1. Exchange rate
2. Interest rates

At its meeting on 1 December 2005, the Governing Board of the Bank of Slovenia left the bank's key interest rate unchanged. The interest rate on 60-day tolar bills remained at 4.0%, while the foreign exchange swap rate remained at 1.5%.

Based on analysis of economic trends, the Governing Board considers the monetary policy as appropriate. The level of interest rates is in line with the stability of the nominal exchange rate of the tolar against euro, while current price trends and the medium-term inflation expectations are in line with the target of medium-term price stability. The Governing Board assesses that the inflation target for adopting the euro will be met on time.

Economic growth in the eurozone in the third quarter has accelerated relative to the first half of the year. The current rate of economic growth in the third quarter reached 2.4% at an annual basis. Germany and France contributed most to that growth, the former with growth in exports and industrial production, and the latter with growth in private spending. Export growth has been driven by the favourable economic conditions in the US and Asia, and increased price competitiveness due to the depreciation of the euro against the dollar. The European Commission has published its autumn 2005 economic forecasts, with growth expected to pick up gradually until the second quarter of 2007.

Inflation exceeding the ECB target and the gradual increase in core inflation have raised expectations about an increase in interest rates in the eurozone. Despite the fall in oil prices, energy prices continue being the main source of high inflation growth in the eurozone and the US in November. The risk of keeping inflation in the eurozone at a relatively high level has also been strengthened by the euro's depreciation against the dollar, the rise in import prices and high growth in monetary aggregates. The persistence of inflation levels above the ECB target could be transmitted to a greater extent into core inflation, labour costs and inflationary expectations. Therefore, the ECB raised its key interest rate by 0.25 percentage points on 1 December 2005. In the US, interest rates have been rising for some time while inflation has exceeded 4% in the last two months.

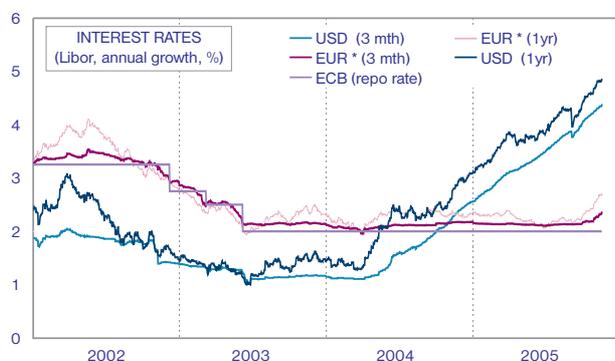

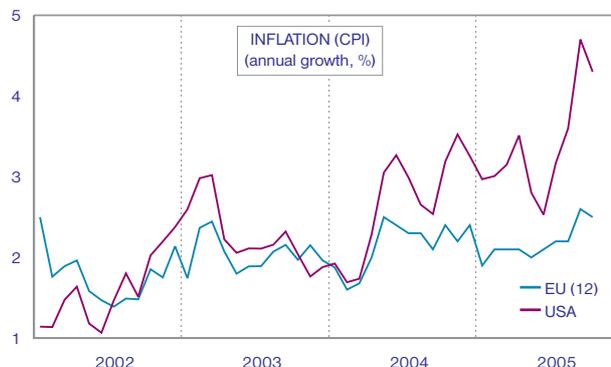

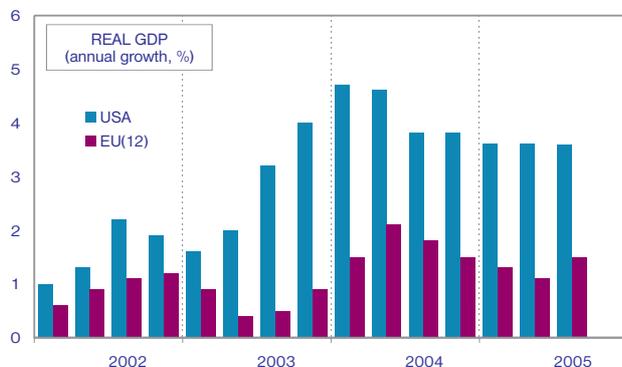

According to estimates, Slovenia continued to have relatively high economic growth in the third quarter. Short-term indicators reveal relatively strong household spending which will probably be the main engine of economic growth in the third quarter. The current rate of growth in industrial production has slowed down, particularly in labour-intensive sectors, while it has increased at the fastest in export-oriented sectors.

Concerning the labour market, the decline in output of labour-intensive sectors coincides with the decline in employment in those sectors. Since job destruction in sectors with less perspective currently outpaces the job creation in sectors in progress, unemployment is on the rise. In October, the number of registered unemployed reached its highest level for the past year and a half. Similarly, the ILO definition unemployment rate rose in the third quarter. The persistence of relatively high growth in nominal wages could increase labour unit costs, worsen price competitiveness of firms and slow down the creation of new vacancies.

The year-on-year inflation rate in November decreased back to 2.1%, after the fall in oil prices which caused a significant rise in inflation in the previous two months. By the end of November, refined petroleum products were in average cheaper by 7.9% decreasing year-on-year inflation rate by 0.7 percentage points. Until October, growth in producer prices had fallen to 1.8%, which is equal to the unchanged rise of consumer goods prices. This points to a lowering of the risk of these prices being transmitted into overall inflation. The Governing Board assesses that other macroeconomic risks, such as excessive spending and excessive growth in labour costs, are limited in the short term. This is confirmed by the relatively low level of core inflation, which is fluctuating at around 1% year-on-year. The main risk of Slovenia failing to meet the reference criteria for introducing the euro is presented by further significant rises in the prices of refined petroleum products.

A. MONETARY REVIEW

1. INTERNATIONAL ENVIRONMENT

In line with expectations, economic growth in the eurozone was slightly higher in the third quarter. Initial estimates of economic growth in the USA in the third quarter show continuing solid economic growth, despite the shock caused by the two hurricanes. Economic growth in the third quarter in the eurozone was initially estimated at 1.5% year-on-year, more than in the first half of the year (1.2%). Quarterly growth was also higher than in previous quarters at 0.6%. The main factor in the return to higher economic growth in the eurozone was higher growth in Germany and France, fuelled by exports and industrial production (Germany) and private consumption (France). According to the European Commission's autumn forecasts, economic growth in the eurozone will gradually rise over the next quarters until the second quarter of 2007, when it will stall at 2.2% year-on-year. The European Commission is forecasting economic growth of 1.3% in 2005 and 1.9% in 2006. The initial estimate for third-quarter economic growth in the USA was 3.6% year-on-year, the same as in the first half of the year. Quarterly growth reached 0.9%, up from the second quarter. Domestic private consumption continued to grow solidly, while inventories fell, confirming that domestic demand is improving. Investments made a positive contribution to quarterly economic growth, as did net exports. The outlook for an improvement in economic growth in the future is also good. The factors include a slowdown in oil prices after the shocks caused by the hurricanes, rebuilding work in

the areas hit by the hurricanes, and higher economic growth in countries where the USA exports. There are also indications of the first results of the rise in interest rates in the USA, which could restrict the increase in economic growth. These include the cooling of the real estate market and the slowdown in household lending. The Consensus forecast for economic growth this year rose again to 3.6%, as it was before Hurricane Katrina, while next year's forecast remains at 3.3%.

The ECB raised its interest rate after almost two years in December, while the Federal reserve continued with step-by-step growth of interest rate in November. The main refinancing operations minimum bid rate of the ECB was raised by 0.25 percentage points to 2.25. This is first interest rate change since June 2003. The raise in interest rate was expected, because of growing inflation due to oil price increases, which could be passed through to other prices and price expectations. The possible passthrough was already evident from a small rise in October core inflation. Besides that, there is fast liquidity growth present in the euro area since mid 2004 because of low interest rates, that could translate into inflation pressures. Despite of the raise of interest rates in the euro zone, they will remain low enough to support pick-up in economic activity. In line with expectations November's raise in the key central bank interest rate in the USA was 0.25 percentage points, taking the Federal Funds rate to 4%. The Federal

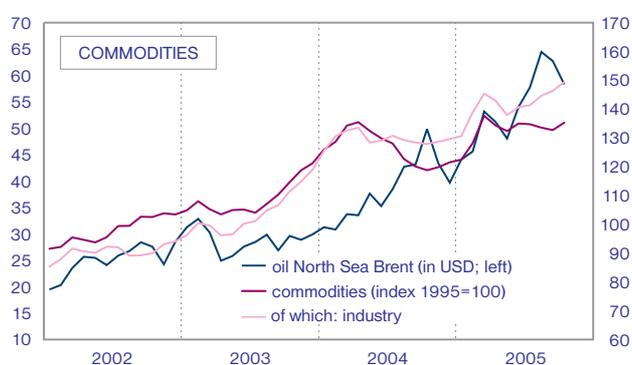

Reserve is still saying that there are inflationary pressures from the rise in energy prices, although the fundamentals of economic growth remain solid, despite the temporary adverse effects of the hurricanes. The gradual rise in interest rates is therefore likely to continue. Analysts are expecting interest rates to continue rising until at least the end of January 2006.

Inflation slowed in October in both the eurozone and the USA, while core inflation rose. After the hike in September's prices from the oil shock caused by the two hurricanes, price growth slowed slightly in October to reach 2.5% year-on-year in the eurozone, as a result of the slowdown in oil prices. In contrast to headline inflation, there was slight rise in core inflation, which excludes food, energy, alcohol and tobacco. October's rate was 1.4% year-on-year, while it had held at 1.3% for the previous three months. Prices rose by 4.3% year-on-year in the USA in October, which represents a slowdown in inflation following the jump to 4.7% in September. At the same time core inflation (excluding food and energy) rose slightly to 2.1% year-on-year, having stood at 2.0% in September. Analysts are warning that the rise in core inflation represents the beginning of the transmission of high oil prices into other prices, while in addition the rise in core inflation, at least looking in the short term in the USA, is also being brought about by good economic growth.

Since the end of October the dollar has continued to appreciate against the euro. The euro lost almost 4% of its value against the dollar between the end of October and the middle of November. Analysts mostly explain it by the increase in the interest rate differential between the euro and the dollar, while in addition the American economy had encouraging figures over the period, with the exception of the rise in the number of nonfarm payrolls, which was lower than expected.

The slowdown in oil prices also continued until the middle of November. After leaping at the end of August and the beginning of September, owing to the hurricanes in the Gulf of Mexico, oil prices are gradually settling. A barrel of Brent crude averaged USD 58 in October, compared with September's aver-

age of USD 63 per barrel. Events in the USA have had a major impact on the movement of oil prices in recent months. In the first half of October fears were raised by Hurricane Wilma in the Gulf of Mexico, causing a temporary rise in prices, but it subsequently failed to reach the oil infrastructure. In the second half of the month the decline in prices continued, caused primarily by lower demand for refined petroleum products in the USA, and then by forecasts in the first half of November for a milder winter in the USA. A major factor in the weekly fluctuations is estimates of stocks of oil in the USA, which showed improvement in the first half of November, in terms of both crude and petrol. In addition Opec reported in November that it had sufficient oil available to meet higher winter demand.

2. REAL SECTOR

Economic Activity

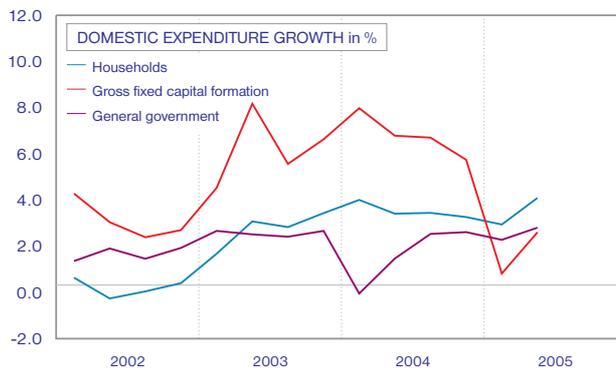

According to the available figures and indicators, economic growth remained reasonably high in the third quarter, although slightly lower than in the second quarter. Our estimates are that trade dynamics in the third quarter was slightly more balanced, with the contribution to economic growth made by net exports expected to be lower than in the second quarter, when it stood at 4.7 percentage points. Household spending was strong according to short-term indicators, and was probably the main engine of economic growth in the third quarter. According to our estimates, investment activity also strengthened, while growth in general government spending remains close to the level recorded in the second quarter. In addition we are anticipating an end to the decline in inventories, which in the second quarter was a significant drag on economic growth, contributing -2.9 percentage points.

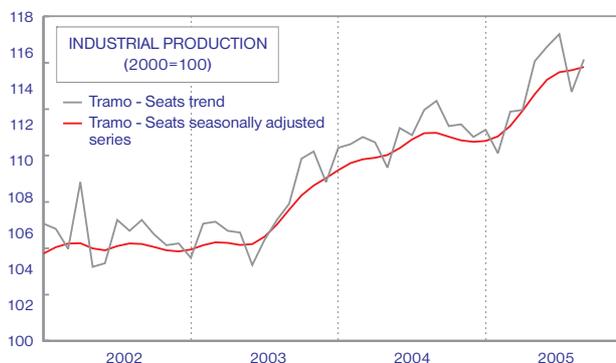

Following the fall in August, the monthly dynamics of industrial production strengthened slightly in September, but was weaker overall in the third quarter than in the second quarter. Owing to the new methodology that the SORS has been using since this July, current analysis of industrial production is subject to greater uncertainties than in the past, as the figures for the last three months are merely temporary. Provisional figures put year-on-year growth in industrial pro-

duction in September at 2.0%, with year-on-year growth in the third quarter being the same. The seasonally adjusted figures using the Tramo-Seats method show that after an irregular fall in August, the current rate of growth picked up slightly again. A significant fall in the current rate of growth was recorded in September in the production of intermediate goods, which this year has recorded much lower year-on-year growth rates than last year. However, after falling significantly in August, production of capital goods was again rising, its year-on-year growth of 8.2% over the first nine months of the year making it the fastest-growing component of industrial production. Year-on-year growth in production of consumer goods amounted to 1.5% in

September, higher than the average rate of 0.6% recorded over the first nine months of the year.

Year-on-year growth in manufacturing output rose significantly in September, while the year-on-year rates of growth in output in the mining sector and the energy sector both fell. The rise in year-on-year growth in manufacturing output to 3.7% was primarily the result of high year-on-year increases in production in the chemicals industry (18.7%), the car industry (13.6%), the metals industry (9.5%) and the manufacture of electrical and optical equipment (7.8%). Prominent on the negative side were foodstuffs (-6.8%) and textiles (-23.0%), while strong year-on-year declines were also recorded in September by mining (-16.9%) and the energy sector (-9.5%).

The growth dynamics in other sectors slowed slightly in the third quarter, the only exception being in retail sales.

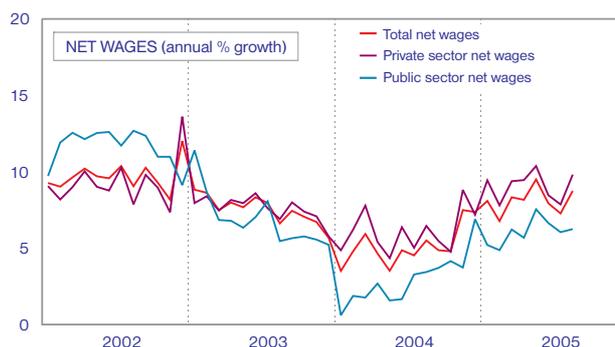

After considerable growth in construction work carried out in the second quarter of this year, when the real year-on-year growth rate reached 13.2%, the dynamics in construction stalled significantly in the summer months. The value of construction work carried out fell by 1.4% in real terms in the third quarter, while September's year-on-year decline was 4.7% in real terms. In addition, the relatively large rise in the number of building permits issued in the second quarter was followed by a significantly poorer figure for the third quarter, which slightly lowered our expectations of the level of construction activity in the coming quarters. Despite the reduced number of overnight stays, which were down just under 4% in the third quarter of this year compared with the same period last year, balance of payments figures point to favourable growth in revenues from tourism, which probably reflects changes in the guest structure. Retail sales slowed slightly in September, taking year-on-year growth to 4.0% in real terms. Nevertheless, at 7.9% real year-on-year growth in sales in the third quarter was up 1.6 percentage points from the second quarter. In September the highest growth was again recorded by sales of textile products, while sales of cars also strengthened notably. The high growth in revenues from retail sales is also reflected in the relatively high VAT inflow.

The stagnation of business optimism, the relatively pessimistic expectations of consumers and the optimistic expectations in retail sales all continue. The seasonally

adjusted value of the indicator of confidence in the manufacturing sector remains unchanged for the third successive month, but in October the value was 3 percentage points lower than in the same month last year. The rise in consumer pessimism, which had been evident since April, was halted in October. The indicator of retail confidence has remained at a high level, with the current optimism in the retail sector at its highest level since 1999.

The Labour Market

Growth in total household income fell slightly in September, but total wages paid rose again.

Year-on-year growth in total household income was 5.5% in September, and averaged 4.3% over the first nine months of the year. After the August shock year-on-year growth in social transfers fell to 4.2%, but the dynamics of total wages paid strengthened, taking year-on-year growth to 9.7%. As it has been a characteristic for the rest of the year, the total of other earnings from employment remained below the value recorded last year, which can be partly attributed to the change in tax legislation, which cause a switch from contract-based payments to regular wages for full employment.

Growth in average wages remains high. Year-on-year growth in average monthly gross wages was 6.3% in September, and averaged 6.5% over the first nine months of the year. Given the figures for growth in free prices, which rose by a mere 1.1%

Sources: Statistical Office of the Republic of Slovenia; Agency of the Republic of Slovenia for Public Legal Records and Related Services; Bank of Slovenia estimates. Labour costs: average gross wages (Statistical Office of the Republic of Slovenia) + other labour compensation (Agency for Public Related Records and Related Services)+other taxes (MoF).

in the first nine months of this year, and for economic growth, which reached 3.9% in the first half year, this year's growth in wages seems excessive, also when allowance is made for the structural effect of job losses in the lowest-wage sectors and the aforementioned switch from contract-based payments to wages. Owing to the effects of the new tax legislation, nominal growth in average net wages continues to outstrip growth in average gross wages, and stood at 7.7% year-on-year in September having averaged 7.6% over the first nine months of the year. This year gross wages have been growing fastest in the real estate and business services sector, in the electricity, gas and water supply sector, and in the trade sector. Growth in gross wages averaged 7.6% over the first nine months of the year in the private sector, and 4.5% in the public sector.

In September there was a seasonal increase in the active population and the number of population in active work.

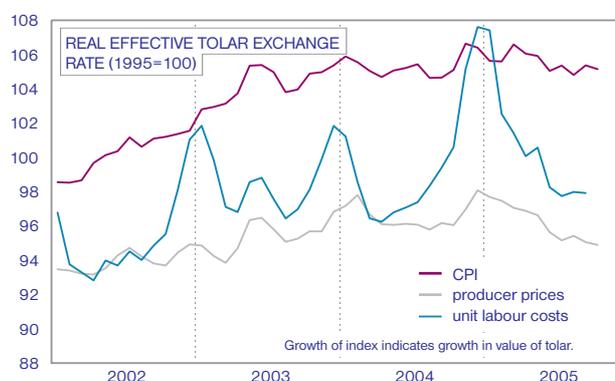

The year-on-year increase in the active population was 0.6% in September, and averaged 0.4% over the first nine months of the year. The increase in the active population partly reflected the rise in employment, with the number of people in active work rising by 0.7% year-on-year in September, the same as its average increase over the first nine months of the year. In recent months the number of unemployed has also risen. The sectors recording the largest rises in employment this year are real estate and business services, and the catering industry. Year-on-year growth in public sector employment continues to fluctuate around 2%, primarily as a result of employment in the education sector and the health sector. Official figures even point to a fall in employment in public administration, although this is partly as a result of methodological changes and changes in classification. Discounting changes in classification by sector, employment in public administration would have grown by approximately 2%. The favourable trend in employment in the small business sector seen at the beginning of the year has slowed in recent months, as evidenced in particular by a slowdown in the current growth rates.

The number of unemployed rose significantly in October.

Almost 95,000 people were registered with the Employment Service at the end of October, the highest figure for 18 months, and 1.8% more than last October. The registered figures available for September show 10.0% of the active population to

be unemployed, while the survey of unemployment, for which only the second-quarter figures are available, when the level of registered unemployment was lower, put the rate at 5.8%.

Competitiveness

The nominal effective exchange rate of the tolar against a basket of foreign currencies depreciated by 0.4% in October.

With the euro and Swiss franc exchange rates unchanged, the main factor in the tolar's fall was the rise of 2% in the dollar exchange rate. With economic results good and the American central bank maintaining a restrictive monetary policy, the dollar has been rising on world markets this year. The dollar's rise is benefiting the competitiveness of the eurozone and the Slovenian economy. This year to October the nominal effective tolar exchange rate depreciated by 1.8%, with the dollar rising by 11% and the pound sterling by just under 2% over the same period. In the first half of November the tolar exchange rate against the dollar was up a further 1.5%, so a further fall in the value of the tolar is expected in November.

Price competitiveness as measured by consumer prices deteriorated by 0.5% in September.

This was the same as the improvement in August, and thus it was unchanged over the two months together. There was an above-average rise in consumer prices in September, with Slovenian prices up 1% and a basket of foreign prices up 0.5%. There were similar factors in the rise in both sets of prices in September, primarily high growth in prices of refined petroleum products on world markets. Prices of refined petroleum products have gradually been falling since September, with their impact on inflation lessening, and thus it is expected that the process of the convergence of domestic consumer prices with prices abroad will continue to the end of this year.

The trend of better price competitiveness as measured by producer prices continued in September,

improving by 0.4%, and by 1.2% in the year to September. The main factor in the improvement in price competitiveness as measured by producer prices was slower growth in domestic prices than in foreign prices. In the year to September domestic producer prices rose by 1.9%, while the basket of foreign producer prices rose by 2.8%, just under 1 percentage point more. The slower

Sources: Statistical Office of the Republic of Slovenia; Bank of Slovenia calculations

growth in domestic producer prices continued in October, when year-on-year growth fell to 1.8%.

An improvement in the price competitiveness of the Slovenian economy is expected in the final quarter of this year. In addition to price movements, the depreciation in the nominal effective tolar exchange rate expected to the end of the year (owing to the rise in the dollar against other currencies this year) will also have a beneficial effect on price competitiveness.

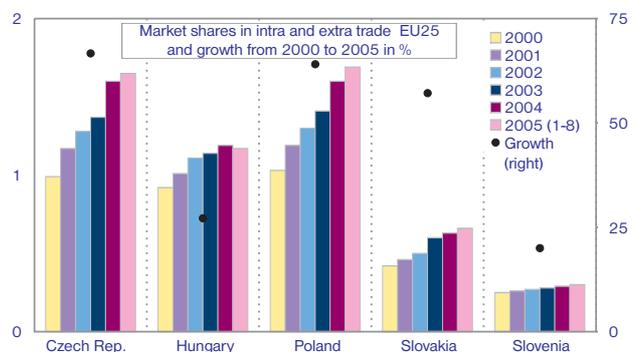

Price competitiveness as measured by unit labour costs improved by 0.1% in September. With the current rate of growth in labour costs per employee having slowed by one-fifth, the other factors in the improvement in price competitiveness in September were the favourable current rate of growth in industrial production and the continuing contraction of employment in the manufacturing sector. Longer-term comparisons present an even better picture, with competitiveness as measured by unit labour costs having improved by 1.5% in the year to September. The main factor in the improvement in competitiveness was high year-on-year growth in labour productivity, which was up 1.3 percentage points from August. With growth in industrial production high, a significant factor in the rise in labour productivity was the fall in employment of more than 1% in the manufacturing sector. Owing to the high basis from the second half of last year, year-on-year growth in labour costs per employee has gradually slowed this year, and is now slower than simultaneous productivity growth, which is contributing to the improvement in competitiveness. Given the expected depreciation in the effective tolar exchange rate, wage movements remain the most important factor in the risk of a decline in price competitiveness as measured by unit labour costs. It was in the final quarter last year that wages grew most.

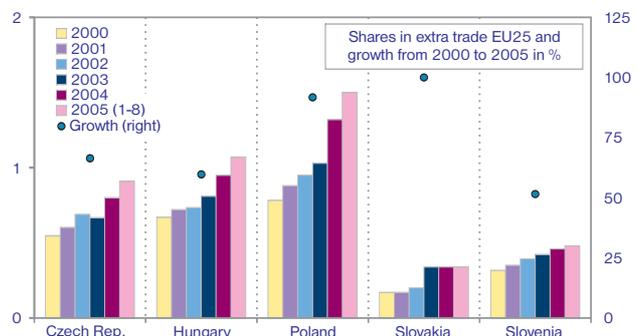

The market share of Slovenian companies on the internal EU25 market (intra and extra) has continued to grow since Slovenia joined the organisation. Between 2000 and the end of the August, the market share of Slovenian companies on the internal EU 25 market rose from 0.25% to 0.30% (an increase of 20%), despite competition from the new members and increased competition from Asia. Over the same period, of Slovenia's most important trading partners in the eurozone, only Germany and Austria recorded an increase in their share

of the internal EU25 market, just under 10%, while the market share of France fell by 15% and that of Italy by 6%.

The market shares of the new EU member-states who joined at the same time as Slovenia rose faster than Slovenia's did between 2000 and the end of August. Poland's market share rose by 64%, the Czech Republic's by 67%, Hungary's by 27% and Slovakia's by 57%. Unlike Slovenia, whose companies saw their market share of the internal EU25 market rise equally over the period in question, the market shares of the aforementioned members rose strongly between 2002 and 2004 inclusive. The incomplete figures for this year (first eight months) show this rate to have slowed on average by slightly less than 5% year-on-year. It was the same in the Czech Republic, while Hungary's market share even fell slightly.

Assuming that euro prices are a given for Slovenian companies, exchange rate movements also have a significant impact on competitiveness, particularly in relation to non-members. Owing to the euro's rise against the dollar, between 2002 and 2004 non-members that invoiced in dollars had an additional competitive advantage. With the dollar rising against the euro this year, this advantage is gradually diminishing. We therefore feel that the competitiveness of Slovenian companies will rise further in the coming period, both inside the EU market and outside it.

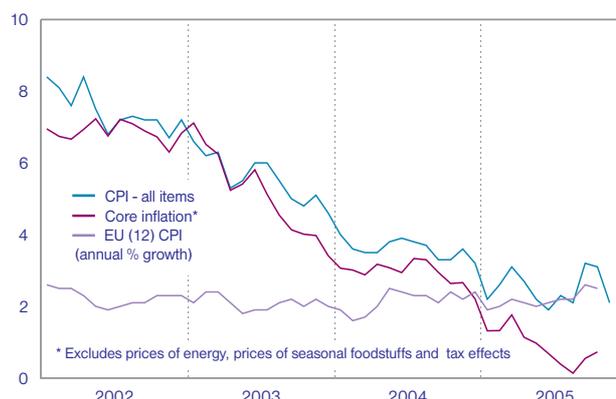

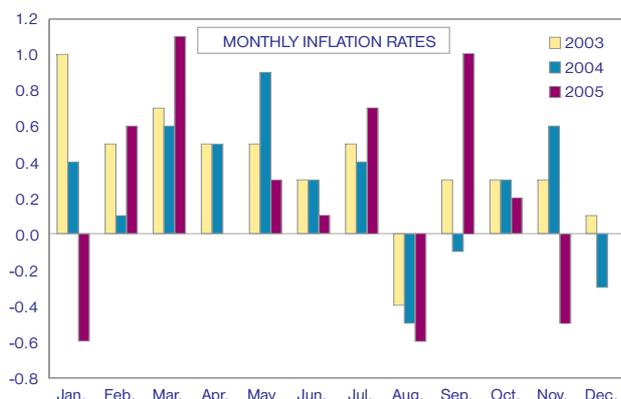

Slovenia's share of extra EU25 exports is rising more quickly than its share of the internal market. Slovenia's share of extra EU25 exports rose from 0.32% in 2000 to 0.48% at the end of this August, an increase of more than one-half. Of the new member-states, the Czech Republic and Hungary saw their shares of extra EU25 exports rise slightly more quickly

than Slovenia, with Poland recording the largest rise of 92%. In the period in question Slovenia recorded its largest rises in exports to the former Yugoslav republics, Serbia-Montenegro in particular, and to Russia.

1) Effective exchange rate: basket of 7 currencies of Slovenia's main foreign trading partners (excluding Croatia), weighted by the shares in Slovenian goods trade. From January 2002 onward three currencies (EUR, USD, CHF) are used in the calculation. 2) Real exchange rate: SIT exchange rate divided by relative (domestic/foreign) price ratio.

3. PRICES

After a long interval between rate changes, the ECB raised its refinancing rate in December. The Federal Reserve continued its gradual raising of the key interest rate in November, which has been underway for some time. The key ECB interest rate was raised by 0.25 percentage points at the beginning of December to 2.25%, the first interest rate change since June 2003. The rise was expected, as for some months there have been clearer and clearer signs of rising inflation primarily originating in the rise in oil prices, but it could lift inflationary expectations. The possible transmission of high energy prices into rises in other prices began to be seen in the slight rise in core inflation. In addition liquidity growth has been rising rapidly since the middle of 2004, as a result of low interest rates, and this could eventually increase inflationary pressures. The ECB stated that despite the rise interest rates will still be low enough, and will contribute to improving economic growth in the eurozone. In line with expectations the Federal Reserve continued its gradual raising of the key interest rate, the rise of 0.25 percentage points taking the Federal Funds rate to 4%. The Federal Reserve is still saying that there are inflationary pressures from the rise in energy prices, although

the fundamentals of economic growth remain solid, despite the temporary adverse effects of the hurricanes. The gradual rise in interest rates is therefore likely to continue. Analysts are expecting interest rates to continue rising until at least the end of January 2006.

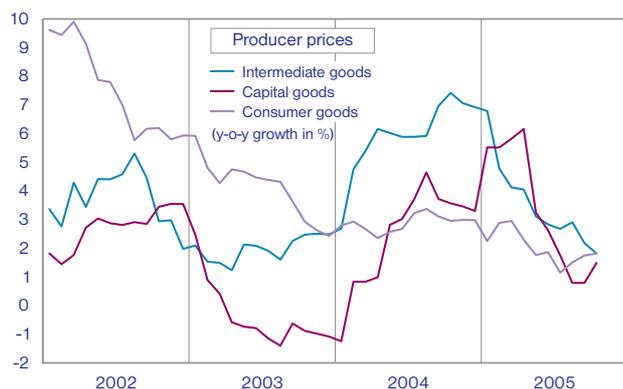

After a temporary increase in the two previous months, in November year-on-year inflation fell back to its August level of 2.1%, with the monthly change in consumer prices standing at -0.5%. The main influence on November's inflation was the significant fall in prices of refined petroleum products. These lowered year-on-year inflation by 0.7 percentage points, while the contribution of refined petroleum products to headline inflation fell from 1.7 percentage points in September to 0.7 percentage points. Means of transport also became cheaper again in November, lowering year-on-year inflation by 0.2 percentage points. Current year-on-year growth in prices of means of transport is -8.4%, which can partly be attributed to the increased competition on the car market in the last year. Prominent among the price increases in November were rises in the prices of clothing and footwear, and prices of food and non-alcoholic beverages. The price movements were part of the normal seasonal fluctuations, and the rises therefore did not have any great impact on year-on-year inflation.

* August 2005. Sources: Statistical Office of the Republic of Slovenia. Breakdown of CPI by Bank of Slovenia and Institute of Macroeconomic Analysis and Development, other calculations by Bank of Slovenia. Figures may not sum to official figures due to rounding.

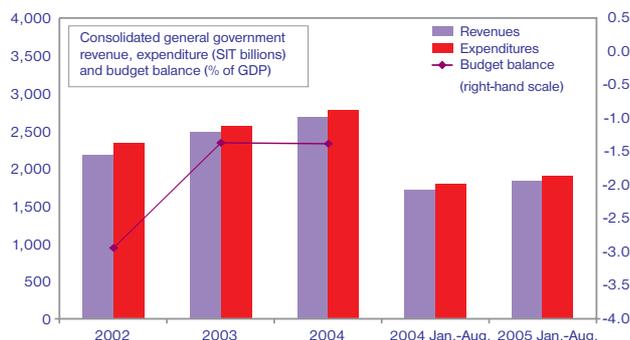

Year-on-year inflation as measured by the harmonised index of consumer prices (HICP) stood at 2.1% in November. The value of the price stability convergence criterion, which is calculated as the 12-monthly average of the HICP, fell by 0.2 percentage points to currently stand at 2.5%. The October reference criterion, calculated from the average inflation in Finland, Sweden and the Netherlands, was 2.4%. Provisional figures put November's year-on-year inflation in the eurozone at 2.4%, a fall of 0.1 percentage points from the previous month.

Year-on-year growth in producer prices of manufactured goods remained below 2.0% also in October. After stalling in the summer, the fall in year-on-year growth in producer prices continued in the autumn. Growth in producer prices in October was down a further 0.1 percentage points from September and

stood at 1.8%. Among the individual groups, growth in prices of consumer goods remains favourable, the October rate being unchanged from September at 1.8% year-on-year, which is 1.3 percentage points less than year-on-year growth in consumer prices. Similar growth (1.8%) was recorded in October by prices of intermediate products, the rate having fallen by 0.4 percentage points from September. The main factor in this was the slower growth in prices of energy produced domestically, which rose by only 0.6% in the year to October, while growth in commodities prices was down 0.1 percentage points and stood at 2.6%. Only growth in prices of capital goods rose significantly in October, the increase to 1.5%, taking it closer to the year-on-year rate of growth in the other two groups of producer prices.

4. PUBLIC SECTOR

At the beginning of November the government approved a framework package of economic and social reforms aimed at raising welfare standards in Slovenia. The package contains 67 different measures aimed at four development priorities: first, competitiveness and economic growth, second, effective creation, two-way flow and application of knowledge for economic development and creation of high-quality jobs, third, an efficient, less costly state, and fourth, a modern social state and higher employment. The proposed measures also involve changes and supplements to the pension system and changes in the health sector.

The government submitted updated draft state budgets for 2006 and 2007 to the National Assembly in November. The general government deficit should amount to 1.4% of GDP in 2006, and should fall to 1.2% of GDP in 2007. In the updated draft budgets, which the government approved at the beginning of November, there is an increase in both revenues and expenditures, of approximately SIT 267 million in 2006, and SIT 72 million in 2007. The draft budgets incorporate certain planned changes to tax laws (a gradual cut in payroll taxes, which should be finally abolished in 2009, and amendments to the personal income tax act, the corporate income tax act, the tax procedure act and the value added tax act). The state budgets for 2006 and 2007 should be adopted at the beginning of December.

Source: Ministry of finance. Government expenditures for social security contributions are not excluded in consolidation.

The Ministry of Finance issued a resolution terminating the issue of 1-month treasury bills, with the Bank of Slovenia's approval. In line with the strategy for adopting the euro, the Ministry of Finance felt in the middle of November that the aim for which 1-month treasury bills were issued had been achieved. In other words, managing the liquidity of the government's single treasury account was no longer necessary. The issue of 1-month treasury bills was introduced in 2001 with the aim of developing the domestic money market and increasing liquidity on the securities market. This September liquidity was further increased by the introduction of joint official liquidity maintainers and the merger of long-term government securities. The ministry will issue the final series of 1-month treasury bills on 1 December this year.

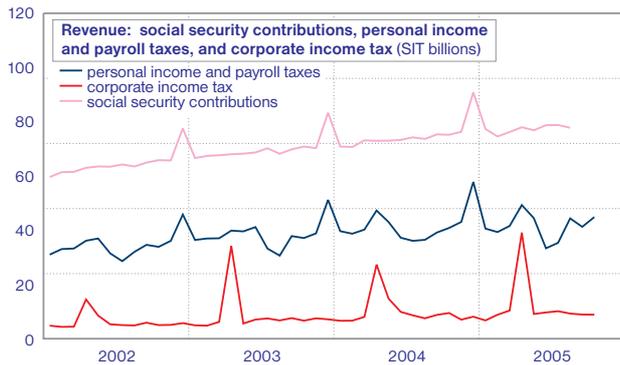

This year the government is again borrowing mainly by issuing long-term securities. At the beginning of November the government released the sixth issue of RS60 5-year bonds in the amount of SIT 7 billion and the eighth issue of RS59 11-year bonds in the amount of SIT 16 billion. The average yield on the bids accepted was 3.373% for the RS60s, and 3.650% for the RS59s. The ninth issue of RS59 11-year bonds and the seventh issue of RS60 5-year bonds are planned for the beginning of December.

The European Commission issued new macroeconomic forecasts. According to the European Commission forecasts, which were released in the middle of November, Slovenia's general government deficit as measured by ESA95 methodology should amount to 1.7% by the end of this year, 1.9% next year and 1.6% in 2007. The figure given in the General Government Deficit and Debt Report issued by the Ministry of Finance is 1.6%. As measured by the same methodology, the European Commission debt forecast for the end of the year is 29.3%, while the Ministry of Finance forecast is 28.9%. The figure should rise slightly in 2006 to 29.5%, and should then fall to 29.2% in 2007. The debt forecasts are a percentage point more optimistic than the spring forecasts, primarily thanks to the revenue from the sale of NLB.

Revenues

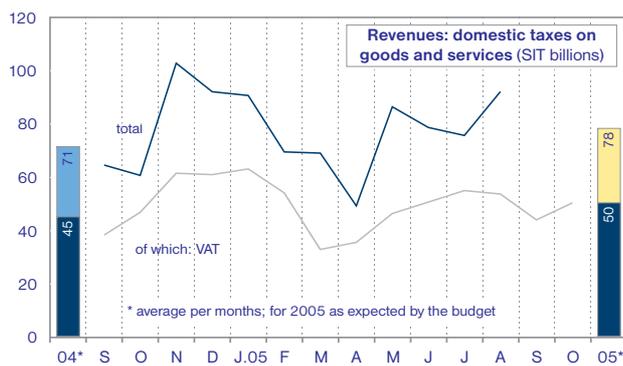

General government revenues had risen significantly in year-on-year terms up to the end of October, particularly in the last four months. According to initial estimates, revenues in the last four months were up 7% year-on-year in real terms. The main factors in the rise were higher VAT revenues, and growth in revenues from corporate income tax.

Taxes based on wages rose by 2.7% year-on-year in the first nine months of the year, and by 3.6% in October.

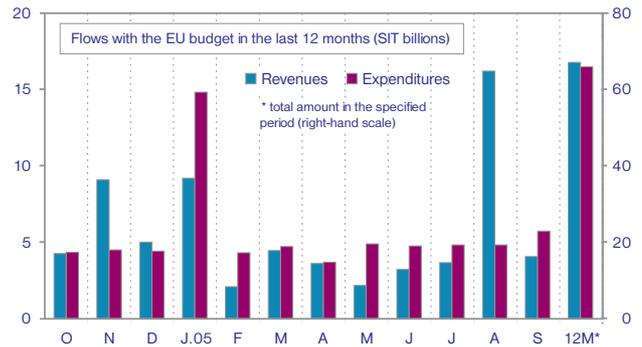

The largest year-on-year growth in taxes based on wages was recorded in August, with personal income tax revenues prominent in this. This trend reflects the fact that this year income tax rebates were largely issued in June and July, while in previous years they were also relatively high in August. Revenues from personal income tax in the first three quarters of the year were approximately equal in real terms to last year's, while in October they were up almost 6% year-on-year in real terms. Revenues from payroll tax were the key factor of growth in revenues from taxes based on wages, particularly in September and October, when their real year-on-year growth averaged 8%. Revenues from this tax are expected to fall again next year, owing to the plan to reduce the burden of this tax.

Revenues from corporate income tax also grew year-on-year in October. In the first nine months of the year revenues from corporate income tax were up 8.9% in real terms compared with the same period last year. These revenues should be equivalent to 2.2% of estimated GDP by the end of the year, up 0.2 percentage points from 2004.

Revenues from taxes on goods and services grew faster in real terms in the last four months than in the first two quarters, primarily on account of higher VAT revenues. VAT payments in the first ten months of the year were 14% higher in real terms than in the same period last year. Monthly VAT revenue averaged SIT 51 billion over the last four months, compared with SIT 40 billion in the same period last year. Excise revenues recorded real growth of 3.3% in the last four months, compared with real growth of 4.5% in the first half of the year. Revenues from excise duties on tobacco recorded the highest growth.

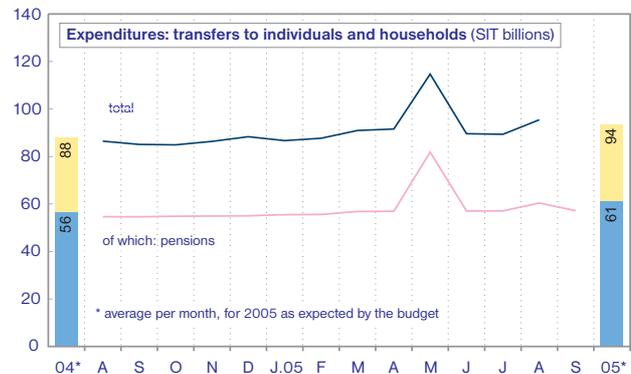

Inflows of funds from the EU budget are still recording the largest shortfall in forecast revenues. In the first nine months of the year Slovenia paid SIT 3.9 billion more into the EU budget than it received. Up to and including September, Slovenia had received SIT 48.6 billion, or 45% of the revenues forecast for this year. This means that this year it will be hard to achieve the inflows of funds from the EU budget forecast in the revised state budget. Payments into the EU budget amounted to SIT 52.5 billion over the same period.

Expenditures

General government expenditures rose by 3.5% in real terms in the first eight months of the year. August's expenditures were 5.5% higher in real terms than in the same month last year. The main factors in the rise in expenditures over this period were increases in expenditure on subsidies, and payments into the EU budget.

Expenditure on wages rose by almost 3% in real terms in the first eight months of the year. The year-on-year increase in expenditure on wages was brought about both by an expansion of employment in the public sector, and by a rise in average gross wages in the public sector. Employment in the public sector rose by 2.2% year-on-year in August, while gross public sector wages were up 4.8% year-on-year in nominal terms. Public sector wages were raised on 1 July, and the next review is expected in the coming year, again on 1 July.

Current transfers rose strongly in August. Year-on-year growth in current transfers stood at 11.5% in real terms in

August. The significant rise in current transfers is a result of high transfers to public agencies and an increase in supplements paid to pensioners. Transfers to public agencies amounted to SIT 7 billion in August, almost as much as in the first seven months of the year (SIT 9.6 billion). The payment of the shortfall in this year's annual supplement to pensioners amounted to a further SIT 3.3 billion. This was a result of the adoption of the new Pension and Disability Insurance Act. In addition to these two factors, an increase in transfers to households also contributed to the rise in current transfers in August.

Transfers to households in the first eight months of the year were up 2.8% in real terms on the same period last year. The fastest growth was recorded by transfers to the unemployed, family benefits and parental benefit, and sick benefits. While transfers to the unemployed rose by just 1.6% in the first quarter, it rose strongly in the second and third quarters, reaching a nominal year-on-year growth rate of 7.5% over the first eight months of the year. The slowest growth was in transfers for war invalids and victims of war, and in transfers for study grants.

The Health Insurance Institute (ZZZS) is disclosing a surplus of revenue over expenditure of SIT 4.4 billion for the first three quarters of the year. The ZZZS expenditure cumulatively rose by 4.4% year-on-year over the first three quarters, while its revenues were up 8%. The main factors in the rise in the ZZZS expenditure were expenditure on drugs and transfers to public institutes, which account for three-quarters of all its expenditure. These rose by 4.6% year-on-year over the first three quarters. Expenditure on drugs rose fastest over this period. The surplus of SIT 5.5 billion originally forecast for this year was subsequently reallocated to additional programmes to reduce waiting times in the health sector.

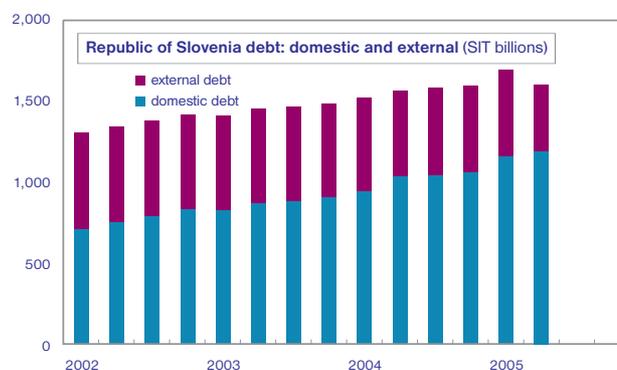

Expenditure on pensions in the first ten months of the year was up approximately 5.6% in nominal terms from the same period last year, while revenues were up just 3.7%. November's pension increase, the third, will see pensions rise by a further 1.7%. The rise in the Pension Fund (ZPIZ) expenditure was the result of a rise in the number of pensioners and also the pension increases. Pensions were increased for the third time in November. Under the new increase, November's pensions will be 1.7% higher. In addition, an extra payment for October will be made in November, as the new arrangements have been backdated to 1 October. The number of pensioners was up 1.1% year-on-year in October, with the number of old-age pensioners up almost 2.0% year-on-year.

Investment expenditure in the first eight months of the year was behind last year's level for the same period.

Despite expectations of a strengthening in investment expenditure, between January and August it was down 7.5% year-on-year in nominal terms.

Public Debt and Guarantees

At the end of June Slovenia's public debt stood at SIT 1,604 billion, or 24.9% of estimated GDP. Between the end of last year and the end of June, public debt increased by just SIT 4 billion, which is partly a consequence of spending a portion of the revenue from the privatisation of NLB to reduce debt. Despite the almost unchanged nominal value of the debt, its structure showed a pronounced change. The proportion of internal debt grew by 7.8 percentage points, and now stands at approximately three-quarters of the entire debt. This is a consequence of the policy of borrowing via long-term securities on the domestic market.

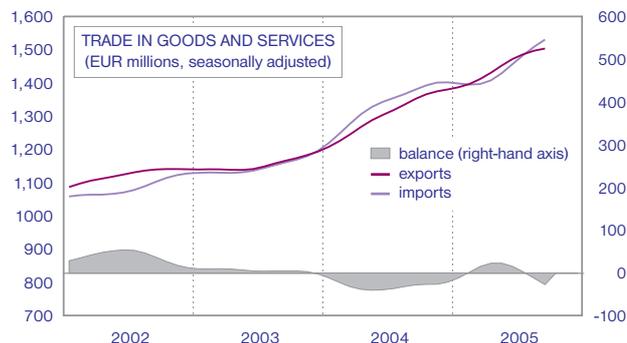

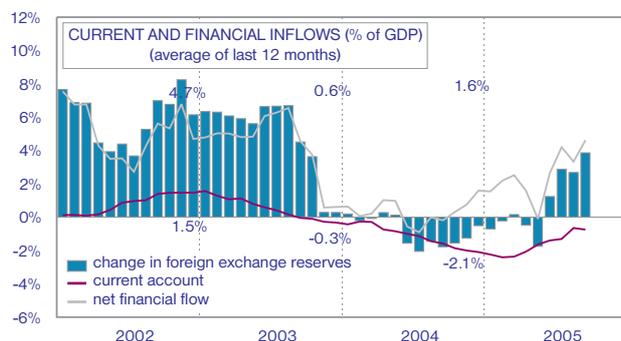

At the end of June debt with a government guarantee stood at SIT 598 billion, or 9.3% of estimated GDP. In the period from the end of December to the end of June, debt with a government guarantee increased by SIT 36 billion. In this there was a higher relative increase in guarantees for external debt.

5. BALANCE OF PAYMENTS

With September's positive balance of EUR 25 million, this year's current account position moved from deficit to surplus. The nine-month figure of a surplus of EUR 5 million was EUR 345 million better than in the same period last year, with all groups of transactions having contributed to this. There were smaller deficits in goods balance and in the income position, while the surpluses in services and in transfers were larger than in the same period last year.

The monthly dynamics of trade in goods and services has been slowing since June. The rising trend that prevailed over the first half of the year, and the slowdown in the next three months, was more pronounced for exports than for imports of goods and services. The trend of a surplus in trade in goods and services that was prevalent for the majority of this year was transformed into a deficit in the last two months. Thanks to the favourable dynamic before the deterioration, the year-on-year rates of growth in imports and exports are high, with the 12% rise in exports of goods and services superior to the 10% rise in imports. Unlike the deficit last year, this year a surplus in the amount of EUR 121 million has been generated, equivalent to 0.6% of estimated GDP over the period (last year's deficit was 0.7% of GDP).

In goods trade the slowdown in export growth continued in September, while growth in imports remains high.

Sources: Goods trade: Statistical Office of the Republic of Slovenia. Goods trade volumes: BoS estimates, Statistical Office of the Republic of Slovenia, IFS, IMF.
*Through August

Having reached almost 20% by May, the current rate of growth in exports slowed to a poor 1% in the months to September. At the same time, import growth remained at levels of over 20% at an annualised rate, with a slight slowing trend. These movements have led to the deficit in goods trade growing more quickly in recent months, and to the cumulative year-on-year rate of growth in imports approaching that of exports.

In the first nine months of this year exports grew by 11.9% year-on-year, and imports by 9.5%. At the mid-point of the year export growth was outstripping import growth by 4.4 percentage points, but by September the gap in the cumulative difference had fallen to 2.4 percentage points. After falling in the second quarter, the deficit in goods trade exceeded last year's comparable figure in all the months of the third quarter. It amounted to EUR 105 million in September, almost double what it was the year before. This year to September the deficit in goods trade reached EUR 783 million, which is still EUR 143 million less than last year, given the favourable trends in the first half of the year.

The current rate of growth in exports of goods is defined primarily by the slowdown in growth in exports to the EU. Despite the decline in the current rate of export growth, the

Source: Bank of Slovenia

rapid growth recorded in the first months of the year means that exports to the EU have recorded above-average year-on-year growth of 13.9%, and have gained a percentage point in the structure of total exports, the EU now accounting for 68%. The current rate of growth in exports to new EU member-states is slightly better than for the EU as a whole, as is the current rate of growth in exports to non-members (the year-on-year rates of growth are 12.4% and 8.1%). At 11%, this year's growth in exports to former Yugoslav republics is slightly lower than the figure for the EU. High growth continued in exports to Serbia-Montenegro (31% last year, 23.5% this year) and to Croatia (16% last year, 13.2% this year), while exports to Macedonia and Bosnia-Herzegovina have stagnated in recent years level.

In imports of goods, imports from countries outside the EU are rising rapidly, while imports from the EU are maintaining high growth. Both last year and this year there has been a rapid increase in imports from the former Yugoslav republics (up 37.5%), while imports from Asia are also rising rapidly (up 20%). The proportion of Slovenia's imports accounted for by the latter increased slightly to 4.7%. Extremely high growth is being recorded by imports from Serbia-Montenegro (83.3%) and Bosnia-Herzegovina (60.5%). Imports from the former Yugoslavia account for 6.4% of Slovenia's total imports (compared with 5.1% in the same period last year), while the trade surplus with the region remains high at EUR 954 million. With imports from non-members rising more rapidly, the proportion of Slovenia's imports accounted for by the EU fell by 1 percentage point to 81.4%.

Among exports, the largest rise this year of 18.1% was recorded by exports of consumer goods. They account for 37% of exports, and are the second-largest group, behind intermediate products, which account for almost 50% of exports. The production of road vehicles is of growing importance to exports: this year exports by this sector have risen by 45%, its proportion of total exports rising by 3.5 percentage points to 15.3%.

Among imports the fastest growth is being recorded by imports of intermediate goods, primarily as a result of rises in world commodity prices and energy prices. The value of imports of oil and refined petroleum products has risen by 46.6% this year, while the proportion of total imports that they

account for has risen from 5% last year to 7% this year. Total imports of intermediate goods rose by 14.5% year-on-year this year, or a little less, 9%, in terms of volume.

After slowing temporarily in August, the current rate of growth in trade in services picked up again in September.

Exports continue to grow faster than imports. Exports of services in the first nine months of the year amounted to EUR 2,376 million, up 13.6% on the same period last year, while imports were up 10.5% at EUR 1,742 million. A surplus in trade in services of more than EUR 100 million was first recorded this May, since which it has happened again twice, in August and September. Exports exceeded imports by EUR 634 million in the first nine months of the year, which represents year-on-year growth of 23%.

Among the more important services, prominent growth has been recorded this year by business and technical services.

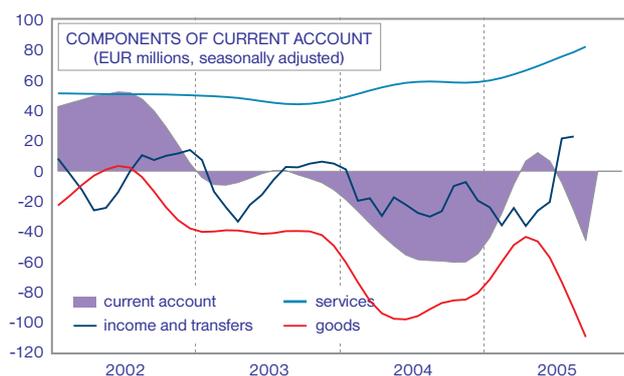

Exports of these rose by 14.9% year-on-year in the first nine months of the year, while imports rose even more rapidly, at a year-on-year rate of 35.3%. The deficit reached EUR 92 million. With imports of business and technical services rising rapidly, the proportion of total imports of services that they account for rose by 3.6 percentage points to reach almost 20%. High growth in both imports and exports is also being recorded by communications and construction services, the first with a deficit and the second with a surplus.

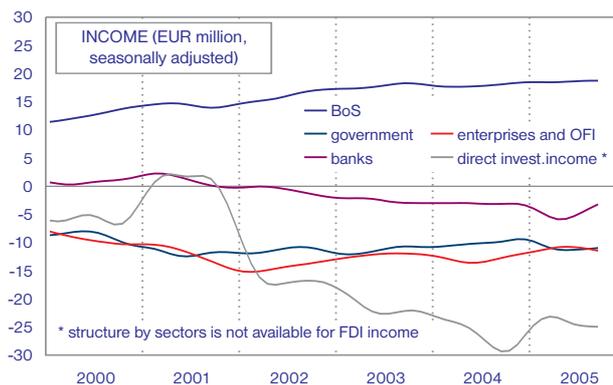

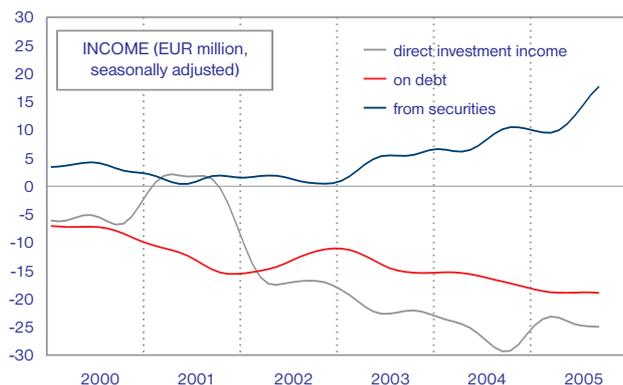

September took revenues from tourism past EUR 1 billion.

They were up 10.8% or EUR 111 million on the same period last year. The main factors in the rise in revenues from tourism were the rise of EUR 30 million in revenues at casinos and the rise of EUR 50 million in foreign currency spending by tourists. Overnight stays by foreign visitors were down 1% from last year, with the number of arrivals rising by 2%. There has been a decline in the average number of overnights by foreign tourists for three successive years, last year's decline being sharper than in the previous two years. Health spas and mountain resorts have grown in importance in the tourism sector in recent years, accounting for 43% of arrivals by foreign visitors, and more than one-half of all their overnight stays. Foreign tourists also spend longest at health spas, the average stay of 4.1 days being a day longer than the average for Slovenia as a whole. However, the largest decline in the average length of stay by foreign visitors in recent years was recorded by health spas. Apart from health spas, the sharpest decline in the this year's average length of stay was recorded by Ljubljana: the number of foreign tourists rose by 26.4%, while the rise in the number of overnight stays of 17% was significantly lower.

Flows in both directions in the income account have continued to grow in line with growth in gross financial transactions with the rest of the world.

Inflow of capital income totalled EUR 365 million in the first nine months of the year, up 39.5% year-on-year. Outflow of capital income amounted to EUR 663 million, up 10.5%. The capital income

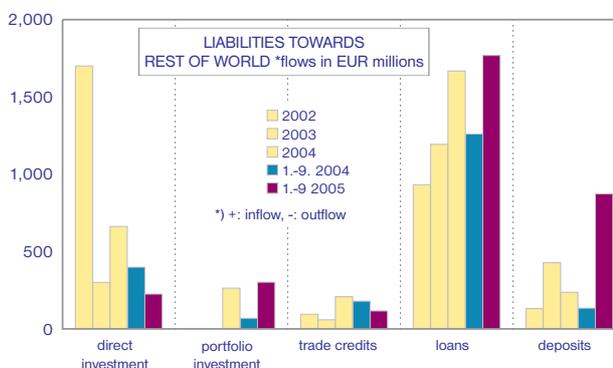

dynamic reflects the prevailing tendencies in this year's financial account, both in terms of sector and in terms of type of investment. The fastest rate of growth and the largest volume were recorded this year by income from securities, which reflects the exceptional growth in portfolio investments abroad. This year to September it reached EUR 272.3 million, up 52% year-on-year. Income from portfolio investments accounts for 75% of all capital income on the inflow side, 5 percentage points more than last year and 15 percentage points more than in 2003.

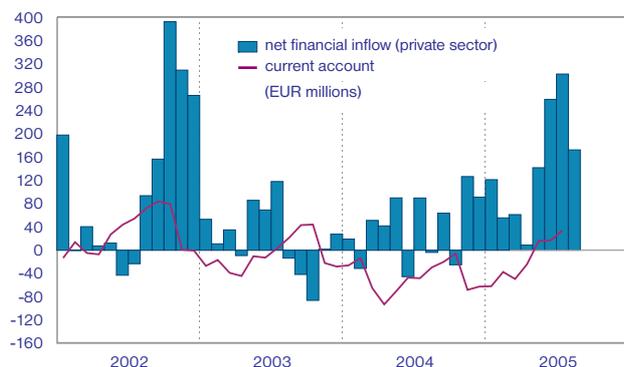

Financial Account

Net financial inflows from the rest of the world have been strengthening since the middle of the year. There was a net financial outflow of EUR 346 million this year to May, entirely as a result of government outflows for the repayment of eurobonds. Between June and September there was a net financial inflow of EUR 1.2 billion, equivalent to approximately 4.5% of annual GDP. The increase in net financial inflow is primarily the result of higher liabilities to the rest of the world. The main source of inflows remains bank borrowing abroad, while investments in securities account for most outflows.

September, having been the largest source of financial inflows behind bank borrowing abroad in the first seven months of the year.

Foreign direct investment strengthened in August and September, but was still lower in the first nine months of this year than in the same period last year. Foreign direct investment amounted to EUR 166 million in August and September, almost three-quarters of the FDI inflow in the first nine months of the year. This is still EUR 174 million less than in the same period last year.

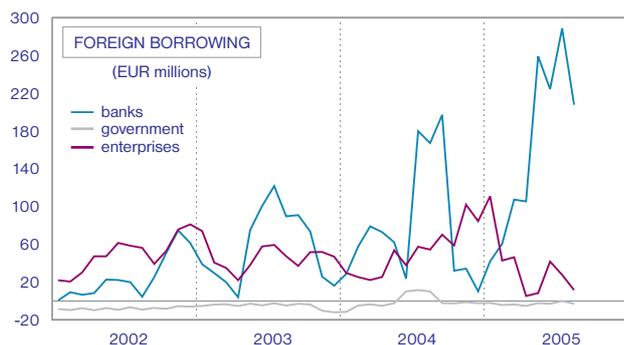

Investments by non-residents in domestic portfolio investments were modest in August and September, but this year's have nevertheless been significantly higher than last year's. Non-residents invested a net sum of EUR 28 million in the private sector in August and September, buying EUR 40 million of shares and selling EUR 12 million of other securities. This year to September the inflow into the private sector amounted to EUR 302 million, up EUR 234 million from the same period last year. Investments in shares strengthened more than investments in other securities. Investments in government securities fell by EUR 350 million over this period. Excluding May's eurobond repayment (of EUR 500 million), non-residents' investments in government securities amounted to approximately EUR 150 million.

Inflows on the side of liabilities to the rest of the world have been strengthening since May. Financial inflows into the private sector amounted to EUR 1.3 billion this year to May, and to EUR 2.1 billion from June to September. After the slight seasonal fall in inflows in August (to EUR 280 million), September's inflow returned to the previous level (EUR 409 million). Inflows via bank borrowing abroad remain high, while non-residents' deposits at banks actually fell in August and

The inflow from trade credits taken in recent months has been higher than in the same period last year. Trade credits taken amounted to EUR 103 million in August and September, compared with a net outflow of EUR 33 million in the same period last year. This year to September the net inflow from

this source amounted to EUR 115 million, down EUR 64 million from the same period last year.

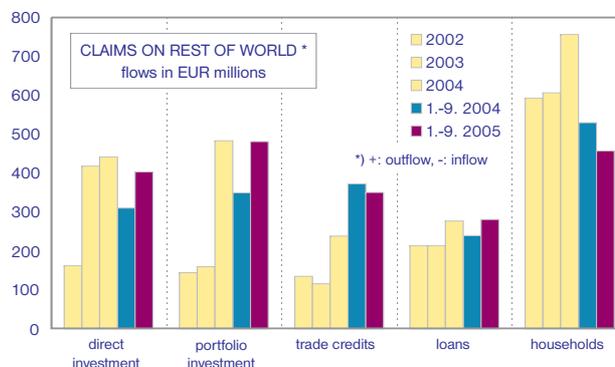

The heavy borrowing abroad by banks was to a great extent the result of relatively strong demand for lending, slow growth in deposits, and thus a need for additional financing. Another factor in the increase in bank borrowing abroad was heavy domestic demand for foreign currency lending, which is allowing banks to close their foreign currency positions despite the borrowing abroad. In August and September banks borrowed an additional EUR 578 million abroad, taking the total in the first nine months of the year to EUR 1,580 million. Provisional figures show bank borrowing to have remained high in October. Companies paid off EUR 65 million of debt abroad in August and September, while the total inflow over the first nine months of the year was just EUR 188 million, half what it was in the same period last year. The decline in corporate borrowing abroad is to a great extent the result of a switch from foreign sources of financing to domestic sources, owing to the convergence of domestic interest rates, the abolition of restrictions on foreign currency lending and increased competition on the domestic lending market.

In August and September there was a net outflow in non-residents' deposits at banks, which have been the second-most important financial inflow this year. Non-residents' deposits rose by EUR 873 million over the first nine months of the year, significantly in excess of the rise in the same period last year (EUR 134 million). Like the rise in bank borrowing abroad, this rise can to a great extent be attributed to the demand for the financing of bank lending and the ability of banks to finance themselves via their parent banks abroad. Deposits at banks fell by EUR 70 million in August and September, but the increase recorded in July was EUR 302 million.

Private sector investments abroad are gradually strengthening, but significantly slower than non-residents' investments in the private sector. Private sector investments abroad amounted to EUR 1,174 million this year to May, similar to the same period last year, and to EUR 998 million between June and September, up EUR 124 million from the same period last year. The low volume of investment in August (EUR 50 million) reflects low portfolio investments on one hand, and a reverse flow (inflow) in direct investment abroad and trade credits granted on the other hand. In September investments

abroad returned to the level seen in earlier months (EUR 302 million). In the first nine months of the year the largest rises over the same period last year were recorded by outflows from bank loans to the rest of the world (55%), investments in securities (37%) and direct investment abroad (30%).

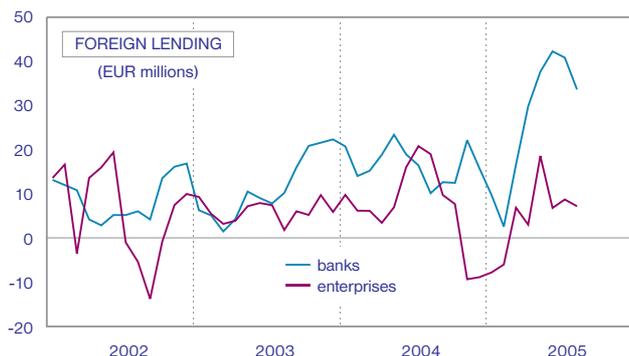

Direct investment abroad amounted to EUR 183 million in September, which is almost half of the total direct investment abroad in the first nine months of the year. Prime in the rise in direct investment abroad in both September and the year as a whole were investments by certain banks and trading companies in the former Yugoslavia.

After exceptional growth in July, investments in foreign securities fell in August and September. Investments in foreign securities amounted to EUR 480 million this year to September, up EUR 131 million from the same period last year. After rising to EUR 139 million in July, the outflow fell in August and September to a total of EUR 33 million.

Signs: inflows or increases in liabilities (+), outflows or increases in claims(-). Increases in foreign exchange reserves (-), increases in debt (+). Source: Bank of Slovenia. 1) "Private sector" = non-government sector, thus including public sector organisations.

Outflows from trade credits granted to the rest of the world were similar to last year's. This year to September the outflows amounted to EUR 350 million, down EUR 22 million from the same period last year. August's repayments (of EUR 125 million) were mainly of a seasonal nature, but were nevertheless almost triple those of last August. There were EUR 96 million of trade credits granted in September, the highest figure since September 2004.

This year to September the private sector approved EUR 281 million of financial loans to the rest of the world, 17% more than in the same period last year. The proportion of loans to the rest of the world accounted for by the banking sector reached 79% this year, compared with 60% last year. The outflow amounted to EUR 66 million in August and September, of which banks accounted for EUR 48 million.

Owing to the small deficit in the current account and in the financial account, foreign exchange reserves fell this year to May, but since June they have been rising, thanks primarily to net financial inflows. Between the end of last year and the end of May foreign exchange reserves fell by EUR 480 million, but rose by EUR 1,300 million between the end of May and September. Foreign exchange reserves stood at EUR 7.4 billion at the end of December, EUR 7.1 billion at the end of May, and EUR 8.4 billion at the end of October. Since May the indicators measuring sufficiency of foreign exchange reserves have been improving: October's reserves were 31.4% of annual GDP, and were sufficient for 5.9 months of imports of goods and services.

External Debt

The net external debt rose by EUR 651 million this year to September to stand at EUR 1,525 million. Over this period the gross external debt rose by EUR 3,048 million, while gross claims against the rest of the world rose by EUR 2,396 million. The gross flows are thus increasing on both the liabilities side and the claims side, which is to a great extent the result of the increasing openness of the Slovenian economy, and shrinking restrictions on the flow of capital. The net external debt has remained more or less unchanged since the end of July, having risen by EUR 16 million in August and fallen by EUR 37 million in September.

In September the gross external debt rose by EUR 628 million, which is approximately one-fifth of the rise in external debt this year, to stand at EUR 18.3 billion. As in most of this year, the largest factor in the increase in debt in the month was bank borrowing via loans abroad, of which there was EUR 309 million in September, and EUR 2,611 million this year. This year to September the government reduced its debt to the rest of the world by EUR 208 million, while other sectors (excluding banks) saw external debt rise by EUR 483 million. At the end of September the government's external debt stood at EUR 2.1 billion, that of banks at EUR 7.4 billion, and that of other sectors at EUR 7.6 billion.

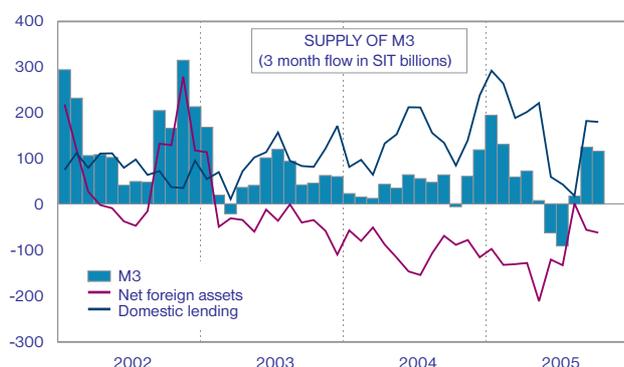

Gross claims against the rest of the world rose by EUR 665 million in September, approximately the same as the gross external debt. The Bank of Slovenia's claims accounted for the largest proportion of this year's rise in gross claims against the rest of the world (42%), with the claims of banks and of other sectors accounting for slightly less (27% each), and government claims the least (5%). The Bank of Slovenia's claims against the rest of the world totalled EUR 7.0 billion, those of other sectors EUR 4.6 billion, those of banks EUR 3.1 billion, and those of the government EUR 0.8 billion.

6. MONEY AND CREDIT

The negative contribution of net foreign assets to growth in M3 has been higher this year than last year, but has shrunk in the last three months. In the first ten months of the year banks increased their domestic investments by SIT 730 billion (compared with SIT 542 billion in the same period last year), while net foreign assets (NFA), which shows the contribution made by balance of payments flows to growth in M3, were down more than SIT 40 billion from the same period last year to SIT 427 billion. With the current account in balance, the decline in NFA is to a great extent a result of the increase in portfolio and direct investments by non-bank sectors. Portfolio investments are the most important in terms of volume, having risen by 40% year-on-year this year to September to SIT 107 billion.

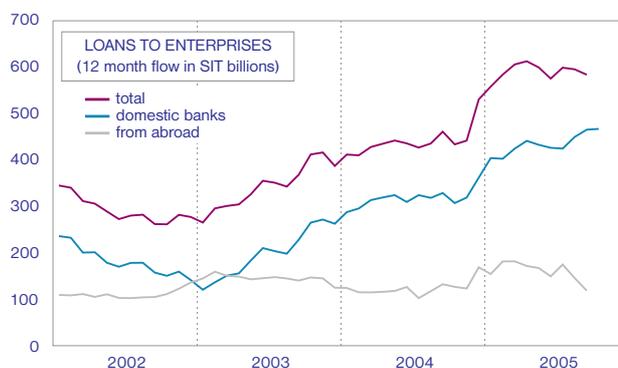

Private sector lending rose strongly in the second half of last year, and has remained relatively high this year. The increase in lending to the private sector was one-third higher in the second half of last year than in the first half at SIT 319 billion, then reached SIT 330 billion in the first half of this year, with the increase between July and October standing at SIT 217 billion. The largest increase was recorded by lending to the corporate sector, which totalled SIT 270 billion between last October and this March, in line with the expansion of economic activity and growth in exports of goods. Lending to the corporate sector has been falling since the second quarter, with the increase in lending totalling SIT 90 billion in the second and third quarters. The increase in lending in the third quarter was actually lower than in the same period last year. The largest increases this year to October were recorded by lending to households and other financial organisations, while the increase in lending to the government has more than halved this year. The increase in lending to households in the amount of SIT 169 billion was over

SIT 30 billion more than that recorded in the whole of 2004, while the increase in lending to other financial organisations more than doubled from SIT 21 billion in the whole of last year to SIT 46 billion this year.

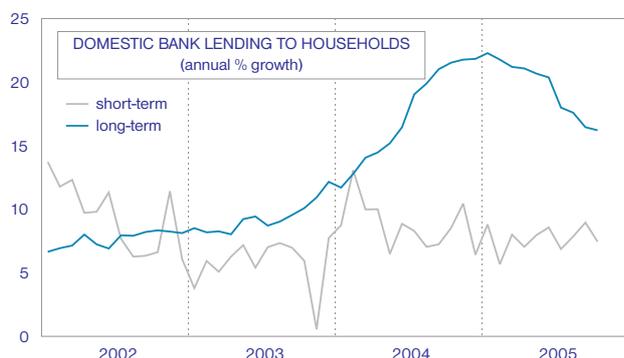

The switch from domestic currency to foreign currency has accelerated this year. Foreign currency loans are prevalent, while in recent months non-bank sectors have been making net repayments of short-term tolar loans. The proportion of the increase in loans to non-bank sectors accounted for by foreign currency loans rose by 13 percentage points this year to October to reach 88%. The total stock of loans to non-bank sectors increased by SIT 41 billion in October, as a result of an increase of SIT 52 billion in foreign currency loans and a net repayment of tolar loans in the amount of SIT 11 billion. The heaviest borrowers in foreign currency are companies and other financial organisations, while household borrowing has also picked up since the end of last year. This year to October the government paid off SIT 11 billion of long-term tolar loans and borrowed SIT 5 billion via foreign currency loans (May's figure of SIT 19.7 billion was the highest), but has mainly borrowed this year via short-term loans. Total year-on-year growth in domestic loans to non-bank sectors rose from 18.2% last October to 22.8% this October. Only year-on-year growth in foreign currency loans increased, by just under 13 percentage points to 59.6%. Over the same period year-on-year growth in tolar loans fell from 8.6% to 6%, with short-term tolar loans actually falling by 1.8% year-on-year.

This year companies have been replacing both domestic tolar loans and foreign currency loans from abroad with cheaper foreign currency loans from domestic banks. The increase in total domestic and foreign lending was SIT 385.5 billion in the first nine months of 2004, but was slightly more in the first nine months of this year at SIT 386.6 billion. Domestic lending to companies has been slowing gradually since April, with October's increase amounting to SIT 19.3 billion. Year-on-year growth in domestic lending to companies fell from 25.2% in April to 22.7% in October.

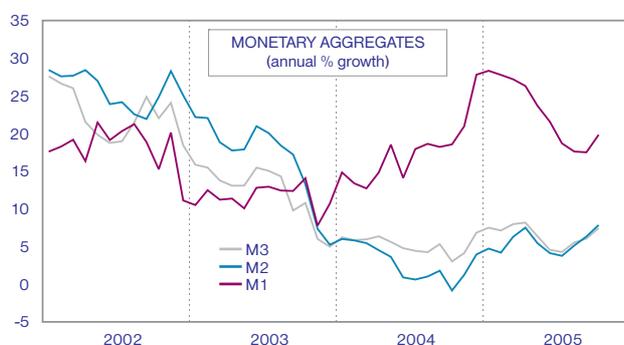

Direct lending to companies from abroad has been decreasing this year. The proportion of the total increase in domestic and foreign loans accounted for by loans from abroad fell from 38% last year to under 12% this year. Companies bor-

rowed heavily abroad in February and July, but in other months borrowing was low or repayments were made, September's figure being SIT 8.4 billion.

Household borrowing has increased most this year. The increase in lending to households was SIT 36 billion in the first quarter (at the level of the quarterly average in 2004), but rose strongly in the second and third quarters to more than SIT 57 billion, with October bringing a further increase of SIT 19 billion. Households are the only non-bank sector this year to have primarily borrowed via tolar loans. Of the total increase in loans to October in the amount of SIT 168.5 billion, tolar loans (primarily long-term) accounted for SIT 94.1 billion, and foreign currency loans for SIT 74.4 billion. Foreign currency loans account for 44% of lending to households this year, compared with just 8.9% in the same period last year. Year-on-year growth in total lending rose from 20.5% last December to 24.9% this October. The largest rise was in growth in foreign currency lending, partly owing to the low basis from last year.

The government has been a net borrower from banks in the last two months. This year to October the government recorded net borrowing of SIT 49.3 billion from banks, with SIT 39 billion taken in September and October alone. This year the government has primarily borrowed from banks via securities issues (SIT 39 billion), its borrowing via loans being just a quarter of this (SIT 10.3 billion). The stock of short-term tolar lending rose by SIT 16.7 billion and the stock of foreign currency lending by SIT 5.7 billion, while the stock of long-term tolar loans fell by SIT 11.5 billion.

The current rate of growth in the M1 monetary aggregate fell between February and August this year, but rose again in September and October to just over 20% at an annualised rate. M1 rose by SIT 10 billion in October (primarily owing to an increase of SIT 8.4 billion in currency) to SIT 1,079 billion.

Year-on-year growth in M1 has been gradually falling this year. It peaked in January at 28.3%, and then fell by 8.5 percentage points to reach 19.8% by October. The holiday season means that demand for transaction money reaches its highest level in November and December, but a repeat of last year's growth is nevertheless not anticipated.

Growth in the broad money aggregates has been gradually increasing since July. The broad monetary aggregates M2 and M3 fell between May and July owing to the decline in government deposits at the Bank of Slovenia and other banks, which were used to make eurobond repayments abroad and the early repayment to banks of RS06 bonds for unpaid foreign currency deposits. Year-on-year growth in M2 was 7.9% in October, while growth in M3 was 7.4%, the same as this April. October's growth in the two broad money aggregates was primarily the result of growth in M1 transaction money, and only to a lesser extent the result of growth in time deposits.

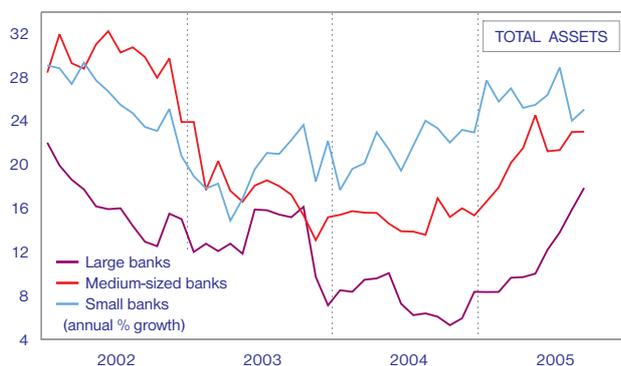

Tolar time deposits are increasing more rapidly than foreign currency deposits. Tolar time deposits at banks rose by SIT 108.3 billion this year to October, while foreign currency deposits rose by less than half of this (SIT 49.7 billion). Year-on-year growth in tolar time deposits at banks, which last October was still negative at -8.5%, had risen to 6.7% by October. Over the same period year-on-year growth in foreign currency deposits fell from 12.9% to 6.5%. The main factor in growth in tolar time deposits outstripping growth in foreign currency deposits is tolar interest rates being higher than foreign currency interest rates in the context of a stable exchange rate.

Only tolar time deposits of 31 days to 1 year have been increasing this year. Tolar time deposits of 31 to 90 days grew most year-on-year (18.4%), followed by tolar time deposits of 91 days to 1 year (16.7%). Tolar time deposits of up to 30 days and long-term time deposits of more than 1 year fell, the first by just under one-third, and the second by 14.3%. The structure of tolar time deposits is also being influenced by the interest rate yield curve and the liquidity preference, as there is practically no difference between interest rates on short-term tolar time deposits of up to 1 year and those of more than 1 year.

7. BANKING SECTOR

Year-on-year growth in the banking system's total assets is rising, and reached 21.3% at the end of October.

Total assets had risen by SIT 974.6 billion this year to reach SIT 6,653 billion at the end of October. More than half of the increase in total assets this year (57.6%) came from lending to non-bank sectors, which rose by SIT 561.6 billion, of which SIT 322.5 billion was lending to companies and SIT 169.4 billion was lending to households. Securities accounted for SIT 223.6 billion of the increase in banking transactions this year. On the financing side, there has long been a trend of banks financing the majority of their activities via foreign banks, which accounted for just under two-thirds this year, and only to a lesser extent via deposits by non-bank sectors, which accounted for just one-fifth this year. The current rate of growth in total assets, which has averaged 1.6% this year, was significantly lower than in previous months at 0.8% in October.

The largest rise in total assets in October was recorded by medium-sized banks, while large banks saw their total assets stagnate. The medium-sized banks recorded a rise of 1.7% in their total assets, compared with 1.5% for the small banks and just 0.2% for the large banks. The year-on-year rates

of growth were just under 18% for the large banks, 25.6% for the medium-sized banks and 25.2% for the small banks.

The market shares of the five largest banks in terms of total assets and lending did not change significantly in October despite a slight decline.

The market share of the five largest banks (the CR5) in terms of total assets was 63.7% at the end of October, having fallen by 0.4 percentage points in the preceding month and by 1.6 percentage points in the preceding 12 months. In lending to non-bank sectors, where the five largest banks have a share of 62.9%, there was no change in October, although it was down 2.1 percentage points over the preceding year. The situation is similar in lending to households, where the five largest banks have a share of 63.1%, the share having fallen by 0.2 percentage points in October and by 2.4 percentage points in the preceding year. The largest fall in the preceding 12 months is still being recorded by lending to companies, where the share of the five largest banks was down 3.1 percentage points, although the decline in this market share has slowed in recent months and was just 0.1 percentage points in October.

Growth in lending to non-bank sectors remains high and lending to households is showing no signs of decline, while the increase in lending to companies in October was lower than in previous months.

The monthly increase in lending to non-bank sectors has averaged SIT 56.2 billion this year, SIT 14.5 billion more than last year's average. The fastest growth among lending to non-bank sectors at the end of October was being recorded by lending to households (25%), while year-on-year growth in lending to companies and to other financial organisations was just under 24%. The monthly increase in lending to households was SIT 20 billion in October, the second-highest this figure this year, while the total increase in such lending over the first ten months of the year exceeded the figure for the whole of last year (SIT 135.5 billion) by just under a quarter. The maintenance of such a dynamic over the long term is raising the indicator of household indebtedness, or the ratio of the stock of household borrowing from banks to average monthly wages. This ratio reached 7 in September, and is significantly higher than in previous years. Year-on-year growth in lending to the government is still negative (-2.8%), the government having made net repayments of bank lending

BALANCE SHEET Level in SIT; growth in %	Level		Growth since	
	2003	2004	Oct.-05	Dec.-04

in the amount of SIT 1.4 billion this year. Among investments in securities, banks recorded the largest increases this year in investments in Bank of Slovenia tolar bills (SIT 192.8 billion) and other securities (SIT 145.6 billion), while the net increase in bank investments in government securities this year is relatively low at SIT 43.5 billion. The decline in the stock of Bank of Slovenia foreign currency bills at banks continued in October. This amounted to SIT 50.1 billion in October, and SIT 154.2 billion cumulatively this year.

The gap between the rates of growth in foreign currency lending and tolar lending to non-bank sectors is increasing in favour of the former. Foreign currency has accounted for close to 90% of the increase in lending to non-bank sectors this year. The factors in this are the net repayment of tolar bank lending by companies (together with other financial organisations), and the increasing proportion of pure foreign currency lending in new household lending (44%). For non-bank sectors overall, year-on-year growth in foreign currency lending approached 60% by the end of October, compared with just 6% for tolar lending, while the figures were 51.7% for companies and other financial organisations and 478.5% for households. The high current rate of growth in foreign currency lending is raising the proportion of the total stock of lending to non-bank sectors accounted for by foreign currency lending. This reached 43.3% in October, while for companies and other financial organisations the figure was 55%. The proportion of household lending accounted for by foreign currency lending reached 10.4% in October.

Growth in banks' total assets is double that of deposits by non-bank sectors, and banks are therefore borrowing from banks abroad. Deposits by non-bank sectors stagnated in October, the higher year-on-year growth compared with previous months being a consequence of the fall in deposits last October. The increase in household deposits, which account for close to two-thirds of all deposits by non-bank sectors, remains low, having totalled just SIT 7.8 billion in the last four months. Borrowing via foreign banks in October did not reach this year's high average level, but still accounted for more than half of the financing for the increase in total assets in the month, the proportion standing at close to two-thirds for this year cumulatively. Year-on-year growth in liabilities to foreign banks was 67.8% in October. The proportion of the banking system's total liabilities accounted for by liabilities to foreign banks rose by 6.8 percentage points to 24.7% over the last year, while the proportion accounted for by deposits by non-bank sectors fell by 6 percentage points to 56%. There is no significant change being seen in the currency or maturity structure of deposits by non-bank sectors. Sight deposits accounted for just under 35% in October, short-term deposits for 58%, while long-term deposits accounted for 7% for the third successive month. The proportion of deposits by non-bank sectors accounted for by foreign currency deposits is also relatively stable. With tolar deposits growing faster year-on-year, it amounted to 34% in

October, having fallen by 0.6 percentage points between June and the end of October.

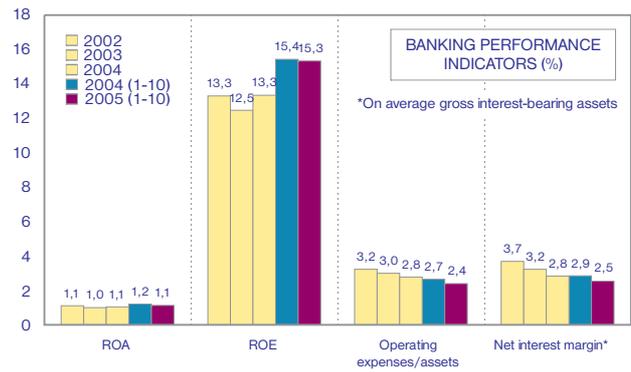

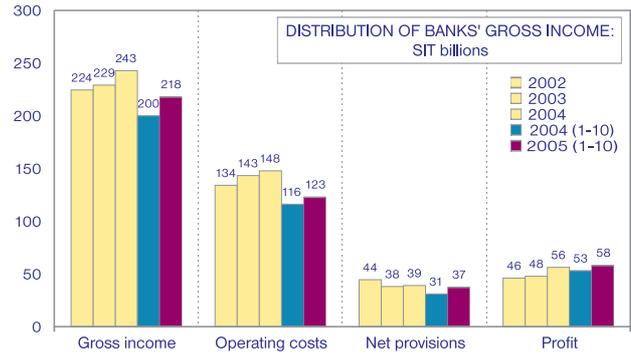

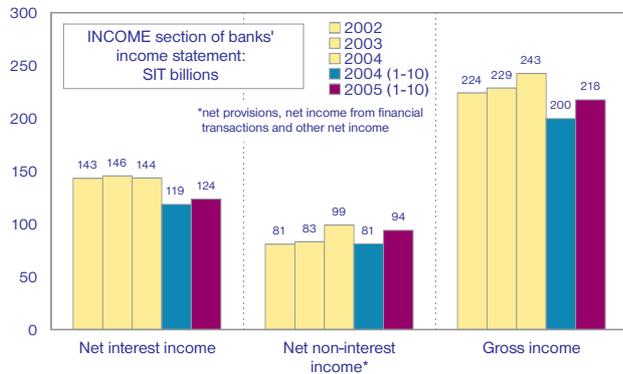

Growth in bank's net interest income in October remained at the level seen in previous months (4.3%), while growth in non-interest income slowed (to 15.7%). Growth in net interest income (of 4.3%) was similar to that seen in previous months, the main factor in the positive growth being the faster decline in interest expenses (9.2% year-on-year) than in income (2.5%). Year-on-year growth in banks' gross income has been falling in recent months and was just 8.9% in October, as a result of the decline in growth in non-interest income, as the effect of high non-interest income from financial transactions in the summer is gradually diminishing. Growth in net non-interest income from fees and commissions is very stable, but relatively low at 8.3%. Both are factors in the continuing decline in banks' financial intermediation margin.

Growth in operating costs and provisioning costs remains stable. Operating costs had risen by just 5.8% by the end of October, with labour costs up 5.3%. Year-on-year growth in provisioning costs is also relatively stable (20.3%). This is slower than growth in lending, although relatively high volatility is a feature of banks' provisioning costs in the final months of the year or the beginning of a new year.

Banks' margins are still showing a gentle falling trend. This year's cumulative interest margin on average interest-bearing assets is approaching 2.5%, down 0.3 percentage points from the same period last year. The interest margin calculated for the last 12 months per total assets approached 2.4% in October. The non-interest margin has again been falling since August, and was just over 1.8% in October. The financial intermediation margin thus fell below 4.3%.

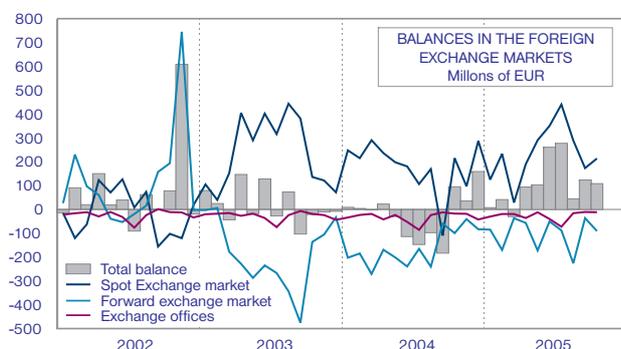

By the end of October banks had declared a pre-tax profit of SIT 57.8 billion this year, up 9.2% from the same period last year. With profit growing more slowly than total assets, ROA is down 0.1 percentage points this year, while ROE is comparable to last year's figure at 15.4%. The proportion of banks' gross income accounted for by net interest is 2.5 percentage points lower this year at 56.8%, while operating costs as a proportion of banks' gross income are 1.7 percentage points lower at 56.4%. Coverage of operating costs with non-interest income stood at 76.7% at the end of October, up 6.6 percentage

points from the same point last year. The indicator measuring operating costs as a proportion of total assets is 2.4% this year, down 0.25 percentage points.

B. MONETARY POLICY

1. EXCHANGE RATE

After balance at the beginning of the year, since April an excess supply of foreign exchange has been prevalent on the foreign exchange markets. In October this amounted to EUR 108 million. This year to October it reached EUR 1 billion, while in the same period last year net demand in the amount of EUR 445 million prevailed. These movements are primarily the result of high net financial inflows from abroad and the improvement in the current account position. With the high excess supply of foreign exchange, total foreign exchange reserves this year to October increased by EUR 912 million or by 3.3% of estimated GDP on an annual level.

Transactions on the spot foreign exchange market were the largest factor in the overall excess supply. In October the excess supply of foreign exchange was just under one-tenth lower than this year's average monthly supply of foreign exchange at EUR 212 million. The biggest contributors to the excess supply of foreign exchange were non-residents, in an amount of EUR 139 million, while the net supply of foreign exchange from private individuals and companies totalled just EUR 74 million. This year to October the excess supply of foreign exchange on the spot market amounted to EUR 2,322 million, approximately EUR 200 million more than in the same period last year. Non-residents accounted for approximately 78% of the overall excess supply of foreign exchange, private individuals for 12%, and companies for the lowest proportion of 10%.

The trend of lower net demand for foreign currency continued in October. Overall net demand for foreign currency in the first ten months of this year amounted to EUR 277 million, a fall of just under one-fifth from the same period last year.

Net demand for foreign exchange on the forward market was still below-average in October at EUR 92 million. Banks sold EUR 130 million of foreign exchange to non-residents on the forward market, and purchased EUR 39 million of foreign exchange from domestic companies.

Transactions between banks and non-bank sectors have remained the main source of increase in the potential supply of foreign exchange on the market in the final

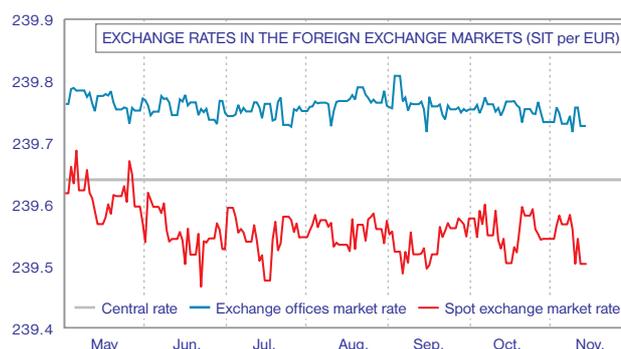

quarter. In October the potential supply of foreign exchange increased by EUR 236 million. This year to October it reached EUR 1.7 billion, already twice the supply for the whole of 2004. With growth in liabilities to non-bank sectors relatively low, the increase in the potential supply of foreign exchange on the market was spurred primarily by the high growth in foreign currency loans, in particular to companies and households.

1) Basket/effective exchange rate: basket of 7 currencies of Slovenia's main foreign trade partners (excluding Croatia), weighted by shares in Slovenian goods trade. From January 2002 onwards three currencies are taken into account (EUR, USD, CHF). Sources: BoS, Statistical Office of the Republic of Slovenia and various foreign sources.

Banks further increased the potential supply of foreign exchange by reducing their stock of subscribed foreign currency bills. The stock fell by EUR 218 million in October. Nevertheless, the net potential supply of foreign exchange from transactions between banks and the Bank of Slovenia fell to EUR 145 million. The main factor in the smaller potential supply was banks increasing their stock of foreign exchange swaps by EUR 73 million, the Bank of Slovenia not having made any outright purchases of foreign exchange in October. However, this year to September the Bank of Slovenia made outright purchases from banks of EUR 1,332 million of foreign exchange, thus reducing the potential supply of foreign exchange on the market by more than EUR 767 million.

The nominal exchange rate remains stable. With the exception of ordinary movements within monthly seasonal trends, since June the euro exchange rate on the spot market has remained stable at a level 0.04% below the central rate. The euro exchange rate is also remaining stable on the exchange office market, fluctuating at a level 0.06% above the central rate.

2. INTEREST RATES

The Bank of Slovenia last changed the interest rates of its tolar instruments on 8 April this year. Since joining the ERM II, the Bank of Slovenia has twice (last December and this April) raised the foreign exchange swap rate and the refinancing rate by 0.25 percentage points each time, these now standing at 1.5% and 3.5% respectively. The purpose of these structural adjustments was to ensure continued stability on the money market. The Bank of Slovenia's other tolar interest rates have remained unchanged since Slovenia joined the ERM II. The differential between the interest rate on 60-day tolar bills and the ECB refinancing rate remains 2 percentage points.

There was merely a tiny change in the interest rate on the interbank market in October. After temporarily rising to 3.84% in August, the interest rate on interbank deposits fell again in September to this year's average level of 3.73%, and then remained practically unchanged in October at 3.74%. The interest rate on overnight placements (the Sionia) moved in the opposite direction, up 0.02 percentage points at 3.72%. In October the yield curve of quoted interest rates declined for the lowest and highest maturities, the largest decline of 0.06 percentage points being recorded by 1-day deposits, the same amount by which they had risen in the preceding three months. The decline on the other maturities ranged from 0.01 to 0.03 percentage points.

Interest rates on treasury bills fell slightly in October. The largest fall in interest rates of 0.08 percentage points came at auctions of 6-month treasury bills, while the smallest fall of 0.02 percentage points was recorded by 1-month treasury bills. In recent months the interest rates on treasury bills have varied

within a very narrow range of 0.1 percentage points. Demand at the auctions of 1-month treasury bills exceeded supply by between 1.3 and 2.2 times, the interest rate ranging from 3.69% to 3.73%. An interest rate of 3.67% was set at October's auctions of 3-month and 6-month treasury bills, both recording a decline (of 0.04 and 0.08 percentage points respectively) despite of lower excess demand.

There was a change in banks' declared interest rates on longer maturities in November. Tolar deposit rates for long-term deposits fell by 0.1 percentage points in November. Interest rates on short-term tolar deposits have not changed this year, while those on long-term deposits have fallen by 0.4 percentage points. The change in interest rates was larger on longer maturities: for time deposits of 1 to 2 years the decline was 0.1 percentage points, while for deposits of more than 5 years the decline was 0.8 percentage points. However banks have slowly been raising their interest rates on foreign currency deposits, and also, with slightly more variability, deposits with a foreign currency clause: interest rates on long-term deposits have risen by 0.2 percentage points this year, while the rise in those on short-term deposits was less, at 0.1 percentage points. The rises in foreign currency deposit rates and the cuts in tolar deposit rates are reducing the differential between them, particularly on the longer maturities: it is still 1.9 percentage points on deposits of up to 3 months, but is 0.8 percentage points on deposits of more than 1 year. The differential between interest rates on tolar deposits and deposits with a foreign currency clause is even lower at 1.5 percentage points for short-term deposits and 0.3 percentage points for short-term

time deposits. On the lending side, there has been a sharper fall this year in interest rates on short-term tolar loans (0.4 percentage points for household loans and 0.3 percentage points for corporate loans) than in those on long-term loans (0.2 percentage points for household loans and 0.1 percentage points for corporate loans).

IV. NOTES ON METHODOLOGY

General Notes

Sectors

External sector consists of non-residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, except their branches abroad;
- branches of foreign companies entered in the Companies Register of the Republic of Slovenia;
- sole proprietors or natural persons, independently performing business activities as their prime occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia holding a residential or working visa valid for no less than six months;
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad financed from the Budget as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

Domestic sector is broken down to monetary and non-monetary sector.

Monetary sector consists of the Bank of Slovenia and commercial banks. Commercial banks (hereinafter "banks") are deposit money banks that accept sight deposits and have banking licenses granted by the Bank of Slovenia. Only domestic banks, owned by residents or non-residents, are included.

Non-monetary Sector is further divided into following sub-sectors: Non-monetary financial institutions, General Government, Individuals, Enterprises and Non-profit institutions.

Non-monetary financial institutions include Savings banks, Co-operatives and other financial institutions.

General Government comprises Central Government and Other General Government. **Central Government** mainly consists of the Budget. **Other General Government** contains local communities and entities established by General Government - institutions, funds, companies, clubs and other societies engaged in education, health, culture, social insurance, trade unions and other organizations.

Households (Individuals) include resident individuals.

Enterprises comprise firms in private or public ownership or control, except for those included in the General Government.

Non-profit institutions consist of all entities, not included in any other sector.

Characteristics of the data

Data present stocks on assets and liabilities at the end of the period.

Data on stocks nominated in foreign currencies are converted into Tolars using Bank of Slovenia end of period middle exchange rate.

Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: general information

Table shows basic general data on Slovenia and its economy. In the "latest actual" column the latest available data for the current year are published. Data sources for the table are Bank of Slovenia, Ministry of Finance and The Statistical Office of the Republic of Slovenia.

1. MONEY AND BANKS

Last published data are preliminary.

Sectorization of banks' data as from April 30, 1999

For data from April 30, 1999 on a sectorization has been implemented according to **Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors**, (hereinafter "SKIS") - Official Gazette 56/98. SKIS which implemented a national standard for economic sectorization is based on European System of Accounts 95 and is in accordance with System of National Accounts 93.

According to SKIS the sectors of the economy are: 1.) Non-financial corporations, 2.) Financial corporations (central bank, commercial banks, other financial institutions), 3.) General government, 4.) Households, 5.) Non-profit institutions serving households and 6.) External Sector (non-residents)

There has been no change regarding definition of *Non-resident*.

Domestic sector is broken down to monetary sector and non-monetary sectors.

Monetary sector consists of the Bank of Slovenia and commercial banks. Commercial banks (hereinafter "banks") are deposit money banks that accept sight deposits and have banking licenses granted by the Bank of Slovenia. Domestic banks, owned by residents or non-residents, are included.

Non-monetary Sectors are: Non-financial corporations, Non-monetary financial institutions, General government, Households, Non-profit institutions serving households.

Non-financial corporations are legal persons - market producers of goods and non-financial services.

Non-monetary financial institutions consist: of Savings banks, Co-operatives and *Other financial institutions*. **Other financial institutions** are: 1. Other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing comp.), 2. Financial auxiliaries (securities brokers, stock exchanges) and 3. Insurance corporations and pension funds.

General government consists of: 1. Central government (administrative departments of state and central government agencies), 2. Local government (local administration, local agencies) and 3. Social security funds.

Households: resident individuals as consumers and resident individuals as sole proprietorships and partnerships being market producers and having no independent legal status. The data of the latter have been prior to April 30, 1999 included in the sector Enterprises.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, professional societies.

Table 1.1.: Monetary Aggregates

Table 1.1 shows stock data at the end of month for base money, monetary aggregates M1, M2 and M3, calculated according to the national definition and according to the harmonised definition of the European Central Bank (hereinafter: ECB).

The definition of base money is define as the sum of: *Banknotes in circulation, Banks' settlement accounts, Overnight deposit and Other deposits at the Bank of Slovenia* (Savings banks' settlement accounts, Savings banks' and Savings and loan undertakings' reserve accounts, transactional accounts of the Central and Local Government).

Data sources are banks' and Bank of Slovenia's bookkeeping data, which refer to the end of the month.

Calculation of monetary aggregates according to the national definition is shown on the liabilities' side of Table 1.2: Monetary Survey – Consolidated Balance Sheet of the Monetary System (See methodological notes referring to Table 1.2).

Harmonised monetary aggregates for Slovenia are calculated according to ECB's definition of harmonised monetary aggregates of euro area, which is evident from documents published on web pages of the ECB (<http://www.ecb.int>). Main differences between the two definitions of monetary aggregates are as follows:

- limited maturity of items included (harmonised aggregates include liabilities of up to 2 years only),
- equal treatment of the foreign exchange liabilities (which are, in harmonised aggregates, included into adequate items together with those in domestic currency),
- status of the monetary neutral sector (the central government in the harmonised aggregates has the status of a monetary neutral sector) and
- inclusion of the money market fund shares / units into M3.

Composition of harmonised monetary aggregates, as defined by the ECB is:

- HM1 contains *currency in circulation* and *overnight (sight) deposits*.
- HM2 includes beside HM1 also *deposits with agreed maturity of up to 2 years* and *deposits redeemable at notice of up to 3 months*.
- HM3 includes HM2, *repurchase agreements* and *debt securities with a maturity of up to 2 years*. *Money market fund shares / units* financial instrument, which is according to ECB's definition also part of HM3, will be included in calculation when such institutions appear in Slovenia.

HM2 and HM3 are, for the period prior to July 2002, partly calculated as estimation, because of the unavailability of relevant bookkeeping breakdowns.

Table 1.2.: Monetary Survey - Consolidated Balance Sheet of the Monetary System

Table 1.2 shows consolidated balance sheet of all banks' and Bank of Slovenia at the end of the month. Data for banks are aggregated.

Domestic assets consist of banks' and Bank of Slovenia's claims on General Government arising from succession to the former SFR Yugoslavia and the bank rehabilitation program, and claims from loans and securities on other non-monetary sectors. Claims from succession and the bank rehabilitation program represent: claims of the Bank of Slovenia on the Succession Fund of the Republic of Slovenia (on account of the former National Bank of Yugoslavia Dinar cash), counterpart claims for Bank of Slovenia liabilities to the International Monetary Fund, government guaranteed bank rehabilitation bonds, government bonds for unpaid foreign currency deposits and claims on the former National Bank of Yugoslavia for foreign currency deposits.

Other assets include fixed assets of banks and of the Bank of Slovenia and some other items (doubtful claims, etc.).

In September 2003, the liability part of the Table changed due to methodological changes in the calculation of monetary aggregates under the national definition, because of gradual harmonisation with the definitions of the European Central Bank (changes were made to all time series).

To aggregate M1, a vista Savings deposits at banks were added, and therefore, it consists of currency in circulation and demand deposits at banks (including a vista Savings deposits) as well as at the Bank of Slovenia.

To aggregate M2, Tolar restricted deposits and securities in Tolar including subordinated debt were added, so that the aggregate consists in addition to M1 also of Tolar time deposits at banks, and Government time deposits at the Bank of Slovenia and of Tolar securities.

To aggregate M3, other foreign currency liabilities to central government and securities in foreign currency were added, so that M3 consists of M2 and foreign currency deposits and securities at banks.

Other liabilities consist of capital and reserves of banks and of the Bank of Slovenia and also include some other items.

In the Table as from April 30, 1999 in conformity with SKIS, items of assets and liabilities to other general government mean assets and liabilities to both Local Government and Social Security Funds. By analogy, enterprises mean non - financial corporations and non - profit institutions serving households, and individuals mean households.

From July 31, 1996 onwards, the data for Komercialna banka Triglav are no longer included in banks' data due to its bankruptcy.

Foreign assets/Bank of Slovenia and *Foreign assets/Deposit money banks* were changed because of changes in Tables 1.3. and 1.4. for the period from April 2000 onwards.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The Table shows the Bank of Slovenia's assets and liabilities at the end of month.

Foreign Assets consist of: foreign currency, deposits abroad (sight and time deposits, from April 2000 on also foreign exchange deposits held by BS on the basis of repurchase agreements) first class securities of foreign issuers, monetary gold, reserve position and SDR holdings at the International Monetary Fund and other claims. *Other claims* mainly include balances on fiduciary accounts and with international financial organization.

Because of consolidation of statistical and bookkeeping records in February 2003, *International monetary reserves* are not presented as subitem of Foreign assets. International monetary reserves are shown in Tables 3.12. and 1.9..

Claims on General Government consist mainly of net claims on the National Bank of Yugoslavia taken over by the Succession Fund of the Republic of Slovenia. Claims on the state budget, which are the counterpart of the succeeded liabilities to the International Monetary Fund, are also included.

Repurchase agreements include loans extended to banks based on securities and foreign currency (currency swap). From April 2000 on the amount of the foreign currency swap is shown as a part of the foreign assets of the Central Bank, because of the gradual permanent purchase of foreign currency from the part of Central Bank. In accordance to this are claims based on currency swap with domestic banks shown for the period up to March 2000 in the item *Repurchase* and thereupon in the item *Deposits*.

Other claims include some Bank of Slovenia's small deposits with banks and advance payments to the banks for repayments of Bank of Slovenia bills sold to other buyers through banks as agents.

General Government Deposits comprise deposits of Central Government budget.

Restricted deposits mainly result from deposits earmarked for import payments and deposits covering letters of credit, guarantees and credits taken abroad.

Money transfers in transit comprise money in transit.

Revision in time series caused changes in items *Deposits/Enterprises* and *Deposits/Nonmonetary financial institutions* for the period from February 1998 on. Whereas item *Deposits/Other demand deposits*, which represents the sum the mentioned two remains unchanged.

Table 1.4.: Balance Sheet of Deposit Money Banks

The Table summarizes data on assets and liabilities of banks at the end of the month.

Demand deposits comprise giro accounts of enterprises and non-profit institutions, General Government, non-monetary financial institutions and giro and current accounts of households (see Table 1.6.).

Savings deposits include short and long-term tolar savings deposits of households (see Table 1.6.).

Time deposits consist of short and long-term time deposits of households, General Government, non-monetary financial institutions, enterprises and non-profit institutions (see Table 1.6.).

Restricted deposits represent deposits of enterprises and non-profit institutions, General Government and individuals to be used for money transfers to foreign countries or in cover of letters of credit, loans taken abroad or euro-checks, and can also be used for foreign currency exchange office transactions.

Note 1: In June 1996 foreign liabilities of banks for the undue foreign debt of former SFR Yugoslavia in the amount of SIT 49,027 million were taken over by the Government. Liabilities of banks to the Government were increased for the same amount. The banks decreased their foreign liabilities and claims on the Government for the part of matured allocated debt which they had been repaying to the government fiduciary account since January 1994 totalling SIT 18,078 million.

Bank of Slovenia's claims on and liabilities to banks are equal to the corresponding items in the banks' aggregated balance sheet with few exceptions: Item 'Reserves' (Giro and reserves accounts) on the assets side of banks' balance sheet is almost the same as item 'Deposits of banks' (Giro and reserves accounts, foreign currency deposits) on the liabilities' side of the Bank of Slovenia's balance sheet (Table 1.3.). Similar applies to items 'Liabilities to the banking system' arising from the Bank of Slovenia loans and 'Claims on domestic banks' based on loans in the Bank of Slovenia balance sheet (Table 1.3.). Discrepancies result from differences in accounting accuracy.

In February 2003 were items *Currency and Deposits* and *Loans from BS* diminished by the amount - claim i.e. liabilities based on currency swap of central banks with domestic banks, for period from April 2000 on. (More in Methodological notes for Table 1.3. - *Repurchase*). Total assets i.e. total liabilities were diminished accordingly.

Claims on and liabilities to domestic non-monetary sectors are shown in detail in Tables 1.5. and 1.6. Foreign assets and foreign liabilities are shown in detail in Tables 1.7. and 1.8.

Table 1.5.: Deposit Money Banks' Claims on Domestic Non-monetary Sector

The Table shows banks' claims resulting from loans and securities classified by domestic non-monetary sectors, which are also represented in Table 1.4. in item 'Claims on non-monetary sectors - Total'.

As from April 30, 1999 SKIS has been implemented in the sectorial distribution of the economy and therefore:

- the sector *Enterprises and non-profit institutions* comprises the data on SKIS Sectors *Non financial corporations* and *Non-profit institutions serving households*;
- the sector *Central government* comprises the data on SKIS subsector *Central government*;
- the sector *Other general government* comprises the data on SKIS subsectors *Local government* and *Social security funds*;
- the sector *Individuals* comprises the data on SKIS sector *Households*;
- the sector *Non-monetary financial institutions* comprises the data on *Savings banks* and *Savings cooperatives* as well as the data on SKIS sector *Other financial institutions*.

Marketable securities are long or short-term securities acquired and held by a bank with the intention of reselling them in the short term.

Investment securities are long or short-term securities acquired and held for yield or capital growth purposes and are usually held to maturity.

Table 1.6.: Deposit Money Banks' Liabilities to Domestic Non-monetary Sector

The Table shows banks' liabilities from deposits of domestic non-monetary sectors which correspond to the 'Liabilities to non-monetary sectors - Total' in Table 1.4.

As from April 30, 1999 SKIS has been implemented in the sectorial distribution of the economy and therefore:

- the sector *Enterprises and non-profit institutions* comprises the data on SKIS Sectors *Non financial corporations* and *Non-profit institutions serving households*;
- the sector *Total General government* comprises the data on SKIS sector *General government*;
- the sector *Individuals* comprises the data on SKIS sector *Households*;
- the sector *Non-monetary financial institutions* comprises the data on *Savings banks* and *Savings cooperatives* as well as the data on SKIS sector *Other financial institutions*.

Table 1.7.: Deposit Money Banks' Claims to Non-residents

The Table shows banks' claims to non-residents by currency- Tolars and foreign currencies. Deposit Money Banks' Claims to non-residents are shown in Table 1.4. in item 'Total - Foreign assets'.

In February 2003 was item *Deposits* diminished by the amount - claim based on currency swap of domestic banks with central banks, for period from April 2000 on. (More in Methodological notes for Table 1.3. - *Repurchase*). Item Total claims on non-residents was diminished accordingly.

Table 1.8.: Deposit Money Banks' Liabilities to Non-residents

The Table shows banks' liabilities to non-residents broken by currency- Tolars and foreign currencies. Deposit Money Banks' Liabilities to non-residents are shown in Table 1.4. in item 'Total - Foreign liabilities'.

Table 1.9.: Bank of Slovenia 10-day balance sheet

In April 2002 the definition of base money has been changed to the sum of: *Banknotes in circulation*, *Banks' settlement accounts*, *Overnight deposit* and *Other deposits at the Bank of Slovenia* (Savings banks' settlement accounts, Savings banks' and Savings and loan undertakings' reserve accounts, transactional accounts of the Central and Local Government).

The data time series have been recalculated according to the change in definition.

The off balance items *Buy/sell foreign exchange swap* and *Sell/buy foreign exchange swap* are from April 2003 on are included in the table.

Bank of Slovenia 10-day balance sheet together with off balance items is in terms agreed for publication shown on web page:

http://www.bsi.si/html/eng/finacial_data/hit/balance_bs_dekadna.html

2. FINANCIAL MARKETS

Interest rates (Table 2.1. - 2.6.)

Annual interest rates.

r = real rate over Tolar indexation clause

r(D) = real rate over foreign exchange indexation clause

n = overall nominal rate

TOM = Tolar indexation clause

EUR = foreign exchange clause

Table 2.1.: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of standing lombard facility Bank of Slovenia provides one-day lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of lombard loan.

Repo interest rate for the temporary purchase of treasury Bills, tolar and foreign currency Bank of Slovenia's Bills with obligatory repurchase in 7 days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new 7-day repo was introduced in March 2004, it is offered on a closed basis. The interest rate announced is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to the deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at Bank of Slovenia has been established in July 2004. Variable interest rate refers to 60-day tolar bills' interest rate, increased by 0,2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with maturity of 60 and 270 days. 60-day bills are offered on a permanent basis, 270-day bills were sold by auction till February 2004, afterwards are offered on a closed basis. Interest rates for tolar bills are nominal given, in the case of auctions they are effective rates. Offers of 270-tolar Bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on permanent basis and can be purchased by banks (by other legal persons through banks till 3rd May 2000). They are sold for Euros (till 16.02.1999 for German Marks) or US Dollars at a discount with maturities of two to four months.

Penalty rate is generally used in cases of overdue payments. The penalty rate is determined by the Law on the legal penalty rate since 28.06.2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2.: Interbank Money Market Rates and Indexation Clause

Interbank market

The figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. Interest rate for overnight deposits (SIONIA) is weighted average interest rate for overnight deposits. Interest rate for deposits till 30 days is weighted average interest rate for deposits with maturity till 30 days.

The annual averages of interbank interest rates are computed as simple arithmetic averages of monthly data.

Tolar indexation clause

Tolar indexation clause (TOM) is annual interest rate, calculated by the Statistical Office of Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5th August 1995: average of previous 3 months' inflation (until June 1995 indexation was based on so called R that was equal to the previous months' inflation rate, from 1st June till 4th August 1995 indexation was based on the average of previous 3 months' inflation); since February 1996: 4 months; since December 1996: 6 months; since May 1997: 12 months.

Financial liabilities and assets in domestic currency, with maturity less than 1 year, are not revalued since July 2002.

Foreign exchange indexation clause

Monthly rate is growth rate of Bank of Slovenia's end of month exchange rate for EUR (DEM) or USD.

Annual rate is computed from monthly rate on the conform basis, taking into account the actual number of days in the month and in the year.

Figures for 1993 to 1998 in columns 4, 6 and 8 represent growth of the category in the period December to December.

Table 2.3.: Average Commercial Banks' Interest Rates

Average interest rates (r and $r(D)$) are weighted arithmetic averages of the minimum and maximum interest rates.

Spread is the difference between the weighted minimum and maximum interest rate: $r_{min}=r - \text{spread}$, $r_{max}=r+\text{spread}$.

Nominal interest rates (n) are total annual interest rates.

The figures for the latest month are always provisional; updated figures in the following Monthly Bulletin are not marked with sign *.

With September 1995 was abolished the revaluation with the tolar indexation clause for obligations in domestic currency till 30 days, with July 2002 also revaluation for all loans and deposits in domestic currency with maturity less than 1 year.

Note 1: With the 1st July 2002 the "Law on changes and completions of the law on penalty rate and tolar indexation clause" came into force. It prohibits the use of tolar indexation clause for assets and obligations in domestic currency with the maturity less than 1 year. At the same time have most banks also stopped using the foreign exchange clause for short-term loans and deposits, which has reduced the number of reporting banks and led to series breaks.

Table 2.4.: Average Commercial Banks' Interest Rates on New Loans

Average interest rates on new loans are calculated on a basis of the data of the eight biggest banks, selected by balance-sheet-total criterion. New loans represent new contracts in the reference month. Data for consumer loans to households is collected on the representative sample of new loans (limited number of reports, min/max value). Any automatically changed conditions of lending contracts do not represent new business.

Interest rate on new business is a nominal interest rate increased by a sum of base interest rate or interest rate bounded to the euro exchange clause and subsidy per annum. Average interest rate on new business does not include any administrative or other costs.

All the interest rates are nominal weighted arithmetic averages, where value of certain type of loan represents the weight, except for foreign currency loans where the growth of foreign exchange rate is not taken into consideration.

The interest rates are presented separately, according to their type:

- NOM = a nominal interest rate, without indexation,
- TOM = an interest rate is bound to the base interest rate (TOM),
- D = an interest rate is bound to the euro exchange clause.

The annual averages are computed as simple arithmetic averages of monthly data.

Table 2.5.: Average Commercial Banks' Interest Rates on Basis of Interest Income and Interest Expenses

Interest rates are computed as the ratio of the amount of interest to the average balance of assets. Interest is represented by the interest income and interest expenses. The average amount of investments/assets is a sum of daily values divided by the number of days.

Because of the change in the frame of accounts for banks and savings banks since May 2002 the revalorization and interest incomes are no more represented separately, so the calculation of the real effective interest rates is no longer possible.

Table: Breakdown of bank` assets and liabilities by type of Indexation Clauses

		Loans			Deposits			Total		
		TOM	D	NOM	TOM	D	NOM	TOM	D	NOM
2001	<i>Apr.-Jun.</i>	91.9	7.3	0.8	63.3	2.7	33.9	77.4	5.0	17.7

Ljubljana Stock Exchange (Tables 2.7. to 2.9.)

Table 2.7.: The Ljubljana Stock Exchange: Turnover by Market Segment and by Type of Securities

Shares – Privatization Investment Funds shares are not included.
PIF - Privatization Investment Funds shares.

Turnover is measured by a single counting.

Table 2.8.: The Ljubljana Stock Exchange: Market Capitalization and Turnover Ratio

Market capitalization by market segment and by type of securities is calculated as the sum of market capitalization of individual securities. Market capitalization of an individual security is calculated as the product of the number of listed securities and the market price at the end of period.

Turnover ratio is calculated as turnover in a period divided by market capitalization at the end of period.

Short-term securities are not included in calculations of market capitalization and turnover ratio.

Table 2.9.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

SBI - Slovenian Stock Exchange Index (index value: January 1994=1000)

BIO - Bond Index.

SBI, BIO - value of SBI and BIO at the end of period.

dT - change of index value by points.

d% - change of index value in percentage.

Min, Max - minimum and maximum value of index in a period.

Exchange rates (Tables 2.10.1. to 2.11.4.)

Tables 2.10.: Selected Bank of Slovenia Exchange Rates- Average Rates

The tables show Bank of Slovenia middle rates. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays are not included).

As from 1st January 1999, with introduction of European Monetary Union, the European Currency Unit (XEU) was replaced by the Euro (EUR) at the exchange rate 1 : 1. Fixed exchange rates between the Euro and the national currencies of the EMU Member States (valid from 1st January 2001):

1EUR =	40.33990	BEF
=	1.95583	DEM
=	340.75000	GRD
=	166.38600	ESP
=	6.55957	FRF
=	0.78756	IEP
=	1936.27000	ITL
=	40.33990	LUF
=	2.20371	NLG
=	13.76030	ATS
=	200.48200	PTE
=	5.94573	FIM

Due to the introduction of Euro in January 2002 the exchange rates of members of EMU currencies (ATS, FRF, DEM, ITL) are replaced by the exchange rates of some EU accession countries (CZK, HUF, PLN, SKK).

Introduction of a new currency, the Kuna (=1,000 previous Croatian Dinars) on 30th May 1994.
The Polish zloty was denominated on 1st January 1995 at the exchange rate 1 new zloty for 10.000 old zlotys.

Tables 2.11.: Turnover and Foreign Exchange Market

Annual rates are computed as arithmetical averages of monthly rates. Monthly rates are averages computed from daily rates on working days, weighed with turnover. Foreign currency exchange offices also report transactions on Saturdays, not shown in the table, but included in the monthly and annual totals.

Totals also include transactions between banks and enterprises and between banks solely. In addition to that the transactions between enterprises are included until 30th September 1999 and the transactions of banks with non-residents and households from 1st October 1999.

On the spot exchange market the timing of settlement is at latest 2 working days from the agreement. The forward exchange market is designed for transaction where the timing of settlement is at least 2 working days after the agreement.

The data by the contract agreement are defined by the agreement time of the transaction. The data by the contract settlement are time defined by the settlement time of the transaction.

Data for the turnover on the forward exchange market are available from October 1999. Also the data for turnover by the settlement are available only from October 1999.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments (Tables 3.1. to 3.4.)

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's *Balance of Payments Manual, fifth edition (1993)*.

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data for transactions are converted from original currencies to EUR using the daily Bank of Slovenia exchange rates, or average exchange rates of the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, international investment position and gross external debt data occur as follow:

- revision for **monthly data** are made with the release of:
 - the corresponding quarterly data;
 - the corresponding revised quarterly data;
 - the international investment position data for the corresponding year; and
 - the revised international investment position data for the corresponding year;
- revision for **quarterly data** are made with the release of:
 - the data for the following quarter;
 - the international investment position data for the corresponding year; and
 - the revised international investment position data for the corresponding year;
- revision for **annual** international investment position and external data are made with the release of the data for following years.

Data sources

BOP is compiled on the basis of monthly available data on transactions (ITRS), stock positions and estimates.

- **Reports on transactions**
 - accounts of domestic banks held with correspondent banks abroad (including the central bank),
 - nonresident accounts held with domestic banks,
 - non-bank resident accounts abroad,
 - other accounts between residents and nonresidents,
 - payments between residents and nonresidents in Slovenian Tolars.

Classification of transactions is using the descriptions of transactions provided by the banks' clients;

- **Reports on short-term claims and liabilities to non-residents (form SKV)** is a source for short-term trade credits since 2002.
- **Customs declarations;** from 1.5.2004 data on goods item for EU countries are collected through reports (**Intrastat**), while data for other countries are collected through Customs declarations (**Extrastat**).
- **Reports to the Bank of Slovenia on registered credits granted to and disbursed abroad;** For the period from 1997 also data on nature of direct payments from foreign creditors, which settle liabilities of domestic debtors to other nonresidents, are available from these reports.
- **Yearly surveys on balance and transactions with affiliated enterprises (SN)** is a source for reinvested earnings of direct investments.
- **Accounting data of the Bank of Slovenia;**
- **Commercial banks balance sheet data;**
- **Estimates.**
- **Monthly survey of duty free shops.**

There are several estimation models used in the BOP for the valuation of data on imports, incoming travel, labor income, Italian pensions (till the end of 1998), foreign currency and deposits of resident households.

Current account

Goods

Data for the General merchandise are based on customs declarations. Data on imports c.i.f. and exports f.o.b. are compiled by the Statistical Office. **Adjustments for valuation** of data on imports and **coverage** of data on imports and exports are made by the Bank of Slovenia. The imports data are adjusted from c.i.f. basis to f.o.b. basis by the coefficient which is equal to the weighted average of coefficients between the c.i.f. and f.o.b. values of imported goods (for the available sample), separately calculated for each type of merchandise, transport means and country of the exporter. Since 2004 the coefficient amounts to 1.0306, prior 2004 it amounted to 1.0393. The **coverage adjustments** are made for goods imported

without customs declaration and for which data are available from ITRS or reports of duty free shops and consignment warehouses. Since 1.5.2004 the coverage adjustments include as an estimate also data on imports of motor vehicles from EU by natural persons, not covered in Intrastat System.

Services

Transport

The source for recording of transportation services is the ITRS.

Travel

The ITRS sources used in the compilation of the **incoming travel** item include: a.) health and education related services, b.) payments made by nonresidents to Slovenian tourist agencies, c.) net withdrawals in tolar from nonresident accounts, d.) money spent in casinos by nonresidents, e.) data on sales of goods to nonresidents in duty free shops and consignment warehouses, f.) payments with credit cards and g.) sales of Tolars to nonresidents abroad.

The data on sales of Tolars to nonresidents in Slovenia are estimated on the number of border crossings of foreign travellers and on the number of nights spent by foreign tourists.

Data source for the item expenditure on travel are ITRS and estimations.

Construction services

The source of data is ITRS. All construction works are recorded under construction services.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services and (ii) the premium in a narrow sense recorded as current transfer. The calculation of service charge is based on a fixed percentage of the premium payments.

Government services

All transactions settled through accounts of Slovenian embassies abroad as well as transactions coded as government services settled through accounts of Slovenian banks with foreign correspondents are included in this item.

Income

The ITRS is used as a main source for recording of **compensation of employees**. As many wages are not paid through domestic banks, supplementary estimations of such receipts from the neighboring countries are made. Data on **reinvested earnings and income on equity** are available in an annual survey of Slovenian direct investors abroad and of foreign direct investment enterprises in Slovenia. The present recording of **other investment income** (interest income) is based on the actual payments with the exception of income on reserve assets and loans (including long-term trade credits), which is based on an accrual principle from 2002 onwards.

Current transfers

In this item workers' remittances, insurance and other transfers of other sectors are included. The insurance item is calculated as a difference between the insurance premiums received and the claims paid on the credit side and vice versa on the debit side. The main source for other transfers are the ITRS and the customs documents.

Capital and financial account

Capital account

Capital transfers

Migrants' transfers covers not only payments recorded by domestic banks but also the changes in residency of accounts held with these banks.

Financial account

Direct investment

Direct investment is recorded on the basis of reporting of payments through domestic banks and of data from customs declarations. Data on reinvested earnings is based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one twelfth of the yearly figure.

Until 1997 purchase and sale of all shares and equity have been included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of company's equity, a control package of shares, shares issued by domestic companies on the primary markets with the purpose to increase the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999 direct investment 10% rule is applied.

From 2001 onwards inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are recorded as direct investment - other capital transactions. Until 2001 this kind of transactions are recorded as loans. Since 2002 the item other capital within direct investments includes also data on short-term trade credits between affiliated enterprises.

Portfolio investment

Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 equity securities, not having the characteristics described in the note on Direct investment are

included in this item too. With the new Foreign Exchange Act in 1999 portfolio investment transactions include all transactions below the 10% rule.

Loans

From 2001 onwards inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are not recorded as loans, but are recorded as direct investment - other capital transactions. Loans (including long-term trade credits) and related income has been calculated according to the accrual principle from 2002 onwards and according to the cash principle prior 2002.

Other investment

Other investments except equity between affiliated enterprises are included here and not under Direct investment. Short-term trade credits are estimated and recorded on net basis as change of assets till 2001. Estimation is based on comparison of data on imports and exports from customs declarations with corresponding settlements. Since 2002 onwards short-term trade credits are included on the basis of reports on short-term claims and liabilities to non-residents. Short-term trade credits between affiliated enterprises are included in direct investments. Item currency and deposits of households is estimated by using data on net purchases of foreign currency in foreign exchange offices, net deposits to households' foreign exchange accounts at domestic banks, estimated expenditure of resident households abroad (see Travel).

International monetary reserves

Reserve assets and related income has been calculated according to the accrual principle from 2002 onwards and according to the cash principle prior 2002.

Tables 3.1.: Balance of Payments 1988 - 1992

Excluding transactions with former Yugoslav Republics; processing is included in services, excluded in merchandise.

Note 1: For 1988 and 1989, Official sector data is included in Other sectors.

Note 2: For 1988 through 1990, Statistical errors include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Tables 3.2. and 3.3.: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001 Slovenia acquired 16.39% share in holdings of former Yugoslavia with BIS (Bank for International Settlements), consisting of gold 16.9 mio SIT (EUR 77.8 million), foreign currencies 1.1 mio SIT (EUR 5.3 million) and shares 3.0 mio SIT (EUR 13.8 million). This transaction is not considered to be a balance of payments' flow, but a part of 'other changes' item, which reconciles the international investment position in consecutive periods.

Note 1: CD: customs declarations - foreign trade definitions (Statistical Office of Republic of Slovenia).

Note 2: June 1996: includes issue of government bonds in exchange for a part of allocated foreign debt in the amount of 63.7 mio SIT (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to liabilities to Government.

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million);
- June 1997 (EUR 205.1 million);
- May 1998 (EUR 500.0 million);
- March 1999 (EUR 400.0 million);
- March 2000 (EUR 400.0 million) and in February 2001 (EUR 100.0 million);
- April 2001 (EUR 450.0 million).

Note 4: For 1993-2001, short-term claims include net changes in commercial credits (received and granted). Since 2002 onwards short-term commercial credits are included on the basis of SKV reports on assets' and liabilities' side of balance of payments. Short-term commercial credits between affiliated enterprises are included in direct investments item while other commercial credits are included in other investments/trade credits.

Note 5: Includes mostly BS fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular BS reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia.

Note 8: The data on reinvested earnings for the year 2005 are not yet available, therefore a three-year average (from 2002 to 2004) of last available actual data from annual surveys on capital investments is

included as an estimation. In the year 2006 this estimation will be replaced with the actual data on reinvested earnings for the year 2005.

Note 9: From 2001 there is a time series break on the items direct investment and loans. From 2001 inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are included in the direct investment item, before that they were included in loans item. Since 2002 the item direct investments includes also short-term trade credits between affiliated enterprises.

Note 10: Transfers from EU budget are since 1.5.2004 recorded in current and capital transfers according to the nature of their use. Split between current and capital transfers is provided by the Ministry of Finance.

Table 3.5: Merchandise trade

Exports f.o.b. and imports c.i.f. Year 2005: provisional data (Source: Statistical Office of RS).

The effective exchange rate: Growth of index denotes growth of value of Tolar, and vice versa.

3.6 Short-term commercial credits

Tables include positions of claims and liabilities of short-term commercial credits by countries/groups of countries in the last eight months. Data source is direct reporting of enterprises (reports SKV).

International Investment Position of Slovenia (Table 3.7.)

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that comprise the position consist of claims on nonresidents, liabilities to nonresidents, monetary gold, and SDRs.

Methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the *Balance of Payments Manual*, IMF, 1993. The Manual distinguishes four sectors - monetary authorities, general government, banks, and other sectors.

Revision policy

See revision policy notes for "Balance of Payments" (Tables 3.1. to 3.4.)

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the balance of payments financial account. However, there are differences with some items as follows:

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from nonresidents,
- short term commercial credits with nonresidents (SKV),
- reports on accounts abroad.

Source for the balance of payments is *international transactions' reporting system* - ITRS and reports on loans granted to or received from nonresidents and reports on short term commercial credits with nonresidents.

In accordance with the recommendations of IMF, this item comprises investment where direct investor owns 10 percent or more of ordinary shares or voting power. Equity shares are valued at book value according to the accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in direct investment-other capital item. Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000 all long term intercompany claims are liabilities between affiliated banks and affiliated financial intermediaries were included in this item (not only permanent debt).

Data on claims and liabilities of Slovene enterprises in indirectly affiliated enterprises from 1996 onwards are included in the item 'Direct investment abroad' (in case when enterprise abroad having Slovene direct investment holds 10% or more of equity in other foreign enterprise). In the item 'Direct investment in Slovenia' data on investment of foreign enterprises in indirectly affiliated enterprises in Slovenia are included (in case that Slovene enterprise with foreign direct investment holds 10% or more of equity in other Slovene enterprise).

Portfolio investment

Data on equity securities and other equity shares are also available from enterprises' surveys (form SN), but only data from surveys where direct investor owns less than 10 percent of ordinary shares or voting power, are

included. (In the balance of payments, transactions with equity securities and other shares are collected from ITRS (see note to Tables 3.1. to 3.4. /Capital and financial account/Portofolio investment).

Data on residents' holdings of debt securities are available from direct reports from banks, and brokerage houses. For the balance of payments these data are collected from ITRS.

Liabilities of debt securities of government, banking and other sectors are available from credit registration from and Central Securities Clearing Corporation.

Trade credits and loans

Source for short-term trade credits are reports of enterprises on stock of external claims and liabilities (form SKV).

Sources for long-term trade credits and loans are credit registration forms and are the same for the international investment position and the balance of payments. Until 2000 the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

Currency & deposits, other assets, other liabilities and reserve assets

Sources of data for these items are banks' reports and Bank of Slovenia accounting data and are consistent with those for the balance of payments.

In the IIP arrears on loans and long term commercial credits are included in other claim/liabilities as short term item. Balance of payments does not included arrears.

The item "Assets / Currency and deposits of other sectors" in international investment position also includes data from the Bank for International Settlements (BIS) on deposits of Slovenian households in the banks in member states of BIS.

Till 2002 the item "Other liabilities of other sectors" in the IIP consists of the data on contractual joint ventures, which are not available for the balance of payments.

Table 3.7.: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia),
- claims on other countries on the territory of former SFR Yugoslavia, subject of negotiations on succession (except the part reported by Sklad RS za sukcesijo from 2002 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization.

Additional data on Direct Investment are available in a special publication of the Bank of Slovenia: 'Neposredne naložbe - Direct Investment' and on Bank of Slovenia Web site: <http://www.bsi.si/html/eng/publications/index.html>.

Gross External Debt (Tables 3.8 to 3.11)

General notes

Methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003.

The guide is available under the following web address:

<http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See revision policy notes for "Balance of Payments" (Tables 3.1. to 3.4.)

Data sources

Gross external debt consists of debt liabilities from the international investment position (IIP). Data sources for Tables 3.8 to 3.10 are the same as those for the international investment position excluding the data on direct investment.

Table 3.8 Net External Debt

The table presents gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). The net external debt position is equal to gross external debt deducted by gross external assets in debt instruments.

Table 3.9 Gross External Debt

Gross external debt, at any given time, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity for debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of over one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of

one year or less.

Since september 2003 bonds and notes are valued at market value. Other debt instruments are valued at nominal value. Since 2002 accrued interest is included by loans and long-term trade credits.

Before July 2003, gross external debt was presented in Table 3.9 External Debt and in Table 3.12.2 International Investment Position of Slovenia - Liabilities:

Stocks as at 31 December 2002		bil. of EUR	
NET POSITION	1,4	NET POSITION	1,4

4,7 →
0,6 →

*Liabilities to direct investors and affiliated enterprises are not broken down by debt instruments (concept of new standard). An amount of 1.0 bil. of EUR included: 0.4 bil. of EUR short-term trade credits and 0.6 bil. of EUR loans (short- and long-term)
** Data from Central Securities Clearing Corporation

Table 3.10 Debt – Service Payment Schedule

Service payments projected are estimates of payments due on existing debt outstanding and do not include interest rate changes.

Table 3.11 Debt indicators

Note 1: Short-term debt includes the value of short-term external debt outstanding (original maturity) and the value of long-term external debt outstanding (original maturity) due to be paid in one year or less.

International Liquidity (Table 3.12.)

Table 3.12.: International Liquidity

Foreign exchange reserves of the Bank of Slovenia and banks include foreign cash in convertible currencies, deposits abroad and first class securities of foreign issuers. Balances on fiduciary accounts are included in 'Other foreign assets'.

Foreign exchange reserves of banks are only part of item 'Foreign Assets' in Table 1.4. Foreign assets also include other foreign currencies, deposits abroad, foreign securities and other foreign assets, which do not have the nature of high liquid international funds.

4. GENERAL ECONOMIC INDICATORS

Table 4.1.: Derivation and Expenditure on Gross domestic product

Data for 1999 are partially estimated.

Table 4.2.: Quarterly real gross domestic product

1999 - 1994: constant prices 1992; reference year 2000;
1995 - 2000: constant prices 1995; reference year 2000;
2000 and following: constant prices 2000;

Table 4.3.: Industry

Indices on industrial production are provisional from February 2004.
Methodological notes are published on the internet page: www.stat.si

Table 4.5.: Employment and unemployment

The majority of data for the period before 1997 are estimations based on methodologies used in those years.

Table 4.6.: Average wages

Real wages are deflated with consumer price index.

In case of data for January 2005 and forthwith, the methodology concerning average monthly earnings has been changed, so that legal persons with 1 or 2 employees in the private sector are now taken into account. The Survey, however, does not include individual private entrepreneurs and persons employed by them, own account workers and farmers.

The published data are the result of the new survey Monthly Report on Earnings at Legal Entities. Data for this report are collected by the Agency for Public and Legal Records and Services (with Obrazec 1 - ZAP/M questionnaire) and are then submitted the Statistical Office of Slovenia for statistical processing.

To enable index calculation for 2005, the Statistical Office of Slovenia recalculated 2004 data according to the new methodology.

Table 4.7.: Registered households' income

Real aggregates are deflated with consumer prices index.

5. PUBLIC FINANCE**Table 5.1.: General Government Revenues and Expenditures**

Note 1: The data of the current and previous year are revised monthly until the data on previous year became final.

Tables 5.2.: General Government Lending, Repayments and Financing

General Government Operations (Consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on previous year became final.

Tables 5.3.: Debt of Republic of Slovenia

Republic of Slovenia is defined as a legal person. The data from tables 5.1, 5.2. and 5.3. originate in the Bulletin on Government Finance, published by the Ministry of Finance.

6. PAYMENT SYSTEMS AND PAYMENT INSTRUMENTS**6.2. Payment cards**

Note 1: Credit cards: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by the specific data each month (delayed debit card ie. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit cards: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards, issued abroad: payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: number of valid payment cards held by residents and non-residents, issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic cards: payment cards issued by banks and enterprises residents in Slovenia without licence agreements with foreign issuers.

Licence cards: payment cards issued by banks and enterprises residents in Slovenia under licence agreements with foreign issuers.

Bank card: payment cards issued by banks.

Retailer cards: payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal cards: payment cards issued to natural persons (family cards included).

Business cards: payment cards issued to legal entities.

6.3. Other payment instruments and innovative payment schemes

Note 1: Data refer to the end of each quarter

Note 2: Data refer to payment transactions and money withdrawals at POS terminals in Slovenia.

6.4. Electronic banking

Note 1: Only debt transactions are included.

6.5. Credit and debit transfers

A paper-based payment order is a standardised payment instrument related to a credit transfer, in which the payer submits an order on a paper-based form. It means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing. A special form of paper-based payment order is the so-called special payment order, which is issued by a creditor to be paid by the debtor. The special payment order is presented by the debtor at the bank, which then credits his transaction account and transfers the amount to the account of the creditor. The special payment order was developed by the BoS in 1997.

A non-paper based payment order is an electronic payment order related to a credit transfer, which the customer of the bank submits to his bank on electronic storage media.

A standing order is an instruction from a customer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments to a large number of creditors.

Direct debit is a preauthorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. Direct debit is initiated by the payee. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

6.6. Network of commercial banks

Note 1: In the number of head offices two banks with the license for operation pursuant to the Constitutional Law only are included (Kreditna banka Maribor d.d. and Ljubljanska banka d.d. Ljubljana).

Note 2: Statistical Regions, Source: Statistical Office of the Republic of Slovenia, March 31, 2000. Data up to year 2000 are presented according to Standard Classification of Teritorial Units - Statistical Regions of the Republic of Slovenia, January 1, 1999.

Note 3: Data referring to the Postal bank of Slovenia do not include units of the Post of Slovenia that operate for the Postal bank of Slovenia on the contractual basis.
