## **Important information**

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

At the end of January the IMF raised its forecast for this year's global economic growth to 4.4%, just under 70% of which is expected to come from emerging and developing economies. The economic indicators for the final quarter of last year reveal continuing moderate economic growth in the euro area, while quarterly GDP growth in the US strengthened to 0.8%. The improvement in the US economic situation was a factor in the IMF raising its US economic growth forecast for this year to 3.0% in January, while leaving the euro area forecast unchanged at 1.5%. The rise in oil prices and other commodity prices continued in January, as a result of which inflationary pressures are also strengthening. Inflation in the euro area reached 2.4% in January, and is expected to temporarily exceed 2.0%. The Federal Reserve and the ECB left their key interest rates unchanged in January, while the Chinese central bank again raised its reserve requirement rate for the largest banks.

Economic growth in Slovenia remains dependent on growth in foreign demand, which slowed in the third quarter of last year. Consequently, growth in industrial production also slowed in the second half of last year, the year-on-year rate standing at just over 5% in November. Orders from the domestic market continued to decline. Activity in the construction sector is still contracting sharply in year-on-year terms, but the increase in the value of new contracts in certain segments of construction could indicate a slowdown in the negative trend in 2011. Volume turnover in retail trade other than motor fuels declined again in the final quarter of last year, but year-on-year growth remained high in trade in motor vehicles and fuels. Growth in foreign demand recovered at the end of last year, which contributed to an increase in the economic sentiment indicator in January 2011.

The number of registered unemployed passed 110,000 in December, while the age breakdown of those newly registering as unemployed is an indication of the profound impact of institutional changes. The vast majority of those newly registered as unemployed are aged over 50, and most likely intend to wait for retirement at more favourable terms. The workforce in employment in the private sector declined in November, primarily as a result of continuing job losses in construction and a seasonal decline in manufacturing. The average gross wage per employee in November was up 4.1% in year-on-year terms, primarily as a result of a rise of 8.3% in the manufacturing sector, where labour productivity is also increasing relatively rapidly.

Inflation as measured by the HICP averaged 2.1% last year, up 1.2 percentage points on 2009. The main factor was energy prices, as a result of rises in oil prices on global markets, and rises in excise duties on electricity, natural gas and motor fuels. The core inflation indicators were low or negative, a reflection of the adverse situation in the domestic macroeconomic environment. Year-on-year inflation excluding energy, food, alcohol and tobacco stood at -0.4% last year, as a result of low growth in services prices and a decline in prices of manufactured goods. With food and oil prices recently recording fast growth on global markets, prices of certain foodstuffs are rising in early 2011, bread, meat and dairy products in particular.

The current account was in deficit for the fourth consecutive month in November. The deficit stood at EUR 68 million, compared with a surplus of EUR 87 million recorded in the same month of 2009. The main factor in the current account deficit was the merchandise trade deficit, alongside a decline in the surplus of trade in services and stagnation in the deficit in factor income. The cumulative current account deficit over the 12 months to November amounted to EUR 481 million, or 1.3% of GDP.

The general government deficit in the 12 months to October amounted to 6.5% of GDP. The provisional figures for the realisation of state budget reveal that the last year's deficit stood at EUR 1,731 million or 4.8% of GDP, less than estimated in the budget revision. Year-on-year growth in state budget revenues strengthened in the final quarter, while state budget expenditure, particularly investment expenditures and transfers, declined sharply. Slovenia issued new benchmark 10-year government bond in January this year with a total nominal value of EUR 1.5 billion and a coupon rate of 4.375%.

The banking system's total assets contracted by EUR 1.3 billion in December, primarily as a result of a decline in claims against foreign banks. The most notable change on the funding side was a decline in the banks' liabilities to the Eurosystem and a decline in deposits by non-banking sectors, government deposits in particular. Lending to non-banking sectors increased, primarily as a result of loans to households, while the stock of loans to non-financial corporations in December was down on the previous month. The banking system recorded a pre-tax loss of EUR 48 million in 2010; high impairment and provisioning costs were the main factor also in December.

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 0.5% in December, while the market capitalisation of shares rose by 0.4%. The proportion of the market capitalisation of shares accounted for by non-residents stood at 10%. The SBI TOP rose by 0.9% in monthly terms in December, taking the year-on-year change to -13.5%. The domestic mutual funds' assets under management increased to EUR 2,054 million as a result of a rise of 2.3% in the average unit price, while net withdrawals amounted to EUR 2.3 million.

# 1 | International Environment

The economic indicators for the final quarter of last year reveal continuing moderate economic growth in the euro area, while quarterly economic growth in the US strengthened to 0.8% according to initial estimates. Certain major Asian economies continued to record high growth. Industrial production in the euro area in November was up 1.2% on October, primarily as a result of an increase in production of intermediate goods. In the US the largest factor in the 0.8% monthly growth in industrial production was again an increase in output in the electricity, gas and steam supply sector. Volume turnover in the retail sector remains relatively low in the euro area. In November, it was down 0.8% on the previous month, primarily as a result of lower turnover from food, alcohol and tobacco. December saw positive monthly growth in volume turnover in the retail sector in the US for the sixth consecutive month. The largest increases in turnover were recorded by motor fuels, construction material and cars. Activity in the construction sector remains relatively low in both the euro area and the US. Initial estimates put last year's real GDP growth in the US at 2.9%, in which gross private domestic investment and private consumption were the main factors.

According to initial figures, last year's real GDP growth in Germany stood at 3.6%, primarily as a result of an increase in household consumption and higher exports. Last year's real GDP growth in China stood at 10.3%, FDI having increased for the 17<sup>th</sup> consecutive month in December. Real GDP in India was up just over a tenth in year-on-year terms in the second and third quarters of 2010, and year-on-year growth in exports exceeded 35% in December.

The unemployment rate remains stable in the euro area, and fell in December in the US for the first time since May 2010. The economic sentiment indicator in

Notes: \*Seasonally adjusted data – Eurostat for the euro area, BEA for the US, \*\*IMF, January 2011.

the euro area remained at a relatively high level in January. The unemployment rate in the euro area has fluctuated around 10% since the final quarter of 2009, while the rate in the US fell from 9.8% to 9.4% in December, primarily as a result of increased employment in the health sector. The euro area economic sentiment indicator published by the European Commission rose again in December, and remained almost unchanged in January. After rising in December, consumer confidence in the US fell unexpectedly in January, primarily as a result of large rises in energy prices.

In January Consensus raised this year's economic growth forecast for the US, but left its forecast for the euro area unchanged. In the same month the IMF raised its forecast for this year's global economic growth. The Consensus forecast for this year's economic growth in the US is 3.2%, up 0.5 percentage points on December, while its forecast for 2012 is 3.3%. Consensus left its forecast for economic growth this year in the euro area unchanged at 1.5%, while its forecast for 2012 is 1.6%. In January Consensus also raised its forecast for this year's economic growth in eastern Europe to 4.0%, while its forecast for 2012 is 4.2%. At the end of January the IMF raised its forecast for this year's global economic growth to 4.4%. Growth in developed countries is expected to reach 2.5% this year, with forecasts of 3.0% for the US and 1.5% for the euro area. Growth in emerging countries and developing economies is expected to average 6.5%.

Inflation in the euro area rose from 2.2% in December to 2.4% in January, while inflation in the US rose to 1.5% in December. The largest contributions to inflation in the euro area in December came from prices of food, transport and housing. In the US the largest rises in December were recorded by energy prices. Core inflation remained unchanged in the euro area for the third consecutive month at 1.1%, and unchanged in the US for the second consecutive month at 0.8%. Year-on-year growth in industrial producer prices stood at 4.5% in the euro area in November, and 4.0% in the US in December, primarily as a result of higher growth in commodity prices.

US dollar prices of crude oil and other primary commodities rose again in January, while the price of gold fell slightly. A barrel of Brent crude averaged USD 96.3 in January, up 4.9% on December. The rise in oil prices was the result of increased demand from China, a larger-than-expected decline in American stocks and the closure of an Alaskan pipeline carrying 15% of the US's total oil production. Growth in other commodity prices also remained high in January. US dollar prices of industrial commodities were up close to 40% in year-on-year terms overall, while food prices were up a third. This is increasing inflationary pressures. After rising sharply last year, the price of gold fell slightly in January as confidence in global economic growth and optimism on stock exchanges rose.

The euro appreciated against the US dollar, the Japanese yen and the pound sterling in January, but depreciated slightly against the Swiss franc. The euro rose 1.1% against the US dollar in January to average USD 1.34 for the month. The euro fell during the first half of the month under the influence of continuing concerns surrounding the refinancing of the debt of peripheral euro area countries. The euro then rose in the second half of the month, primarily as a result of an improvement in the market for government bonds from the peripheral euro area countries, on account of well-received auctions for Portuguese, Spanish and Italian government securities. The Federal Reserve and the ECB left their key interest rates unchanged. The Chinese central bank again raised its reserve requirement rate for the largest banks.

activity in the electricity, gas and steam supply sector and the mining and quarrying sector, while the figure for the manufacturing sector was up 1.6% on October. Year-on-year growth has declined since August, partly as a result of the increasing basis from the end of 2009. Aggregate industrial production over the first eleven months of the year was up 6.0% in year-on-year terms, while manufacturing output was up 6.5%. The difference is the result of low growth in output in the electricity, gas and steam supply sector, which accounts for just under a tenth of industrial production in Slovenia. The real value of new orders having declined in the third quarter relative to the second quarter, demand increased again in October and November as a result of renewed growth in orders from the foreign market.

## 2 | Economic Activity and Labour Market

### Real sector

Industrial production in November was down just under 1% on the previous month, the trend of growth having slowed over recent months. The movement in new orders was more favourable, having increased in November for the second consecutive month. The decline in aggregate production was the result of lower

Of the different categories of manufactured goods, only the production of capital goods recorded an increase in November. This was its second consecutive monthly increase, the year-on-year rate exceeding 11% in November. This increase was primarily related to growth in investment in machinery and equipment in certain key EU trading partners. Year-on-year growth in the production of intermediate goods declined to just under 7% in November, primarily as a result of a base effect. The production of consumer goods declined in November for the sixth consecutive month, and stagnated in year-on-year terms despite the low basis. Exports of consumer goods having risen, this was primarily a reflection of low domestic household consumption, which is also being seen in a decline in volume turnover in retail trade other than motor vehicles and fuels.

Growth in industrial production is also being hindered by low domestic demand for consumer goods and capital goods produced in Slovenia. The real value of new orders during the first eleven months of last year was up just over 13% in year-on-year terms, orders from the foreign market increasing by just under 16%, and orders from the domestic market only increasing by just under 4%. Orders from the rest of the world increased notably for all categories of goods, while the only increase in orders from the domestic market was recorded by intermediate goods. Orders for capital goods

from the domestic market during the first eleven months of the year were down almost 5% in year-on-year terms, despite growth in the second quarter, while orders for consumer goods were down just under 7%. This has also been reflected in output, the production of intermediate goods having recorded the highest year-on-year growth of 10%, while year-on-year growth in the production of capital goods did not exceed 4% and the figure for consumer goods was less than 2%. Given that manufacturing generates just under 40% of turnover on the domestic market, and the production of capital goods and consumer goods accounts for over a half of total industrial

\* Volume of industrial production. \*\* Real value of construction put in place. \*\*\* Old methodology.

production, the gradual increase in investment in machinery and equipment and household spending expected for this year could have a beneficial impact on growth in industrial production.

Construction activity in November was up slightly on the previous month, but remained down just under a fifth in year-on-year terms, despite the low basis. The real value of construction put in place was up just under 1% on October as a result of an increase in activity in civil engineering. Activity in the construction of buildings was down just under 13% in monthly terms, one of the largest monthly contractions of the year. The year-on-year contraction in activity was largest in the construction of residential buildings, the rate exceeding 50% in November. After completion of the main work on a major sports and commercial complex, activity in non-residential construction has declined in recent months, and year-on-year growth also remains negative in the civil engineering segment.

The movement in the real value of new contracts in certain segments of construction could indicate a gradual slowdown in the negative trend. The planned increase in public expenditure on infrastructure is also expected to contribute to this in the future. The real value of new contracts in the construction sector in November was up just under a tenth in year-on-year terms. The increase was pronounced in residential construction, while there was also an increase in value in the

civil engineering segment. The total value of new contracts in the construction sector during the first eleven months of the year was down just over 5%, but only as a result of a decline in the figure for civil engineering. The value of new contracts in residential construction was up 14%, while the figure for non-residential construction was up 15%. This was primarily the result of a pronounced increase in value in the first half of the year. According to the Budget Memorandum for 2011 to 2012, public funding for the construction and maintenance of public roads and for the modernisation of railway infrastructure is expected to increase this year and in 2012, the latter also being expected to attract significant co-financing from the EU budget.

Volume turnover in trade increased overall last year, but only as a result of an increase in trade in motor vehicles and fuels. Year-on-year growth in retail trade and in trade in motor vehicles over the first eleven months of the year was a bit over 3%. The main factor was volume turnover in trade in motor vehicles, which has been recording year-on-year growth since the beginning of 2010. In December the rate was down on the previous month, but nevertheless exceeded 13%. Last year real volume turnover in retail trade acted to reduce overall growth. Year-on-year growth in this segment became positive in June, primarily as a result of an increased turnover in trade in fuels, but was negative on average over the year. Volume turnover in retail trade other than motor vehicles and fuels declined by just under 2% last year.

This is an indication of the low recovery in certain segments of domestic consumption in connection with the uncertain situation on the labour market.

Year-on-year growth in nominal turnover in private sector services during the first three quarters of 2010 was higher in the EU27 overall than in Slovenia. In 2008 year-on-year growth in total turnover in services in Slovenia was almost 7 percentage points higher than in the EU27 overall at just over 11%, partly as a result of inflation being just under 2 percentage points higher. With inflation having fallen significantly, the effect of the high basis also led to a larger year-on-year decline in Slovenia in 2009, at just under 17%, almost 8 percentage points more than the figure for the EU27 overall. Another factor

in the larger decline in turnover was the greater impact of the contraction in international trade. Growth in nominal turnover in services during the first nine months of 2010 in the EU27 stood at 4.5%, just under 2 percentage points higher than in Slovenia. The higher growth in the EU27 is primarily the result of the later recovery in economic activity in Slovenia, which is also evident from its year-on-year decline in total turnover in services in the first quarter of last year.

Increased turnover in wholesale trade and in trade in motor vehicles were the main factor in the higher nominal turnover in services in the EU27 overall. Total turnover in trade during the first nine months of the year in the EU27 was up 5.5% in year-on-year terms, just over 4 percentage points more than in Slovenia. Higher growth in turnover in wholesale trade other than motor vehicles and higher growth in turnover in the trade and repair of motor vehicles were factors in the higher year-on-year growth in nominal turnover in trade in the EU27. Growth in turnover in wholesale trade in the aforementioned period stood at just under 8% in the EU27, while turnover declined in Slovenia, primarily as a result of negative year-on-year growth in the first quarter. The differences in nominal turnover in retail trade were not pronounced. Nominal turnover in services other than trade were up 5.6% in Slovenia, just under 4 percentage points more than in the EU27 overall. Major factor in this faster growth was higher turnover in transportation, storage and communications, in connection with the expan-

sion of international trade, which has a greater impact on a small open economy such as Slovenia.

The economic sentiment indicator rose by 1 percentage point in January, primarily as a result of an increase in confidence in the manufacturing sector. The manufacturing confidence indicator rose in January for the second consecutive month, employment expectations having recorded the largest rise in the last month. Confidence in the service sector also rose in January, as a result of favourable expectations. After rising in December, retail confidence declined in January; the main factor was a decline in the sales indicator. Construction confidence in January was unchanged from the previous month, and remains the lowest among all sectors. Consumer confidence was also unchanged from the previous month. Nevertheless, consumers were more pessimistic regarding the general economic situation and unemployment.

### Labour market

The number of registered unemployed increased sharply in December, passing 110,000. The increase was predominantly the result of a large inflow of people over 50 years of age who registered in order to wait for retirement. In December 14,846 people newly registered as unemployed, 76% more than in December 2009. The number of unemployed was up 6,190 on November, of whom 5,652 were older than 50. This age group had accounted for just a quarter of the rise in regis-

tered unemployment during the first eleven months of last year. The number of unemployed in the 30 to 50 age group rose by 961 in December, while the number of unemployed aged under 30 fell by 741. This is in line with the explanation that large numbers of older people have registered with the Employment Service with the intention of waiting for retirement at more favourable terms, and thus taking advantage of old pension legislation and old labour market legislation. From the point of monitoring developments on the labour market, registered unemployment is thus becoming an increasingly unsuitable indicator, as there are more and more unemployed people who have opted for the status voluntarily. In the future it will be necessary to closely follow the surveyed unemployment rate, as it will more accurately reflect the actual situation on the labour market. Registered unemployment nevertheless remains important, as it has an impact on public finances.

Despite the increase in registered unemployment, the pace of outflows from unemployment and the creation of new vacancies are favourable. In December 8,656 people deregistered as unemployed, up a fifth on December 2009, of whom 4,721 went into employment. Companies notified 14,328 new vacancies, up 23% on December 2009. There were 7,830 new hires in December, a year-on-year increase of 3.7%, and a favourable result compared with the decline of 6.5% in the total number of new hires in 2010.

Expected employment

Source: SORS.

The workforce in employment fell by 2,119 in November, primarily as a result of the continuing fall in employment in construction. The workforce in employment in the private sector fell by 2,622 in November, in contrast to the usual November increases before the crisis. The largest fall in the workforce in employment was in

the construction sector, at 1,291. The workforce in employment in construction has fallen by around 16,000 since October 2008, and the employment expectations indicator is continuing to deteriorate. After rising for two months, the workforce in employment in manufacturing fell again in November, by 517. There were also signifi-

cant falls of employment in the sectors of trade, maintenance and repair of motor vehicles, administrative and support services and food and accommodation services. The professional, scientific and technical activities sector is continuing to show a positive trend in the workforce in employment. The workforce in employment in the public sector increased by 503 in November, primarily as a result of an increase in the education sector and the health and social work sector.

The average gross wage per employee in November was up 4.1% in year-on-year terms; the contribution of extraordinary payments was positive but relatively small. The contribution made by extraordinary payments (extra monthly bonuses, end-of-year bonuses, etc.) to year-on-year growth in the average gross wage stood at 0.2 percentage points in November, whereas in November 2009 the smaller amount of extraordinary payments reduced year-on-year wage growth by 1 percentage point. The average gross wage rose by 5.3% in the private sector and by 0.6% in the public sector.<sup>1</sup> Year-on-year growth in gross wages was high in the manufacturing sector, where wages were up 8.3%, to which extraordinary payments contributed 1.2 percentage points. Labour productivity is also growing relatively rapidly in this sector; the year-on-year rate stood at 7.5% in November. According to the calculation covering all corporate employees, year-on-year growth in the total wage bill in the

private sector stood at 3.2% in November. The wage bill also increased in year-on-year terms in the public sector, by 2.7%, largely in connection with the continuing rise in employment.

### Selected competitiveness indicators

The harmonised index of the nominal effective exchange rate in December depreciated relative to November, the year-on-year depreciation thereby increasing slightly. In December, the harmonised index of the nominal effective exchange rate depreciated by 0.5% in monthly terms. The euro fell by 3.3% against the US dollar, 0.8% against the pound sterling, 2.3% against the Japanese yen and 4.6% against the Swiss franc. The uncertainties surrounding public finances in individual euro area countries were the main factor in the euro's fall against major world currencies in December. As a result of the depreciation in the index, the year-on-year depreciation increased from 2.4% in November to 2.6% in December.

The harmonised indicator of the real effective exchange rate as measured by consumer prices in December was unchanged from the previous month, while the year-on-year depreciation declined. As a result of a base effect, the year-on-year depreciation declined from 3.0% in November to 2.8% in December. The year-on-year depreciation in the nominal effective ex-

<sup>1</sup> The public sector and private sector are distinguished according to the standard classification of economic activities. Thus the public sector includes public administration, education, health and culture. The weakness in this indicator is that it includes legal entities that do not fall within the public sector.

change rate accounted for 2.6 percentage points of December's year-on-year depreciation in the real effective exchange rate, the slower year-on-year growth in domestic prices than in the basket of foreign prices accounting for the remainder.

Slovenia's price competitiveness as measured by the harmonised price competitiveness indicator deteriorated last year relative to the main euro area trading partners, the gap widening further in December. The increase in the year-on-year depreciation in the harmonised indicator was pronounced in the first half of the year, primarily as a result of the nominal depreciation in the euro, and to a lesser extent as the result of differences between growth in domestic prices and growth in the basket of foreign prices. The increase in year-on-year depreciation slowed in the second half of the year, fluctuating around 2.5%. The depreciation in the indicator averaged 2.1% in 2010, 1.8 percentage points less than the average year-on-year depreciation in the main euro area trading partners. In December, Slovenia's price competitiveness indicator depreciated by 2.8% in year-on-year terms, compared with an average depreciation of 5.3% in the main euro area trading partners. Despite the year-on-year depreciation, the indicator remains relatively high compared with the aforementioned trading partners, and is an indication of a long-term deterioration in Slovenia's

price competitiveness.

The harmonised competitiveness indicator as measured by the GDP deflator, which reflects the general level of prices in the economy, depreciated in Slovenia in the third quarter of last year, both in quarterly terms and in year-on-year terms.<sup>2</sup> The indicator depreciated by 0.1% relative to the second quarter. As a result of the slightly smaller year-on-year change in the general level of prices in the domestic economy relative to the level of foreign prices, the year-on-year depreciation diminished by 0.5 percentage points in the third quarter to just under 2%. In the third quarter, Slovenia's competi-

<sup>2</sup> The European Commission also publishes price and cost competitiveness indicators ([http://ec.europa.eu/economy\\_finance/db\\_indicators/db\\_indicators8642\\_en.htm](http://ec.europa.eu/economy_finance/db_indicators/db_indicators8642_en.htm)). These differ from those of the ECB because of methodological differences resulting from the countries involved, the different sources for the deflators and the data conversion methods.

**Real harmonised competitiveness indicator – ULC total economy (21 countries and rest of euro area countries)**

Source: ECB.

tiveness as measured by the GDP deflator deteriorated slightly relative to the majority of the main euro area trading partners, where the year-on-year depreciation averaged 3.9%.

The year-on-year depreciation in the harmonised indicator of cost competitiveness as measured by unit labour costs in the total economy diminished slightly in the third quarter in Slovenia, but increased in the main euro area trading partners. The indicator appreciated by 0.1% relative to the second quarter as a result of growth in unit labour costs, while the year-on-year depreciation diminished by 0.5 percentage points to 0.5% as a result of a base effect. The depreciation increased significantly in the main euro area trading partners. The movement in the indicator of unit labour costs in the total economy during the first three quarters of last year is an indication of slower cost adjustment in the Slovenian economy than in the trading partners.

### 3 | Price Developments

Inflation as measured by the HICP averaged 2.1% in 2010, up 1.2 percentage points on 2009. The largest factor in the increase was energy prices, whose contribution to the HICP increased from -0.7 to 1.7 percentage

**Contribution to inflation**

Vir: Eurostat, Bank of Slovenia calculations.

points. The main factors in the movement in energy prices were the price of oil on global markets, which was up 29% on average last year, and the increase in excise duties on electricity, natural gas and motor fuels. As a result of the pass-through of higher prices from the end of 2009, average prices of heat energy were up 17.8% last year. The main factor in the rise in the contribution made by food prices from 0.4 to 0.5 percentage points was higher prices of fruit and vegetables, while the contribution made by processed food remained almost unchanged, despite the rise in excise duties on alcohol and tobacco. Among services prices the largest declines in year-on-year growth were recorded by prices of accommodation and food services and package holidays, while September's changes in the calculation of prices of school meals reduced average annual inflation by 0.2 percentage points. The year-on-year fall in prices of industrial products was largest in the first quarter of 2010, before gradually slowing. The main factors in the fall were car prices and prices of clothing and footwear, while water supply prices averaged growth of 24.3% and contributed an average of 0.1 percentage points towards inflation, as a result of a rise at the end of 2009.

Average price growth as measured by the HICP at constant tax rates stood at 1.8% last year, up 2.2 percentage points on 2009. Under the amendment to the excise duties act the government raised excise duties on alcohol, tobacco products, electricity and natural gas last year. Excise duties on alcoholic beverages rose by

12.6%, while excise duties on tobacco products rose by 11.6% (from EUR 69 to EUR 77 for 1,000 cigarettes). Excise duties on electricity for commercial and non-commercial use were raised from EUR 1.00 to EUR 3.05 per MWh, while excise duties on natural gas were raised from 0.63 cents to 3.63 cents per cubic metre. The rise in excise duties on motor fuels in 2010 was less pronounced than in the two previous years, and they actually finished the year down in year-on-year terms as a result of a cut in December. They were cut again in January as a result of the continued rise in oil prices. The rise in excise duties on heating oil continued in the second half of 2010.

Declining trend in core inflation indicators stopped last year. Nevertheless, core inflation remained low, primarily in reflection of the adverse situation in the domestic macroeconomic environment. Year-on-year growth in the harmonised index of prices excluding energy, food, alcohol and tobacco stood at -0.4% last year, compared with 1.7% in 2009. The main reasons for the decline were the slow recovery in economic activity, the deterioration in the situation on the labour market and the consequent low level of household consumption. This was reflected in the relatively low level of turnover in certain important segments of the retail sector, which restricted providers of goods and services from raising prices. The other two core inflation indicators also declined: the HICP excluding energy and unprocessed food

fell from 1.9% to 0.2%, while the HICP excluding energy fell from 1.7% to 0.3%.

According to detailed SORS figures, the most notable change in the structure of inflation in December was in year-on-year growth in energy prices. In December, prices of liquid fuels and petrol rose by 3.7% and 2.2% in monthly terms as a result of rises in oil prices on global markets. Year-on-year growth in energy prices increased by 2.3 percentage points to 12.6%, while their contribution to inflation rose by 0.3 percentage points to 1.7 percentage points. Seasonal sales brought falls in prices of clothing and footwear in December, although the falls in footwear prices were smaller than in December 2009. This led to an increase in year-on-year growth in footwear

prices from 2.3% in November to 5.2% in December, while the year-on-year fall in prices of clothing increased from 1.7% to 2.2%. A major factor in the decline in the negative contribution to inflation made by industrial products was car prices, in which the year-on-year decline was less than 10.0% for the first time since November 2009. The largest increase in year-on-year growth in services prices in December was recorded by prices of other housing services, while the largest decline in growth was recorded by prices of passenger air transport. The largest year-on-year rises in food prices were recorded by fruit and by sparkling and still beverages.

Industrial producer prices on the domestic market continued to record year-on-year growth in December, while monthly growth also increased. Monthly growth stood at 0.2%, while year-on-year growth stood at 3.5%, up 0.3 percentage points on November. The largest monthly rises in prices were recorded by the manufacture of basic metals, and food and beverages, while the largest falls were recorded by the manufacture of computer, electronic and optical products. In December, the largest year-on-year price rises were again recorded by the manufacture of basic metals, and by the manufacture of paper and paper products, while year-on-year

growth in prices in the manufacture of food products is also gradually increasing. The reason is growth in food prices, in particular prices of cereals, oil and sugar, and oil prices on global markets, which will pass through into higher prices for the end consumer. Rises in prices of bread, meat and dairy products have already been announced for January or early February of this year.

## 4 | Balance of Payments

### Current account

The current account recorded a deficit in November for the fourth consecutive month.<sup>3</sup> A deficit of EUR 68 million was recorded, compared with a surplus of EUR 87 million in November 2009. The main factors in the current account deficit were the merchandise trade deficit, a small widening of the deficit in factor income, and a slight decline in the surplus of trade in services. Only the net inflow of transfers, official transfers in particular, had a positive impact in the current account in November. The

<sup>3</sup> In January 2011 the data sources for the services figures in the balance of trade for 2010 were updated. Based on the Survey of Foreign Tourists in 2009, which is the SORS's basis for estimating the average daily consumption by foreign tourists in Slovenia, and a change in methodology for monitoring the number of overnight stays, exports of tourism services declined. The estimated average daily consumption underwent a profound decline. Exports of tourism services during the first ten months of the year were EUR 160 million less than the previously announced figure. Imports of tourism services were also revised, because of an increase in the proportion of tourism outflows accounted for by transport services. The estimated proportion accounted for by transport services increased from 16% in 2006 to 22% in 2009. As a result, cumulative imports of tourism services during the first ten months of 2010 declined by EUR 70 million. The overall effect of the changes was an increase of around EUR 90 million in the current account deficit.

current account deficit over the 12 months to November amounted to EUR 481 million or 1.3% of GDP, compared with an equivalent figure of 2.2% of GDP in November 2009.

Growth in merchandise imports in November outpaced growth in exports for the third consecutive month, which brought faster growth in the merchandise trade deficit. Merchandise imports amounted to EUR 1,815 million in November, up 17.1% in year-on-year terms, while exports were up 14.6% at EUR 1,687 million. A major factor in the faster growth in imports in recent months has been the rapid rise in commodity prices on global markets. As a result of these movements, the merchandise trade deficit in November widened by EUR 50 million in year-on-year terms to EUR 129 million. The cumulative merchandise trade deficit over 12 months to November 2010 amounted to EUR 939 million or 2.6% of GDP, 0.4 percentage points more than the equivalent figure in November 2009.

The main factor in the widening of the merchandise trade deficit during the first eleven months of last year was a decline in the surplus with non-EU countries. The merchandise trade deficit with EU Member States widened by EUR 6 million in year-on-year terms, while the surplus with non-EU countries declined by EUR 244 million. The proportion of merchandise imports accounted for by non-EU countries has been increasing in

recent months as a result of high year-on-year growth in these imports, which stood at 22% in September, 42% in October and 30% in November. Imports from non-EU countries increased in almost all economic sectors (other than food and animal feed); the largest contribution to the overall increase came from imports of machinery and transport equipment, which were up 114% in November.<sup>4</sup>

Trade in intermediate goods is increasing as a result of economic growth in trading partners, but the low level of domestic demand is leading to lower growth in imports of consumer goods and a contraction in imports of capital goods. The largest year-on-year increase during the first ten months of last year was recorded by trade in intermediate goods directly connected to economic activity. Imports of these were up 22.0% and exports up 21.3%, as a result of the increase in foreign demand, the increase in activity in export-oriented sectors and also price factors on the import side. The increase in trade in consumer goods over the same period was less pronounced: imports were up 5.2%, and exports up 6.3%. Trade in capital goods over the first ten months of last year declined, primarily as a result of a decline in the first quarter. This trade increased in the middle of the year under the influence of relatively fast economic growth, but declined again in year-on-year terms in October. Imports of capital goods over the first ten months of the year declined by 3.2%, and exports by 1%.

<sup>4</sup> According to Eurostat figures.

As a result of higher growth in imports, the surplus of trade in services declined in November, while the surplus over the first eleven months of the year was also down in year-on-year terms. The surplus over the first eleven months of the year amounted to EUR 980 million, down EUR 65 million in year-on-year terms. The only increase in surplus was recorded by transport services, which depend significantly on merchandise trade and where trade is increasing primarily as a result of the increased trade in intermediate goods. Year-on-year growth in imports and exports of transport services stood at around 14% in November. November's surplus in tourism services was up in year-on-year terms; imports decreased by 11.0% while exports were up by just under 7%. In November, imports of other services increased by 15.1% in year-on-year terms, while exports were down

7.0%, which led to the deficit in other services over the first eleven months of the year widening by EUR 70 million. Within other services, the largest increases in the trade deficit were recorded by communications services, and intellectual property services, where the deficit has been widening for some time now. Both imports and exports of construction services declined; the main factor was the contraction in construction investment in Slovenia and abroad.

The deficit in factor income over the first eleven months of last year narrowed by EUR 158 million in year-on-year terms to EUR 559 million. The main factor in the narrowing deficit in factor income was a decline in the deficit in capital income. It narrowed by EUR 96 million in year-on-year terms to EUR 692 million. There was a year-on-year decline of over a half in the deficit in in-

Source: Bank of Slovenia.

come from reinvested and undistributed earnings, and also in net outward interest payments, as a result of a decline in net loans raised in the rest of the world and lower interest rates. By contrast, liabilities from investments in debt securities increased, and acted to widen the deficit in capital income. The surplus in investments in debt securities of EUR 61 million over the first eleven months of 2009 became a deficit of EUR 78 million in 2010. This was the result of issues of government and bank securities. The surplus in labour income increased by EUR 62 million in year-on-year terms over the same period to reach EUR 133 million. This was primarily the result of lower outflows of labour income as a result of a decline in the number of foreign workers.

Inflows of current transfers amounted to EUR 122 million in November, the highest figure of the first eleven months of the year, leading to a sharp increase in the surplus in transfers from the previous month. The surplus stood at EUR 43 million in November, EUR 34 million more than in October. This surplus contributed to the deficit in current transfers during the first eleven months of the year narrowing to EUR 38 million, or just over a fifth of that recorded in the same period of 2009. The improvement was primarily the result of higher inflows of other government transfers. The state budget's net position against the EU budget also improved significantly in November, the surplus exceeding EUR 50 million. According to the latest figures for December, state budget revenues from the EU budget increased to EUR 231 million, while expenditures amounted to EUR 33 million. The improvement in the state budget's net position in December amounted to just over EUR 198 million.

### Capital and financial account

The private sector's overall financial flow in November was a net outflow of EUR 108 million, taking the net outflow over the first eleven months of the year to EUR 604 million. November's net financial outflow was primarily the result of an increase in claims from currency and deposits, in which the domestic commercial banks were the largest factor. These transactions in November were partly compensated for by an increase in liabilities from FDI and loans to domestic banks. The net financial

outflow over the first eleven months of the year amounted to EUR 604 million, merely just over a fifth of the figure for the same period of the previous year of EUR 2,729 million. The decline in the private sector's net financial outflow in 2010 compared with the previous year was primarily the result of an increase in FDI, trade credits and investments by non-residents in domestic securities. The net external debt declined in November; the banking sector was the largest factor in this.

The private sector's claims against the rest of the world increased by EUR 1,222 million over the first eleven months of the year, November accounting for EUR 502 million of this increase. The largest contribution to November's increase in claims, EUR 465 million, came from the domestic banks' holdings of currency and deposits in the rest of the world, which nevertheless declined by EUR 642 million over the first eleven months of the year. As a result of the increase in trade in merchandise and services, claims from trade credits increased again for the third consecutive month. These increased by EUR 601 million over the first eleven months of the year. The outflow of all sectors' holdings of currency and deposits during the first eleven months of last year increased by EUR 102 million, as a result of high outflows of EUR 804 million in households' holdings of currency and deposits. Investments in foreign securities declined in November. The largest decline, of EUR 206 million, was in the banks' investments in short-term debt securities while investments in long-term debt securities in-

Financial claims\* on the rest of the world - November 2010

Source: Bank of Slovenia.

creased by EUR 22 million. As a result of high net outflows in the first quarter of last year, investments in foreign securities during the first eleven months of the year continued to record a net outflow, of EUR 309 million. Despite a decline in November, outward FDI by domestic corporates over the first eleven months of last year amounted to EUR 114 million, comparable to the same period of 2009. Claims from loans to non-residents also declined in November.

The private sector's liabilities increased by EUR 395 million in November, and by a total of EUR 621 million over the first eleven months of the year. The largest factor in November's increase in the private sector's liabilities was non-residents' inward FDI in the amount of EUR 232 million. Of this, non-residents' equity increased by EUR 176 million, and reinvested earnings and other equity by EUR 56 million, while the remainder came from an increase in net liabilities to related companies. Non-residents' inward FDI increased by EUR 557 million over the first eleven months of last year, having declined in the

Financial liabilities to the rest of the world - November 2010

Source: Bank of Slovenia.

same period of the previous year. After making six months of debt repayments in the rest of the world, domestic banks borrowed EUR 160 million in November. Debt repayments by the domestic banks over the first eleven months of last year amounted to EUR 519 million, merely just under a fifth of the figure in the same period

Signs: inflows or increases in liabilities (+), outflows or increases in claims (-).

of 2009. Non-residents' investments in domestic securities have been increasing since March, and, as they had been in 2009, they remained the private sector's main inflow, in the amount of EUR 780 million. Trade credits from the rest of the world are increasing as imports of merchandise and services increase. Liabilities from trade credits increased by EUR 52 million in November, taking the total over the first eleven months of the year to EUR 514 million. The largest factor acting towards decline in the private sector's liabilities to the rest of the world last year was the decline in non-residents' deposits at the domestic banks, which were down EUR 187 million in November and down EUR 772 million over the first eleven months of the year.

The net external debt in November was down EUR 306 million on October at EUR 11.5 billion. The main decline was in the short-term net external debt, the long-term net debt having increased. November's increase in the total economy's gross claims was larger than the increase in gross external debt, as a result of which the net external debt also declined. The gross external debt increased by EUR 256 million to EUR 42.3 billion in November. The main factor was the private sector, while the government and the Bank of Slovenia reduced their gross external debts. Government borrowing in the rest of the world was the main factor in the increase in the long-term gross external debt after 2008, which had reached just over a fifth of total gross external debt in

Slovenia by 2010. By contrast, the stock of short-term debt is diminishing, largely as a result of the Bank of Slovenia in November. Gross external claims rose in November by EUR 562 million to EUR 30.9 billion. The main factor in the increase in external claims was the private sector's short-term claims, primarily currency and deposits. The private sector's short-term claims increased by EUR 402 million in total.

## 5 | Public Finance

The general government deficit in the 12 months to October amounted to 6.5% of estimated GDP. The deficit in the final quarter of 2010 narrowed significantly in year-on-year terms, state budget revenues having increased significantly as expenditure declined sharply. The general government deficit over the first ten months of the year amounted to EUR 1,854 million, around EUR 370 million more than in the same period of the previous year. The wider deficit was caused by the state budget, where the year-on-year decline in expenditure did not follow the decline on the revenue side to the same extent. State budget revenues have increased during the last two months, while expenditure declined sharply. As a result, the state budget deficit in

Source: Ministry of Finance.

Note: \*All bond issues disbursed on domestic market are counted under domestic borrowing, despite of the residency of buyers. Out of EUR 6,500 million bonds issued from February 2009 till April 2010 EUR 5,269 million were bought by foreigners until end October 2010.

the final quarter narrowed by around EUR 410 million in year-on-year terms. According to the Ministry of Finance's provisional figures, the state budget deficit in 2010 amounted to EUR 1,731 million or 4.8% of estimated GDP, EUR 36 million less than estimated in the revision to the budget.

According to available figures, general government revenues in the final quarter were up in year-on-year terms. Payments of taxes and contributions last year were down on the previous year, primarily as a result of lower payments on the basis of corporate performance. General government revenues over the first ten months of last year were at the level of those in the same period of the previous year. Growth in revenues strengthened in November and December. There were increases in both non-tax revenues and revenues from the EU budget, while the main rises in tax revenues were recorded by VAT and excise duties. In addition to the aforementioned two types of tax, payments of social contributions over the year as a whole were also up in year-on-year terms. Despite the increase in revenues from these taxes, total revenues from taxes and contributions were down on the previous year. The key factor in this was smaller revenues from corporate income tax, primarily as a result of tax settlements for the previous year. Consequently, tax prepayments were lowered and were stable at just under EUR 50 million per month in the second half of last year.

Source: Ministry of finance, except: \*\* Public Payments Administration of the Republic of Slovenia, Report on classified general government revenues and coverage (B-2); Bank of Slovenia calculations.

Note: \* Consolidated central government budget, local government budgets and social security funds (pension and disability insurance fund and health insurance fund) in cash accounting principle.

The cut of 1 percentage point in the tax rate also contributed to this. Personal income tax was also down last year. The largest declines were in personal income tax on income from business activities, on interest and on capital gains. Refunds on the basis of annual settlements were also larger than in the previous year. By contrast, payments of personal income tax on wages increased.

According to available figures, general government expenditure in the final quarter was down in year-on-year terms, investment expenditure and transfers in particular. General government expenditure during the first ten months of last year was up 2.8% in year-on-year terms. Restrictions on expenditure in the state budget were the reason for the year-on-year decline in the final quarter. There were also no major interest payments at the end of the year, which in the rest of the year had contributed to growth in expenditure. Last year's expenditure on wages and contributions remained approximately at the level of the previous year. Funding for transfers to individuals and households continued to increase in year-on-year terms in the final quarter. Of these, the largest increase last year was recorded by funding for the unemployed, scholarships and sick pay.

The state budget's position against the EU budget was again positive in 2010, in the amount of 0.9% of GDP. Revenues from the EU budget exceeded payments into the EU budget by EUR 326 million. Nevertheless,

disbursement has remained significantly behind the estimated numbers in the current state budgets. Last year revenues from the EU budget were less than 70% of those anticipated in the revision to the state budget. Disbursement from the structural funds in particular were higher than the previous year. Payments into the EU budget were also less than estimated, by just under 4%.

At the end of last year the general government deficit was financed primarily by withdrawing cash and deposits. In the state budget position, which accounts for the majority of flows, cash and deposits declined by EUR 259 million in the final quarter. According to provisional figures for the realisation of the state budget, the decline in cash and deposits in 2010 amounted to EUR 1.1 billion. Net borrowing amounted to just under EUR 800 million.

Under the state budget financing programme the government issued 10-year bond with a total nominal value of EUR 1.5 billion in January of this year. The state budget financing programme for 2011 envisages financing primarily through issues of long-term securities. According to estimates, the government is expected to issue EUR 3 billion of bonds this year. The 10-year bond issued in January with a total nominal value of EUR 1.5 billion has a coupon rate of 4.375%. The yield to maturity at the time of pricing was 4.431%, while the premium over the benchmark German bond was 155.6 basis points.

## 6 | Banking System\*

The banking system's total assets declined by EUR 1,323 million in 2010. Year-on-year growth in total assets stood at -2.6% in December, total assets having declined by EUR 1,156 million. The main factor was a decline in claims against banks in the rest of the world, which the banks had been increasing from the middle of November to gather funds to repay liabilities to the Eurosystem. On the funding side, in addition to a decline in

\* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

the banks' liabilities to the Eurosystem there was a notable decline in deposits by non-banking sectors in December as a result of withdrawals of government deposits. The banks reduced their investments in securities for the fourth consecutive month, thereby adjusting their stock of

assets to the debt repayments on the liability side. The net stock of loans to non-banking sectors declined in December.

Year-on-year growth in loans to non-banking sectors stood at 1.2% in December, down slightly on last year's average. The net stock of loans to non-banking sectors declined by EUR 165 million in December as a result of a decline in loans to non-financial corporations (NFCs). The proportion of loans to non-banking sectors accounted for by long-term loans rose last year, reaching 73% in December.

The stock of loans to NFCs at the end of December was down EUR 244 million on the previous month, talking year-on-year growth to -2.6%. The decline was the result of a sharp increase in impairments and loan repayments. The proportion of the stock of loans to NFCs accounted for by long-term loans is increasing. Corporates made their largest debt repayments in December to the banks under majority foreign ownership. The year-on-

Source: Bank monthly accounts figures; 2010 figures unaudited.

year contraction in loans to NFCs increased to above 7% at the banks under majority foreign ownership, while year-on-year growth at the banks under majority domestic ownership was merely symbolically negative.

Lending to households amounted to EUR 88 million in December, significantly above last year's monthly average. Year-on-year growth in loans to households stood at 9.8%, the banks under majority foreign ownership accounting for 85% of the increase. Long-term loans accounted for two-thirds of December's increase in loans to households.

The main factors in the decline in the stock of bank funding in December were the banks' debt repayments to the Eurosystem and a decline in government deposits at banks. During the repayment of the final 12-month LTRO on 23 December the banks' debt to the Eurosystem declined by EUR 479 million to EUR 581 million, having stood at EUR 2.1 billion at the end of 2009.

Last year's growth in deposits by non-banking sectors was negative, primarily as a result of a decline of EUR 960 million in government deposits at banks. EUR 278 million of this decline was recorded in December alone. December's seasonal increase in household deposits was relatively high last year at EUR 144 million. Household deposits at banks increased by EUR 490 million in 2010, less than half of the usual increases recorded in the years before the crisis. Year-on-year growth in household deposits stood at 3.6% in December. The

proportion of deposits by non-banking sectors accounted for by long-term deposits increased last year.

The banking system's net debt to banks in the rest of the world declined by EUR 100 million in December. The banks under majority foreign ownership borrowed EUR 135 million in the rest of the world. Liabilities to banks in the rest of the world declined by EUR 1.34 billion in 2010 (compared with EUR 3.07 billion in 2009).

The main factor in the loss recorded by the banking system in 2010 was high impairment and provisioning costs. Net interest increased by 11.2% in 2010, as a result of interest expenses declining by more than interest income. Last year's net non-interest income was down 12% on the previous year, primarily as a result of the banks' losses from financial assets and liabilities held

for trading. At the same time growth in net fees and commission was slightly positive (at 1.3%), while operating costs declined slightly. December's increase of EUR 169 million in impairment and provisioning costs was significantly higher than in all other months of last year. The banking system's total impairment and provisioning costs, which reflect the increase in credit risk, amounted to EUR 757 million last year, up over a half on the previous year's figure. As a result the banking system recorded a pre-tax loss of EUR 48.4 million in 2010. Domestic

## 7 | Domestic Financial Markets

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 0.5% in December, but was up 21.7% in year-on-year terms. The monthly volume of trading in bonds amounted to EUR 4.4 million, taking the volume for the whole year to EUR 108.9 million. The proportion of total volume on the stock exchange accounted for by trading in bonds stood at 8.4% in December, down significantly on last year's average of 22.1%. The majority of the total volume of trading in bonds on the Ljubljana Stock Exchange in December consisted of trading in Slovenska odškodninska družba 2<sup>nd</sup>-issue bonds in the amount of EUR 2.2 million and trading in 48<sup>th</sup>-issue government bonds in the amount of EUR 1.0 million.

The market capitalisation of shares on the Ljubljana Stock Exchange rose by 0.4% in December, but was down 17.3% in year-on-year terms. The proportion of total volume on the stock exchange accounted for by trading in shares declined to 86.7% in December, although it remained higher than last year's average figure of 73.3%. Last year's total volume of trading in shares amounted to EUR 360.8 million. The SBI TOP rose by 0.9% in December (taking the year-on-year change to -13.5%) to finish the month at 850. The P/E ratio in the prime market stood at 43.2 at the end of December. The volume of trading in shares in December was the highest monthly figure of the year at EUR 45.5 million.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents stood at 10.0% in December. Non-residents made net sales of EUR 17.0 million in bonds from Slovenian issuers, and net purchases of EUR 21.3 million in shares in Slovenian issuers in December. The heaviest trading by non-residents, both in December and last year overall, was in government bonds and shares in Slovenian blue-chips. The largest net sellers of bonds in December were again residents of Luxembourg (EUR 137.8 million), while the largest net purchasers were residents of the UK (EUR 103.0 million). The largest net purchases of shares were made by residents of Croatia (EUR 16.3 million), while residents of Cyprus made the

largest net sales (EUR 6.9 million).

Residents made net sales of EUR 68.0 million in foreign bonds, and net purchases of EUR 16.1 million in foreign shares in December. Residents made net purchases of EUR 70.3 million in bonds from foreign issuers and EUR 280.6 million in shares in foreign issuers in total in 2010. The largest net purchases of securities in December were made by insurance corporations (EUR 142.0 million, primarily from the euro area), while the largest net sales were made by banks (EUR 213.5 million, primarily bonds from the euro area). The largest net purchases of shares were made by mutual fund operators,

primarily from the US and the BRIC<sup>5</sup> countries. Households primarily made net purchases of bonds from the euro area, and primarily made net sales of shares from the US and the former Yugoslav republics.

The domestic mutual funds' assets under management increased to EUR 2,053.6 million in December (up 2.9% in monthly terms, and 10.6% in year-on-year terms), as a result of a rise of 2.3% in the average unit price (taking the year-on-year change to +6.5%) and net withdrawals of EUR 2.3 million. Bond funds recorded net inflows of EUR 2.7 million, while balanced funds recorded net withdrawals of EUR 4.2 million, equity funds net withdrawals of EUR 0.5 million, and money-market funds net withdrawals of EUR 0.3 million. The largest net payments into the domestic mutual funds in December, as in 2010 overall, were recorded by the insurance sector (EUR 8.4 million), while other sectors mainly made withdrawals. The largest net withdrawals were made by non-financial corporations and other financial intermediaries, in the total amount of EUR 11.9 million. The proportion of the domestic mutual funds' assets accounted for by liquid assets<sup>6</sup> declined to 8.9% at the end of December. The value of the mutual funds' investments in all markets rose in December: the DJ EuroStoxx index for western Europe rose by 5.5% (taking the year-on-year change to -0.1%), the S&P 500 index in the US rose by 6.5% (taking the year-on-year change to +12.8%)

<sup>5</sup> Brazil, Russia, India and China.

<sup>6</sup> Liquid assets include cash, deposits, money-market instruments and government bonds.

and the Hang Seng in China rose by 0.1% (taking the year-on-year change to +5.3%). The indices in the former Yugoslav republics also recorded positive changes in December: the BELEX 15 rose by 0.5%, the CROBEX by 18.1% and the MBI-10 by 1.6%. The year-on-year changes for the BELEX 15 and the MBI-10 remained negative at -1.8% and -17.2% respectively, but the CROBEX recorded a year-on-year change of +5.3%.

# IV. NOTES ON METHODOLOGY

## General notes

### Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

### Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

## Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

## 1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

### Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procuration and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

### Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

#### Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

#### Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

### Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

### Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

### Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procuration, internal affairs.

### Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

### Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

### Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

### Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procuration, internal affairs is also included here.

## Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

### Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

### Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

### Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%

**Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments**

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

**Table 1.8.: Investment funds**
**General**

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

*Note 1:* Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

*Note 2:* Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

*Note 3:* Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

**Deposit**

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

**Debt securities**

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

**Shares and other equity**

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

**Other assets**

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

**Loans**

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

**Investment fund shares/units**

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

**Other liabilities**

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

## 2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

### Interest rates (tables 2.1–2.4)

**Table 2.1: Bank of Slovenia Interest Rates**

*Lombard loan:* Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

*Interest rate on banks' obligatory reserves:* 1 percent per year since October 1991.

*The overnight-deposit interest rate* is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

*Long-term deposit* at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

*Tolar bills* are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

*Foreign currency bills* are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

*Interest rates* for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

**Table 2.2: Interbank Money Market Rates and Indexation Clause**

#### Interbank market

##### SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

##### EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – "Euribor®" – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

#### Indexation clauses

##### TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

#### **Foreign exchange indexation clause USD and CHF**

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

### **Table 2.3: European Central Bank Interest Rates**

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

**Main refinancing operations** are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

#### **Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes**

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

### **2.4: Monetary Financial Institutions Interest Rates**

#### **Data from January 2003–April 2005**

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

#### **Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.**

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

**Outstanding amounts** are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

**New business** is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

**The annual percentage rate of charge (APRC)** is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

**Weighting method:** The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

\* Households = sole proprietorships + individuals + non-profit institutions serving households

\*\*APRC data includes households without sole proprietorships and without non-profit institutions serving households

*Note 1:* For this instrument category, new business and outstanding amounts coincide.

*Note 2:* For this instrument category, households and non-financial corporations are merged and shown under the household sector.

## **Exchange rates (Tables 2.6.1–2.6.2)**

### **Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006**

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

### **Table 2.6.2: European Central Bank exchange rates**

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

## **Payment systems (Tables 2.7 to 2.13)**

### **General**

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

### **Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions**

*Note 1:* On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

*Note 2:* SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

*Note 3:* Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

*Note 4:* As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

*Note 5:* Gross value is the total value of all payment orders executed in the payment system.

*Note 6:* Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

### **Table 2.8 Payment Cards**

*Note 1: Credit card:* A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

*Note 2: Debit card:* A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

*Note 3: Cards issued abroad:* Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

*Note 4: Volume and value of transactions abroad:* Use of cards issued in Slovenia for payments abroad.

**Number of payment cards in circulation:** Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

**Number and value of payments refer** to the use of payment cards in each quarter/year.

**Domestic card:** Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

**Licence card:** Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

**Bank card:** Payment card issued by banks.

**Retailer card:** Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

**Personal card:** Payment card issued to a natural person (family cards included).

**Business card:** Payment card issued to a legal entity.

### Table 2.9 Other Payment Instruments and Innovative Payment Schemes

*Note 1:* Data refer to the end of each quarter.

*Note 2:* Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

### Table 2.10 Electronic Banking

*Note 1:* Only debt transactions are included.

### Table 2.11 Credit Transfers

**A paper-based order** is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

**Special payment order** is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

**A non-paper-based credit transfer** is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

**A standing order** is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

**Direct credit** is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

### Table 2.12 Debit Transfers

**Direct debit** is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

**A special money order** is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

**Table 2.13: Network of Commercial Banks**

*Note 1:* Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

*Note 2:* Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

**3. BALANCE OF PAYMENTS AND EXTERNAL POSITION****Balance of Payments****General notes**

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

**Characteristics of the Data**

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

**Revision policy**

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

**Data sources**

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
  - report on account balances at domestic banks – PPV (until 31 December 2004),
  - report on account balances abroad – C (until 31 December 2006),
  - report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
  - report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

- **Estimates and other sources**
  - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
  - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
  - estimate of Italian pensions (UMAR) until the end of 1998,
  - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
  - estimate of labour income (SURS),
  - data on pensions paid to non-residents (ZPIZ),
  - survey on the write-downs of debt from trade in goods and services abroad,
  - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
  - estimate of cash transactions on tourism and labour income (from 2007 onwards),
  - quarterly data on consumption of foreign embassies in Slovenia (SURS, from 2008 onwards),
  - migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
  - households' transfers (SURS, from 2008 onwards),
  - assets acquired directly by tenders and programmes of EU (SURS, from 2008 onwards),
  - data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards).

## Current account

### **Goods**

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

**Adjustments of CIF/FOB** - data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

**Coverage adjustments** - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural

persons not covered by Intrastat System.

## Services

### Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

#### Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

#### Travel - methodology since 2005 onwards

**Main data sources** to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

**Main data source** to estimate the **import** of travel is SURS's survey TU\_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU\_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

### Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

### Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

### Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SURS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

## Income

**Labour income – receipts.** Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

**Labour income - expenditures.** ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

**Capital income –** Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

## Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SURS survey) are included from 2008 onwards.

## Capital and financial account

### Capital account

#### Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SURS, Annual survey on investment in tangible assets).

### Financial account

#### Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans

and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

#### **Portfolio investment**

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

#### **Financial derivatives**

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

### **Other investments**

#### **Short-term trade credits**

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]}
- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]}

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

#### **Loans and long-term trade credits**

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

#### **Currency and deposits**

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

#### **International monetary reserves**

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia

(investments in securities and other investments).  
International monetary reserves item includes also financial derivatives (from 2009 onwards).

### Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

### Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

\* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

**Note 8:** The data on reinvested earnings for 2010 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2007 to 2009 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2011, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2011 shall take into consideration the new three year average (2008 to 2010).

**Note 9:** From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

**Note 10:** Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

**Note 11:** In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

### Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

### Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

## International Investment Position of Slovenia

### General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

### Revision policy

See note "Revision policy" in the section "Balance of Payments".

### Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

### Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment-other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

#### **Portfolio investment**

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

#### **Financial derivatives**

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

#### **Trade credits and loans**

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

#### **Currency and deposits, other assets, other liabilities and reserve assets**

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

### **Table 3.6: International Investment Position of Slovenia**

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards),

expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: [http://www.bsi.si/iskalniki/ecb\\_en.asp?Mapald=714](http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714).

### Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

## Gross External Debt

### General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

### Revision policy

See note "Revision policy" in the section "Balance of Payments".

### Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial derivatives are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

### Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

### Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

### International reserves

#### Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

## 4. PUBLIC FINANCE

### General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

### General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

### Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

**EDP debt** is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

### Tables 4.2 and 4.3: Non-financial Account of the General Government sector

**Fiscal burden** is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

**Intermediate consumption** consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

### Tables 4.4 and 4.5: Financial Account of the General Government sector

**Change in EDP debt** is a difference between the current and preceding EDP debt figure.

**Deficit-debt adjustment (DDA)** is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

**Other liabilities** consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

**Other flows** are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

**Borrowing requirement** consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

### Table 4.6: Revenues and Expenditures of the General Government

*Note 1:* The data of the current and previous year are revised monthly until the data on the previous year become final.

*Note 2:* Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

*Note 3:* Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

### Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

*Note 1:* The data of the current and previous year are revised monthly until the data on the previous year become final.

### Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

## 5. FINANCIAL ACCOUNTS

### Financial accounts (Tables 5.1 to 5.6)

**Tables 5.1, 5.2, 5.4 and 5.5** show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

**Tables 5.3 and 5.6** present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

#### Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

## 6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

### General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site:

[http://www.stat.si/skd\\_nace\\_2008.asp](http://www.stat.si/skd_nace_2008.asp) (in Slovene).

## General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

## Non-financial accounts and general economic statistics

### Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

### Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

### Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

### Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

### Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

### Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

*Note 1:* From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

### Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

### Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1-ZAP/M)). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

### **Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators**

Nominal effective exchange rate, ECB EER-41 group of currencies (AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CZ, EE, HU, LV, LT, PL, BG, RO, NZ, DZ, AR, BR, HR, IN, ID, IL, MY, MX, MA, PH, RU, ZA, TW, TH, TR, IS, CL, VE) - Euro area 16 against Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs deflated, ECB EER-21 group of currencies and Euro area 16 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO) against Slovenian tolar (until 31.12.2006) from 01.01.2007 against Euro.

The growth of the index value represents decrease of competitiveness.

*Note 1:* Data shown every three months of the year are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia:  
<http://www.bsi.si/publikacije-in-raziskave.asp?MapaId=1039>.

### **Tables 6.15 and 6.16: Consumer Price Index**

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

### **Tables 6.17 and 6.18: Industrial Producer Price Index**

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

## Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
1.5. Selected Assets of Other Monetary Financial Institutions by Sector	2.6 MFI holdings of securities, breakdown
1.6. Selected Obligations of Other Monetary Financial Institutions by Sector or	2.5 Deposits held with MFIs, breakdown
1.4. Balance Sheet of Other Monetary Financial Institutions	
1.8. Investment funds	2.9. Aggregated balance sheet of euro area investment funds
	2.10. Securities held by investment funds broken down by issuer of securities
2.2. Interbank Money Market Rates and Indexation Clause	4.6 Money market interest rates
2.3. European Central Bank Interest Rates	1.2 Key ECB interest rates
2.6.2a. European Central Bank exchange rates - Average Rates	8.2 Bilateral exchange rates
3.2. Balance of payments, capital and financial account	7.1 Balance of payments - summary
	7.2 Current and capital account
	7.3 Financial account
3.3. Current Account by countries	7.2.3 Current and capital account - geographical breakdown
3.4. Capital and Financial Account by countries	7.3.8 Financial account - geographical breakdown
3.5. Trade in goods by countries	7.5 Trade in goods
3.6. International Investment Position of Slovenia; assets, liabilities	7.3 Financial account
3.7. International Investment Position by countries; assets, liabilities	7.3.8 Financial account - geographical breakdown
3.12. International reserves	7.3.7. Reserve assets
4.1. General Government Non-financial and Financial Accounts (ESA 95)	6.1 Revenue, expenditure and deficit/surplus
	6.2 Debt
	6.3 Change in debt
4.2. Non-financial account general government sector (ESA 95)	6.4. Quarterly revenue, expenditure and deficit/surplus
4.4. Financial account general government sector (ESA 95)	6.5. Quarterly debt and change in debt
6.1. Expenditure on gross domestic product	5.2.1. GDP and expenditure components
6.2. Expenditure on gross domestic product (growth rates)	
6.3. Gross domestic product by activity	5.2.2. Value added by economic activity
