## Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (Slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

6. Banking System
7. Domestic Financial Markets

Economic growth in the euro area remained weak in the third quarter, while the outlook for future growth is deteriorating. GDP in the euro area was up 0.2% on the second quarter, largely as a result of relatively favourable growth in Germany and France. Domestic consumption remained low, unemployment having remained above 10%, and the urgent fiscal consolidation is not allowing government consumption to stimulate growth. In November, the economic growth forecasts for the euro area, particularly for 2012, continued to be revised downwards, primarily as a result of the debt crisis and the increasingly evident signs of a slowdown in the global economic growth. In their recent forecasts the European Commission, the OECD and Consensus have been forecasting growth of around 0.5% or even less for next year. The ECB cut its key interest rate by 0.25 percentage points in November to 1.25%.

The deterioration in the international environment is also being reflected in the activity of the Slovenian economy. In the third quarter it was down 0.2% on the second quarter, manufacturing activity having fallen while domestic consumption continued to decline. GDP was down 0.5% in year-on-year terms. As growth in exports recorded a faster year-on-year decline than that of imports, the contribution made by net trade declined, as did the contribution made by growth in inventories. Growth in value-added in the majority of private sector services was less favourable than in the second quarter. Contraction in construction investment and the crisis in the construction sector continued. Given the limited possibilities of growth in domestic demand, and the decline in indicators of foreign demand in the final quarter, the outlook for future economic growth deteriorated sharply.

The number of registered unemployed increased to 110,905 in October, although the increase was significantly smaller than in the last two years as a result of a smaller inflow of those seeking their first employment. At the same time, fewer vacancies were notified. The registered unemployment rate remained at 11.5% in September, while the survey rate rose to 7.9% in the third quarter. The workforce in employment increased slightly in September, but primarily as a result of a seasonal rise in employment in the education sector. The adverse economic situation continues to be reflected in a gradual slowdown in growth in average wages and in a decline in the workforce in employment in the private sector, which is reducing purchasing power of consumers.

The current account position has remained close to balanced this year, as a result of an increase in the surplus of trade in services and the surplus in current transfers, and a narrowing of the merchandise trade deficit. In recent months, the further decline in confidence in the international environment and the persistently low level of domestic demand have been reflected in a gradual decline in year-on-year growth in merchandise imports and exports. The deficit in factor income remains high, under the growing impact of interest payments on past government borrowing. The current account deficit over the 12 months to September narrowed to 0.2% of GDP, having stood at 0.6% of GDP a year earlier.

Inflation stood at 2.8% in November, down 0.1 percentage points on October. The decline was largely the result of a sharp decline in year-on-year growth in prices of fruit from 21.9% in October to approximately 2%. The low level of economic activity is curbing growth in core inflation via a decline in consumer purchasing power, November's rate having remained practically unchanged from October.

In the year to the third quarter the general government deficit according to the ESA 95 methodology amounted to 6.5% of GDP, a deficit of 5.5% having been forecast for this year in the Reporting of Government Deficits and Debt Levels. Yields to maturity on Slovenian 10-year government bonds on the financial markets mostly remained around 7% in November. This is raising the cost of new government borrowing, and also the cost of new private sector borrowing.

The main factors on the funding side in October's increase of EUR 161 million in the banking system's total assets were an increase in liabilities to the Eurosystem and the issue of debt securities by SID banka. The banks obtained funding in an extraordinary 1-year LTRO, primarily for repaying liabilities to banks in the rest of the world. On the investment side there was an increase in cash in hand and balances at the central bank, while the negative growth in loans to non-banking sectors stagnated in October. The banking system recorded a pre-tax loss of EUR 124 million during the first ten months of the year, in which the major factor was an increase in impairment and provisioning costs.

The market capitalisation of bonds on the Ljubljana Stock Exchange stagnated in October, while the market capitalisation of shares rose by 3.3%. The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents stood at 12.6%. The SBI TOP responded to the positive outcome of the EU summit with a rise of 4%. It ended October at 643 points, a year-on-year change of -25.7%. In September investors made their largest net withdrawals from mutual funds in the last three years. October's net withdrawals of EUR 10.3 million were lower than in September, and the average unit price recorded a rise of 8.6%. These were the factors behind October's increase in the domestic mutual funds' assets under management to EUR 1,879 million.

# 1 | International Environment

Real GDP growth in the euro area in the third quarter was low, but positive. However, economic growth forecasts continued to be lowered, particular for 2012. GDP in the euro area in the third quarter was up 0.2% on the previous quarter, primarily as a result of relatively favourable growth in France and Germany. In light of the fiscal crisis and the rising uncertainty in the global economy, in its autumn forecasts the European Commission lowered the economic growth forecast for the euro area. The rate is expected to stand at 1.5% this year, and just 0.5% in 2012. In November, Consensus and the OECD announced similarly low forecasts for the euro area.

The slowdown in economic growth in the euro area is also having an impact on activity and confidence in other major economies. Industrial production in the euro area declined by 0.2% in September, the largest monthly decline in the last six months. There was also a significant monthly decline in orders in industry, by 6.4%. The slowdown in activity in the euro area is being reflected in a decline in demand for products from the major trading partners and increased uncertainty surrounding global

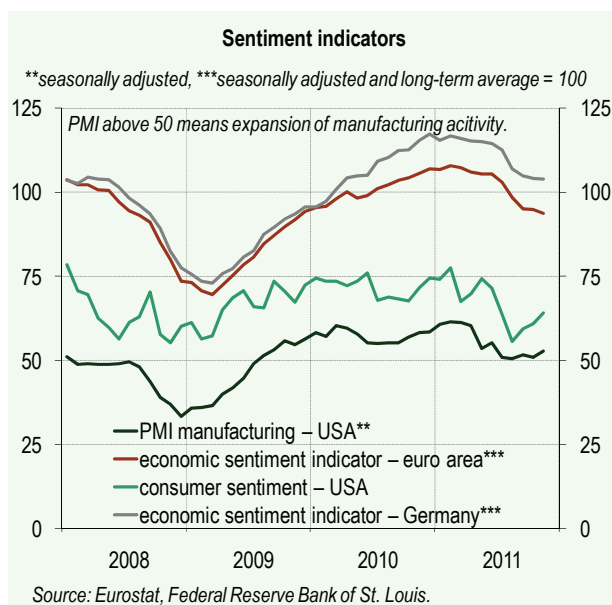

economic growth. The PMI for global economic activity has declined in recent months. In October it reached its lowest level since August 2009, albeit still in the zone of growth. In China too the PMI for manufacturing has declined significantly in recent months, dipping below the 50 -mark in October. In eastern Europe, which is closely tied to the euro area in economic terms, economic growth is slowing and growth forecasts are being lowered.

The adverse economic situation in the euro area and the US is also being reflected in construction and in the real estate market. Construction activity in the euro area in the last year has remained at a level approxi-

Notes: \*Seasonally adjusted data – Eurostat for the euro area and BEA for the US, \*\* Consensus, November 2011.

mately a fifth down on its pre-crisis peak achieved in 2007. Activity in residential construction is also low in the US, while real estate prices are down approximately a third on the pre-crisis level. At the same time the banks are increasing the number of foreclosures. In line with the slow economic recovery and the persistent high unemployment, sales of new houses in the US have been low since 2008, and were down just under 1% in year-on-year terms in September.

**In November, confidence continued to decline in the euro area in the majority of economic sectors, while in the US consumer confidence has been gradually rising since August, although it remains below its average over the last four years.** The economic sentiment indicator in the euro area declined in October for the eighth consecutive month. Confidence had declined significantly in recent months in manufacturing, retail and other private sector services. Consumer confidence is also declining, while construction confidence remains the lowest among all the sectors. The consumer confidence indicator in the US rose slightly again in November, primarily as a result of expectations surrounding a gradual improvement in the situation on the labour market. Unemployment remains high in both economies, October's rates standing at 10.3% in the euro area and 9.0% in the US.

**Inflation in the euro area remained unchanged at 3.0% in November, and fell to 3.5% in the US in October.** In the euro area energy prices continued to record the highest growth in October, the rate standing at 12.4% for the second consecutive month. Inflation in the US was down 0.4 percentage points in year-on-year terms at 3.5% in October. The largest factor in the decline was lower growth in energy prices. The rate stood at 14.2% in October, down more than 5 percentage points on September. Year-on-year core inflation (excluding energy and unprocessed food) in the euro area stood at 2.0% in October, the same as in September. In the US, year-on-year core inflation (excluding energy and food) was up slightly in October, rising 0.1 percentage points to 2.1%.

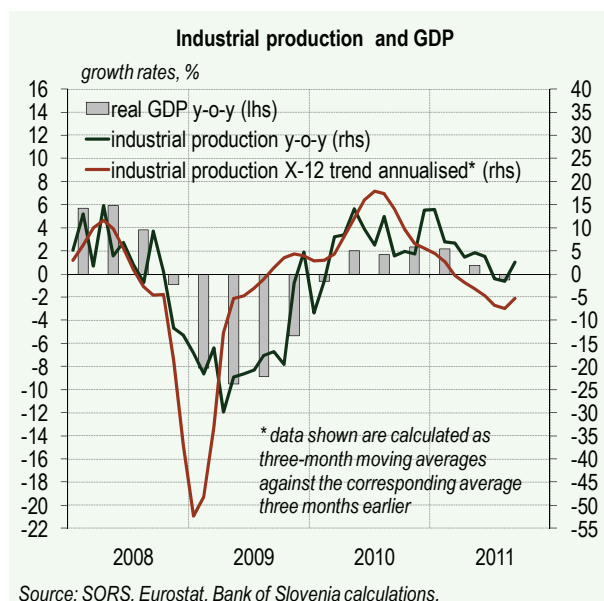

**The increased uncertainty surrounding the resolution of the fiscal problems in the euro area brought a fall in the euro against the US dollar in November, while oil prices remain high.** The euro averaged USD 1.36 in November, down 1.1% on October. Despite increased uncertainty surrounding future economic developments, oil prices remain high. The price of a barrel of Brent crude was up 1% on October at USD 110.50. In contrast to oil prices, prices of industrial commodities continued to fall. The Federal Reserve made no change to its key interest rate in November, which remains at the interval between zero and 0.25%, while the ECB cut its key interest rate by 0.25 percentage points to 1.25%.

## 2 | Economic Activity and Labour Market

### Real sector

Economic activity in Slovenia declined in the third quarter, and the gap by which growth trails the average euro area rate remained large, primarily as a result of weak domestic demand. According to the first release of national accounts figures, GDP in the third quarter was down 0.2% on the previous quarter, while the new figures for the first and second quarters reveal a stagnation in activity during the first half of the year. GDP was also down in year-on-year terms in the third quarter, by 0.5%. The cumulative gap in the quarterly rates of GDP growth in the first three quarters with those of the euro area overall amounted to 1.5 percentage points. The weaker economic situation in Slovenia is primarily the result of a sharp decline in investment, particularly in construction, which is also typical of other euro area countries where growth in investment in the pre-crisis period was unsustainable. At the beginning of the third quarter growth in foreign demand slowed sharply as a result of increased uncertainty in the international environment. Growth in value-added in manufacturing – a key contributor to the weak economic recovery in the last two years – also ceased.

**Domestic consumption continued to decline in the third quarter while the contribution made to GDP growth by net trade also declined notably.** Domestic consumption was down 1.9% in year-on-year terms, 0.2 percentage points more than in the second quarter. The contraction in investment remains the main contributor to

low domestic consumption, the year-on-year contraction having remained significantly above 10%. Government consumption also began to decline, and given the urgency of fiscal consolidation its contribution to GDP growth is likely to remain negative in the future. Despite high unemployment and a real decline in the wage bill, final household consumption has remained almost unchanged in the last year, and is probably being financed from households' withdrawals of money from various forms of financial investment. The euro area's fiscal crisis and the resulting crisis of confidence on the financial markets are already being reflected in a slowdown in foreign demand. Year-on-year growth in exports declined to 5.6% in the third quarter, down approximately a half on the first half of the year. The slowdown in import growth was slightly smaller, from an average of 6.7% in the first half of the year to 3.7% in the third quarter. The contribution made to GDP growth by net trade stood at 1.3 percentage points, just over 1 percentage point less than in the second quarter.

Source: SORS, constant prices.

As manufacturing stagnated and the crisis in construction continued, value-added was down in year-on-year terms in the third quarter. Growth in manufacturing – a key source of economic growth in the last two years – ceased in the third quarter. At the same time construction continued to record a sharp year-on-year contraction in value-added, despite certain signs of stabilisation in residential construction. Growth in value-added was less favourable in private sector services other than real estate activities. Most notable was the information and communication activities sector, where value-added declined by over 4%. Given that costs in the non-tradable sector have not yet adjusted sufficiently to the lower level of economic activity, and that fiscal consolidation is unavoidable because of the uncertain situation on the financial markets, expectations of a rise in domestic demand, or of a consequent rise in value-added in sectors dependent on domestic demand are diminished. With confidence indicators declining and forecasts for future economic growth in the key trading partners being revised downwards, the chances of faster growth in export-oriented sectors are also diminishing.

**Despite positive developments in September, industrial production in the third quarter was down on the previous quarter.** The decline in production was just over 1%, primarily as a result of the monthly declines in

manufacturing output in June and July. After stagnating in August, manufacturing output strengthened by 3.5% in September. This was partly the result of the re-establishment of night shifts at Revoz and, in contrast to the trends in surveyed indicators of current demand, a quarterly increase in the real value of new orders from foreign markets in the third quarter. At the same time the figures for new orders from the domestic market indicate a continuation of weak domestic demand. As a result of the negative monthly developments moving into the third quarter and the effect of a relatively high basis, year-on-year growth in industrial production continued to decline.

Notes: Differences from official numbers are due to rounding. Data are unadjusted for seasonal and working days effects.

\* Volume of industrial production. \*\* Real value of construction put in place. \*\*\* Old methodology.

According to the figures adjusted for the number of working days, year-on-year growth in industrial production stood at just under 1% in the third quarter, primarily as a result of a sharp slowdown in manufacturing output.

**The surveyed figures for the final quarter of this year suggest a highly adverse situation in manufacturing.**

The indicator of uncertainty in the economic situation rose to its highest level since the first half of 2009. The indicator of expected output declined by around 60% between August and November. The indicators of current and expected demand declined again in November. The indicators of price expectations and employment expectations have also been negative during the last few months. Together with the increasing uncertainty in the international environment, the decline in the key surveyed confidence indicators is increasing the risk of a decline in production in the final quarter. Further evidence of this came from September's sharp decline in the real value of new orders in the euro area.

**The decline in the total amount of construction put in place slowed significantly in the third quarter compared with the previous quarter, primarily as a result of a quarterly increase in activity in residential construction.** After declining by almost a fifth in the second quarter, partly in connection with the collapse of one of the largest construction firms, construction activity in the third quarter was down just 2.5% on the previous quarter.

The largest factor in the slower decline was an increase of over 30% in residential construction. The adverse developments also eased in non-residential construction and civil engineering work, where the decline in activity was more the result of the pass-through of the low level from June than a continuing contraction in activity in both types of construction. According to original figures, the year-on-year contraction in total activity nevertheless remained high at more than 25%, largely as a result of very low activity in the construction of non-residential buildings. The year-on-year contraction in civil engineering work remained at around 20%, while that in residential construction slowed from over 40% in the second quarter to just over 10% in the third quarter.

**Despite the slowdown in the contraction in the amount of construction put in place, the indicators of solvency, demand and confidence are showing a continuation of the severely adverse situation in the sector.** In the third quarter, the real value of new contracts continued to record a sharp year-on-year contraction, residential construction recording the highest figure, at around 45%. The total value of new contracts in construction was down just over a fifth. There was again a notable decline in the number of building permits issued (14%) and corresponding floorspace (over 6%). The number of construction firms<sup>1</sup> and the proportion of construction firms among firms with unsettled past-due liabilities de-

<sup>1</sup> Corporates with unsettled past-due liabilities from court enforcement orders and from tax debts of more than 5 days uninterrupted excluding other unsettled past-due liabilities from unpaid invoices between creditors and debtors. Source: AJPES.

clined slightly between July and October, but nevertheless remain highest among all sectors. At the same time the average daily amount of unsettled liabilities in the construction sector is increasing. It exceeded EUR 163 million in October, up just over a third on the beginning of the year. The proportion of unsettled liabilities accounted for by construction firms is thus in excess of 30%. The surveyed indicator of total orders remained sharply negative in November, while the indicator of expected orders in the next three months was again negative.

**Growth in volume turnover in retail trade remains dependent on growth in volume turnover in trade in motor vehicles and fuels.** Volume turnover in the retail sector increased by 2.4% in the third quarter, again primarily as a result of high growth in turnover in the sale of fuels. Volume turnover in the retail sector excluding motor fuels was down just under 1%. Volume turnover in the retail sector was also up in year-on-year terms, by 2.6%; the main factor was again turnover in trade in motor fuels. Excluding motor fuels, turnover was down 2.4%. Volume turnover in the retail sector in October was up 1.7% on the previous month, also as a result of increased turnover in trade in motor fuels. In the third quarter, volume turnover in the trade and repair of motor vehicles was down by just under 1% on the previous quarter. This was the first decline since the second quarter of 2009. The year-on-year rate of growth remained relatively high at just over 5%, but was only a third of that recorded in the first quarter of this year. Volume turnover in trade in motor

vehicles increased again in October, by just under 3% on the previous month.

**The economic sentiment indicator remained low in November, unchanged from October, while the outlook in manufacturing deteriorated again.** After declining significantly in October, the manufacturing confidence indicator increased by 2 percentage points, but only as a result of a significant decline in the inventories indicator compared with the previous month. The indicators of total orders and output expectations declined again, the total orders indicator reaching its lowest level of the last year and a half. Confidence remains high in the retail sector, primarily as a result of an increase in sales and thus confidence in trade in motor fuels. Confidence in trade in

foodstuffs has also increased significantly in recent months. In other branches of the wholesale and retail trade sector confidence is significantly lower, and more in line with declining consumer purchasing power. In November, confidence in other private sector services declined to its lowest level since October of last year. Pessimism continues in the construction sector, where demand indicators remain sharply negative. Consumers also remain pessimistic.

### Labour market

The number of registered unemployed recorded a seasonal increase in October, but the increase was less than in previous years. October typically brings a seasonal increase in the number of registered unemployed as a result of the loss of student status by school and university students. Because a large number of them do not find employment, they are registered as unemployed. This October their inflow into unemployment was again the main reason for the increase in the number of registered unemployed to 110,905; the numbers of others newly registering as unemployed were similar to previous months. Because this year's annual seasonal increase in the number of first-time jobseekers was around 2,000 less than that recorded last year, and was the smallest in the last five years, the year-on-year rise in the number of unemployed declined from 9.3% in September to 8.0% in October. The unemployment rate in September remained at a similar level to the previous five months at 11.5%.

Almost 16,000 vacancies were notified in October, fewer than in previous months, and fewer than in the same month of previous years. This also brought an end to the increase in the number of vacancies seen since the beginning of 2010.

The workforce in employment rose in September, mostly as a result of seasonal movements in the education sector. The workforce in employment was up 1,400 in September. The workforce in employment in education rose by around 1,200, less than in the same month of previous years. The workforce in employment in other branches of the public sector remained unchanged or fell slightly. At the same time the workforce in employment in the private sector rose slightly, although not

Total wage bill and average monthly gross wage per employee

\*Wage bills are calculated as the product of average gross monthly wages for employees of legal persons who received pay and the total number of employees of legal persons.

Source: SORS, Bank of Slovenia calculations.

enough to compensate for the fall in July and August. Year-on-year growth in the workforce in employment in the public sector slowed to 0.4% in September. The year-on-year decline in the workforce in employment in the private sector remains around 2%, with falling employment in construction the prevailing factor.

Year-on-year growth in the average nominal gross wage per employee in the private sector slowed slightly in September, while the real total wage bill continued to decline. The average nominal gross wage stood at EUR 1,507 in September, up 1.4% in year-on-year terms. This was the result of growth in nominal gross wages in the private sector, which has been gradually diminishing in the last year. The monthly rate of growth in the nominal gross wage in the private sector was negative in September, at -1.7%, while the year-on-year rate stood at just 2.1%. The average nominal gross wage in the public sector has been gradually declining in year-on-year terms since April. As a result of a fall in employment and a slowdown in nominal wages, the real total wage bill in the private sector continued to decline in September. The real total wage bill also continued to decline in the public sector, as a result of a gradual decline in wages and a slowdown in growth in the workforce in employment. These developments in the wage bill are a reflection of the adverse situation in the economy, and austerity measures in the public sector.

## Selected competitiveness indicators

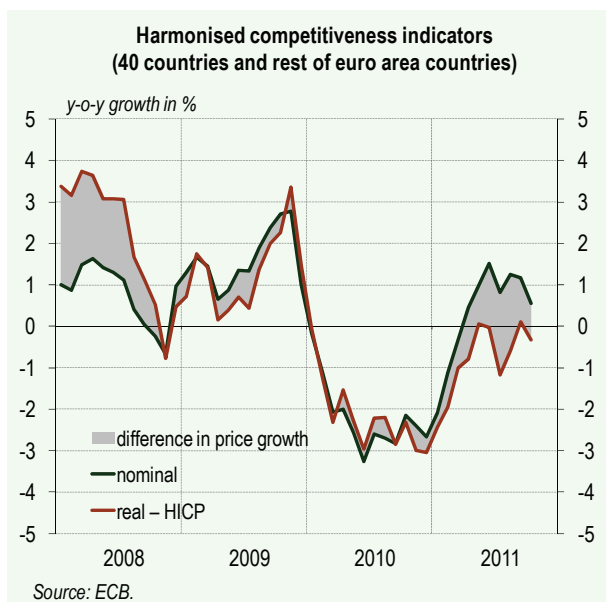

**Slovenia's harmonised competitiveness indicator in October was up slightly on the previous month, while the year-on-year appreciation slowed.** The harmonised index of the nominal effective exchange rate in October was up 0.3% on September. The year-on-year appreciation stood at 0.6%, down a half on September. In October the euro was down 0.5% against the US dollar relative to September, 0.2% against the pound sterling and 0.7% against the Japanese yen. The euro rose against the Swiss franc for the second consecutive month, by 2.4% in October. The euro's depreciation against the US dollar, pound sterling and Japanese yen was primarily the result of new uncertainty surrounding the debt crisis in the euro area. The euro's appreciation against the Swiss franc was the result of an intervention by the Swiss central bank, which has maintained the exchange rate above CHF 1.20 to the euro since 6 September.

**After recording a small year-on-year appreciation in September, the real price competitiveness indicator recorded a depreciation of 0.3% in October.** The main factors in the depreciation were the movement in the nominal effective exchange rate and the ratio between domestic prices and the basket of foreign prices. October's year-on-year appreciation in the nominal effective exchange rate was down 0.6 percentage points on September at 0.6%, while the gap by which the index of domestic prices trails the basket of foreign prices simultaneously narrowed by 0.2 percentage points to 0.9%. The

year-on-year gap by which domestic prices trails the weighted average of foreign prices has been narrowing since July, in reflection of the faster rise in domestic inflation relative to the foreign partners during this period.

**The gap by which Slovenia's price competitiveness trails that of the major euro area trading partners has widened slightly in recent months.** The average monthly appreciation in Slovenia's real effective exchange rate has been faster in recent months than the average of the major euro area trading partners, partly as a result of higher monthly inflation. The gap between Slovenia's price competitiveness indicator and the average of the main trading partners therefore widened, approaching its value from the beginning of the year.

## 3

## Price Developments

Year-on-year inflation as measured by the HICP in November was down 0.1 percentage points on the previous month at 2.8%. The main factor in November's fall in inflation were prices of unprocessed food, year-on-year growth in which was down 3.6 percentage points at 1.5%. This was primarily the result of a decline of 20 percentage points in year-on-year growth in prices of fruit to approximately 2%. Year-on-year growth in prices of processed food increased again, by 0.9 percentage points to 6.2%. After easing slightly in recent months, prices of bread and cereal products, milk, dairy products and eggs, and oil and fats rose sharply again. Year-on-year growth in energy prices, non-energy industrial goods and services remained unchanged overall. Inflation thus remains below the euro area average, which according to Eurostat's preliminary figures stood at 3.0% for the third consecutive month.

The core inflation indicators remain subjected to the influence of the adverse macroeconomic situation and the decline in consumer purchasing power. The broadest core inflation indicator, the HICP excluding energy, was down 0.2 percentage points at 1.8%. Year-on-year core inflation as measured by the HICP excluding energy and food prices, which account for around 35% of

the basket of prices in the HICP, remained unchanged at 0.8%. Core inflation thus measured consists of services and non-energy industrial goods, and is primarily determined by domestic factors such as wages, corporate earnings and direct taxes. The low economic activity and the related deterioration in the labour market are acting to reduce household consumption, and household purchasing power as measured by the real wage bill is declining. This is preventing retailers in certain segments of the economy from raising final prices. This dynamic is also being reflected in the confidence indicators and the price expectations indicator. All these factors suggest that growth in core inflation is limited. Core inflation remains

Note: Figures may not sum up to official figures due to rounding.

low, below the average in the euro area, where in October the narrowest core inflation indicator remained unchanged in year-on-year terms at 1.6%.

**According to the latest detailed figures, the largest contribution to October's increase in year-on-year inflation came from prices of clothing and footwear and prices of fruit. The largest year-on-year contribution continues to come from energy prices and prices of certain food products.** Prices of clothing and footwear rose sharply in October during a changeover in collections, the year-on-year rate of growth turning positive after more than a year. Their contribution to year-on-year inflation was up 0.4 percentage points at 0.1 percentage points. Prices of fruit, which have been very volatile this year, rose sharply again in October, the year-on-year rate of growth rising by 15.7 percentage points to 21.9%. Year-on-year growth in prices of meat is continuing to increase, having risen by 4.6 percentage points since the beginning of the year to 5.1%, the highest figure since July 2008. The total contribution to year-on-year inflation made by prices of fruit and meat was up 0.2 percentage points in October at 0.5 percentage points. Year-on-year growth in prices of processed food also increased in October, as a result of a rise in excise duties on tobacco products. At the same time year-on-year growth in prices of milk, dairy products and eggs and prices of bread and cereal products remained high. Year-on-year growth in energy prices was up 0.8 percentage points in October at 8.5%; all sub-categories other than solid fuels contributed

to the increase. The trend of a slowdown in the year-on-year fall in prices of cars ended in October, their negative contribution to inflation increasing from 0.1 percentage points to 0.2 percentage points. After increasing in September, year-on-year growth in services prices declined again, primarily as a result of a fall in prices of telephone and internet services.

**Growth in domestic producer prices continued to decline in October, in line with the slowdown in growth in commodity prices on global markets.** Year-on-year growth in domestic producer prices in October was down 0.5 percentage points on September at 3.1%, primarily as a result of a year-on-year fall in commodity prices and energy prices. This is a reflection of the slowdown in prices on global markets, which are passing through to domestic producer prices via lower growth in import prices. Year-on-year growth in the index of import prices has fallen from more than 10% in January to 4.3% in September. Year-on-year growth in the index of intermediate goods prices at domestic producers is down 4.2 percentage points from its peak of last February at 4.7%, while year-on-year growth in prices in the manufacture of basic metals is down over 20 percentage points. At later stages of the production chain, prices of the majority of consumer non-durables also fell. Growth in producer prices of food was down 0.6 percentage points at 3.1%, year-on-year growth in the index of import prices having continued to decline, and with it the pressures on final food prices. By contrast, prices of consumer durables and

prices of capital goods were up in year-on-year terms. Year-on-year growth in prices is declining faster in Slovenia than in the euro area; energy prices continue to record the largest gap. September's year-on-year growth in energy prices in the euro area was 10 percentage points higher than the rate in Slovenia. In addition to growth in import prices, the indicator of price expectations in manufacturing has also declined sharply in recent months, and there is thus no expectation of price pressures in producer prices or in final prices for consumers.

## 4 | Balance of Payments

### Current account

The current account figures have fluctuated sharply this year, but have remained close to a balanced position overall. After a high deficit in August, a surplus of EUR 39 million was recorded in September. The cumulative current account position during the first nine months of the year moved into surplus, in the amount of EUR 13 million. The largest factors in September's surplus were an increase in the surplus of trade in services and a surplus in current transfers. The deficit in factor income remained at the level of August, while the deficit in merchandise trade halved. The longer-term comparisons also show a balance being achieved in the current account.

The current account deficit over the 12 months to September was down to EUR 88 million or 0.2% of GDP, having stood at 0.6% of GDP a year earlier. With exports of merchandise and services recording faster nominal growth than imports, the positive contribution to GDP growth continued. The high surplus in current transfers was another factor in the achievement of longer-term balance.

**The trend rate of growth in merchandise trade remained positive in September, as growth in merchandise imports increased while growth in merchandise exports slowed slightly.** Despite September's developments, the gap by which nominal growth in imports trailed growth in exports in the third quarter was wider than in the second quarter. Quarterly growth in merchandise imports declined from 7.5% to 5.6%, while quarterly growth in exports remained unchanged at 10.0%, the gap between import growth and export growth thereby widening by 1.9 percentage points to 4.4 percentage points. These developments in merchandise trade are also being reflected in a trend of decline in the merchandise trade deficit. The merchandise trade deficit stood at EUR 207 million in the third quarter, down a third on the first quarter. The merchandise trade deficit over the first nine months of the year widened by EUR 73 million in year-on-year terms to EUR 771 million, primarily as a result of the low basis in the first quarter of last year.

**According to SORS figures, year-on-year growth in merchandise trade in September fell below the average over the first nine months of the year.** Merchandise imports recorded year-on-year growth of 8.3% in September, compared with 13.8% during the first nine months of the year, while merchandise exports recorded rates of 9.2% and 14.3% respectively. Signs of a renewed deterioration in the economic situation in the international environment first appeared at the end of the second quarter, and became more evident in the third quarter. This is being seen in a slowdown in the trend and year-on-year rates of nominal growth in merchandise exports and, in particular, merchandise imports, which are also being affected by low domestic demand.

**This year the regional breakdown of merchandise trade has again remained mostly tilted towards EU**

**Member States.** This can be seen in growth in exports to EU Member States diminishing more slowly than growth in exports to non-EU countries, while the reverse was the case on the import side, particularly in the third quarter. Year-on-year growth in imports from EU Member States declined more rapidly, while growth in imports from non-EU countries in the third quarter was actually up 2.6 percentage points on the previous quarter at 12.2%. The major factor in the slowdown in growth in imports in the second and third quarters was the low level of domestic consumption, in particular investment, imports of capital goods having stagnated in year-on-year terms overall in the second and third quarters.

**According to SORS figures, the merchandise trade deficit over the first nine months of the year did not record a significant year-on-year increase.** The increase of EUR 69 million to EUR 1,064 million was primarily the result of trade with EU Member States, the deficit with whom was up EUR 53 million in year-on-year terms at EUR 1,614 million. Slovenia traditionally maintains a surplus in trade with non-EU countries, although this was down EUR 16 million in year-on-year terms over the first nine months of the year at EUR 550 million. The nominal increase in imports of oil and refined petroleum products contributed just over EUR 400 million to this year's merchandise trade deficit. Despite the increase in the deficit, coverage of merchandise imports by exports rose by 0.3 percentage points compared with the same period last year to stand at 93.5%.

**Year-on-year growth in trade in services continued to be outpaced by simultaneous growth in merchandise trade in September.** The trend rate of growth in trade in services is slowing notably on the export side, while imports strengthened slightly in the third quarter. In light of these developments, the year-on-year increase in the surplus of trade in services slowed sharply in the third quarter to stand at EUR 37 million. Exports of services amounted to EUR 3.7 billion over the first nine months of the year, up 7.6% in year-on-year terms, while imports were up 3.2% at EUR 2.5 billion. With growth in exports of services outpacing growth in imports by just over 4 percentage points, the surplus of trade in services was up EUR 185 million in year-on-year terms at EUR 1,178 million.

**The main factors in the surplus of trade in services are transport services and travel services.** The overall surplus of trade in services peaked at EUR 442 million in the second quarter, before declining to EUR 383 million in the third quarter. Alongside an increase in the deficit in services related to intellectual property and other services, another factor in the decline in the surplus of trade in services in the third quarter was the slight decline in the surplus of trade in travel services. Year-on-year growth in exports of travel services stood at 8.0% in the third quarter, while imports of travel services recorded a year-on-year increase for the first time since the second quarter of last year, at 1.8%. The surplus of trade in travel services declined from EUR 337 million in the second

quarter to EUR 299 million in the third quarter. Year-on-year growth in exports of transport services has been slowing this year, but remains high, while imports of transport services declined slightly in the second and third quarters. In light of these developments, the surplus increased in the third quarter to reach a record EUR 160 million. Other positive contributions to the surplus of trade in services came from services in the construction sector, even though they were down in year-on-year terms on both the import and export sides, and foreign trade intermediation services. Other services recorded an overall deficit of EUR 350 million. Intellectual property services recorded the largest deficit, at EUR 178 million.

**The deficit in factor income narrowed in year-on-year terms in the second and third quarters.** There was a surplus of EUR 136 million in net labour income over the

first nine months of this year, while capital income recorded a net outflow. The deficit in capital income stood at EUR 237 million in the third quarter, and at EUR 748 million or 2.1% of GDP over the last 12 months. Income from interest in the third quarter was up 13.0% in year-on-year terms, while income from investments in foreign securities was up 11.0%. Only inward income from investments in securities recorded a year-on-year increase over the first nine months of the year, at 22.2%, while income from interest on loans granted to the rest of the world stagnated. The stock of outward FDI continued to decline, the disinvestment amounting to EUR 72 million so far this year. Year-on-year growth in outflows of capital income increased from 7.5% in the second quarter to 11.5% in the third quarter. Outflows of income from inward FDI in the third quarter were down 13.0% in year-on-year terms,

while interest payments were up 34.5% and income from non-residents' investments in domestic securities was up 25.6%. The largest year-on-year increase was in cumulative government expenditure on bonds and notes over the first nine months of the year, which was up 31.2%. The increase in interest payments and income from investments in securities during the first nine months of the year accounted for more than 60% of the increase in outflows of capital income in the amount of EUR 237 million. The cumulative deficit over the last 12 months is still widening. In August it was up EUR 53 million in year-on-year terms at EUR 572 million (1.6% of GDP).

The surplus in current transfers declined from an average of EUR 40 million during the first two quarters to EUR 4 million in the third quarter. The decline in the surplus was primarily the result of the deficit in private transfers doubling from EUR 23 million in the second quarter to EUR 42 million in the third quarter. The surplus

in government transfers was down EUR 9 million in quarterly terms at EUR 46 million. There was a sharp year-on-year improvement in the position of transfers over the first nine months of the year. The surplus reached 83 EUR million, a deficit of EUR 90 million having been recorded in the same period last year. A major factor in this year's favourable position in current transfers was the state budget's net position against the EU budget, which recorded a surplus of EUR 244 million during the first nine months of the year.

### Capital and financial account

September's decline in the private sector's liabilities was slightly larger than the decline in claims, as a result of which the private sector's net external debt also declined slightly. The decline in liabilities was EUR 6 million larger than the decline in claims. The private sector's claims declined by EUR 48 million in September, primarily as a result of a decline in outward FDI and port-

folio investments, which declined by EUR 214 million in September. The largest factor in the decline in the latter was the domestic banks, which reduced their investments in foreign debt securities by EUR 174 million. The banks primarily sold off their securities to obtain the money to repurchase their own bonds. September also saw increases in short-term outward trade credits and residents' holdings of currency and deposits in the rest of the world. While currency and deposits in the rest of the world increased for the fifth consecutive month, claims from trade credits increased by EUR 124 million in September, having declined sharply in August. The private sector's liabilities to the rest of the world declined by EUR 55 million in September. The key factor was a decline of EUR 210 million in liabilities from foreign portfolio investments, the largest contribution to which came from the banks, which repurchased their own bonds. Non-residents' holdings of currency and short-term deposits at the domestic banks also declined in September. Having declined in August, liabilities from trade credits and foreign loans to domestic banks increased by EUR 176 million and EUR 30 million respectively in September.

**The private sector's net financial outflow over the first nine months of the year was significantly larger than in the same period last year, primarily as a result of a large outflow of currency and deposits to the rest of the world.** This amounted to EUR 2.2 billion, up EUR 1.9 billion in year-on-year terms. The cumulative outflow of currency and deposits during the first nine months of

the year exceeded EUR 1.4 billion. The other changes in the private sector's claims were significantly smaller. The breakdown of the private sector's liabilities also changed markedly during the first nine months of the year. If securities and trade credits remained the main foreign source of private sector financing last year, this year it was FDI above all. FDI totalled EUR 454 million over the first nine months of the year, up EUR 483 million on the same period last year. The net repayment of loans from the rest of the world is continuing. The domestic commercial banks repaid EUR 757 million of debt during the first nine months of the year. In contrast, corporates increased their foreign loan liabilities by EUR 256 million over the same period.

**The overall net external debt increased by EUR 165 million in September to stand at EUR 11.2 billion at the end of the month. The short-term net external debt increased, while the long-term net external debt declined slightly.** September's increase in the net external debt was the result of an increase in the gross external debt and a decline in gross external claims. The gross external debt increased by EUR 142 million in September to stand at EUR 42.8 billion at the end of the month. The largest contribution to the increase came from other sectors (the private sector excluding banks), which increased their gross debt by EUR 366 million, primarily as a result of an increase in trade credits received. The government sector and the banking sector reduced their gross external debt in September, the banks doing so primarily as a

result of repurchase of their own bonds. The banks reduced their liabilities to the rest of the world by EUR 229 million on this account. Gross external claims declined by EUR 23 million in September to EUR 31.6 billion. The main contributions to the decline in external claims came from the government sector and the banking sector, whose claims declined by a total of EUR 529 million. The banking sector reduced its claims from debt securities and loans, while the government sector primarily reduced its short-term deposits in the rest of the world.

## 5 | Public Finance

The general government deficit according to the ESA 95 methodology over the last four quarters to September amounted to 6.5% of GDP. It stood at EUR 2,310 million. Year-on-year growth in both revenues and expenditure slowed in the third quarter. Revenues were down 0.7% on the same quarter last year. Taxes on production and imports and property income recorded declines. Expenditure in the third quarter was up 1%. While expenditure on social benefits and transfers was up 3.8%, there was a significant decline in expenditure on investment and subsidies, which were both down around a fifth in year-on-year terms.

The consolidated general government deficit during the first nine months of the year narrowed in year-on-year terms. The general government deficit during the first nine months of the year amounted to EUR 1.3 billion, down EUR 332 million in year-on-year terms. The main factors in the reduction of the deficit were tax revenues, most notably corporate income tax, and funds received from the EU budget. The state budget deficit stood at EUR 105 million in September (compared with EUR 190 million in the same month last year), and at EUR 11 million in October (compared with EUR 150 million last

Note: \*All bond issues disbursed on domestic market are counted under domestic borrowing, despite of the residency of buyers.

year). Local government recorded a surplus of EUR 22 million during the first nine months of the year, having recorded a deficit of EUR 50 million in the same period last year, primarily as a result of major construction investment. The Health Insurance Institute recorded a deficit of EUR 54 million during the first ten months of the year.

**Growth in consolidated general government revenues declined in the second half of the year, the year-on-year rate standing at 5.1% over the first nine months of the year.** After recording high growth in the first half of the year, general government revenues were down in year-on-year terms in July and August, but were up again in September as a result of transfer revenues from public funds. This year Kapitalska družba transferred EUR 50 million to the Pension and Disability Insurance Institute in September, having normally executed the transfer in November in previous years. Inflows of taxes and social contributions in September were down 1.4% on the same month last year, primarily as a result of

higher VAT refunds, which related in part to October. September's early VAT refunds were of a one-off nature, and were connected with the introduction of a new information system at the Tax Administration. According to the available figures, revenues from taxes and social security con-

Source: Ministry of finance, except: \*\* Public Payments Administration of the Republic of Slovenia, Report on classified general government revenues and coverage (B-2); Bank of Slovenia calculations.

Note: \* Consolidated central government budget, local government budgets and social security funds (pension and disability insurance fund and health insurance fund) in cash accounting principle.

tributions in October were up in year-on-year terms. According to the Public Payments Administration, October's fiscal revenues were up just over 8% in year-on-year terms, the state budget recording an increase of more than a fifth in tax revenues. In October, many tax revenues and revenues from social contributions remained recorded in unallocated fund accounts. The item of other taxes was disclosed at EUR 189 million in October, compared with a usual figure of less than EUR 3 million in this item each year. The Tax Administration will reallocate the unallocated funds to the correct accounts of taxes and social contributions in November. Revenues from the EU budget during the first ten months of the year were up EUR 161 million in year-on-year terms.

**Growth in consolidated general government expenditure during the first nine months of the year stood at 1.6%. September's year-on-year decline in expenditure was largely the result of a decline in investment expenditure.** Expenditure during the first nine months of the year was up EUR 197 million in year-on-year terms. The increase was primarily the result of higher expenditure on pensions and the unemployed, while the largest contraction was in investment expenditure. Expenditure on pensions during the first nine months of the year was up EUR 110 million, while unemployment benefits were up EUR 50 million. Interest payments were up EUR 38 million. The largest decline was recorded by investment expenditure, which was down EUR 94 million. September's expenditure was down EUR 48 million in year-on-year terms, investment expenditure recording the largest decline (EUR 31 million), although expenditure on subsidies was also down. October's state budget expenditure and expenditure of the Health Insurance Institute were down in year-on-year terms, while the Pension and Disability Insurance Institute's expenditure was up in year-on-year terms. The expenditure of the aforementioned three budgets was down EUR 10 million overall in October.

**The government sector borrowed around EUR 3.1 billion during the first nine months of the year, mostly via long-term bond issues. The revised state budget financing programme envisages borrowing of around EUR 1 billion in December.** The borrowing in the first nine months of the year was used to finance the deficit of

EUR 1,337 million in the account of government revenues and expenditure and to repay EUR 972 million of debt. EUR 330 million was deposited in accounts. In addition, the deficit of EUR 458 million in the account of financial claims and investments was financed, this deficit including a capital transfer to NLB (EUR 243 million), loans to Greece (EUR 131 million) and a capital transfer to Adria Airways (EUR 49.6 million). On 17 November the government approved an update to the state budget financing programme for 2011, which envisages the issue of 18-month treasury bills in December, with a nominal value of approximately EUR 1 billion.

**The spreads on Slovenian bonds over the German benchmark continued to rise in November, the required yield exceeding 7% on certain days.** The spreads on the government bonds of certain euro area countries over the German benchmark rose again in November as a result of the continued deepening of the crisis in the markets for euro area sovereign debt. The spread on Slovenian 10-year government bonds over the German benchmark averaged 480 basis points in November, up from an average of 335 basis points in October. There were several factors in the rise in the required yield on Slovenian bonds. In addition to the worsening debt crisis in certain euro area countries and the situation in the international financial environment, it is also a reflection of the adverse expectations regarding domestic economic growth, the low liquidity of Slovenian government bonds, and the need for credible fiscal consolidation

Sources: Bloomberg, Bank of Slovenia calculations.

Note: Spread is calculated as a difference between yield of 10-year government bond and the yield of reference German bond on a daily basis and is used as a measure of country's credit risk. \* In the picture SLOREP 01/21 is used after 11. January 2011.

and structural reforms in the context of other internal specifics of the economic crisis in Slovenia.

## 6 | Banking System\*

**The banking system's total assets increased by EUR 161 million in October.** The main factor in the change on the funding side was an increase in liabilities to the Eurosystem as a result of the participation by the majority of banks in the extraordinary 1-year LTRO at the end of October. This long-term funding helped the banks to make further debt repayments to the rest of the world, most notably at the domestic banks. On the investment side the banks used the remaining funding mostly to increase cash in hand and balances at the central bank, and, to a significantly lesser extent, investments at banks in the rest of the world and loans to non-banking sectors.

**October's increase in net loans to non-banking sectors was the first such increase since May, at EUR 12 million, the year-on-year rate of growth nevertheless remaining unchanged at -2.4%.** The banks under majority foreign ownership made the largest contribution to the increase in loans. The largest increase in October was recorded by loans to the rest of the world, while loans to non-financial corporations actually declined, albeit by significantly less than in the previous month.

**Lending to non-financial corporations (NFCs) recorded a below-average decline in October, of EUR 26 million.** This ended the trend of above-average decline in the stock of net loans to NFCs seen since June. The rate of contraction is slowing, and has reached 4.7%. Only the large domestic banks recorded a decline in loans to NFCs in October.

**The trend of decline in year-on-year growth in loans to households continued in October.** The rate stood at 4%. The stock of loans to households declined at the large domestic banks, which for the second consecutive month were the only group of banks to record negative

growth in loans to households. Growth was highest at the banks under majority foreign ownership. Growth in housing loans stood at 10.8% in October, although the rate continued to decline.

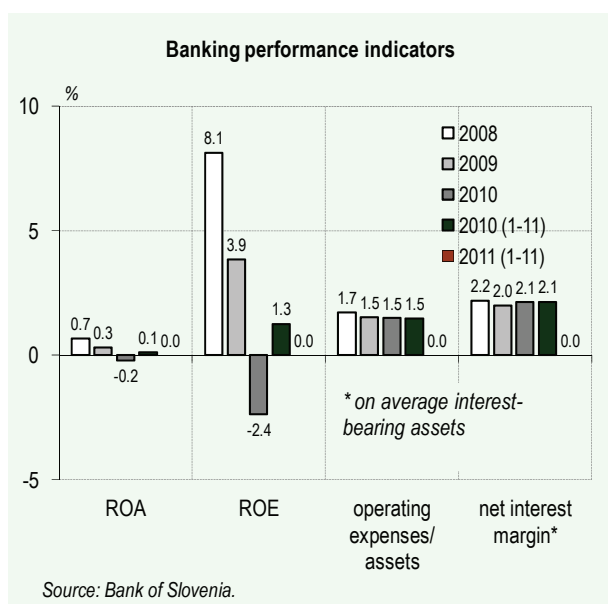

**The banks continued to make net debt repayments in the rest of the world in October, in the amount of EUR 251 million.** Dependence on foreign funding declined at all the bank groups in October, most notably at the large domestic banks, where the decline was EUR 231 million. The banks mostly obtained the funds to repay liabilities at the extraordinary 1-year LTRO. At the end of October SID banka issued EUR 150 million of 1-year bonds.

**The main factors in October's decline of EUR 95 million in deposits by non-banking sectors were a decline in deposits by NFCs and, to a lesser extent, a decline in household deposits.** Year-on-year growth in bank deposits by non-banking sectors increased slightly in October to 3.7%. The decline in corporate and household deposits was compensated for by a significant increase in deposits by other financial institutions and government deposits. In the maturity breakdown there was a decline in the average maturity of deposits of 90 to 365 days, as a result of a switch to deposits of up to 90 days.

**October's growth in net interest was more negative than in the previous month. As impairment and provisioning costs continued to increase, the banking system's losses increased.** At -1.3%, October's year-on-

\* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

year growth in net interest was the lowest in the last two years, primarily as a result of faster growth in interest expenses. The banks recorded an above-average increase in impairment and provisioning costs for the third consecutive month, in October by EUR 97 million. Cumulative impairment and provisioning costs over the first ten months of the year amounted to EUR 706 million, up 39% on the same period last year. The banking system recorded a pre-tax loss of EUR 124 million during this period, just over a fifth more than in the whole of last year.

## 7 | Domestic Financial Markets

The market capitalisation of bonds on the Ljubljana Stock Exchange declined in October for the third consecutive month, albeit by a symbolic 0.02%. Government bonds still account for the largest proportion of the market capitalisation, at 92%, followed by bank bonds with 5.3% and corporate bonds with 2.5%. After recording a large increase in September, the volume of trading in bonds fell by a half in October. Despite a new bond issue by Cimos, the volume of trading stood at just EUR 3 million, the second-lowest monthly figure this year. Slovenska odškodninska družba 2nd-issue bonds accounted for almost half of the monthly volume. The proportion of total stock exchange volume accounted for by bonds in-

creased by 2 percentage points in October to 14%.

**The market capitalisation of shares on the Ljubljana Stock Exchange rose by 3.3% in October.** Shares in NFCs accounted for 88.6% of the market capitalisation, shares in insurance corporations for 6.2%, and bank shares for 5.1%. After increasing for two consecutive months, the volume of trading in shares declined again in October. It was down just over a half on September at EUR 18 million. Shares accounted for 85.1% of total monthly volume in October. Shares in Krka and Mercator accounted for more than three-quarters of the monthly volume of trading in shares. After increasing for almost a year, the dividend yield on prime market shares declined to 3.2% in October. The SBI TOP responded to the positive outcome of the EU summit with a rise of 4%. It ended October at 643 points, a year-on-year change of -25.7%.

**In October almost all of the major global stock market indices responded positively to the agreements between EU heads of government on the resolution of Europe's debt crisis.** The monthly changes in four major indices were higher in October, at +8.4% for the DJ EuroStoxx in western Europe, +10.8% for the S&P 500 in the US, +12.9% for the Hang Seng in China and +11.6% for the DAX XETRA in Germany. The indices in the former Yugoslav republics recorded monthly falls in October, of 0.6% for the CROBEX and the MBI-10, and 1.2% for the BELEX 15. The year-on-year changes in the majority of stock market indices remained negative, other than in

Source: Ljubljana Stock Exchange, Securities Market Agency, Bank of Slovenia calculations.

Source: Central Securities Clearing Corporation, Bank of Slovenia calculations.

the US, where the indices were unchanged in year-on-year terms in September and were up in October, the year-on-year changes standing at +5.9% for the S&P 500 and +7.5% for the Dow Jones.

**The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents stood at 12.6% in October.** In October non-residents made net sales of Slovenian shares for the first time since 2009, in the amount of EUR 17.6 million. The net sales were the result of trading by residents of Serbia, who made net sales of EUR 20 million in shares in Mercator. The largest net purchasers were residents of the UK and residents of Croatia, in the amount of just under EUR 2 million in each case. Non-residents made net sales of Slovenian bonds for the third consecutive month in October, this time in the amount of EUR 48.2 million. The largest net purchasers were residents of Germany (EUR 35.1 million), while the largest net sellers were residents of Luxembourg (EUR 69.1 million).

**Residents made net sales of EUR 108.9 million in foreign bonds and net purchases of EUR 11.6 million in foreign shares in October.** The main net sales of foreign bonds, primarily euro area bonds, were again made by the banking sector, in the amount of EUR 104 million. Households and NFCs made net purchases of foreign bonds, in the amounts of EUR 0.8 million and EUR 0.5 million respectively. The main net investments in foreign shares were made by insurance corporations and pen-

sion funds, in the amount of EUR 47.7 million; half of the net investments were in shares from the US, while half were in shares from the euro area. The largest net sales of foreign shares, in the amount of EUR 37.9 million, were made by other financial intermediaries except insurance corporations and pension funds, also primarily shares from the euro area and the US.

**In September investors made their largest net withdrawals from mutual funds in the last three years. October's net withdrawals of EUR 10.3 million were lower than in September, and the average unit price recorded a rise of 8.6%. The domestic mutual funds' assets under management thus increased to EUR 1,879 million.** The mutual funds under majority bank

Source: Bank of Slovenia.

ownership and the non-bank mutual funds each accounted for half of the net withdrawals (EUR 5 million each) in October. Investor uncertainty as a result of the current European and global situation was the reason for the migration of funds from high-risk investments to safer forms of investment. Investors in balanced funds and equity funds again made net withdrawals in October, in the amounts of EUR 8.9 million and EUR 5.1 million respectively, while investors made net payments of EUR 3.5 million into bond funds. The largest net withdrawals in October were again made by the household sector, in the amount of EUR 11.1 million. Insurance corporations and pension funds again made the sole major net investment in October, in the amount of EUR 1.8 million. The proportion of the domestic mutual funds' assets under management accounted for by liquid assets<sup>2</sup> increased to 10% in October.

<sup>2</sup> Liquid assets include cash, deposits, money-market instruments and government bonds.

# IV. NOTES ON METHODOLOGY

## General notes

### Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

"Households" refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

### Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

## Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

## 1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

### Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

### Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

#### Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

#### Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

**Securities other than shares**

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

**Shares and other equity**

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

**Remaining assets**

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

**Deposits**

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

**Debt securities issued**

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

**Capital and reserves**

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

**Remaining liabilities**

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

**Tables**

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

**Note 1:** With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

**Table 1.1.: Monetary Aggregates**

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

### Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

### Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%
2	1.3.	liabilities/ 4		Liabilities/ Deposits/ Domestic sectors/ Other MFIs/ Foreign currency	100%	100%	-

4	1.3.	liabilities/ 15		Liabilities/ Securities issued/ Foreign currency	92%	89%	100%

### Table 1.4.: Balance Sheet of other Monetary Financial Institutions

The table summarizes data on assets and liabilities of other Monetary Financial Institutions, i.e. banks, savings banks, savings and loans undertakings and money market funds, at the end of the month.

Detailed survey of assets and liabilities of the monetary financial institutions is in the tables 1.5. and 1.6.

**Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments**

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

**Table 1.8.: Investment funds****General**

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

**Deposit**

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

**Debt securities**

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

**Shares and other equity**

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

**Other assets**

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

**Loans**

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

**Investment fund shares/units**

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

**Other liabilities**

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

## 2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

### Interest rates (tables 2.1–2.4)

**Table 2.1: Bank of Slovenia Interest Rates**

*Lombard loan:* Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

*Interest rate on banks' obligatory reserves:* 1 percent per year since October 1991.

*The overnight-deposit interest rate* is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

*Long-term deposit* at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

*Tolar bills* are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

*Foreign currency bills* are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

*Interest rates* for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

**Table 2.2: Interbank Money Market Rates and Indexation Clause**

#### **Interbank market**

##### **SIONIA/SITIBOR**

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

##### **EONIA/EURIBOR**

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

#### **Indexation clauses**

##### **TOM**

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

#### Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

### Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

**Main refinancing operations** are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

#### Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

### 2.4: Monetary Financial Institutions Interest Rates

#### Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

**Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.**

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

**Outstanding amounts** are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

**New business** is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

**The annual percentage rate of charge (APRC)** is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

**Weighting method:** The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

\* Households = sole proprietorships + individuals + non-profit institutions serving households

\*\*APRC data includes households without sole proprietorships and without non-profit institutions serving households

*Note 1:* For this instrument category, new business and outstanding amounts coincide.

*Note 2:* For this instrument category, households and non-financial corporations are merged and shown under the household sector.

## **Exchange rates (Tables 2.6.1–2.6.2)**

### **Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006**

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish złoty was denominated on 1 January 1995 at the exchange rate of 1 new złoty for 10,000 old złotych.

### **Table 2.6.2: European Central Bank exchange rates**

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

## **Payment systems (Tables 2.7 to 2.13)**

### **General**

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

### **Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions**

*Note 1:* On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

*Note 2:* SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

*Note 3:* Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

*Note 4:* As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

*Note 5:* Gross value is the total value of all payment orders executed in the payment system.

*Note 6:* Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

### **Table 2.8 Payment Cards**

*Note 1: Credit card:* A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

*Note 2: Debit card:* A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

*Note 3: Cards issued abroad:* Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

*Note 4: Volume and value of transactions abroad:* Use of cards issued in Slovenia for payments abroad.

**Number of payment cards in circulation:** Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

**Number and value of payments refer** to the use of payment cards in each quarter/year.

**Domestic card:** Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

**Licence card:** Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

**Bank card:** Payment card issued by banks.

**Retailer card:** Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

**Personal card:** Payment card issued to a natural person (family cards included).

**Business card:** Payment card issued to a legal entity.

## Table 2.9 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

## Table 2.10 Electronic Banking

Note 1: Only debt transactions are included.

## Table 2.11 Credit Transfers

**A paper-based order** is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

**Special payment order** is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

**A non-paper-based credit transfer** is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

**A standing order** is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

**Direct credit** is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

## Table 2.12 Debit Transfers

**Direct debit** is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

**A special money order** is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

**Table 2.13: Network of Commercial Banks**

*Note 1:* Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

*Note 2:* Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

### 3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

#### Balance of Payments

##### General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

##### Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

##### Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

##### Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
  - report on account balances at domestic banks – PPV (until 31 December 2004),
  - report on account balances abroad – C (until 31 December 2006),
  - report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
  - report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

- **Estimates and other sources**
  - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
  - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
  - estimate of Italian pensions (UMAR) until the end of 1998,
  - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
  - estimate of labour income (SURS),
  - data on pensions paid to non-residents (ZPIZ),
  - survey on the write-downs of debt from trade in goods and services abroad,
  - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
  - estimate of cash transactions on tourism and labour income (from 2007 onwards),
  - quarterly data on consumption of foreign embassies in Slovenia (SURS, from 2008 onwards),
  - migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
  - households' transfers (SURS, from 2008 onwards),
  - assets acquired directly by tenders and programmes of EU (SURS, from 2008 onwards),
  - data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards),
  - data on purchases/sales of real-estate in Croatia (Croatian National Bank, from 2008 onwards),
  - data on purchases/sales of emission allowances between residents and nonresidents (Slovenian Environment Agency, from 2008 onwards).

## Current account

### **Goods**

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

**Adjustments of CIF/FOB** – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

**Coverage adjustments** - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

## Services

### Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

### Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

### Travel - methodology since 2005 onwards

**Main data sources** to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2009)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

**Main data source** to estimate the **import** of travel is SURS's survey TU\_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU\_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

### Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

### Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

### Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SURS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

## Income

**Labour income – receipts.** Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

**Labour income - expenditures.** ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

**Capital income –** Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

## Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SURS survey) are included from 2008 onwards.

## Capital and financial account

### Capital account

#### Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SURS, Annual survey on investment in tangible assets).

### Financial account

#### Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Repub-

lic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From the same year data on Slovenian residents' purchases/sales of real-estate in Croatia are included (data source is Croatian National Bank).

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies.

Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

#### **Portfolio investment**

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

#### **Financial derivatives**

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

### **Other investments**

#### **Short-term trade credits**

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

#### **Loans and long-term trade credits**

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

#### **Currency and deposits**

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

#### **International monetary reserves**

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). International monetary reserves item includes also financial derivatives (from 2009 onwards).

### Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1988 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

### Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

\* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)
- January 2011, RS69 (EUR 1000.0 million)
- March 2011, RS70 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

**Note 7:** Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

**Note 8:** The data on reinvested earnings for 2011 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2008 to 2010 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2012, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2012 shall take into consideration the new three year average (2009 to 2011).

**Note 9:** From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

**Note 10:** Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

**Note 11:** In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

### Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

### Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

## International Investment Position of Slovenia

### General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

### Revision policy

See note "Revision policy" in the section "Balance of Payments".

### Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

### Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

#### **Portfolio investment**

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

#### **Financial derivatives**

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

#### **Trade credits and loans**

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

#### **Currency and deposits, other assets, other liabilities and reserve assets**

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

### Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: [http://www.bsi.si/iskalniki/ecb\\_en.asp?Mapald=714](http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714).

### Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

## Gross External Debt

### General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

### Revision policy

See note "Revision policy" in the section "Balance of Payments".

### Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial derivatives are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

### Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

### Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

### International reserves

### Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

## 4. PUBLIC FINANCE

### General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.  
Quarterly and yearly data on Gross domestic product are not yet reconciled.

### General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

### Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

**EDP debt** is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

### Tables 4.2 and 4.3: Non-financial Account of the General Government sector

**Fiscal burden** is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

**Intermediate consumption** consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

### Tables 4.4 and 4.5: Financial Account of the General Government sector

**Change in EDP debt** is a difference between the current and preceding EDP debt figure.

**Deficit-debt adjustment (DDA)** is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

**Other liabilities** consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

**Other flows** are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

**Borrowing requirement** consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

### Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

### Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

### Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

## 5. FINANCIAL ACCOUNTS

### Financial accounts (Tables 5.1 to 5.6)

**Tables 5.1, 5.2, 5.4 and 5.5** show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

**Tables 5.3 and 5.6** present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

#### Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

## 6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

### General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev. 2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site:

[http://www.stat.si/skd\\_nace\\_2008.asp](http://www.stat.si/skd_nace_2008.asp) (in Slovene).

## General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

## Non-financial accounts and general economic statistics

### Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

### Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

### Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

### Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

### Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

### Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

*Note 1:* From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

### Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

### Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1-ZAP/M)). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

#### **Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators**

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: until 31.12.2006 Slovenian tolar, from 01.01.2007 Euro.

The growth of the index value represents decrease of competitiveness.

*Note 1:* Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia:  
<http://www.bsi.si/publikacije-in-raziskave.asp?MapaId=1039>.

#### **Tables 6.15 and 6.16: Consumer Price Index**

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

#### **Tables 6.17 and 6.18: Industrial Producer Price Index**

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

## Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
1.5. Selected Assets of Other Monetary Financial Institutions by Sector	2.6 MFI holdings of securities, breakdown
1.6. Selected Obligations of Other Monetary Financial Institutions by Sector or	2.5 Deposits held with MFIs, breakdown
1.4. Balance Sheet of Other Monetary Financial Institutions	
1.8. Investment funds	2.9. Aggregated balance sheet of euro area investment funds
	2.10. Securities held by investment funds broken down by issuer of securities
2.2. Interbank Money Market Rates and Indexation Clause	4.6 Money market interest rates
2.3. European Central Bank Interest Rates	1.2 Key ECB interest rates
2.6.2a. European Central Bank exchange rates - Average Rates	8.2 Bilateral exchange rates
3.2. Balance of payments, capital and financial account	7.1 Balance of payments - summary
	7.2 Current and capital account
	7.3 Financial account
3.3. Current Account by countries	7.2.3 Current and capital account - geographical breakdown
3.4. Capital and Financial Account by countries	7.3.8 Financial account - geographical breakdown
3.5. Trade in goods by countries	7.5 Trade in goods
3.6. International Investment Position of Slovenia; assets, liabilities	7.3 Financial account
3.7. International Investment Position by countries; assets, liabilities	7.3.8 Financial account - geographical breakdown
3.12. International reserves	7.3.7. Reserve assets
4.1. General Government Non-financial and Financial Accounts (ESA 95)	6.1 Revenue, expenditure and deficit/surplus
	6.2 Debt
	6.3 Change in debt
4.2. Non-financial account general government sector (ESA 95)	6.4. Quarterly revenue, expenditure and deficit/surplus
4.4. Financial account general government sector (ESA 95)	6.5. Quarterly debt and change in debt
6.1. Expenditure on gross domestic product	5.2.1. GDP and expenditure components
6.2. Expenditure on gross domestic product (growth rates)	
6.3. Gross domestic product by activity	5.2.2. Value added by economic activity
6.4. Gross domestic product by activity (growth rates)	
6.5. Industrial production index and productivity index in industry	5.2.3. Industrial production
6.6. Industrial production index and productivity index in industry (growth rates)	
6.7. Turnover and new orders in industry	5.2.4. Industrial new orders and turnover, retail sales and new passenger car registrations
6.8. Turnover and new orders in industry (growth rates)	
6.9. Business tendency and consumer surveys (part 1)	5.2.5. Business and Consumer Surveys
6.10. Business tendency and consumer surveys (part 2)	
6.11. Employment by Labour Force Survey (ILO)	5.3.1. Employment
6.12. Unemployment by Labour Force Survey (ILO)	5.3.2. Unemployment
6.14. The Effective Exchange Rate - Nominal, Real	8.1 Effective exchange rates
6.15. Consumer price index	5.1.1. Harmonised Index of Consumer Prices
6.16. Consumer price index (growth rates)	
6.17. Industrial producer price index	5.1.2. Industry, construction, residential property and commodity prices
6.18. Industrial producer price index (growth rates)	

# ADVANCE RELEASE CALENDAR

## Economic and financial data for Slovenia - SDDS ADVANCE RELEASE CALENDER
