

**MONTHLY REPORT
ON BANK PERFORMANCE**

BRIEF COMMENTARY ON DEVELOPMENTS IN THE BANKING SECTOR

The net increase in the balance sheet total over the first four months of 2019 amounted to EUR 0.8 billion, comparable to the increase over the whole of last year. Loans to the non-banking sector continued to grow, while the most liquid forms of bank investment increased at the same time. Growth in deposits by the non-banking sector is continuing to outpace growth in the balance sheet total. The trend of improving quality in the credit portfolio is continuing. All the banks in Slovenia were profitable, recording a pre-tax profit that was up 7% on the same period last year. The relatively high profit was primarily attributable to moderate growth in (net) interest income, and the continuing net release of impairments and provisions at system level.

The balance sheet total stood at EUR 39.6 billion in April 2019, up 4% in year-on-year terms. The year-on-year increase was 1.8 percentage points more than in December 2018. On the liability side, deposits by the non-banking sector continued to grow, the year-on-year rate reaching 6.7% in April. There was a notable increase in household deposits, year-on-year growth in which stood at 7% in April, higher than last year's average rate of growth. The increase in household deposits remains high: they were up EUR 1.25 billion over the 12 months to April. This year's increase in deposits is also attributable to government deposits and deposits by other financial institutions. The seasonal decline in deposits by non-financial corporations seen in the first quarter of the year did not continue in April. Given the historically low stock of loans to non-financial corporations (EUR 8.7 billion) and the large stock of deposits by non-financial corporations at the banks (EUR 6.5 billion), the LTD ratio in this segment has declined sharply in recent years. It stood at 1.3 in April, well down on its long-term average of 2.4 over the last 20 years.

Year-on-year growth in loans to the non-banking sector stood at 4.4% in April, up just over 1 percentage point on December of last year. The banks have maintained similar relative holdings of securities and other highly liquid assets on their balance sheets this year. Year-on-year growth in loans to non-financial corporations slowed again in April to 3%, slightly higher than last year's average rate of 2.9%. Year-on-year growth in household loans remains stable and at a relatively high level: the rate was 7.1% in April. This year's net increases in each of the main types of household loans, consumer and housing, have been almost exactly the same. Household loans, consumer loans in particular, currently constitute a major source of growth in net interest income, which is contributing more to the banks' gross income than non-interest income. Year-on-year growth in housing loans increased slightly, to 5.3% at the end of April, while year-on-year growth in consumer loans increased to 12.8%.

The NPE ratio in the household segment is continuing to decline, reaching 2.1% in April, as a result of a decline in the NPE ratio for consumer loans to 2.6%. The decline in the NPE ratio is primarily attributable to an increase in the total stock of consumer loans, while the non-performing portion remains stable in the strong economy. The true quality of this portfolio segment will only be evident when economic growth slows, bringing a rise in the unemployment rate. NPE ratios are continuing to decline in other segments of the credit portfolio: to 7.4% for non-financial corporations, 8.0% for sole traders and 2.9% for non-residents. The NPE ratio across the entire portfolio has declined to 3.5%, equivalent to NPEs of EUR 1.5 billion.

The banking system generated a pre-tax profit of EUR 205 million over the first four months of the year. With net interest income up 4.9% in year-on-year terms, and growth in non-interest income slowing because of a base effect, the banks' gross income was similar to the same period last year (up 0.7%). The year-on-year rise of 3.6% in operating costs reduced the banks' net income, i.e. income before net impairments and provisions. At the level of the banking system, and particularly among the largest banks, the prevailing factor during the first four months of the year was the net release of impairments and provisions, which amounted to EUR 28.4 million at system level, up sharply on the same period last year. ROE increased to 13.5%. While credit growth remains at its current level, net interest income can be expected to continue recording moderate growth, but net impairments and provisions will gradually cease to have a favourable impact in the future. With interest rates expected to remain low over the medium term, growth in net interest income could slow again as lending activity declines, putting downward pressure on the banking system's profitability.

Notes: * Loans to non-banking sector not held for trading comprise "Loans and other financial assets at amortised cost" (from A/I of the "Methodology for compiling the recapitalisation of the statement of financial position", the category of "Loans (and other financial assets) designated for measurement at fair value through profit and loss" (from A/I), the category of "Loans (and other financial assets) designated for measurement at fair value through other comprehensive income" (from A/I) and the category of "Loans (and other financial assets) measured at fair value through other comprehensive income".

** Financial assets / securities on the asset side comprise total financial assets from A/I, including loans held for trading, while equities and debt securities other than loans are captured from other categories of financial asset (A/I, A/IV and A/V).

*** Includes subordinated debt until 31 December 2017. Under the IFRS 9 methodology, the item of "subordinated debt" is abolished, and these liabilities are included under liabilities to banks.

The bank performance data in this publication is based on the banks' own book figures, which differ in methodological terms from the published statistics. The data on loans also differs because the data in this publication includes loans to non-residents, applies the net principle (amounts are minus value adjustments), and does not include non-marketable securities.

2. BANKS' INTEREST RATES

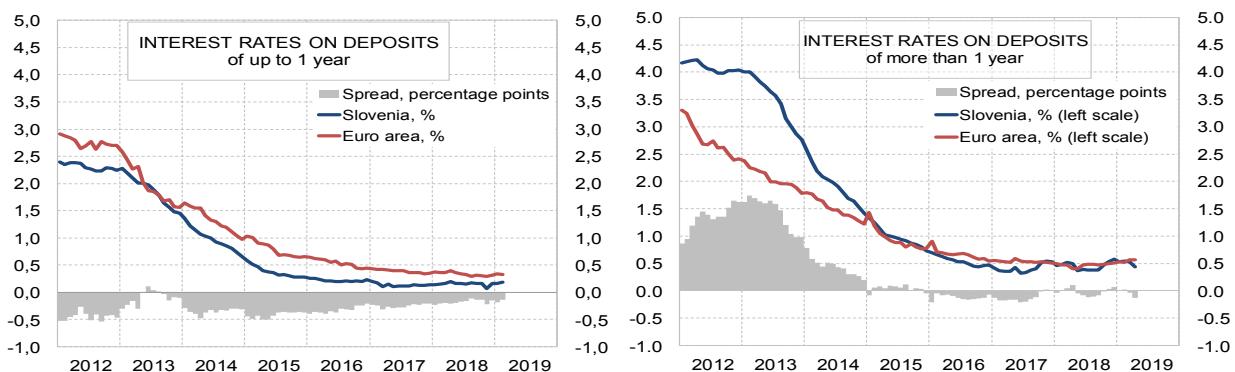

Figure 2.1: Comparison of interest rates on new loans in Slovenia with those across the euro area, variable¹ (left) and fixed² (right) rates, in percentages

Note: The following definitions apply to all interest rates in this appendix: 1) **variable-rate** loans comprise loans concluded with a variable interest rate or with an interest rate fixed for less than one year (even if it is fixed for the entire term to maturity); 2) **fixed-rate** loans comprise loans concluded with a fixed interest rate for a period of more than one year.
