Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

Economic growth in the second quarter was higher than expected in the euro area, but below expectations in the US. The main factor in the current rate of economic growth in the euro area of 1% was Germany's GDP, which recorded growth of 2.2%. The current rate of economic growth in the US was 0.4% in the second quarter, less than Consensus's June forecast. The lower growth in the US was primarily the result of a negative contribution to GDP made by net trade. High unemployment and large fiscal deficits still keep uncertainties about robustness of global economic growth on high levels.

The current rate of growth in domestic GDP stood at over 1% in the second quarter, primarily as a result of high growth in foreign demand and the renewal of inventories. Faster growth in foreign orders in the early part of the year was followed by a sharp increase in industrial production and exports, which had a beneficial impact on growth in transportation, storage and communications. The increase in imports, intermediate goods in particular, was partly reflected in the renewal of inventories. The situation remains most problematic in the construction sector, with adverse impacts on gross fixed capital formation and financial intermediation, where value-added declined notably in the first half of the year. Household consumption continued its gradual decline, as uncertainties persist on the labour market.

The number of unemployed has ceased to rise in recent months, but risks associated with certain corporate bankruptcies remain. The number of registered unemployed stood at 98,406 in July. The workforce in employment has stabilised since February, but employment expectations remain low. The average gross wage per employee in June was up 4.4% in year-on-year terms.

Year-on-year inflation as measured by the HICP was up 0.1 percentage points in August at 2.4%. Core inflation remains low, primarily as a result of the uncertain situation on the labour market and the resulting weakness in household consumption. In August there was a rise in the contribution to the HICP made by food prices as a result of a rise in excise duties on tobacco and higher current growth in prices of seasonal produce, while the contribution made by energy prices declined, primarily as a result of negative current growth in fuel prices. The risks of higher inflation remain associated with growth in prices of oil and commodities in connection with the weak euro.

After widening of the current account deficit in May, there was a surplus of EUR 104 million in June. The main factor in the position in both months was merchandise trade, which moved from a deficit in May to a surplus in June. The deficit in factor income continued to decline in year-on-year terms, movements being affected by last year's changes in sources of financing. The current account deficit in the year to June stood at EUR 444 million or 1.2% of GDP, compared with 4.7% of GDP last June.

The general government deficit in the 12 months to June stood at 6.2% of GDP. Revenues are continuing to decline in year-on-year terms, primarily as a result of lower corporate income tax revenues, while in July there was also a large personal income tax settlement for last year. Growth in general government expenditure slowed slightly, expenditures on interest and transfers to households having been the major factors in the growth in the first half of the year.

The banking system's total assets increased by EUR 490 million in June, before falling by EUR 1,487 million in July. The main factor in the fall was the repayment of funds received by the banks a year earlier from the Eurosystem. The banks made further debt repayments to banks in the rest of the world, while the government sector reduced its deposits at banks. Lending to non-banking sectors was weaker in July than in June, but continued to grow, as a result of lending to households, while growth in loans to non-financial corporations stagnated in July. The banking system's pre-tax profit during the first seven months of the year was almost half of last year's comparable figure, as a result of a sharp increase in impairments and provisioning.

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 0.2% in June and by 0.4% in July, while the market capitalisation of shares declined by 0.9% in June and by 5.7% in July. The proportion of the market capitalisation of shares accounted for by non-residents rose to 9.2% in July. The SBI TOP fell by 0.3% in June and by 7.6% in July (taking the year-on-year changes to -15.5% and -21.0% respectively). After declining in June, the domestic mutual funds' assets under management rose to EUR 1,953 million in July, as a result of a rise of 0.6% in the average unit price and net withdrawals of EUR 13.6 million.

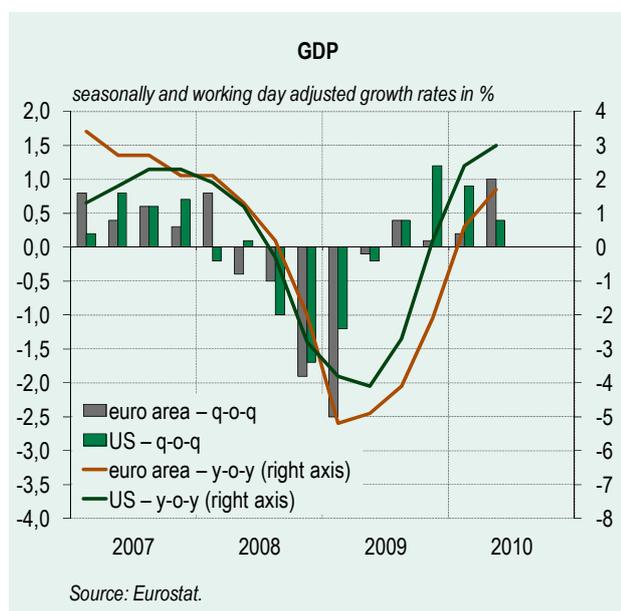

1 | International Environment

Economic growth in the euro area rose in the second quarter, while it declined in the US. Real GDP in the euro area and the EU27 were up by 1.0% in current terms in the second quarter (1.9% in year-on-year terms), 0.7 percentage points more than in the first quarter. Germany recorded the largest current rise in GDP among EU Member States, at 2.2%. The revised estimate of GDP growth in the US stood at 0.4%, 0.5 percentage points less than in the first quarter. Economic growth also slowed slightly in the second quarter in China, to 10.3%, down from 11.9% in the first quarter.

Significant differences remain between the euro area and the US in growth in retail sector's revenues, while unemployment remains high in both economies. The situation in the construction sector also remains uncertain. In addition to current growth, year-on-year growth in revenues in the retail sector in the US has been higher this year than in the euro area, albeit primarily as a result of a significantly lower basis from last year. Revenues in the retail sector recorded a decline of just under a tenth in the first half of 2009, compared with just under 3% in the euro area. This was connected with the sharp rise in unemployment in

the US, which rose from 4.6% in 2007 to 10% at the end of 2009, and has fluctuated around 9.5% this year. In the euro area the relative deterioration in the situation on the labour market was considerably smaller during this period. The unemployment rate rose from 7.5% in 2007 to 10%, where it has remained for the last few months. The differences in the movements in industrial production are slightly smaller: growth in the euro area is slightly stronger than in the US, primarily as a result of high current growth between March and May. The number of new building permits for housing fell significantly in the US in July, while sales of residential real estate also fell notably. This fall followed the relatively favourable results in the first half of the year in association with the package of tax breaks that applied up to April. In the euro area activity in the construction sector has stabilised in recent months, although it remains approximately a tenth down compared to the beginning of the boom in construction in 2005.

In August Consensus raised its forecast for this year's economic growth for the euro area, but lowered its forecasts for the US for this and next year. Growth in the euro area is forecast at 1.2% for this year (up 0.1 percentage points on the July forecast), and 1.4% for 2011. Economic growth in the US is expected to be a bit lower, at 2.9% this year and 2.8% in 2011, each down 0.2 percentage points on the July forecasts. The economic growth forecasts for Eastern Europe were also lowered, to 3.8% for this year and

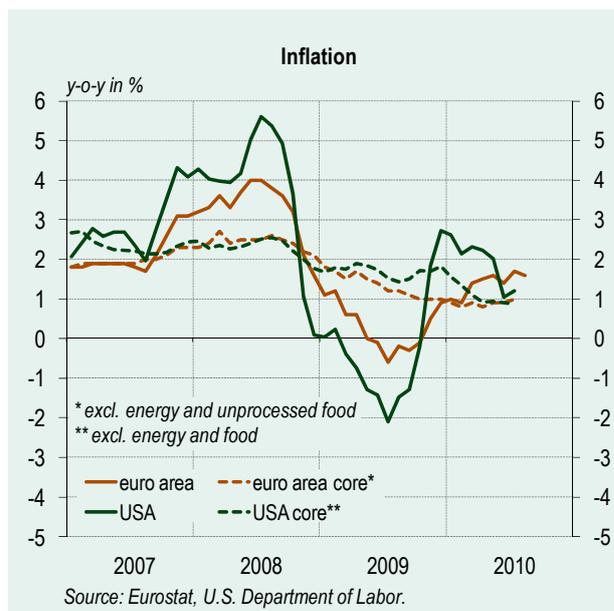

3.9% for next year, each down 0.1 percentage points.

In the euro area, year-on-year inflation fell from 1.7% in July to 1.6% in August. In the US, it rose from 1.1% in June to 1.2% in July. According to the detailed figures available for July, the main factors in the rise in inflation during that month were prices of motor fuels, liquid fuels and tobacco. Energy prices were also the main factor in the rise in inflation in the US. Core inflation excluding energy and unprocessed food rose by 0.1 percentage points in July to 1.0% in the euro area, while core inflation excluding energy and food remained unchanged at 0.9% in the US. Year-on-year growth in industrial producer prices stood at 3.0% in June in the euro area, and 4.2% in July in the US, down slightly on the previous month.

Prices of oil, gold and other commodities rose in August. A barrel of Brent crude averaged USD 76.70 in August, compared with USD 74.70 in July. August's growth in oil prices was associated with high demand from fast-growing Asian economies. Current growth in US dollar prices of non-oil commodities in August was significantly higher than this year's average, and year-on-year growth also remained high. Gold prices rose again in August.

In terms of the monthly average the euro appreciated against the US dollar in August for the second consecutive month, the exchange rate showing an appreciation in the first half of the month and depreciation in the

second half. The euro averaged USD 1.2887 in August, an appreciation of 0.9% compared with July's rate of USD 1.2778, which was up 4.7% on June. The main reason for the euro's appreciation in the first half of August was the euro area recording more favourable economic results than the US in the second quarter, while the depreciation in the second half of the month was associated with the renewed decline in confidence on the financial markets. The key interest rates remained unchanged, at 1.00% at the ECB, and at the interval between zero and 0.25% at the Federal Reserve.

2 | Economic Activity and Labour Market

Real sector

The Slovenian economy recorded current growth of just over 1% in the second quarter. According to the latest national accounts, economic results were also a bit more encouraging in the second half of last year. After stagnating in the final quarter of 2009 and the first quarter of 2010, current GDP growth reached 1.1% in the second quarter. Year-on-year growth was also positive for the first time since the third quarter of 2008, reaching 2.2%.

The GDP growth in the second quarter was the result of high foreign demand and the renewal of inventories in the domestic economy. Year-on-year growth in exports was double that in the first quarter of this year at over 11%. The increase in import growth was even more pronounced; high growth in imports of intermediate goods in the context of increased industrial production was the main factor. The positive contribution to GDP growth made by net trade declined again, to 0.9 percentage points. In the context of the sharp rise in imports, there was also a notable renewal of inventories, which contributed 2.8 percentage points towards GDP growth. The adverse situation on the labour market

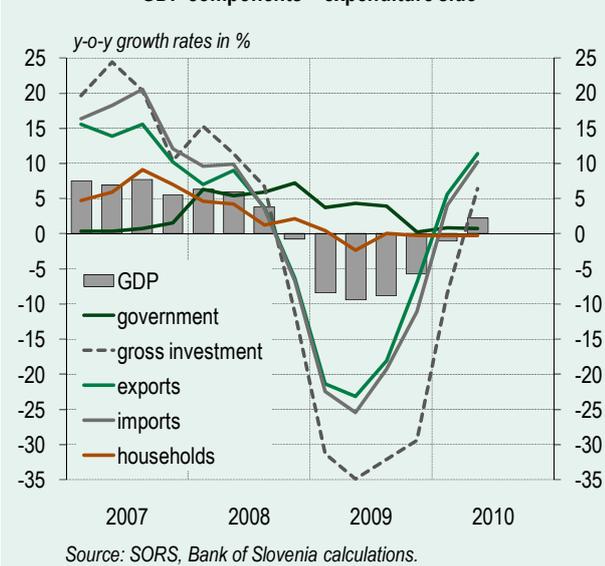

Current growth in GDP according to first releases of data by SORS

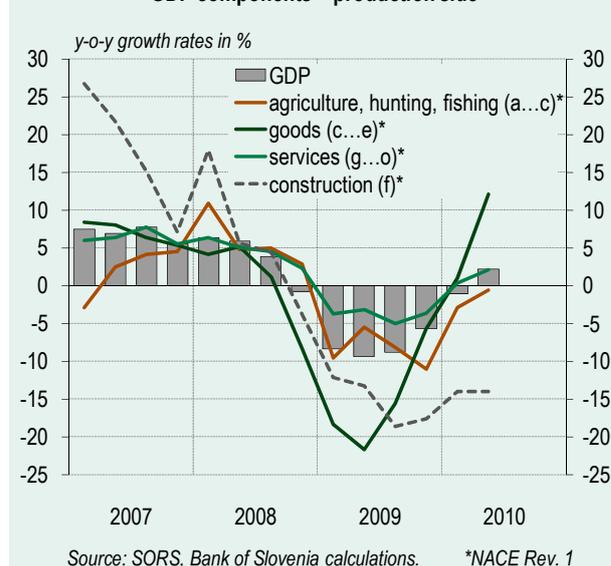

continued to hinder the recovery of final consumption, where household consumption continued to gradually decline. In addition to the confidence indicators, further evidence of the uncertainty in the domestic economy comes from the renewed decline in gross fixed capital formation.

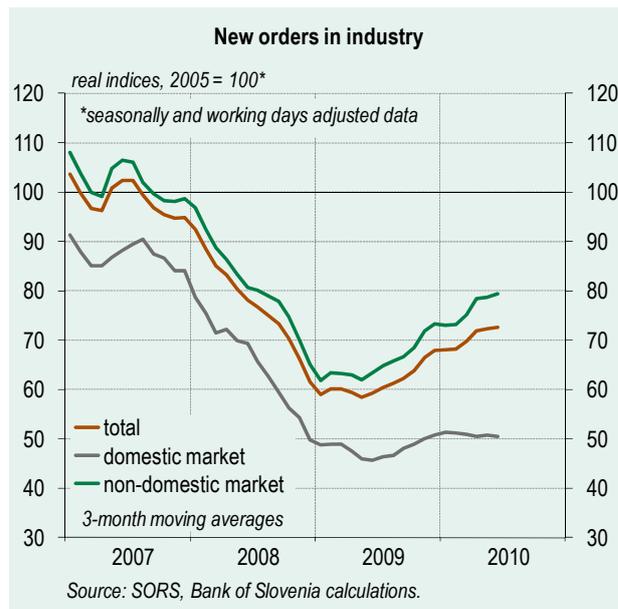

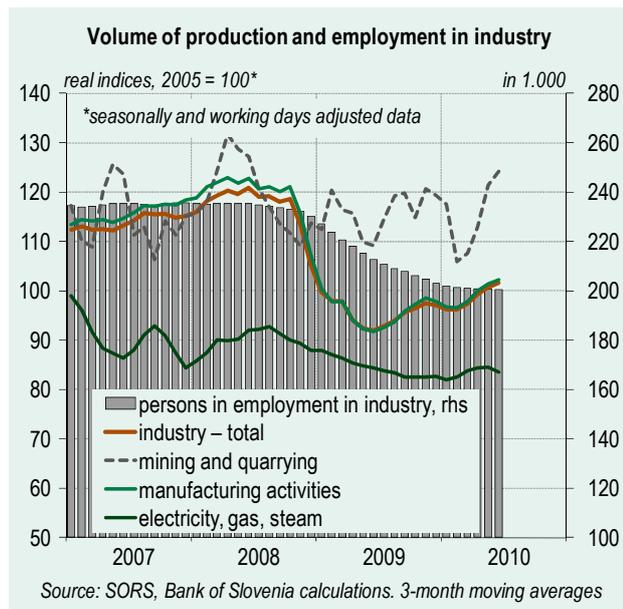

The movements in value-added in various segments of the private sector in the second quarter indicate an increase in the importance of foreign demand for the domestic economy. Among the major sectors, there were sharp year-on-year increases in value-added in manufacturing (close to 14%) and transportation, storage and communications (7.5%). The most problematic developments remained in the construction sector, where value-added was

GDP components – expenditure side

GDP components – production side

again down by 14% in year-on-year terms in the second quarter, despite last year's low basis. This lowered year-on-year GDP growth by 1 percentage point. The current movements in the construction sector indicate that a new equilibrium has not been reached yet, despite the significant contraction in the last year and a half. The crisis in the construction sector is also being partly reflected in the financial intermediation sector. After recording relatively favourable results last year, value-added in the financial intermediation sector declined by 2.7% in the first half of this year. Further evidence of the adverse situation in this sector comes from the halving of pre-tax profits in the banking sector, in association with the sharp increase in net impairments and provisioning.

Growth in industrial production slowed significantly in June, but was nevertheless higher in the second quarter than in the first quarter. According to figures adjusted for the season and the number of working days, industrial production rose in current terms in May and June, by 4.8% and 0.6% respectively, primarily as a result of growth in manufacturing. Growth in industrial production strengthened from 0.3% in the first quarter to 4.4% in the second quarter. Year-on-year growth was also high in May and June as a result of last year's low basis, at 12.0% and 10.4% respectively. Growth in revenues in industry remains primarily the result of increased sales on foreign markets. Sales revenues were up 3.1% and 1.9% respectively in current terms in May

* Volume of industrial production. ** Real value of construction put in place.

and June, while quarterly growth in revenues was up only slightly on the previous quarter at 3.1%. Revenues were also up over a tenth in year-on-year terms in May and June as a result of last year's low basis.

Current growth in new orders also increased in the second quarter, but primarily as a result of a carry-over effect from the end of the previous quarter. After recording high levels in February and March, the current rate of growth slowed in the following months. Nevertheless, new orders in the second quarter were up 4.2% on the first quarter. According to figures adjusted for the season and the number of working days, the value of new orders was down just over 2% in current terms in May, but up just under 3% in June. Growth in foreign orders strengthened from 2.7% to 5.5% in the second quarter, while domestic orders declined by 0.7%. New orders were also up just over a fifth in year-on-year terms in May and June partly as a result of last year's low basis.

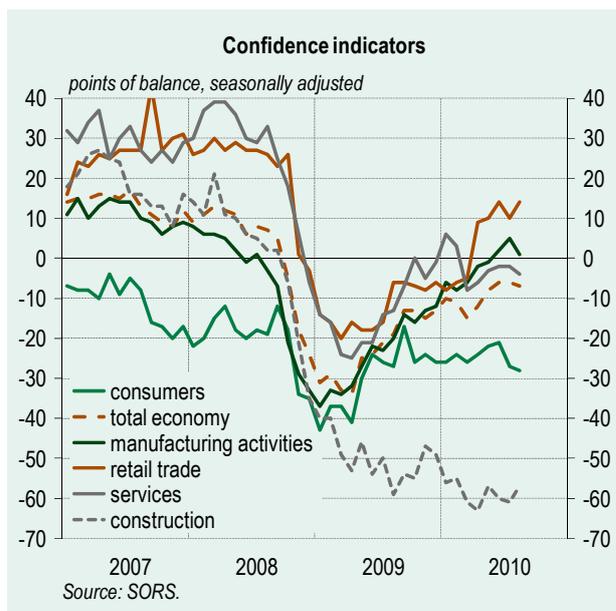

The contraction of activity in the construction sector accelerated further in the second quarter. The real value of construction work performed was down just over 1% in current terms in May and June, according to seasonally adjusted figures. The current contraction in construction activity accelerated from 1.2% in the first quarter to more than 5% in the second quarter; the decline in real value was largest in housebuilding, where it exceeded 25%. The crisis in construction was also reflected in the year-on-year

contraction, which exceeded 17% in the second quarter despite last year's low basis.

Inadequate demand remains the prevailing limiting factor in the construction sector to which prices are only partly adjusting. The proportion of companies facing inadequate demand in recent months was lower than in the first quarter, but nevertheless remains above 50%. Housebuilding activity in the second quarter was down over a half from its peak in the third quarter of 2008, while the number of transactions was down a half from its peak in the second quarter of 2007 and prices were down just under 15% from their peak just before the outbreak of the crisis. The proportion of companies facing high costs of capital and difficulties accessing bank credits remains high, at around 25%. The proportion of unsettled past-due corporate liabilities accounted for by construction companies rose to 31% in July, up a third on 2008 when the volume of construction work was at its peak. The contraction in activity in the construction sector, which has been happening since the end of 2008, has also been reflected this year in a faster decline in the workforce in employment in the sector.

Revenues in the retail trade and trade in motor vehicles increased in current terms in the second quarter, but underwent a downward correction in July. The current rate of growth in revenues in the retail sector (excluding motor vehicles) stood at 4.6% in June, but revenues declined by 0.7% in July. As a result of high growth in June revenues

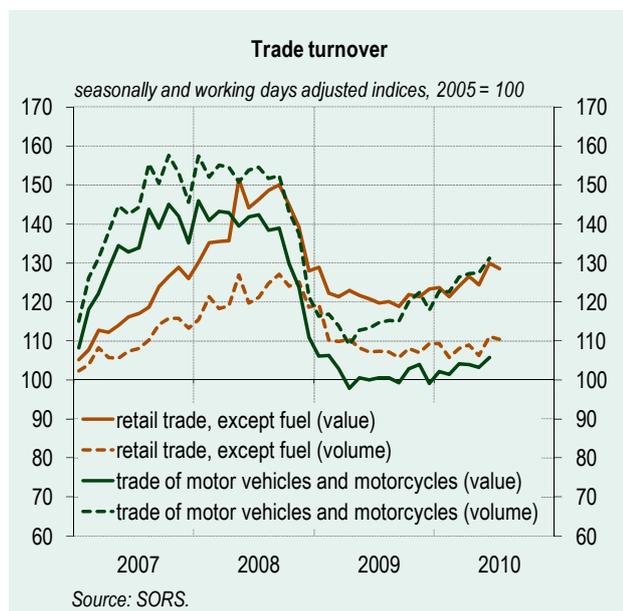

in the retail trade were up by just over 1% in current terms in the second quarter, having declined in the first quarter. Revenues in trade and repair of motor vehicles continued to display a growth trend, despite a current decline of 3.6% in July. Due to current growth in both sub-components, current and year-on-year rates of growth in total real revenues in the retail sector and trade in motor vehicles were again high in June, at 4.7% and 7.5% respectively. Year-on-year growth in total revenues in the second quarter was positive at 4.6% after five quarters of negative growth.

In the trade in motor vehicles the difference between real and nominal revenues has increased sharply since the second half of 2009. At the outbreak of the crisis in

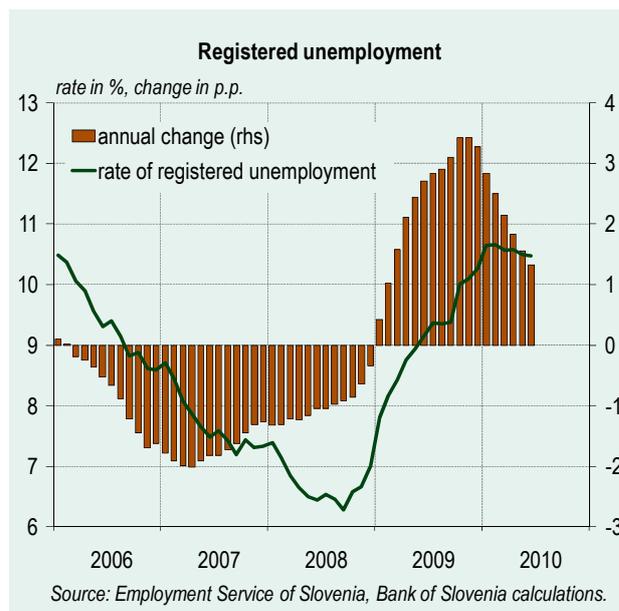

late 2008 sales of vehicles declined sharply, to which dealers responded by further lowering prices. This encouraged vehicle sales, which was also reflected in the number of new vehicle registrations. As a result there was a sharp increase in the difference between real growth and nominal growth in revenues in the trade in motor vehicles. In contrast, in the retail trade (excluding trade in motor vehicles) nominal revenues are growing faster than real revenues. The gap between the growth rates began to widen this year, primarily as a result of growth in prices of motor fuels.

After stagnating in July, the indicator of economic sentiment declined by 1 percentage point in August, primarily as a result of lower manufacturing confidence. This remained positive in August, but was down 4 percentage points on July. The majority of the components of the manufacturing's confidence indicator deteriorated, most notably the output, demand and exports indicators. After stagnating in July, services confidence also declined in August, the majority of the indicators remaining negative. A less-negative assessment of building activity brought current improvement in the construction confidence indicator, which nevertheless remains the lowest among all the sectors. The retail confidence indicator also improved, the current sales and sales expectations indicators strengthening in particular. This was in contrast to the renewed deterioration in consumer confidence, where the bad household financial situation was prominent.

Labour market

The rise in the number of unemployed has slowed sharply in the last few months, but the risk of a renewed deterioration in the remainder of the year has increased as a result of certain corporate bankruptcies. The number of registered unemployed rose to 98,406 in July as a result of prevailing seasonal effects, up 219 or 0.2% on June. The number of unemployed is currently fluctuating at a level last recorded around 2003. The rise in the registered unemployment rate seasonally adjusted by the X12 method has slowed significantly during the last six months. The rate stood at 10.6% in June, up just 0.4 percentage points on November 2009, when the last major current rise was recorded. The surveyed unemployment rate remained unchanged in the second quarter at 7.1%, which is a poor result from the point of view of the usual seasonal fall in surveyed unemployment in this quarter. After recording high year-on-year growth in 2009, the number of people newly registered as unemployed fell in 2010: a total of 7,856 were newly registered as unemployed in July, down 11.6% in year-on-year terms. Employers notified 15,163 vacancies in July, up 2.8% on the same month last year. The number

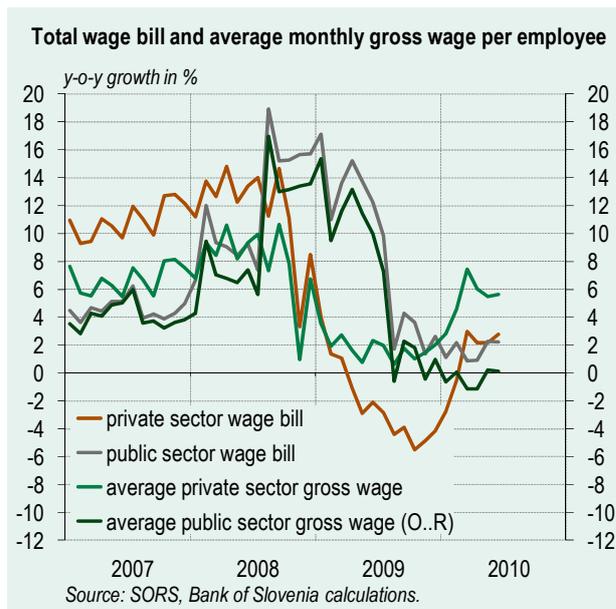

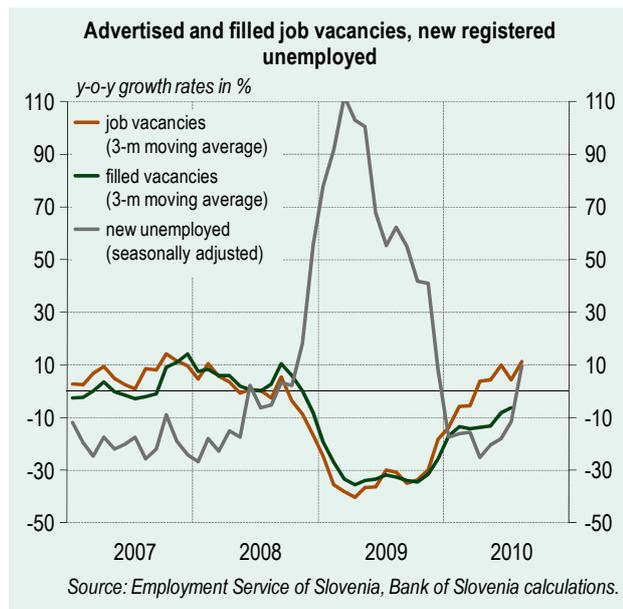

of new hires continued to decline, and was down 1.6% in year-on-year terms in July.

The fall in the workforce in employment has ceased since February, but expectations of new employment remain relatively low. The workforce in employment in the private sector rose by 343 in June, primarily as a result of a rise of 466 in the workforce in employment in financial

Notes: * Sections of NACE Rev. 2 classification. ** CPI deflator.

and insurance activities. There were large rises of 251 and 221 recorded by the professional, scientific and technical activities sector and the administrative and support service activities sector respectively. The workforce in employment is persistently falling in certain branches of the private sector. The workforce in employment in June was down 245 on the previous month in the construction sector, and by 412 in the manufacturing sector. Despite certain favourable changes, survey data about employment expectations in the private sector is still not indicating any sustained growth in the workforce in employment. The workforce in employment is continuing to increase in the public sector, and was up 120 in June. The workforce in employment is now down around

45,000 on the pre-crisis figure in the private sector, but up around 7,000 in the public sector.

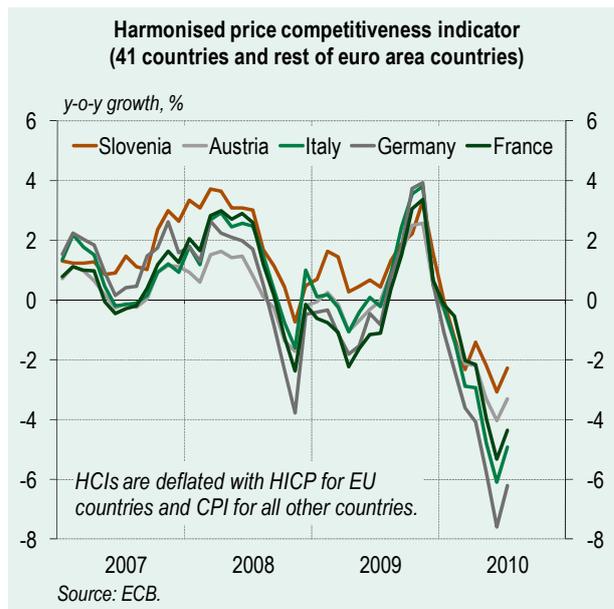

The average gross wage per employee in June was up 4.4% in year-on-year terms. Wage growth in the private sector stood at 5.7%, while wages in the public sector stagnated in year-on-year terms. The increase was particularly pronounced in the manufacturing sector and the real estate activities sector, year-on-year growth in June reaching 9.4% and 7.6% respectively. In recent months major factors in the movement in wages have been the statistical effect of the rise in the average wage in the private sector as a result of extensive lay-offs among the low-paid, and a rise in wages for employees whose wages were temporarily reduced during their inclusion in the government measure to subsidise temporary lay-offs.¹

Selected competitiveness indicators

The harmonised index of the nominal effective exchange rate recorded a current appreciation in July, in contrast to the other months of this year. July's appreciation of 0.5% was the result of the euro's rises of 4.7% against the US dollar, 1% against the pound sterling and 0.7% against the Japanese yen. The euro depreciated by 2.3% against the Swiss franc in July. The main factor in the euro's rise against major world currencies was the euro area's better economic results in the second quarter. As a result of the current appreciation, the year-on-year depreciation in the

¹ Brezigar Masten, Arjana; Kovačič, Saša; Lušina, Urška; Selan, Ana: Estimation of the impact of minimum wage rise in Slovenia, IMAD, Working Paper 3/2010, Ljubljana.

index in July declined by 0.6 percentage points to 2.6%.

The current appreciation in the harmonised index of the real effective exchange rate as measured by consumer prices in July was the same as that in the nominal effective exchange rate. It stood at 0.5%. This was an indication that domestic consumer prices grew at the same pace in current terms in July as the basket of foreign prices. The year-on-year depreciation declined from over 3% in June to 2.3% in July. The depreciation in the nominal effective exchange rate contributed 2.6 percentage points to the year-on-year depreciation, while domestic prices growing faster than the basket of foreign prices reduced the depreciation by 0.3 percentage points.

The deterioration in Slovenia's price competitiveness as measured by consumer prices relative to its most important euro area trading partners ceased in July. The current appreciation in the index of the real effective exchange rate in July averaged just under 1% in the main trading partners, 0.4 percentage points more than in Slovenia. In year-on-year terms this indicator is nevertheless continuing to show a relative deterioration in Slovenia's price competitiveness. The year-on-year depreciation in July stood at 2.3%, compared with an average of 4.7% in the trading partners. There were major differences from country to country. Price competitiveness improved most in Germany,

where there was a 6.2% year-on-year depreciation. The depreciation in the indicator stood at 4.9% in Italy, 4.4% in France and 3.3% in Austria.

The harmonised index of price competitiveness as measured by the GDP deflator,² which reflects the general level of prices in the economy, depreciated in current and year-on-year terms in the first quarter in Slovenia. The indicator declined by 1.3% in current terms in the first quarter in Slovenia, which was a major factor in the 1.2% year-on-year depreciation, the first since the second quarter of 2006. The indicator also recorded a current deprecia-

² The European Commission also publishes price and cost competitiveness indicators (http://ec.europa.eu/economy_finance/db_indicators/db_indicators8642_en.htm). These differ from those of the ECB because of methodological differences resulting from the countries involved, the different sources for the deflators and the data conversion methods.

(21 countries and rest of euro area countries)**

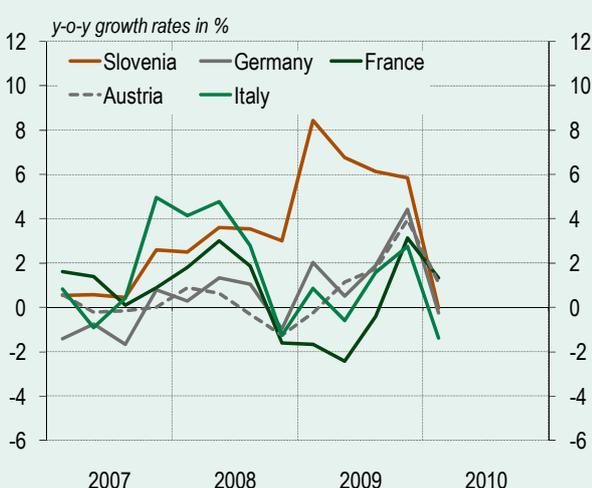

Source: ECB.

tion in the first quarter in the main trading partners, which averaged 2.2%. The year-on-year depreciation was less pronounced, and ranged from 1.8% in France to 0.2% in Germany, while Austria recorded a year-on-year stagnation in the indicator.

The harmonised indicator of cost competitiveness as measured by unit labour costs in the economy as a whole in Slovenia depreciated in current terms in the first quarter, but remained unchanged in year-on-year terms. The aforementioned indicator also depreciated in current terms in the main trading partners. The current depreciation in the indicator in Slovenia stood at 0.2%, 1.4 percentage points less than the average depreciation in the

**Real harmonised competitiveness indicator – ULC total economy
(21 countries and rest of euro area countries)**

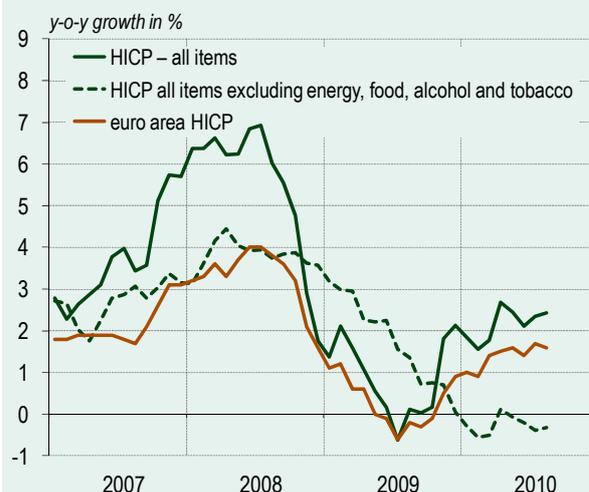

Source: ECB.

main trading partners. With the exception of Italy, the current depreciation was primarily the result of the euro's fall against major world currencies, unit labour costs having increased compared with the final quarter of 2009. Growth in unit labour costs was highest in Slovenia, as a result of which the current depreciation in the competitiveness indicator was the lowest of the countries in question. The indicator stagnated in year-on-year terms in Slovenia, while Germany and Italy recorded year-on-year depreciations of 0.3% and 1.4% respectively, while Austria and France recorded year-on-year appreciations of 1.1% and 1.3% respectively.

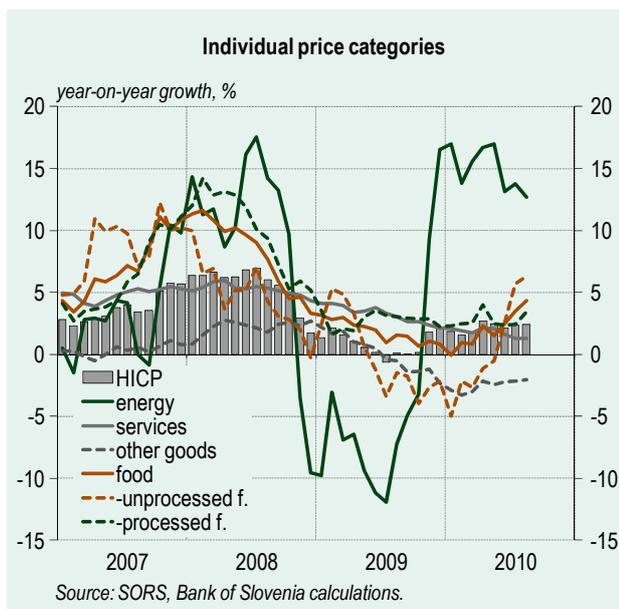

3 | Price Developments

Year-on-year inflation as measured by the HICP was up 0.1 percentage points in August at 2.4%. The contribution made by food prices rose, while the contribution made by energy prices declined slightly. Year-on-year growth in food prices increased by 0.7 percentage points in August to 4.2%, while their contribution to inflation increased by 0.2 percentage points to 0.9 percentage points. Excise duties on tobacco were raised in August, while in the last few months there has been a notable increase in prices of seasonal food, as a result of adverse weather conditions. Despite a rise in excise duties on electricity and natural gas,

Year-on-year inflation rates

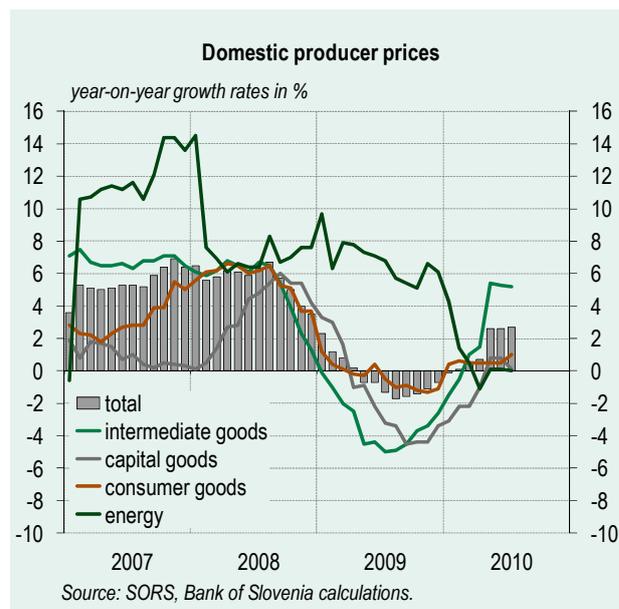

Source: SORS, Eurostat; Bank of Slovenia calculations.

energy prices declined slightly in current terms, which also reduced their year-on-year growth from 13.8% to 12.7% in July. Their contribution to inflation declined to 1.6 percentage points. The year-on-year fall in prices of non-energy industrial goods has slowed in recent months: they were down 2.0% in year-on-year terms in August. Year-on-year growth in services prices was unchanged at 1.3%.

Core inflation remains low, a reflection of the relatively low level of final household consumption. Core inflation excluding energy, food, alcohol and tobacco stood at -0.4% in July, and -0.3% in August. Core inflation excluding energy rose from 0.6% to 0.8% in August, while core inflation excluding energy and unprocessed food rose from 0.1% to 0.4%. The persistently high unemployment rate and the year-on-year decline in the number of new hires are continuing

to have a negative impact on household consumption. This has resulted in low growth in revenues in the retail sector, which is limiting retailers' possibilities of raising prices, and is acting to curb the core inflation trend.

According to detailed figures available for July, the largest year-on-year rises were recorded by energy prices, municipal services, and fruit and vegetables, while prices of cars, clothing and footwear fell. Among the components of the HICP year-on-year growth remained high in prices of heat energy (31.3%), liquid fuels (31.2%), gas (20.5%) and solid fuels (19.3%). Year-on-year growth in prices of municipal services also remains high, at 29.5% for water supply and 17.7% for refuse disposal. July also saw sharp year-on-year rises in prices of vegetables (17.5%) and fruit (9.3%). The prices in both categories rose in current

terms in June and July, in contrast to the trend in previous years. The rise in excise duties on 1 July was a factor in the higher year-on-year growth of 3.1% in prices of alcohol. July saw continuing year-on-year falls in prices of cars (11.6%), clothing (3.3%) and footwear (2.8%).

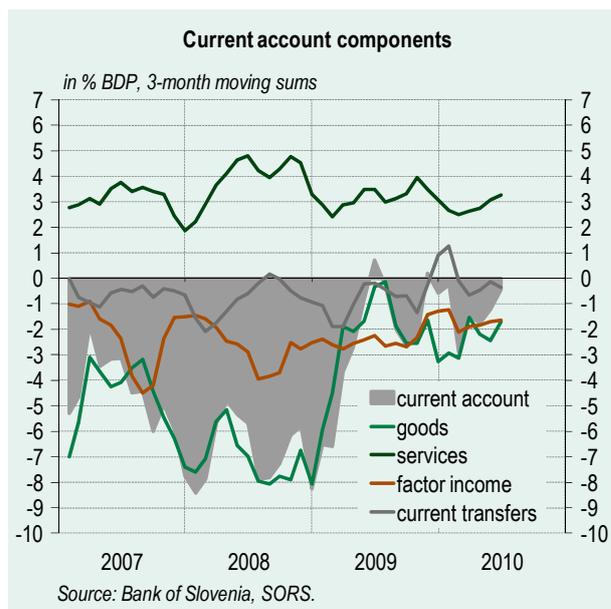

Growth in industrial producer prices on the domestic market increased slightly in July. Industrial producer prices on the domestic market were up 2.7% in year-on-year terms in July, 0.1 percentage points more than in June. The largest year-on-year rises were recorded by producer prices of metals, water collection, treatment and supply, and furniture. Year-on-year growth in industrial producer prices on the foreign market also increased in July, to 3.4%.

4 | Balance of Payments

Current account

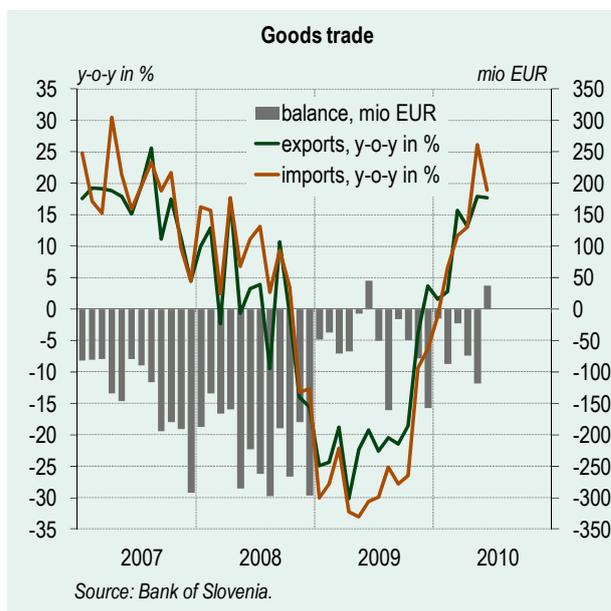

After an increase in the current account deficit in May, a significant surplus was recorded in June. Merchandise trade was the main factor in the current account position in both months. May saw a current account deficit of EUR 90 million, while a surplus of EUR 104 million was recorded in June. During this period the merchandise trade balance moved from a deficit of EUR 118 million to a surplus of EUR 37 million. May and June saw a continuation of the decline in the deficit in factor income, while the total surplus in services during the two months remained almost unchanged in year-on-year terms. There were favourable developments in current transfers in June. The current account deficit in the first half of the year declined by EUR 81 million to EUR 159 million, as the deficit in factor income and transfers declined. The merchandise trade deficit widened by EUR 97 million, while the surplus of trade in services declined by EUR 35 million. The current account deficit in the year to June amounted to EUR 444 million or 1.2% of GDP, compared with 4.7% of GDP a year earlier.

Merchandise trade increased sharply in May and June; import growth slightly outpaced export growth. According to balance of payments figures, year-on-year

growth in exports in May was up just under 5 percentage points on April at close to 18%, and remained at this level in June. The acceleration was even more pronounced on the export side, where growth stood at over 26% in May, before slowing to just under 19% in June. Alongside the sharp increase in current growth, another factor in the year-on-year growth in merchandise trade was the very low basis from the second quarter of last year. Import growth also slightly outpaced export growth overall in the first half of the year, also as a result of a deterioration in the terms of trade caused by year-on-year rises in commodity prices and energy prices. The merchandise trade deficit widened by EUR 97 million in year-on-year terms, to EUR 282 million.

After increasing in March, year-on-year growth in mer-

merchandise exports to the EU27 fluctuated around 20% until June, while similar movements were seen on the import side. Growth in exports to the EU27 accelerated during the first four months of the year to reach 21.5% in April, partly as a result of a strong base effect from last April, when the year-on-year low was reached. During the next two months growth slowed slightly, but nevertheless remained around 20%. On the import side, after March there was also a pronounced acceleration in May, when year-on-year growth in merchandise imports approached 26%, before slowing to 16.5% in June. Growth in exports to the EU27 during the first half of the year reached 15.7%, outpacing import growth by just under 2 percentage points. The merchandise trade deficit with EU Member States in the first half of the year nevertheless widened by EUR 12 million in year-on-year terms to EUR 863 million.

In trade with non-EU countries, imports and exports during the first four months of the year were down in

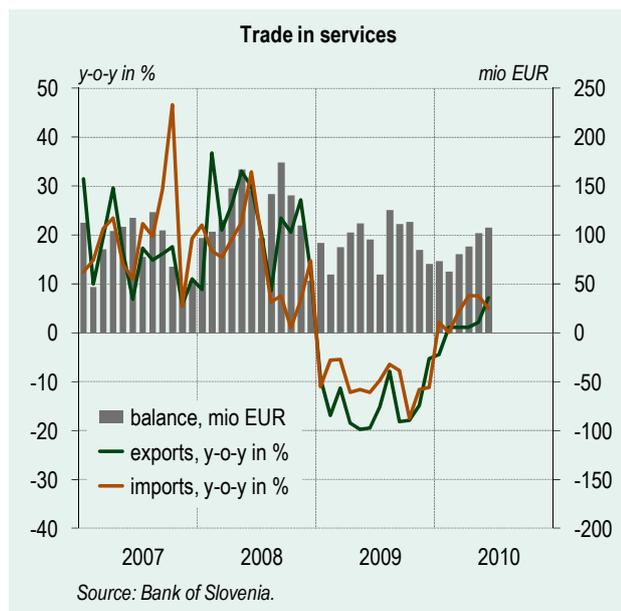

year-on-year terms overall, before a sharp increase in merchandise trade in May. Import growth stood at just over 29%, while export growth exceeded 15%. Year-on-year growth in merchandise trade with non-EU countries slowed on the import side in particular in June, to just over 20%. Imports from non-EU countries during the first half of the year were up 7.4% in year-on-year terms, while exports were up by just over 3%, which reduced the merchandise trade surplus by EUR 63 million to EUR 401 million.

After stagnation during the first five months of the year, exports of services increased significantly in June.

Growth exceeded 7% in June, primarily as a result of a sharp increase in growth in exports of transport services associated with rising export activity and the low basis from last June. Exports of tourism services in the first half of the year were up by just 0.5%, a reflection of the continuing uncertainty on the labour markets in the main trading partners. After declining during the first five months of the year, exports of

Source: Bank of Slovenia, SORS.

other services (services other than tourism and transport) increased by just over a tenth in June. Most notable among the other services was the continuing contraction in exports of construction services, which exceeded 28% during the first half of the year. Exports of communications services also declined slightly, while exports of other business services increased. Both categories of services have shown sharp fluctuations in exports this year. Despite stronger growth in June, total exports of services in the first half of the year were up by just 1.5% in year-on-year terms.

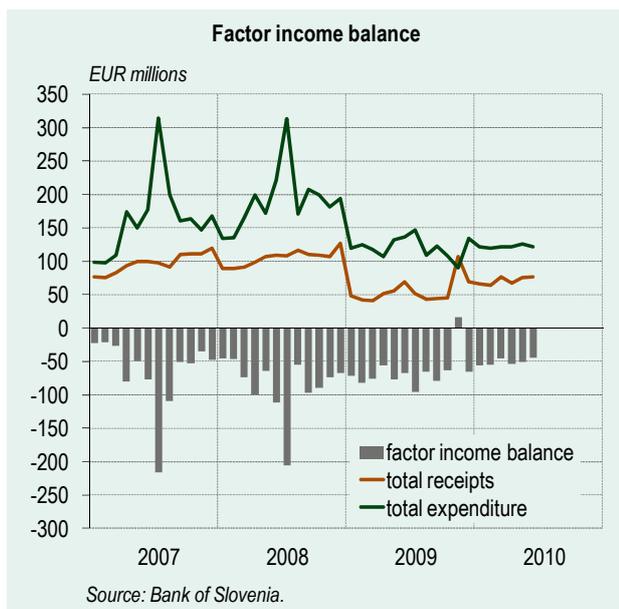

Despite a slowdown in June, growth in imports of services in the first half of the year significantly outpaced export growth. Growth in imports of services in June was down around 2.5 percentage points on April and May at 5%, taking the rate for the first half of the year to 4.6%. Imports of transport services have risen sharply since March, and were up about a quarter in year-on-year terms in May and June. Given the situation on the Slovenian labour market, growth in imports of tourism services was relatively high, at 4.6% in the first half of the year. Growth in imports of other services (services other than tourism and transport) fluctuated considerably in the first half of the year, and averaged just under 2%. The sharp contraction in imports of construction services continued, a reflection of the deepening crisis in domestic construction sector. Among the major other services, imports of computer and information services and of other business services mostly stagnated,

while imports of intellectual property services rose sharply, by just under a third.

The faster recovery in imports than exports of services in the first half of the year had an adverse impact on the surplus of trade in services. The surplus declined by EUR 35 million in year-on-year terms to EUR 515 million, despite a slight improvement in results in June, when the surplus was up EUR 12 million in year-on-year terms at EUR 108 million. The largest factors in the year-on-year decline in the surplus of trade in services were a decline of EUR 14 million in the surplus in tourism services and an increase of EUR 19 million in the deficit in other services (services other than tourism and transport). Among other services, there was a sharp decline of EUR 20 million in the surplus in construction services, and an increase of EUR 30 million in the deficit in intellectual property services. The deficit in financial services recorded in the first half of 2009 became a surplus of EUR 10 million this year, while the deficit in government services narrowed by EUR 16 million.

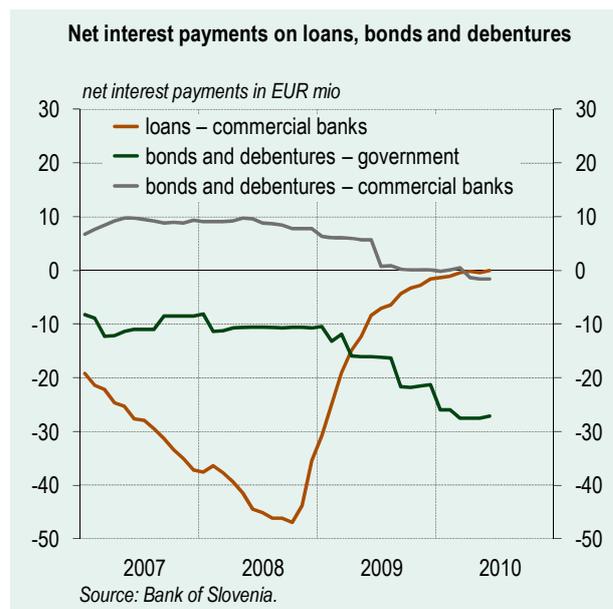

The deficit in factor income in the first half of 2010 narrowed by just under a third in year-on-year terms, a decline being recorded in all months in the first half of the year. The deficit narrowed from EUR 430 million in the first half of 2009 to EUR 306 million in the first half of 2010. The deficit in capital income narrowed by EUR 89 million in year-on-year terms to EUR 361 million. The deficit in income from FDI narrowed by EUR 51 million, while the deficit in income from other investments, predominantly bank loans, narrowed by EUR 148 million. The deficit in income from securities stood at EUR 73 million, a surplus of EUR 50 million in this income having been recorded in the first half of 2009. Another factor in the narrowing deficit in factor income was the relatively high surplus of EUR 54 million in labour income, which was largely the result of a decline in the number of foreign workers and the irregular situation in the payment of their wages. The deficit in factor income in the 12 months to June stood at 1.8% of GDP, compared with 2.8% of GDP a year earlier.

Changes in the sources of financing in 2009 are also having a major impact this year on the movements in factor income. Among income from other investments, in-

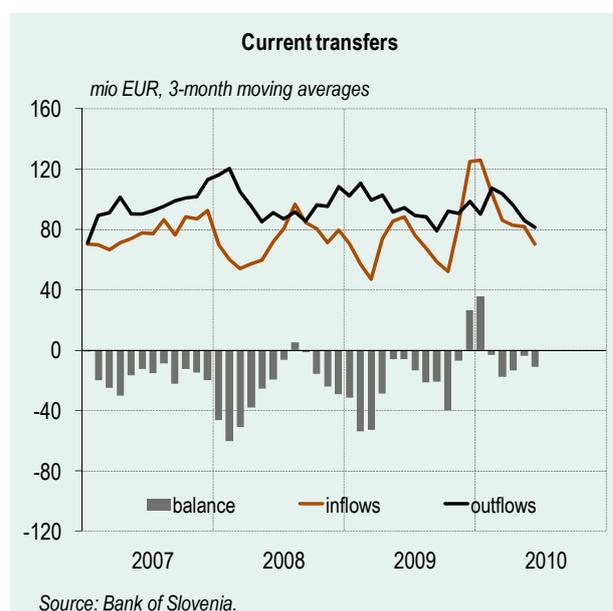

Interest payments by the commercial banks on loans raised in the rest of the world were down EUR 120 million during the first half of the year in year-on-year terms at EUR 89 million. The banks' corresponding receipts declined by just EUR 13 million to EUR 85 million. Alongside lower interest rates, another factor in the decline in interest payments on loans raised in the rest of the world was the significantly diminished access to funding on foreign interbank markets in 2009. This loss of funding was compensated for by government and commercial banks' bond issues. This brought a deficit in income from investments in securities, as expenditure on interest payments on issued bonds and notes increased sharply. In the first half of the year this expenditure by the government was up EUR 78 million in year-on-year terms at EUR 165 million, while at the commercial banks it was up EUR 39 million at EUR 42 million.

In the first half of the year, the deficit in current transfers narrowed sharply in year-on-year terms. It stood at EUR 86 million, EUR 89 million less than in the first half of 2009, primarily as a result of a decline in the deficit in government transfers as the deficits in taxes on production and in other government transfers narrowed. The net position of the state budget against the EU budget was positive in the amount of EUR 7.5 million, up just slightly on the first half of last year. The private sector deficit narrowed by EUR 7 million in year-on-year terms to EUR 17 million.

Capital and financial account

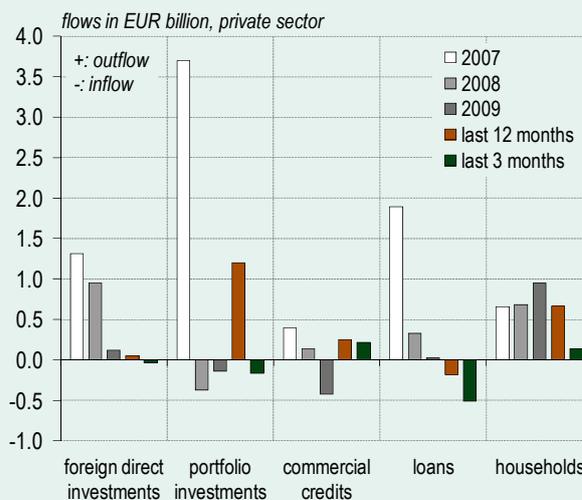

The private sector recorded net financial outflows of EUR 49 million in May, and net inflows of EUR 242 million in June. May's net financial outflow was primarily the result of an increase in claims from currency and deposits, in which the domestic commercial banks were the largest factor. These transactions in May were partly compensated for by an increase in liabilities from trade credits and an increase in loans to domestic banks. The largest factor in June's net inflow was an increase in liabilities from deposits at banks and trade credits, while the increase in claims was negligible.

The private sector's claims against non-residents increased by EUR 515 million in May, the highest figure of the last seven months. June's increase was negligible, at EUR 26 million. Claims against the rest of the world increased by EUR 3,065 million over the last 12 months, almost as much as in 2008 and 2009 put together. The main factors in the increase in claims over the last year have been currency and deposits in the rest of the world held by domestic banks and households, and investments in foreign securities. Claims from currency and deposits increased by EUR 459 million in May, while there was a decline of EUR 102 million in investments in foreign securities in May and June.

The private sector's liabilities to the rest of the world increased again in May (by EUR 466 million) and June (by EUR 269 million). Liabilities to the rest of the world increased by EUR 1,445 million overall in the last 12 months, as a result of the stabilisation of the global economic situation and the resulting easier access to foreign financing

Financial claims* on the rest of the world - June 2010

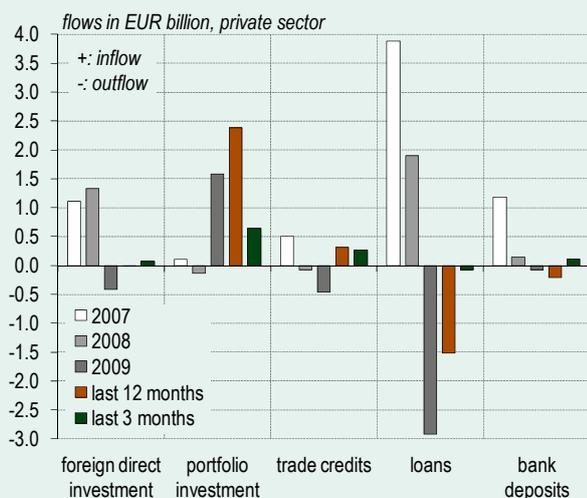

Source: Bank of Slovenia.

for the private sector. The largest factors in May's increase in liabilities were foreign loans to banks, which increased by EUR 335 million, and trade credits, which increased by EUR 122 million, the largest figure since May 2008. The largest factors in June's increase in the private sector's

Financial liabilities to the rest of the world - June 2010

Source: Bank of Slovenia.

liabilities were non-residents' deposits at banks (EUR 196 million) and trade credits (EUR 89 million). Liabilities from foreign loans to banks and corporates declined by EUR 133 million in June.

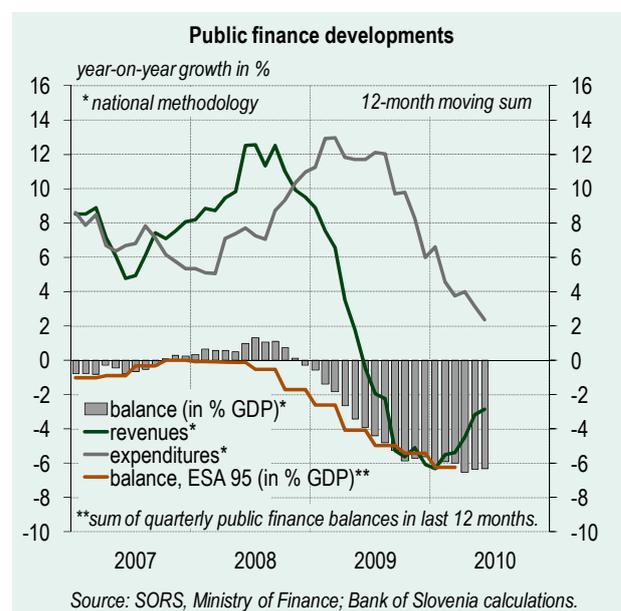

After falling by EUR 43 million in May, Slovenia's net external debt rose by EUR 240 million in June to stand at EUR 11.3 billion at the end of the month. Gross external claims rose by EUR 1.1 billion in May, while the gross external debt rose by EUR 1.07 billion. In June the total economy's gross external claims fell by more than the gross external debt (EUR 371 million versus EUR 131 million), thereby increasing the net external debt. The banking sector, the Bank of Slovenia and the government saw their gross external claims fall in June, while other sectors further increased their gross external claims. The main contributions to the decline in gross external liabilities came from the government and other sectors, whose liabilities declined by a total of EUR 155 million.

5 | Public Finance

The general government deficit in the 12 months to June reached 6.2% of GDP. June's deficit was lower than in the previous months. The general government deficit in the first half of the year was up EUR 254 million in

year-on-year terms at EUR 1,370 million. In the first seven months of the year the state budget recorded a deficit of EUR 1,423 million, 81% of the deficit anticipated in the revision to this year's state budget. The Health Insurance Institute also recorded a deficit over the first seven months of the year, of EUR 22 million, almost EUR 60 million less than in the same period last year. On the revenue side the HII recorded slightly higher inflows of social contributions during the first seven months of the year, while the decline in expenditure was even more pronounced. Current transfers to public institutions in particular were lower. The deficit in local government over the first half of the year amounted to EUR 31 million, about EUR 28 million less than in the same period last year. The decline in the local government deficit was the result of a year-on-year increase in person income tax revenues.

Consolidated general government revenues in the first half of the year were down 0.6% in year-on-year terms. The cumulative decline in revenues from taxes and contributions deepened further in July and August to around 2.5%. The major factor in the decline in revenues during the first half of the year was a decline in corporate income tax revenues, both as a result of tax settlements for last year and as a result of a cut in the tax rate and the consequent decline in tax prepayments this year. The rate of decline in revenues from taxes and contributions deepened to 2.8% over the first seven months of the year, but stood at 2.5% in August. The large decline was the result

of high personal income tax refunds in July, while last year the majority of refunds were made in the previous month. Refunds of person income tax over the first eight months of the year exceeded the total for the whole of last year by EUR 20 million. Revenues from excise duties also recorded negative growth during the first eight months of the year, as a result of lower consumption of products subject to duty (motor fuels in particular). The excise duty on electricity was raised to EUR 3.05 per MWh, less than the EUR 6.05 per MWh originally envisaged in the revision to this year's budget. As a result revenues from this source are expected to be EUR 7.8 million smaller this year than previously planned. Among the major sources of revenue, positive growth during the first eight months of the year was recorded by social contributions (0.9%) and VAT (3.1%).

Year-on-year growth in general government expenditure in the first half of the year slowed to 2.7%. Expenditure in the first half of the year was up EUR 215 million in year-on-year terms. The majority of the difference came from higher interest payments on securities (up EUR 88 million), higher expenditure on pensions (up EUR 71 million) and transfers to the unemployed and social assistance recipients (up EUR 45 million). Interest payments have risen this year as a result of the relatively high borrowing last year, when the budget deficit was high, and borrowing was also allowed for the purpose of pre-financing the maturing of debt principal in the following two years. The growth in expenditure on pensions was partly the result of the scheduled annual

pension increase in February (1.7%, or 1.1% on a portion of pensions), and a rise in the number of pensioners. During the first half of the year the number of pensioners rose by 2.2%, compared with 1.7% over the whole of last year. Expenditure on wages in the first half of the year was almost unchanged in year-on-year terms, and the government is drawing up further economising measures in the area of wages. At the moment these primarily comprise a possible wage freeze in the next two years and the postponement of the adjustment to eliminate wage discrepancies. Investments in the first half of the year were down EUR 18 million in year-on-year terms, but with regard to the revision to the budget positive growth in investment expenditure is expected by the end of the year.

Receipts from the EU budget during the first seven months of the year were EUR 38 million higher than payments into the budget. In terms of the revision to the budget, during the first seven months of the year revenues received were 28% of the total planned for this year, while expenditure was 60% of the total. The revision to the budget anticipates a positive net position against the EU budget this year in the amount of EUR 625 million.

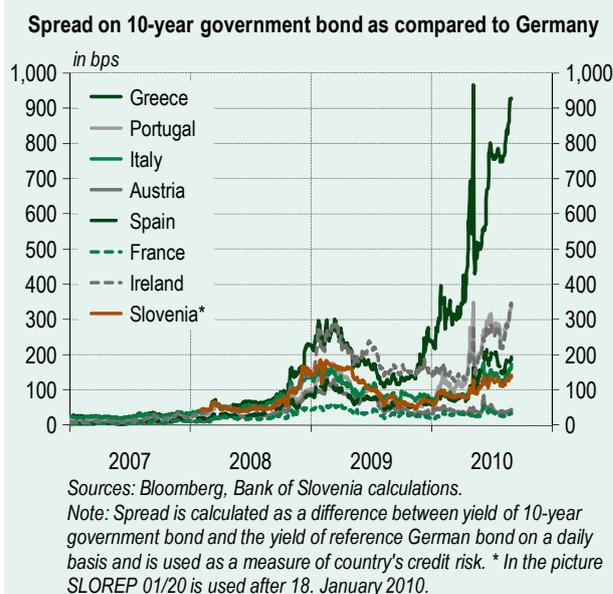

Net general government borrowing in the first half of the year amounted to EUR 878 million, while cash in bank accounts also declined. The account of financial claims and investments recorded a surplus. The majority of the borrowing was undertaken in the first three

Note: *All bond issues disbursed on domestic market are counted under domestic borrowing, despite of the residency of buyers. Out of EUR 7,500 million bonds issued from February 2009 till June 2010 EUR 5,275 million were bought by foreigners until end June 2010.

months of the year, when two government bonds with a total nominal value of EUR 2.5 billion were issued. The majority of payments of debt principal maturing this year were also made in the first half of the year, in the amount of EUR 1.7 billion. The government withdrew EUR 484 million from bank accounts in the first half of the year to cover the general government deficit, while the account of financial claims and investments recorded a surplus of EUR 8 million. A deficit is projected in this account over the remainder of the year, primarily as a result of the loan to Greece. According to IMF, ECB and European Commission assessments from August, this year Greece will meet the conditions for the approval of the second instalment of loans from euro area Member States (other than Slovakia), which is expected to be made in September, and in which Slovenia is likely to participate. The spreads on 10-year government bonds over the comparable German bond in the so-called peripheral countries during the summer remained slightly higher than in May. The spread on Slovenian government bonds over the comparable German bond stood at 125 basis points in August, having stood at a similar level in the two previous months (123 basis points in June, and 124 basis points in July).

6 | Banking System*

After increasing by EUR 490 million in June, the banking system's total assets declined by a noteworthy EUR 1,487 million in July. The main factors in June's increase were an increase in government deposits at banks on the funding side, and an increase in the stock of currency and deposits at the central bank on the investment side. July's decline in the banking system's total assets was primarily the result of maturing liabilities to the Eurosystem in the amount of EUR 875 million. Additionally the continuing repayment of debt to domestic banks and to banks in the rest of the world and a renewed decline in government deposits were factors on the funding side in July's decline in total assets. On the investment side there was consequently a significant decline of EUR 761 million in loans to banks, the stock of currency in deposits at the central bank and investments in securities. The volume of net lending to non-banking sectors was modest but growing in June and July.

Loans to non-banking sectors recorded a net increase of EUR 107 million in June, but were down a third in July. Year-on-year growth in loans to non-banking sectors consequently declined to 2.0% in July. Lending to households and a renewed decline in loans to non-financial corporations were factors in the modest net increase in loans in both months. The trend of lengthening loan maturities has continued for all categories of borrower.

The net stock of loans to non-financial corporations declined in July for the third consecutive month. The banks under majority foreign ownership were again major contributors to the declines of EUR 76 million in June and EUR 15 million in July, their loans to this category of borrowers declining by EUR 52 million and EUR 66 million respectively. The merely symbolic positive year-on-year growth in loans to non-financial corporations in July was a reflection of the stagnation in lending to non-financial corporations.

There was a net increase of EUR 158 million in loans to households in June, significantly more than this year's monthly average, but this was followed by a modest increase of EUR 41 million in July. In terms of the maturity breakdown, long-term loans contributed EUR 71 million towards July's increase, while short-term loans again declined. Although the domestic banks lent slightly more to households in July,

* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

the banks under majority foreign ownership accounted for almost two-thirds of this year's total net increase in loans to households.

The banks are continuing to make debt repayments to banks in the rest of the world. The banks have made net repayments of EUR 225 million to banks in the rest of the world in the last two months, and EUR 1,063 million in total this year. In July the banks reduced their liabilities to the Eurosystem by EUR 875 million, as a result of the maturing of funding obtained last year in 12-month longer-term refinancing operations at the ECB.

Government deposits were a major factor in June's increase and July's decline in deposits by non-banking sectors. After temporarily increasing its deposits by EUR 507 million in June, the government continued to withdraw by reducing its deposits by EUR 154 million in July. There was almost no increase in household deposits in the last two months, while deposits by non-financial corporations and other financial institutions declined by EUR 45 million and EUR 4 million respectively. Year-on-year growth in deposits

by non-banking sectors stood at 4.1% at the end of July, up 0.7 percentage points on June. In terms of the maturity breakdown, July's net increase in short-term deposits was the first this year, although sight deposits declined, while the increase in long-term deposits was smaller than this year's average.

Source: Bank monthly accounts figures.

The banking system's gross income during the first seven months of the year was up 3.5% on the same period of 2009, but pre-tax profit was almost halved. Net interest during the first seven months of the year was up by just over 16% on the same period last year, primarily as a result of a decline of almost a fifth in interest expenses, while the decline in interest income was significantly smaller. Losses from securities trading were the major factor in the negative year-on-year growth in net non-interest income. In July the banks continued to record a modest increase in impairment and provisioning costs, which were up almost a half on the first seven months of last year. Impairment and provisioning costs remain a key reason for the banking system's continuing decline in pre-tax profit.

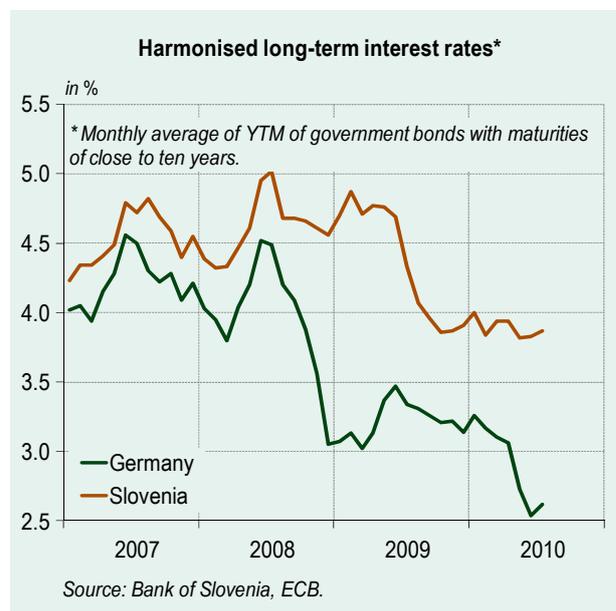

7 | Domestic Financial Markets

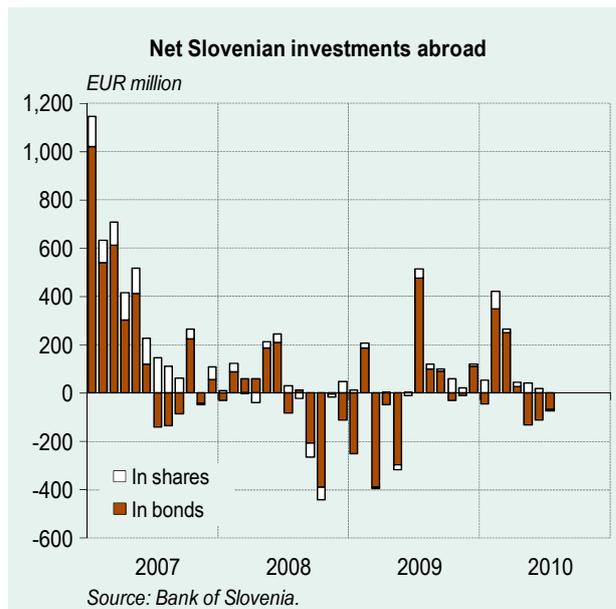

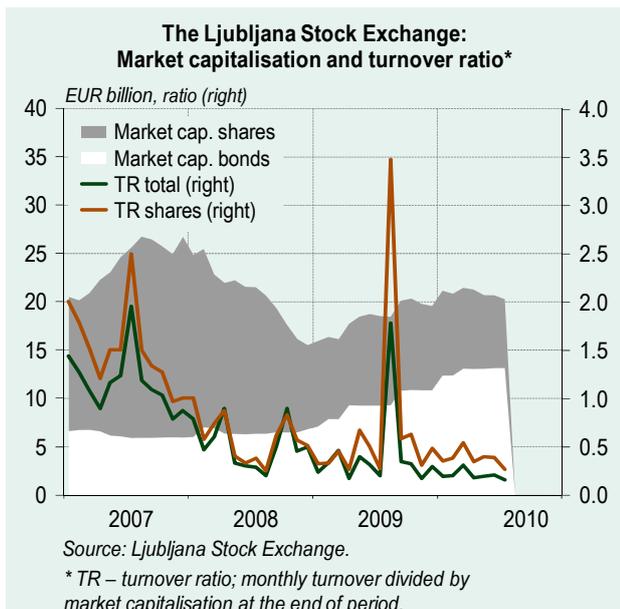

The yield on Slovenian government bonds stood at 3.87% at the end of July, compared with 2.62% on German government bonds. According to ECB figures, the spread between Slovenian and German long-term government securities narrowed only slightly in July to a still-relatively-high 125 basis points (compared with 129 basis points in June).

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 0.2% in June, and by 0.4% in July. Banka Celje 13th-issue bonds (EUR 40 million), NLB 26th-issue bonds (EUR 61 million) and Zavarovalnica Triglav 2nd-issue bonds (EUR 30 million) were listed for trading during these two months. The volume of trading bonds amounted to EUR 12.9 million in June and EUR 11.6 million in July, less than the monthly average in 2009 of EUR 13.0 million, but more than the monthly average during the first seven months of 2010 of EUR 10.9 million. The proportion of total trading volume on the stock exchange accounted for by bonds rose to 30.1% in June and to 37.0% in July, primarily as a result of a lack of confidence in growth in share prices. The heaviest trading was in 2nd-issue Slovenska odškodninska družba bonds (EUR 3.5 million in June and EUR 4.0 million in July).

The market capitalisation of shares on the Ljubljana Stock Exchange declined by 0.9% in June and by 5.7% in July, despite an increase of 13.4% in the number of Gorenje shares. The SBI TOP finished July at 813, having fallen by 0.3% in June and 7.6% in July (taking the year-on-year changes to -15.5% and -21.0% respectively). The SBI TOP has been falling since October 2009, a reflection of adverse corporate results and the uncertain economic recovery in Slovenia. The P/E ratio had risen to 42.6 on the prime market by the end of July, while on the standard market the corporate losses declared meant that there was no point in calculating the ratio. The volume of trading in shares amounted to EUR 28.5 million in June and EUR 17.8 million in July, below the monthly averages in 2009 and 2010.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents rose to 9.2% in July, the highest figure to date. Non-residents made net purchases of EUR 22.6 million in Slovenian securities in June, comprising net sales of EUR 8.8 million in bonds and net purchases of EUR 31.4 million in shares in Slovenian issuers. The largest net purchasers and net sellers of government bonds were residents of Luxembourg and the UK, while residents of Austria were the most active in the purchase and sale of shares. Non-residents made net purchases of EUR 44.9 million in Slovenian securities in July, comprising EUR 12.1 million in bonds and EUR 32.9 million in shares in Slovenian issuers.

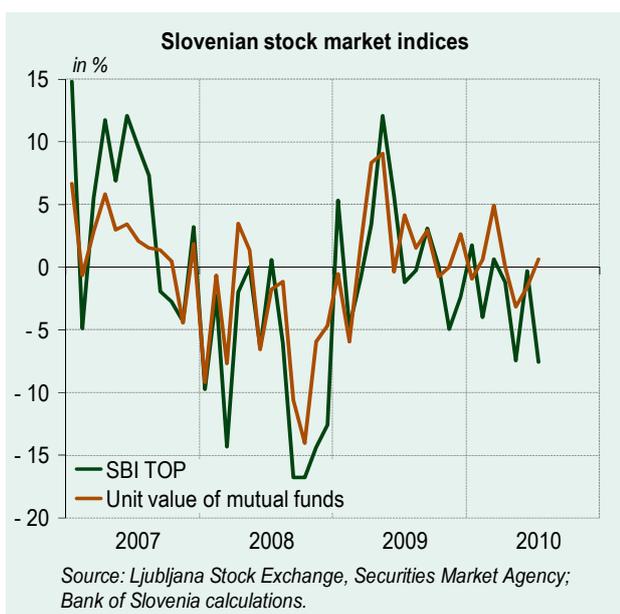

The largest net purchasers and net sellers of government bonds were again residents of Luxembourg and the UK, while residents of Austria and the US were the most active in share trading.

Residents made net purchases of EUR 18.0 million in foreign shares and net sales of EUR 113.6 million in foreign bonds in June. Residents made net sales of EUR 6.8 million in foreign shares and EUR 68.2 million in foreign bonds in July. The majority of net purchases in foreign shares, shares in companies from the BRIC³ countries and the US in particular, were made by other financial

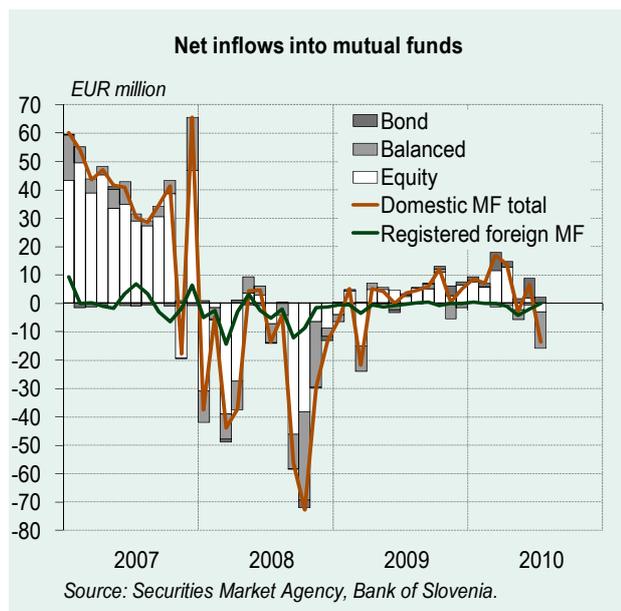

intermediaries. The banks made net sales of shares, shares in companies from the US and euro area in particular. The insurers primarily made net purchases of euro area bonds, while the banking sector primarily made net sales of government bonds and bank bonds from issuers in the euro area. Households made net sales of securities in June and July, particularly those from the euro area, but also made net purchases of shares in companies from the US.

The domestic mutual funds' assets under management declined to EUR 1,890 million in June before rising to EUR 1,953 million in July (a decline of 1.3% in June

³ Brazil, Russia, India and China.

⁴ Liquid assets include cash, deposits, money-market instruments and government bonds.

and a rise of 3.3% in July). There were net inflows of EUR 6.5 million into the domestic mutual funds in June, when the average unit price fell by 1.6%. There were net withdrawals of EUR 13.6 million in July, when the average undertaking price rose by 0.6%. The largest net withdrawals were from mixed funds and equity funds, while bond funds recorded net inflows. The largest net inflows into the domestic mutual funds were recorded by the insurance sector, while the largest net withdrawals were recorded by other financial intermediaries, households and non-financial corporations. The proportion of the mutual funds' assets accounted for by liquid assets⁴ stood at 10.8% at the end of July. In June and July the domestic mutual funds saw the value of their investments in the markets of the euro area and the BRIC countries rise, primarily as a result of price increases. The rise in the majority of international capital market indices in July was larger than their fall in June. The year-on-year changes in the DJ EuroStoxx for western Europe, the S&P 500 for the US and the Hang Seng for China stood at +7.3%, +11.6% and +2.2% respectively in July. The Balkan indices fell in June and July. The year-on-year change in the BELEX 15 remained positive at the end of July at +10.6%, while the year-on-year changes in the CROBEX and the MBI-10 stood at -1.2% and -3.4% respectively.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procuration and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procuration, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procuration, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%
2	1.3.	liabilities/ 4		Liabilities/ Deposits/ Domestic sectors/ Other MFIs/ Foreign currency	100%	100%	-

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds
General

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A penalty rate is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Ljubljana Stock Exchange (Tables 2.6 to 2.8)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities

Shares – investment fund shares are not included.

IF – investment fund shares.

Turnover is measured with a single counting.

Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

- SBI – Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO – Bond Index
- SBI, BIO – value of SBI and BIO at the end of period
- dT – change of index value by points
- d% – change of index value in percentage
- Min, Max – minimum and maximum value of index in a period

Exchange rates (Tables 2.9.1–2.9.2)
Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.
The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.9.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

Payment systems (Tables 2.10 to 2.16)
General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.10: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.11 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.12 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.13 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.14 Credit Transfers

A **paper-based order** is a payment instrument related to a credit or debit transfer, in which the payer submits an order on

a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.15 Debit Transfers and Simply book-entry

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.16: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).

- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**

- report on account balances at domestic banks – PPV (until 31 December 2004),
- report on account balances abroad – C (until 31 December 2006),
- report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
- report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.

- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.

- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.

- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.

- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.

- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.

- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.

- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.

- **Accounting data of the Bank of Slovenia**

- **Accounting data of banks (KNB)**

- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

Estimates and other sources

- estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
- estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
- estimate of Italian pensions (UMAR) until the end of 1998,
- estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
- estimate of labour income (SURS),
- data on pensions paid to non-residents (ZPIZ),
- survey on the write-downs of debt from trade in goods and services abroad,
- estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
- estimate of cash transactions on tourism and labour income (from 2007 onwards),
- quarterly data on consumption of foreign embassies in Slovenia (SURS, from 2008 onwards),
- migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
- households' transfers (SURS, from 2008 onwards),
- assets acquired directly by tenders and programmes of EU (SURS, from 2008 onwards),
- data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB - data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SURS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income - receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income - Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are

obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SURS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SURS, Annual survey on investment in tangible assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount

of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2009 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2006 to 2008 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2010, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2009 shall take into consideration the new three year average (2007 to 2009).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2009 are provisional.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial

items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not

distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial derivatives are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity,

insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.

- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2 (Nomenclature statistique des activités économiques dans la Communauté

européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1–ZAP/M)). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, ECB EER-41 group of currencies (AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CZ, EE, HU, LV, LT, PL, BG, RO, NZ, DZ, AR, BR, HR, IN, ID, IL, MY, MX, MA, PH, RU, ZA, TW, TH, TR, IS, CL, VE) - Euro area 16 against Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs deflated, ECB EER-21 group of currencies and Euro area 16 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO) against Slovenian tolar (until 31.12.2006) from 01.01.2007 against Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data shown every three months of the year are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia: <http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
1.5. Selected Assets of Other Monetary Financial Institutions by Sector	2.6 MFI holdings of securities, breakdown
1.6. Selected Obligations of Other Monetary Financial Institutions by Sector or	2.5 Deposits held with MFIs, breakdown
1.4. Balance Sheet of Other Monetary Financial Institutions	
1.8. Investment funds	2.9. Aggregated balance sheet of euro area investment funds
	2.10. Securities held by investment funds broken down by issuer of securities
2.2. Interbank Money Market Rates and Indexation Clause	4.6 Money market interest rates
