Slovenia.

in the first quarter, and a net inflow of EUR 0.8 billion in the second quarter. This increase was the result of an increase in liabilities to the rest of the world, in the context of a slightly smaller increase in claims against the rest of the world. Thus in the second quarter the private sector's liabilities to the rest of the world increased by EUR 2.7 billion (compared with EUR 1.2 billion in the first quarter), while its claims against the rest of the world increased by EUR 1.9 billion (compared with EUR 1.3 billion).

Loans to banks and deposits by non-residents were again prominent among financial liabilities to the rest of the world in the second quarter. Of the total increase of EUR 2.7 billion in financial liabilities to the rest of the world in the second quarter, inflows via loans to banks from the rest of the world accounted for EUR 1.3 billion, and deposits by non-residents for EUR 0.5 billion. Of these inflows, loans from the rest of the world amounted to EUR 1.1 billion in June, primarily as a result of two major transactions. Thus inflows via loans to banks from the rest of the world in the second quarter were more than double those in the first quarter. It is likely that these inflows were primarily the result of a need for refinancing, as the domestic private sector's demand for lending is diminishing, and the financing conditions in the rest of the world are deteriorating. FDI amounted to EUR 0.6 billion in the first half of the year, and these inflows have remained unchanged in the last two years at around 3.5% of GDP. Inflows via trade credits have been strengthening since

the final quarter of last year, while inflows via portfolio investments in the last two months were slightly larger (EUR 0.2 billion), portfolio investments having recorded a net outflow of EUR 0.1 billion in the first four months of the year.

Corporates recorded borrowing of less than EUR 0.2 billion in the rest of the world in the first six months of the year, a similar figure to the second half of last year. Last year corporates borrowed EUR 0.4 billion in the rest of the world, down significantly on the previous year's figure of EUR 0.7 billion. The proportion of total borrowing accounted for by corporate borrowing in the rest of the world declined from almost 20% in the previous year to less than 10% last year, the figure declining further to 7% in the first half of this year. This means that corporates are decreasingly financing themselves directly in the rest of the world, instead increasingly financing themselves indirectly via the domestic banking system.

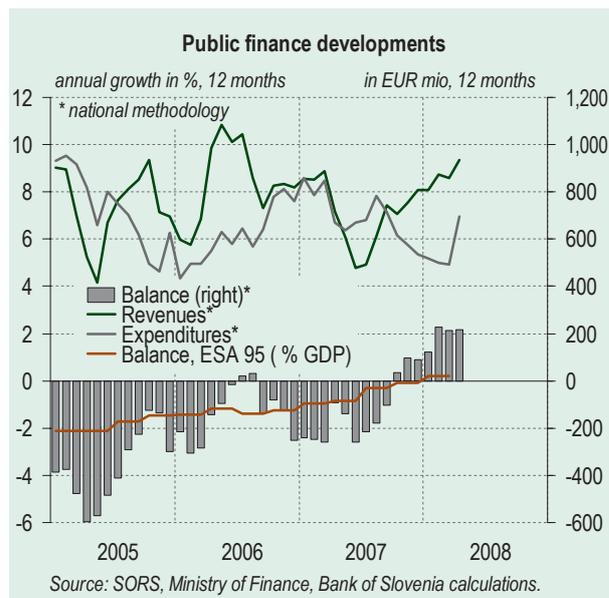

Portfolio investments, loans to the rest of the world and FDI were prevalent on the claim side. Of the total increase of EUR 1.9 billion in claims against the rest of the world in the first half of the year, outflows via bank loans to the rest of the world accounted for EUR 0.5 billion, portfolio investments for EUR 0.4 billion and FDI for EUR 0.3 billion. The relatively large outflows via loans and portfolio investments are probably related to the large financial inflows, which have partly been invested in the rest of the world as domestic lending demand has declined

slightly. FDI in the second quarter was double that in the first quarter, but was rather volatile, fluctuating around 3.5% of GDP. Trade credits slowed in the second quarter, primarily as a result of seasonal effects.

The net external debt increased by EUR 1.4 billion in the first half of the year, the trend of increase thus remaining similar to that seen last year. The net external debts of the banking sector and the general government sector increased by EUR 1.4 billion and EUR 0.6 billion respectively in the first half of the year, while the net external debt of other sectors declined by EUR 0.6 billion. The general government sector's net external debt primarily increased as a result of February's release of 11-year government bonds in the amount of EUR 1 billion. The net external debt stood at EUR 7.7 billion at the end of June, the gross external debt standing at EUR 39.0 billion, and gross external claims at EUR 31.3 billion.

5 | Public Finance

The general government sector recorded a surplus in the first half of the year, compared with a deficit in the same period last year. According to the available figures, the main improvement was in the position of the state budget, by about EUR 290 million. General government revenues were up 9.5% in year-on-year terms in the first quarter, while growth was even higher in the second quarter. According to the available figures and estimates, expenditure also grew faster than in the first quarter, but was nevertheless outpaced by revenues. As a result, there was an improvement in the general government sector's position. The surplus in the first four months of the year amounted to EUR 220 million, compared with EUR 93 million in the same period last year. The largest improvement is coming from the state budget, where figures for the realisation in May and June reveal a continuing improvement in the year-on-year comparison. The state budget surplus amounted to EUR 116 million in the first half of the year, compared with a deficit of EUR 176 million in the same period last year. In the 2008 State Budget Implementation Report for the first half of

the year, the Ministry of Finance estimated that this year's state budget surplus would be larger than forecast in the revision. It is expected to be EUR 230 million, compared with the forecast of EUR 69 million in the budget revision. According to the forecast for state budget revenues and expenditure, it is primarily revenues from personal income tax, VAT and corporate income tax that will be higher than forecast this year. No major deviations from the forecasts in the budget revision approved for 2008 are expected on the expenditure side, with the exception of transfers to individuals, where the adoption of the Act Amending the Act Regulating Adjustments of Transfers to Individuals and Households in the Republic of Slovenia will necessitate reallocations in order to secure the appropriate funding.

Source: Ministry of finance, Bank of Slovenia calculations.

General government revenues recorded high growth between April and July, in excess of the level seen in the first quarter. Growth in revenues remains high, and reflects the developments on the labour market, inflation trends and the effects of changes in legislation made at the beginning of last year. Revenues in the consolidated general government accounts in the first four months of the year were up 10.6%, while the available figures for tax payments indicate that growth in the majority of taxes remained high between May and July. This is particularly the case for personal income tax, corporate income tax and VAT. Revenues from personal income tax in the first seven months of the year were up one-third, with income tax on employment earnings rising by approximately 13% in year-on-year terms, the main contributions to the growth in these tax revenues coming from lower tax rebates this year and higher payments of personal income tax based on other sources. Revenues from corporate income tax in the first seven months of the year were up just over 15% on the same period last year, as a result of higher tax prepayments this year. Growth in VAT revenues has also increased in recent months. Revenues from social security contributions have continued to record year-on-year growth of more than 10%, as a result of the number of employees as well as the growth in average wages. Revenues from payroll tax declined in line with the rate cuts, and the tax will be finally abolished at the beginning of next year.

General government expenditure in the first four months of the year was up 7.9% in year-on-year terms, 2.7 percentage points less than the increase in revenues. Expenditure on goods and services, expenditure on subsidies and investment expenditure all recorded above-average growth. Expenditure on subsidies was above-average in April. Expenditure on goods and services also recorded strong growth in the first four months of the year, while growth in expenditure on wages during this period was less than growth in total expenditure. Growth in investment expenditure has remained stronger than average. Figures for state budget expenditure are available for the first six months of the year. The largest increases in the first half of the year were recorded by expenditure

on goods and services, and on subsidies, which is in line with the state budget revision. The expenditure of the Health Insurance Institute (HII) during the first five months of the year, for which figures are available, was up 7.9% in year-on-year terms, while the expenditure of the Pensions and Disability Insurance Institute (PDII) during the first six months of the year was up 6.8% year-on-year, pension expenditure rising by 7.1%. Growth in the expenditure of the two social security funds in the first half of the year was higher than in the previous years.

The implementation of a new wage system in the public sector will entail higher growth in expenditure on wages in the remaining months of this year and in the next two years. According to the IMAD (Economic Mirror, June 2008), as a result of the elimination of wage discrepancies the average gross wage per employee should increase by 13.1% over the aforementioned period, in four parts. The first quarter of the increase will be paid along with August's wages in September (backdated to May), followed by increases in January and September 2009, and a final increase in March 2010. The largest wage increases will be in health and social work (just over 20%), culture (approximately 18%), public administration (approximately 12%) and education (approximately 6%). According to the same forecasts, the average gross wage in the public sector should increase by 8.7% this year, gross wages in the public sector having risen by 7.1% in the first half of the year. On 1 July there was a scheduled public sector wage increase of 2%. An updated public sector wage system act was adopted at the end of July, to define in detail the number of wage grades being transposed into the new wage system.

Expenditure on transfers to individuals and households grew by 7.4% year-on-year in the first four months of the year, and pension expenditure by slightly more. Pensions accounted for the majority of transfers, and were up 7.7% over the aforementioned period. The number of old-age pensioners is rising at a rate of approximately 3.0% per year, while the total number of pensioners recorded year-on-year growth of 1.4% in the first half of the year. Pensions are next due for adjustment in November. Pensioners whose pension is less than EUR

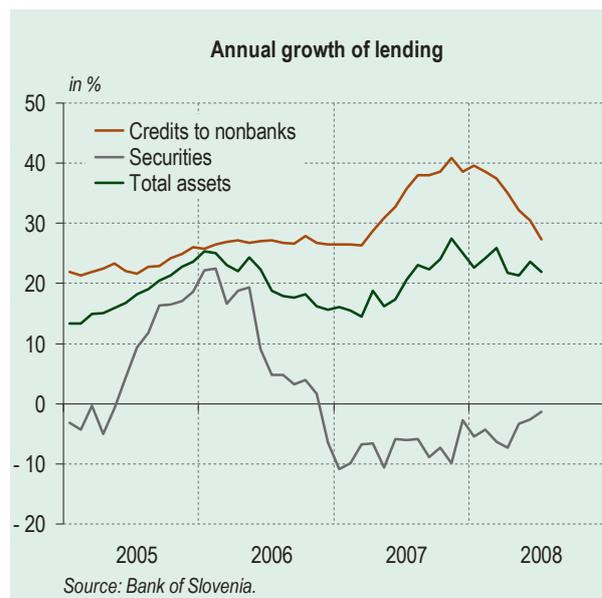

500 will receive a one-off pension bonus, the total cost of the payments amounting to an estimated EUR 32 million. Among the other categories of transfer, payments of sick pay recorded strong growth, while family benefits and parental allowances recorded high growth. Year-on-year growth in unemployment payments and social security transfers remained negative. Social security benefits, with the exception of pensions, are due to increase by 4.1% in August, as a result of the adoption of the Act Amending the Act Regulating Adjustments of Transfers to Individuals and Households in the Republic of Slovenia.

6 | Banking System*

After a temporary increase in June, this year's trend of declining growth in total assets continued in July.

The reason for June's relatively high increase in total assets of EUR 1.6 billion was the significant increase in financing at foreign banks. Then in July liabilities to foreign commercial banks actually declined slightly, as did financing at the ECB. Growth in deposits by non-banking sectors increased in both months, primarily as a result of growth in government deposits. Bank lending activity continues to slow, both to non-financial corporations and to households.

The slowdown in lending to non-banking sectors continued in June and July. Year-on-year growth in loans fell below 30% in July, for the first time since last April. Loans to OFIs and to the rest of the world, which recorded the fastest rates during the period of rapid growth (averaging between 80% and 90% in 2007), are slowing most sharply this year. Year-on-year growth in loans to these two sectors fell below 40% in July. In all sectors, lending in foreign currency is slowing more sharply than lending in domestic currency. The proportion of the stock of loans in foreign currency recorded the sharpest decline for non-financial corporations, from 3.5% in January to 3% in July. For household loans, the trend of increase in the proportion of foreign currency loans ended in July, the figure of 12.6% being the highest among all sectors. The slowdown in

lending to non-banking sectors is being accompanied by a shortening of average maturities, particularly on loans to non-financial corporations.

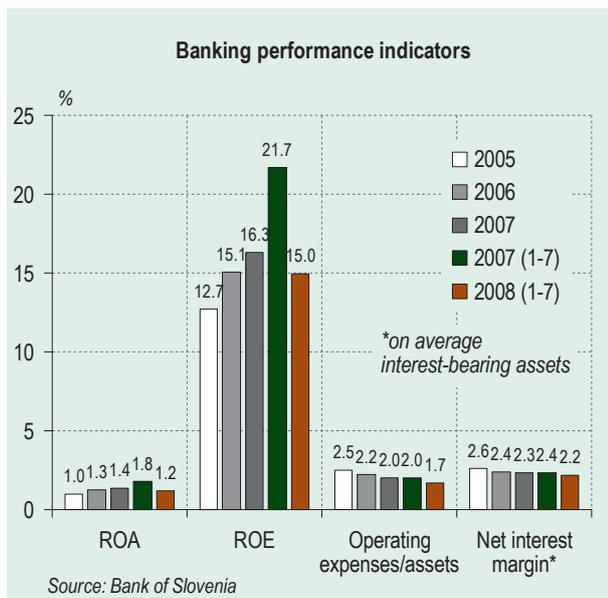

Year-on-year growth in loans to non-financial corporations had declined to 28.1% by July, down 7.3 percentage points on the start of the year. The slowdown was mostly the result of a decline in growth in lending at the banks under domestic ownership (from 32.4% in January to 21.4% in July), while the current rate of growth in lending at the banks under majority foreign ownership recorded a negligible decline to stand at a relatively high 42.1% in July.

Household lending is also slowing, but less sharply than lending to other sectors. Growth in household

* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

loans was 5.3 percentage points down on the start of the year at 22.8% in July. July's increase of EUR 119 million in household loans was this year's highest as a result of seasonal factors, but the monthly increases in household loans have been lower than last year's comparable figures since March. The gap between the rates of growth at the banks under majority foreign ownership and the banks under domestic ownership is narrower than for loans to non-financial corporations, and has remained at a similar level to the start of the year.

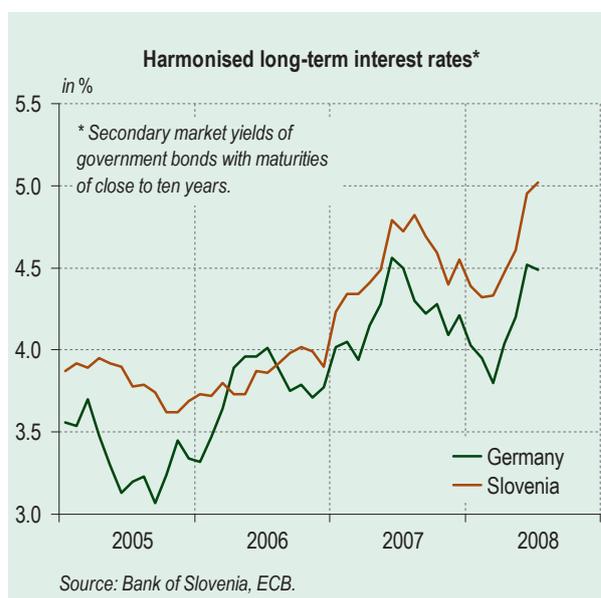

In June banks primarily secured financial resources via high borrowing in the rest of the world, while higher growth in deposits by non-banking sectors also contributed to growth in resources in June and July. Liabilities to foreign banks increased by EUR 1.2 billion in June, while there was no new net borrowing in the rest of the world in July. Year-on-year growth in deposits by non-banking sectors increased to 14.3% in June and 13.1% in July, primarily as a result of growth in government deposits. Having recorded double-digit growth between March and June, household deposits recorded growth of 8.4% in July, the lowest rate this year, the stock declining during the month. With July's growth in household loans low, one of the reasons for the net withdrawal of bank deposits was the financing of holiday spending by households. This year's trend of faster growth in short-term deposits with a fixed term of more than 90 days continued, encouraged by the more favourable interest rates on deposits of these

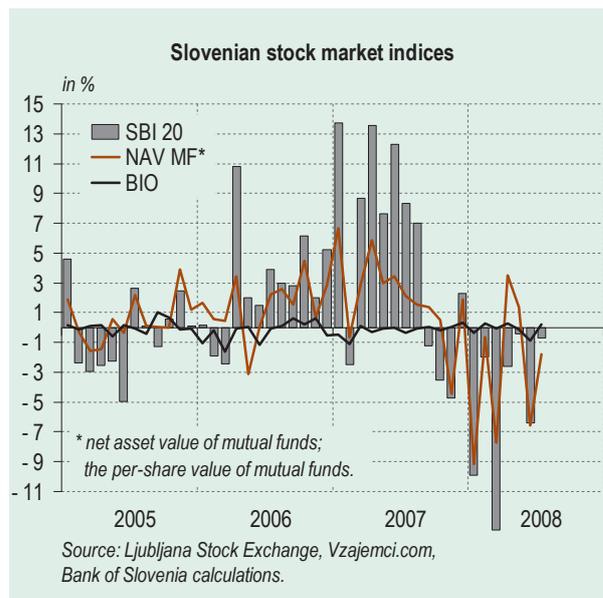

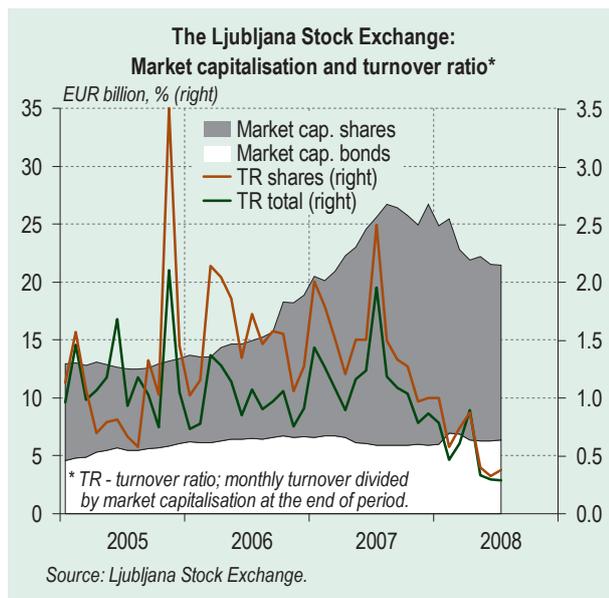

maturities. The aforementioned short-term government deposits also contributed to the growth in short-term deposits.

The banking system's pre-tax profit in the first seven months of the year was down 16% on the same period last year. Growth in the banking system's net interest remained favourable at 16%, while non-interest income was down 32% on last year's comparable figure. Banks returned to recording a positive result from trading in July, cutting this year's trading losses to EUR 40 million. Net impairments and provisioning were down 30% on the first seven months of last year at EUR 53 million.

7 | Domestic Financial Markets

The average monthly market yield on Slovenian government securities increased sharply in June, and increased again slightly in July. The yield on German bonds also increased in June, but fell slightly in July, the spread in yields between Slovenian and German bonds thereby widening to 53 basis points. At the beginning of July the ECB raised its key interest rate by 25 basis points to 4.25%. The Fed's key interest rate remained unchanged at 2%. The market yields on government securities rose in June as a result of expectations of interest rate rises. The releases of discouraging economic figures and the record oil prices brought an increase in

risk-aversion, which led to a fall in global share indices. The fall in share prices slowed in July. The American S&P index lost 8.6% in June, and a further 1% in July. The DJ EuroStoxx index for western Europe lost 11.8% in June, and a further 1.8% in July.

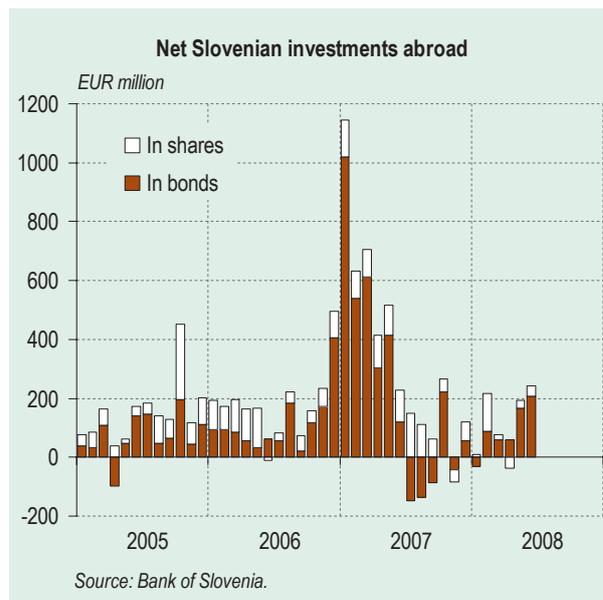

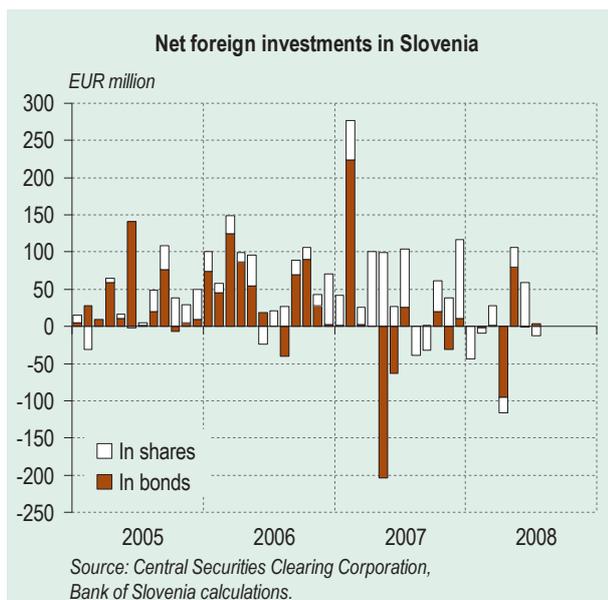

Having fallen by 0.6% in June, the market capitalisation of bonds on the Ljubljana Stock Exchange rose by 0.9% in July. Despite trading in a new bank bond beginning on the Ljubljana Stock Exchange in June, the maturity of two bank bonds and a 0.88% fall in the BIO brought a decline in market capitalisation. Despite two more bank bonds maturing, market capitalisation rose slightly in July as a result of the beginning of trading in two new bonds on the regulated market and a rise of 0.24% in the BIO. After increasing temporarily in June, the volume of trading in bonds declined again in July to just 24% of the average monthly volume over the last 12 months.

The market capitalisation of shares on the Ljubljana Stock Exchange fell by 3.9% in June, and by a further 0.5% in July. After declining in June, the volume of trading in shares increased slightly in July, to just under one-half of the average monthly volume in the first half of the year. Just over 90% of the volume was in shares on the prime market and the standard market, the majority in Krka shares. The P/E ratio declined on both the prime market (to 21.39 in June and 21.27 in July) and the standard market (to 14 in

June and 10.17 in July). The SBI 20 lost 6.4% in June. The SBI 20 fell by 30.7% in the first half of the year, and by a further 0.7% in July. The Tax on Capital Gains on Derivatives Act entered into force on 15 July. A tax of 40% is envisaged on capital gains on derivatives in the first year after disposal, the rate subsequently being reduced to 20%, the same as on other capital gains.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents increased to 6.28% in June, and to 6.4% in July. In June non-residents made net sales of EUR 1.1 million in bonds, and net purchases of EUR 59.1 million in domestic shares. Residents of the Netherlands made the largest net purchases of Slovenian shares, primarily those on the prime market. Residents of Austria, Germany, Cyprus and France were prominent among the net purchasers of bonds, while residents of the UK and Luxembourg were major net sellers of Slovenian bonds. In July non-residents made net purchases of EUR 3.1 million in Slovenian bonds, and net sales of EUR 12.9 million in Slovenian shares. Residents of Croatia were prominent among the net sellers of Slovenian shares. Residents of Serbia and Cyprus made the largest purchases of Slovenian bonds, bank bonds in particular.

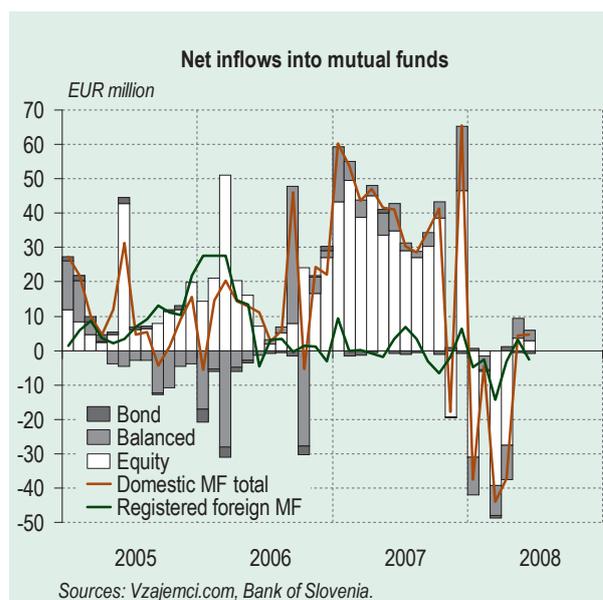

In May residents made net purchases of EUR 166.5 million in foreign bonds and EUR 27 million in

foreign shares.² The banking and insurance sectors were prominent among the net purchasers of bonds, particularly those of euro area issuers. Residents (the insurance sector, households and the sector of other financial intermediaries) primarily made net purchases of foreign shares in issuers from the euro area and the BRIC countries. Residents primarily sold shares in issuers from the EU.³ In June residents made net purchases of EUR 208.5 million in foreign bonds and EUR 33.8 million in foreign shares. Its purchases of bonds from euro area issuers made the insurance sector prominent among the net purchasers of foreign bonds. The insurance and banking sectors and corporates were prominent among net purchasers of foreign shares, particularly shares from the euro area, the former Yugoslav republics and Japan. Households made net sales of foreign shares in June.

The total assets in domestic mutual funds increased by 1.9% in May and declined by 6.6% in June to reach EUR 2,268 million. The average unit price rose by 1.4% in May, but fell by 6.5% in June. There was a net inflow of EUR 5 million into domestic mutual funds in May. The largest net inflows were into balanced funds (EUR 6 million) and equity funds (EUR 4 million), while there were net outflows of EUR 4 million from money market funds and

EUR 1 million from bond funds. There were net inflows of EUR 4.8 million into domestic mutual funds in June (EUR 3 million into balanced funds, EUR 3 million into equity funds, and outflows of EUR 1 million from bond funds and EUR 0.2 million from money market funds). The proportion of mutual funds' total assets held in liquid assets increased by 0.5 percentage points to 11.5% in May, but then declined to 10.5% in June. Domestic mutual funds saw a fall of 1.8% in the average unit price in July, taking the negative year-on-year change in the average unit price to 18.7%. The

² The figures for residents' net investments in the rest of the world for May are provisional, and differ from those published in the previous issue of Economic and Financial Developments as a result of corrections.

³ Denmark, Sweden, UK.

monthly change in the average unit price of mutual funds with an investment strategy focusing on the Balkans was negative. In June, the Croatian stock market fell by 10%, the Macedonian market by 15% and the Serbian market by 0.1%. The Serbian market then fell by a further 15.9% in July, while the Croatian and Macedonian markets recorded gains of 1.4% and 10.6% respectively. Two index funds, PB Biotech Index and PB Uranium Index, were listed for trading on the Ljubljana Stock Exchange in June, and the calculation of the PIX was ceased on 18 July.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procuration, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procuration, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A penalty rate is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Ljubljana Stock Exchange (Tables 2.6 to 2.8)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities

Shares – investment fund shares are not included.

IF – investment fund shares.

Turnover is measured with a single counting.

Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of

individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

- SBI – Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO – Bond Index
- SBI, BIO – value of SBI and BIO at the end of period
- dT – change of index value by points
- d% – change of index value in percentage
- Min, Max – minimum and maximum value of index in a period

Exchange rates (Tables 2.9.1–2.9.2)

Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

As of 1 January 1999, with the introduction of the European Monetary Union, the European currency unit (XEU) was replaced by the euro (EUR) at an exchange rate of 1:1. Fixed exchange rates between the euro and the national currencies of the EMU member states (valid from 1 January 2001):

1EUR =	40.33990	BEF
=	1.95583	DEM
=	340.75000	GRD
=	166.38600	ESP
=	6.55957	FRF
=	0.78756	IEP
=	1936.27000	ITL
=	40.33990	LUF
=	2.20371	NLG
=	13.76030	ATS
=	200.48200	PTE
=	5.94573	FIM

Due to the introduction of the euro in January 2002, the exchange rates of some members of EMU currencies (ATS, FRF, DEM, ITL) have been replaced by the exchange rates of some EU accession countries (CZK, HUF, PLN, SKK).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.9.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Payment systems (Tables 2.10 to 2.15)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.10: TARGET and Giro Clearing transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 3: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Table 2.11 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.12 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.13 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.14 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A **non-paper-based credit transfer** is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A **standing order** is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.15 Debit Transfers and Simply book-entry

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A **special money order** is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.16: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (SAD).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
 - report on account balances at domestic banks – PPV (until 31 December 2004),
 - report on account balances abroad – C (until 31 December 2006),
 - report on transactions through accounts at domestic banks – PPT,
 - report on transactions through accounts abroad – C.

All banks which conduct international payment transactions and all residents with open accounts abroad are obliged to report. The resident issuer/beneficiary of the payment is obliged to forward data on the type of transaction.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits since 2002.
- **Reports on investments (SN)** are the source for reinvested earnings of direct investments.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU**
- **Estimates and other sources**
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
 - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
 - estimate of Italian pensions (UMAR) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
 - estimate of labour income (SURS),
 - data on pensions paid to non-residents (ZPIZ),
 - survey on the write-downs of debt from trade in goods and services abroad,
 - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
 - estimate of cash transactions on tourism and labour income (from 2007 onwards).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was

calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations and for which data are available from ITRS or from the reports of duty free shops and consignment warehouses. Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

The source of records on transportation services is the ITRS.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURs):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURs's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS. All construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures).

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURs) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURs on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated (from a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes, paid in the current month). The estimate is replaced by actual data only when these data are available. Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates. From 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data).

Capital and financial account

Capital account

Capital transfers

Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. Data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad.

Financial account

Direct investment

Direct investment is recorded on the basis of reported payments through domestic banks and data from customs declarations. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no

longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents.

Financial derivatives

Since 2004, these types of transactions are included in VRP and KDD sources.

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

The foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (transactions booked on the account number 188000 showing net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)
- March 2007 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2007 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2004 to 2006 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2008, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2007 shall take into consideration the new three year average (2005 to 2007).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2006 are provisional.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments. However, there are differences in some items and data sources as follows:

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR),
- short-term commercial credits with non-residents (SKV), and
- reports on accounts abroad (C).

The source for the balance of payments is the International Transaction Reporting System (ITRS); this category reports on loans granted to or received from non-residents and reports on short-term commercial credits to non-residents.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are valued at book value according to accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). Other discrepancies in sources and criteria are explained in methodological notes that refer to the balance of payments.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003.

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial instruments

Since 2003, the data are included in VRP and KDD sources.

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Sources for long-term trade credits and loans are credit registration forms and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments, those being the accounting data of commercial banks (KNB), the account balances of banks in original currencies (PPV), the account balances abroad of companies (C) and the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial instruments are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.

- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 2/2002) and is in line with the classification of activities NACE Rev.1 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 3 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, hunting and forestry
- B Fishing
- C Mining and quarrying
- D Manufacturing
- E Electricity, gas and water supply
- F Construction
- G Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods
- H Hotels and restaurants
- I Transport, storage and communications
- J Financial intermediation
- K Real estate, rental and business activities
- L Public administration and defence; compulsory social security
- M Education
- N Health and social work
- O Other community, social and personal service activities
- P Activities of private households as employers and undifferentiated production activities of private households

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: www.stat.si.

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

Non-financial accounts and general economic statistics (Tables 6.1 to 6.8)

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production. Indices on industrial production are provisional from February 2004 on.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2006 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1–ZAP/M)). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Effective exchange rate - nominal/real

The growth of the index value represents the growth of the value of domestic currency and vice versa. In the index of the real effective exchange rate, measured through the cost of labour per unit, the cost of labour is calculated based on gross salary only due to a change of statistical data source.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products (intermediate goods, capital goods and consumer goods), as well as by main divisions of activities.

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.
