### **Important information**

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

7. Domestic Financial Markets

GDP grew by 0.4% in the third quarter in the euro area according to initial estimates, and by 0.7% in the US according to revised figures. The main factors in this growth were domestic consumption, encouraged by fiscal measures, and net exports. The uncertainties surrounding future economic developments in the international environment nevertheless remain high, as the increased consumption was primarily the result of government measures, and industrial production continues to grow relatively slowly. Prices of oil, gold and other commodities rose again in November. Year-on-year inflation stood at 0.6% in the euro area in November (up from -0.1% in October), and remained negative in the US in October. Prices rose in current terms in both the euro area and the US, primarily as a result of external factors. The euro appreciated against the US dollar in November, while the ECB and Federal Reserve left their interest rates unchanged.

GDP was up 1% in current terms in the third quarter, an indication of the gradual recovery of economic activity. The improvement in economic activity in Slovenia in the third quarter was primarily in export-oriented sectors of industry, which in the context of still-low domestic consumption was primarily reflected in a strong positive contribution to GDP growth from trade. Activity in manufacturing was up just under 1% in current terms in September, while quarterly growth exceeded 4%, primarily in response to the recovery of the French and German economies. By contrast the situation in sectors dependent primarily on domestic demand continued to deteriorate, as evidenced by the decline in activity in the retail and construction sectors. The seasonally adjusted economic sentiment indicator in November was up in current terms, and for the first time since August 2007 was also up in year-on-year terms, as a result of the sharp deterioration last November during the rapid decline in economic activity.

The total workforce in employment increased in September as a result of seasonal jobs in education, but employment in the majority of branches in the private sector continued to fall in current terms. The workforce in employment in September was down 3.6% in year-on-year terms. The majority of this decline came from manufacturing, where employment was down around 12% in year-on-year terms. The average nominal gross wage was up 2.4% in year-on-year terms in September; but the year-on-year growth rate has been gradually declining since the beginning of the year.

Year-on-year inflation as measured by the HICP stood at 1.8% in November, up 1.6 percentage points on October. The main factors in the increase were base effects in energy prices, and also current growth in energy prices. Core inflation excluding energy, food, alcohol and tobacco remained unchanged at 0.7%, as a result of a fall in prices of manufactured goods and a simultaneous rise in services prices. Inflation is expected to rise further in December as a result of base effects in energy prices, but is then expected to fall slightly at the beginning of next year.

The cumulative current account went into surplus again in September, a surplus of around EUR 60 million being recorded in the first nine months of the year. In the context of a slight decline in the surplus in services, and a smaller net outflow in factor income, the main factor in the improvement was merchandise trade. The current rate of growth in merchandise exports also increased slightly in September, in the context of growth in output and a decline in inventories in manufacturing. The current account deficit over the 12 months to September was down EUR 0.2 billion on that in August at EUR 0.7 billion, or 1.9% of GDP. The private sector's claims and liabilities in the financial account continued to increase in September, which is related to the improvement in economic activity in the euro area and the stabilisation of the financial markets. The main factor in the increase in the private sector's liabilities to the rest of the world in September was non-residents' investments in Slovenian securities, primarily in bonds of the domestic banking sector. The next external debt remains at its level from the end of last year at EUR 10 billion.

The general government deficit over the first eight months of the year amounted to EUR 1.2 billion, but the increase has been less pronounced since the summer. Revenues over the first eight months of the year were down 6.5% in year-on-year terms, while expenditure over the same period was up 10%. The main adverse factor in revenues collection was a decline in payments of taxes and contributions, which was the result of the bad economic situation, while the high growth in expenditure was to a great extent the product of increased expenditure on wages, pensions and social transfers.

The banking system's total assets declined by EUR 478 million in October, primarily as a result of net debt repayments to banks in the rest of the world on the funding side, and a decline in claims against banks on the investment side. Lending to non-banking sectors stagnated. The net increase in loans to non-financial corporations was negative, while lending to households was higher than this year's monthly average. The banking system's pre-tax profit during the first ten months of the year was down 40% on the same period last year at EUR 237 million, primarily as a result of impairment and provisioning costs.

The market capitalisation of bonds on the Ljubljana Stock Exchange was up 0.7% in October, while the market capitalisation of shares was up 1.3%, the SBI 20 rising by 1.9%. Net inflows into domestic mutual funds amounted to EUR 12 million in October, taking the stock of domestic mutual funds' assets up to EUR 1,810 million.

# 1 | International Environment

Economic activity increased in the third quarter in all the major global economies. Uncertainties surrounding future developments in the international environment nevertheless remain high, primarily as a result of the persistently harsh conditions on the labour market. According to Eurostat flash estimate, GDP in the euro area in the third quarter was up 0.4% in current terms, the first rise since the first quarter of 2008. Inventories and net exports were the main factors in this rise. GDP in the US was up 0.7% in current terms in the third quarter, primarily as a result of government subsidies for purchasing cars and real estate, and a rise in exports. November saw an improvement in the PMI, while the consumer confidence indicator improved slightly in the euro area, but deteriorated in the US. The reason for the deterioration in the US is the persistent uncertainty on the labour market. October's unemployment rate in the euro area was unchanged from September at 9.8%, while in the US it was up 0.4 percentage points at 10.2%. Retail trade continued to decline in the euro area in September, while industrial production remained relatively low, despite an increase of 0.3% in current terms. This year China and India are again the fastest-growing of the ma-

... jor global economies, recording year-on-year growth of 8.9% and 7.9% respectively in the third quarter. Given the slow increase in exports, domestic demand was the major factor in this growth.

**The latest forecasts of Consensus and the European Commission are for higher economic growth in the euro area and the US in 2010 than previously forecast.** Consensus has revised its growth forecasts for both economies upwards relative to October, while the European Commission cut its growth forecast for the euro area and raised its growth forecast for the US relative to its spring forecasts. Consensus is forecasting economic growth of -3.8% in 2009 and 1.2% in 2010 in the euro

Notes: \*Seasonally adjusted data – Eurostat for the euro area, BEA for the US, \*\*Consensus, November 2009.

area, and -2.4% and 2.7% in the US. The European Commission is forecasting economic growth of -4.1% in 2009 and 0.7% in 2010 in the euro area, and -2.5% and 2.2% in the US.

**Year-on-year inflation stood at 0.6% in the euro area in November (up from -0.1% in October), and at -0.2% in the US in October (up from -1.3% in September). Core inflation continues to decline in the euro area, but again rose slightly in the US.** Year-on-year growth in prices excluding energy and unprocessed food in the euro area declined to 1.0% in October. The main factor was lower growth in prices of processed food. Core inflation excluding energy and food in the US rose for the second consecutive month in October, by 0.2 percentage points to 1.7%. Base effects in energy and food prices remain the main factor in the year-on-year movement of industrial producer prices on the domestic market in both the euro area and the US. Industrial producer prices were down 7.7% in year-on-year terms in the euro area in September, and down 1.9% in the US in October.

**Oil and gold prices rose again in November in connection with the continuing decline of the US dollar,**

**while US dollar prices of other commodities also continue to rise.** A barrel of Brent crude averaged USD 76.7 in November, compared with USD 73.3 in October. The higher growth in oil prices is a reflection of increased demand from Asia, China in particular, and the fall in the US dollar. The rise in gold prices is also related to the latter. US dollar prices of non-oil commodities continue to rise in both current and year-on-year terms.

**The euro continued to appreciate against the US dollar in November, while the two central banks again left their interest rates unchanged.** The euro averaged USD 1.4914 in November. The euro depreciated against the Japanese yen, the Swiss franc and the pound sterling. The ECB's key refinancing rate stood at 1.00%, while the Federal Reserve's key rate remained in the interval from zero to 0.25%. Of Slovenia's major trading partners outside the EU, Russia cut its key interest rate in November, the slightly lower inflation in recent months allowing for this.

## 2 | Economic Activity and Labour Market

### Real sector

**The relatively moderate GDP growth in the third quarter was evidence of the continuing gradual recovery of economic activity, in line with expectations, but the year-on-year decline in GDP remained very large, at 8.5%.** According to initial and as-yet incomplete estimates, GDP increased by 1.0% in current terms in the third quarter, a somewhat larger increase than the 0.6% recorded in the second quarter. This growth in the second and third quarters was relatively moderate given the sharp decline at the end of last year and the beginning of this year. The improvement in economic activity is in line

Gross domestic product	2008		2009		
	Q3	Q4	Q1	Q2	Q3
Changes on the previous quarter	0.5	-4.0	-6.2	0.6	1.0
Changes on the same quarter of the previous year	3.4	-0.9	-8.8	-9.0	-8.5

Source: SORS.  
Note: Constant prices, seasonally and working days adjusted data.

with estimates of renewed growth in foreign demand, while government spending was another factor in the positive GDP growth alongside the contribution from trade. Figures for household consumption and investment point to a very gradual recovery in domestic demand, although the year-on-year changes in the two components of domestic consumption remain sharply negative. In line with this, the deterioration in year-on-year growth in value-added was most evident in the sectors of construction and trade, while the decline in manufacturing slowed somewhat. Contrary to expectations, and contrary to the developments in the euro area, there was no end to the decline in inventories in the third quarter: the decline in inventories accounted for more than 40% of the year-on-year decline in GDP in the third quarter.

**Industrial production was up in current terms for the second consecutive month in September, while there was also an increase in quarterly terms, for the first time since the second quarter of 2008.** According to figures adjusted for the season and the number of working days, industrial production was up 0.7% on August, primarily as a result of a rise of 1.2% in the manufacturing sector. Activity in the manufacturing sector was up 4.3% in current terms in the third quarter, the year-on-year decline shrinking from over a quarter to under a fifth. The inventories figures indicate that the growth in output was a response to current demand, and was not aimed at the

rebuilding of inventories. According to SORS figures, inventories contracted again in current terms in the third quarter. Despite somewhat stronger activity compared to the first half of the year, the situation in manufacturing remains harsh, capacity utilisation remaining low, in line with the relatively low level of assured production. Compared with August, the year-on-year decline in the real value of new orders also deepened in September, particularly from markets outside the euro area.

**The increase in activity in manufacturing is primarily a reflection of the better situation in certain large EU economies.** The manufacturing sector, which generates

Notes: Differences from official numbers are due to rounding. Data are unadjusted for seasonal and working days effects.

\* Volume of industrial production. \*\* Real value of construction put in place.

about 60% of its revenues on foreign markets, was the first to begin cutting output and jobs at the outbreak of the economic crisis. As a result of comprehensive counter-cyclical measures, economic activity in some large EU Member States increased slightly in current terms in the second quarter, and the improvement in the situation continued in the third quarter. According to partial Eurostat figures, in the third quarter imports of intermediate goods and consumer goods, including cars, increased in current terms in euro area countries, while investment demand remained weak. As a result activity increased in the Slovenian manufacturing sector, in the manufacture of vehicles, rubber, plastic and fabricated metal products,

information and optical technology, and electrical machinery, an indication of Slovenian manufacturing's considerable responsiveness to changes in foreign demand.

**The decline in construction seen in current terms since April deepened in September.** The value of construction work performed was down a tenth on August according to seasonally adjusted figures, while the figure for the third quarter was also down a tenth on the second quarter. Housebuilding activity continued to decline in current terms in the third quarter, while civil engineering work also slowed sharply. The year-on-year decline in construction deepened to a third in September, while the real value of stock of contracts remained down over a tenth.

**The decline in activity in the construction sector is a reflection of lower investment spending, and also of the substantial inventories from last year.** DARS's projected spending on the construction and renovation of motorways this year is down over a fifth in year-on-year terms, while government construction investments over the first nine months of the year were down a quarter in year-on-year terms. Year-on-year growth in construction investment in local government remained high until August, but investment then recorded a significant year-on-year decline in September according to initial estimates, as a result of the high basis from last year. This was related to increased investment in new build and the adaptation of existing buildings last September. The number of transactions in new residential properties increased in the third quarter, but despite lower prices it remains relatively low compared with previous years, an indication of the surplus supply on the market. This is the result of a significant increase in inventories, as evidenced by the figures for last year,<sup>1</sup> tighter financing conditions, and the continuing deterioration of the situation on the labour market.

**Real revenues in the retail sector were down in current terms also in the third quarter, to a great extent as a result of the decline in revenues in non-food trade, but the provisional figures for October were slightly better.** The current average decline in real reve-

<sup>1</sup> Inventories in the construction sector in 2008 were up approximately EUR 0.5 billion on the previous year at approximately EUR 1.6 billion (Source: APLRRS, IMAD, Bank of Slovenia estimates).

nues in the retail sector was 0.3% in the third quarter, according to figures adjusted for the season and the number of working days, significantly smaller than in the first two quarters, but the year-on-year decline deepened to around 14%. Revenues in trade in food, beverages and tobacco in the third quarter were down 1% in current terms, while revenues in non-food trade excluding motor fuels declined by 3.0% over the same period. Sales in the retail sector increased by just over 1% in current terms in October, primarily as a result of a 3% increase in trade in food, while non-food sales stagnated. Income elasticity of demand is one of the factors behind different revenue dynamics of various classes of products. Food products have low income elasticity of demand, and consequently respond less intensely to a decline in consumer purchasing power. By contrast non-food products, including consumer durables, have higher elasticity on average, and respond more strongly to changes in purchasing power.

**November's seasonally adjusted economic sentiment indicator was up 1 percentage point in current terms, and also in year-on-year terms.** The year-on-year improvement was the result of a low basis after the sharp fall last November brought by the rapid deterioration in the economic environment. Confidence in the manufacturing sector continued its gradual improvement in November, in connection with a rise in the indicators of export expectations and export orders. Managers assessed the situation this November as better than a year earlier. Among the activities primarily dependent on domestic

demand, confidence deteriorated in current terms in the retail and service sectors, while there was an improvement in the construction sector, albeit from a very low level. The latter was also the result of an improvement in the indicators of the volume of work, total orders and price expectations. Consumer confidence also improved slightly, assessment of the economic situation for the next 12 months improving on October.

### Labour market

**Figures for the number of registered unemployed and new jobs point to a continuation of the adverse situation in the labour market in October.** The total number of registered unemployed reached 94,591 persons in October, and has increased by more than a half in year-

on-year terms. The current increase in the number of unemployed of 6,225 was large compared with the usual October rise in previous years, which was between two and three thousand during the last three years. The rise in the number of unemployed was caused primarily by the increase in the number of first-time jobseekers (school-leavers and students leaving full-time education), but other factors such as bankruptcies of some large companies and increase in permanently redundant workers also played a role. Employers registered 15,653 vacancies in October. This was the highest figure this year, partly as a result of the usually high autumn season, although the number of vacancies was nevertheless down a fifth on the year-on-year basis. The number of new jobs has remained at two-thirds of the last year's level in recent months.

**In September the number of employed workers declined in current terms in the majority of sectors, but overall it showed a slight increase as a result of the usual positive season in the education sector.** The

number of employed in the private sector was down 0.2% from August. This negative current change was seen in the majority of branches in the private sector. The contraction in the number of employed workers has been gradually slowing since May in the manufacturing sector, but has accelerated in recent months in the construction

Notes: \* Sections of NACE Rev. 2 classification. \*\* CPI deflator.

sector, in spite of high season in construction jobs. The number of employed in the public sector in September increased 0.9% on August, the education sector recording a rise of 2.7%, where the seasonal effect was at the level comparable to that of previous years.

**The number of employed workers declined for 31,556 persons or 3.6% in year-on-year terms in September.**

**Manufacturing accounted for the majority of the decline.** The number of employed in the private sector was down 35,199 or 5.0%. The year-on-year decline in manufacturing was 26,318 or 11.8%. Other sectors contributing to the large decline in the number of employed in the private sector were construction, transportation and storage, and trade, maintenance and repair of motor vehicles. The negative current dynamic this year means that the year-on-year dynamic in all of the aforementioned sectors is deteriorating from month to month. Employment in the public sector increased by 3,643 in year-on-year terms in September, a rise of 2.1%. The main factors contributing to the increase were year-on-year rises in employment in the education and health sectors. According to the Labour Force Survey, unemployment rate was up to 6,2% in the third quarter, 0,6 percentage points higher than in the previous quarter.

**The average nominal gross wage stood at EUR 1,434 in September, up 2.4% in year-on-year terms. The year-on-year rate of growth has been gradually declining since the beginning of the year.** Year-on-year growth in the average gross wage in the public sector

stood at 2.3% in September. Despite a slowdown in recent months, average growth over the first nine months of the year remained at 8.9%. The high year-on-year growth this year is to a great extent result of upward wage adjustments in the public sector, where the first and second phase of the wage discrepancies elimination programme started to be implemented in August last year and in January of this year, respectively. Year-on-year growth in wages in the private sector stood at 1.7% in September, up from 0.6% in August. Most branches of the private sector recorded a year-on-year rise in wages; the largest was recorded by the transportation and storage sector, 4.5%; the manufacturing and construction sectors also recorded year-on-year rises. Private sector wages increased by 1.8% in September in current terms, but this was largely due to a greater number of hours worked. Furthermore, average wages increased also due to layoffs of the low-paid, thus pushing up the average wage of existing workers.

**Selected competitiveness indicators**

**The harmonised index of the nominal effective exchange rate appreciated in October, primarily as a result of a fall in major world currencies against the euro.** The nominal effective exchange rate appreciated by 0.2% in current terms in October. The main factors were falls of 2.7% in the pound sterling, 1.7% in the US dollar and 0.6% in the Japanese yen. The sole major currency to rise against the euro was the Swiss franc, which was up 0.1%. A year-on-year appreciation in the

harmonised index of the nominal effective exchange rate of the domestic currency has been recorded every month this year, the largest figure being recorded in the last month, when the rate rose from 1.8% in September to 2.6% in October.

**The nominal appreciation in the domestic currency was the largest factor in the appreciation of the price competitiveness indicator of the Slovenian economy as measured by consumer prices.** The price competitiveness indicator appreciated by 0.3% in current terms in October, the year-on-year appreciation rising from 2.1% in September to 2.9% in October. The appreciation in the nominal effective exchange rate accounted for 2.6 percentage points of this appreciation, and the faster growth in domestic prices relative to the basket of foreign prices for 0.3 percentage points. The contribution made by domestic prices growing faster than the basket of foreign prices thus remained unchanged for the second consecutive month. This is an indication that the main factors behind the appreciation of the price competitiveness indicator were external, namely the euro's rises against major currencies on global markets.

**In the majority of Slovenia's most important trading partners October's appreciation in the price competitiveness indicator as measured by consumer prices was larger than in Slovenia. This indicates that Slove-**

**nia's competitive position is improving relative to the other countries.** The monthly appreciation in Austria was the same as in Slovenia at 0.3%, while it was higher than in Slovenia in Italy (0.4%), Germany (0.5%) and France (0.5%). The indices of the real effective exchange rate as measured by the HICP or the CPI in Slovenia's most important trading partners also appreciated in year-on-year terms, by 3.3% on average, just under 0.5 percentage points more than the appreciation in Slovenia's real effective exchange rate. The year-on-year appreciation in Slovenia's index of the real effective exchange rate in October was up 0.8 percentage points on September, but the appreciations in other trading partners were more significant. The year-on-year appreciation was up 1.1 percentage points in Austria, 1.6 percentage points in Italy, 1.9 percentage points in France and 2.2 percentage points in Germany. The stronger year-on-year appreciation in this competitiveness indicator in recent months in the aforementioned countries was primarily the result of base effects from last year, when energy and commodity prices fell sharply.

**The harmonised competitiveness indicator based on GDP deflators,<sup>2</sup> which reflects the general movement of prices in the economy, recorded a year-on-year appreciation in Slovenia, in contrast to the main trading partners.** Despite a current depreciation of 1.3%, the year-on-year appreciation in Slovenia actually increased

<sup>2</sup> The European Commission also publishes price and cost competitiveness indicators, which are available at [http://ec.europa.eu/economy\\_finance/db\\_indicators/db\\_indicators8642\\_en.htm](http://ec.europa.eu/economy_finance/db_indicators/db_indicators8642_en.htm). These differ from those of the ECB because of methodological differences resulting from the countries involved, the different sources for the deflators and the data conversion

**Real harmonised competitiveness indicator – ULC total economy (21 countries and 16 euro area countries)**

Source: ECB.

from 1.6% in the first quarter to 2.1% in the second quarter as a result of base effects from last year. In contrast to Slovenia, this competitiveness indicator in the main trading partners recorded a current appreciation overall in the second quarter of 0.6%, while the year-on-year movements in the majority of partner countries recorded a depreciation of approximately 1.0% for the second consecutive quarter.

**The harmonised competitiveness indicator based on unit labour costs for the total economy<sup>2</sup> recorded a current depreciation of 0.8% in Slovenia.** There was also depreciation in Germany, of 0.3%, while the other main trading partners recorded an overall appreciation of 1.2%. In Slovenia the indicator recorded a year-on-year appreciation of 7%, while there was also a year-on-year appreciation in Austria (of 3.6%). The index was unchanged in Germany, and depreciated by approximately 2% in France and Italy. A major factor in the current depreciation in the Slovenian competitiveness indicator as measured by unit labour costs for the total economy was the decline in working hours in manufacturing. The high year-on-year appreciation was primarily the result of wage adjustments in the public sector.

## 3 | Price Developments

**Year-on-year inflation as measured by the HICP rose significantly in November to 1.8%, primarily as a result of movements in energy prices.** Inflation fluctuated around zero between August and October, before rising by 1.6 percentage points in November. Energy prices made a positive contribution to inflation for the first time this year in November, of 1.0 percentage points. The significant year-on-year rise in energy prices was to a great extent the result of base effects from the movement of prices at the end of last year, when the average price of a barrel of Brent crude was approximately 30% lower than in the same period this year. In addition, a major factor in the higher year-on-year growth was the current growth in energy prices, which stood at 3.5%. Growth in commodity prices in the international environment was also one of the possible factors in the movement in prices of unprocessed food and non-energy industrial goods, growth in which is increasing. Year-on-year growth in services prices in November was down 0.2 percentage points on October, despite a large current rise in prices of municipal services, which rose by 11.9%. Inflation is expected to rise further in December as a result of base effects in energy prices, but is then expected to decline slightly at the beginning of next year.

**Inflation**

Source: Eurostat.

After declining since the middle of 2008, core inflation has settled in recent months, which could point to the gradual stabilisation of the economy. Year-on-year growth in the harmonised index of prices excluding energy, food, alcohol and tobacco was unchanged in November at 0.7%. The reason was the smaller fall in prices of manufactured goods than in the previous month and the simultaneous smaller rise in services prices. Core inflation as measured by the HICP excluding energy and unprocessed food also remained unchanged, at 1.1%.

In the inflation breakdown there were significant fluctuations in products with a prominent seasonal component in October. Among the components of the HICP

the fastest current growth in October was recorded by prices of clothes (10.7%) and footwear (5.9%), as a result of the replacement of collections. In addition, there was a significant rise of 8.9% in prices of solid fuels, in line with the movement of commodity prices on the global market. Prices of package holidays recorded the largest decline for the second consecutive month, falling by 8.8% in October. Prices of cars also continued to decline, by 0.6% in October.

Year-on-year growth in industrial producer prices on the domestic market was still negative in October, partly as a result of the weak demand for manufactured goods. Prices of manufactured goods were down

Sources: SORS, Eurostat, Bank of Slovenia calculations.  
Note: Figures may not sum up to official figures due to rounding.

1.4% in year-on-year terms in October, compared with a fall of 1.6% in September. Growth in services prices on global markets is continuing to raise corporate input costs in current terms. Given the limited possibility of transferring the costs to selling prices in the context of the still-harsh economic situation and weak demand, this is above all bringing pressure to cut jobs, wages and margins. Euro area prices of manufactured goods were down 7.7% in year-on-year terms in September, a fall of 0.2 percentage points more than that recorded in August. The larger fall in prices was primarily the result of base effects in energy prices. These remain down in year-on-year terms, and the year-on-year fall in September was just under 1 percentage point larger than in August.

## 4 | Balance of Payments

### Current account

The favourable results in September contributed to a current account surplus over the first nine months of the year. September's surplus of EUR 78 million took the current account position over the first nine months of the year to a cumulative surplus of EUR 59 million. In the context of a slightly smaller surplus in services and a de-

cline of more than half in the net outflow in factor income, the main factor in September's result was merchandise trade. With exports of merchandise and services declining more slowly than imports, trade again made a positive contribution to year-on-year GDP growth in the third quarter. The deficit over the preceding 12 months declined to EUR 0.7 billion or 1.9% of GDP, compared with EUR 2.3 billion or 6.2% of GDP last September.

**The current rate of growth in merchandise trade remained positive in September, import growth slowing and export growth accelerating slightly. Exports nevertheless recorded lower growth than imports for the third consecutive month.** The current rate of growth in merchandise exports increased slightly in September, in the context of growth in output in manufacturing and a decline in inventories. All the product categories recorded growth, consumer goods recording the highest growth of 2%. Despite the positive current growth in merchandise trade in September, the year-on-year contraction in merchandise trade was slightly larger than in August. Merchandise exports amounted to EUR 1,502 million in September, down 20.6% in year-on-year terms, while imports were down 28.8% at EUR 1,480 million. The result of these movements in merchandise trade was a surplus of EUR 22 million,<sup>3</sup> compared with a deficit of EUR 190 million in the same month last year.

According to SORS figures, this year's merchandise

<sup>3</sup> According to the SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix to the bulletin), the merchandise trade deficit in September stood at EUR 12 million.

trade deficit is diminishing rapidly, and over the first nine months of the year was just under a quarter of last year's figure. Merchandise exports were down 22.3% over the first nine months of this year, while merchandise imports were down 29.5%. In the third quarter the year-on-year decline in merchandise imports and exports growth diminished most rapidly in trade with EU Member States, which is related to the current increase in economic activity in these countries. The cumulative deficit over the first nine months of the year reached EUR 553 million according to SORS methodology. Coverage of merchandise imports by exports was up a tenth in year-on-year terms at 95.6%.

The merchandise trade deficit over the first nine months of the year was down EUR 1.8 billion in year-on-year terms. The narrowing of the deficit was primarily the result of trade with EU Member States, where last year's deficit of EUR 3.2 billion narrowed to EUR 1.4 billion this year. Slovenia traditionally maintains a surplus in trade with non-EU countries, although this was down EUR 24 million in year-on-year terms over the first nine months of the year at EUR 827 million. More than half of the year-on-year decline in the merchandise trade deficit comes from a decline in net imports of oil and refined petroleum products, and a decline in net imports of road vehicles.<sup>4</sup>

Source: Bank of Slovenia.

<sup>4</sup> Detailed figures are only available as far as August. The merchandise trade deficit over the first eight months of the year declined by EUR 1,568 million in year-on-year terms. Imports of oil and refined petroleum products were down EUR 619 million in year-on-year terms, while imports of road vehicles were down EUR 386 million.

**According to surveys of business trends in manufacturing, managers' optimism rose over the first nine months of the year.** In September the percentage of managers feeling that exports are expected to rise over the next three months exceeded the percentage of those feeling that they would fall for the first time since last October, by 14 percentage points in seasonally adjusted terms. The figure rose to 16 percentage points in November, well above the average for the year. The increase in optimism is also reflected in the export orders indicator.

**The year-on-year decline in exports of services deepened further in September compared with this year's average, while the figure for imports remained unchanged. These movements saw the surplus in services continue its decline.** Exports of services amounted to EUR 3.3 billion over the first nine months of the year, down 15.1% in year-on-year terms, while imports were down 11.1% at EUR 2.3 billion. With exports falling 4 percentage points more quickly than imports, the surplus of trade in services declined by EUR 299 million in year-on-year terms to EUR 996 million.

**The main factors in the year-on-year decline in the surplus in services were the year-on-year declines in the surplus in transport and tourism services.** The global financial turmoil and economic crisis had its heaviest impact on transport services, which are directly tied to the volume of merchandise trade, and tourism. Transport and tourism accounted for EUR 250 million of the year-

on-year decline of EUR 299 million in the surplus of trade in services. Year-on-year growth in expenditure on financial, computer and information services and on intellectual property services exceeded 20%, the net expenditure amounting to EUR 71 million. Only the net movements in other business services acted to increase the surplus.

**The deficit in net factor income has been declining rapidly this year, particularly in recent months. Over the first nine months of the year it was down just over EUR 290 million in year-on-year terms at EUR 514 million.** There was a net inflow of EUR 40 million in labour income, and a net outflow of EUR 554 million in capital income. Expenditure on capital was down a quarter, while receipts were down a fifth. Light lending and low interest rates meant that this year the largest decline among all capital income items was recorded by net outward interest payments to the rest of the world. Outward interest payments were down over a half (and bank payments by 55.5%), while inward payments were down two-fifths. The decline of EUR 337 million in the deficit in net outward interest payments was the largest factor in the year-on-year decline of EUR 231 million in the deficit in capital income. With net income from FDI in balance, another factor in the decline in the deficit in capital income was the year-on-year decline of EUR 107 million in the surplus of investments in securities.

**The deficit in current transfers over the first nine months of the year was up EUR 20 million in year-on-year terms at EUR 157 million.** The majority of the deficit came from the deficit of EUR 145 million in official transfers. There was also a net outflow of transfers of taxes on goods, social contributions and other government transfers in the amount of more than EUR 300 million. There was a net inflow of transfers of subsidies on goods and output in the total amount of EUR 150 million, and transfers of taxes on income and assets in the amount of EUR 10 million.

### Capital and financial account

**The trend of growth in the private sector's claims and liabilities vis-à-vis the rest of the world since the second quarter resumed in September, when both claims and liabilities rose sharply, after having declined in**

**Claims on the rest of the world - September 2009**

Source: Bank of Slovenia.

**Liabilities towards the rest of the world - September 2009**

Source: Bank of Slovenia.

**August.** The 6-month growth trend was primarily a reflection of the stabilisation of economic activity in the euro area and of the capital and financial markets. The current rate of growth in claims and liabilities remains highly volatile, although the three-month moving averages point to a gradual rise in both items. Despite September's surplus

of EUR 78 million in current transfers, international reserves declined by EUR 12 million as a result of the net outflow in capital and financial transactions. This result was the product of a net outflow from the private sector (EUR 1,036 million), a contraction of the Bank of Slovenia's balance sheet (EUR 403 million), and a net inflow

Signs: inflows or increases in liabilities (+), outflows or increases in claims (-).

into the government sector (EUR 1,408 million).

The private sector's negative net position of EUR 1,036 million in September, or 3.7% of GDP, was primarily the result of an increase in claims. As in previous months, the main factor in September's increase of EUR 1,335 million in claims, were claims against the rest of the world arising from currency and deposits held by the Slovenian private sector. The largest share amongst currency and deposits claims had short-term deposits by banks (EUR 546 million) and by corporates (EUR 385 million) in the rest of the world. The stabilisation of the situation on foreign financial markets meant that investments in foreign securities increased for the third consecutive month, although there remained a cumulative net inflow over the first nine months of the year (a decline of EUR 155 million in claims from investments in foreign securities).

The main factor in the increase of EUR 299 million in the private sector's liabilities to the rest of the world in September were non-residents' investments in Slovenian securities, primarily in newly issued bank bonds. July's issue of NLB d.d. bonds with a nominal value of EUR 1.5 billion was followed in September by the issue of a 3-year bond by Abanka Vipava d.d. with a nominal value of EUR 500 million. This allowed the two banks to largely replace their foreign borrowing source (short term loans). Slovenian banks continued to make debt repayments in September (of EUR 78 million), thereby taking the reduction in liabilities from loans over the first nine months of the year to EUR 2,207 million. The long-term financing of Slovenian corporates in the rest of the world declined over the first nine months of the year, but remained positive. Corporates made a cumulative net reduction in short-term financing via loans from the rest of the world over the first nine months of the year, although the net financial flow in September was positive for the first time since February 2009. Non-residents' deposits at domestic commercial banks declined by a further EUR 140 million in September, taking the outflow over the first nine months of the year to EUR 509 million. Liabilities from non-residents' deposits at banks were positive over the same period last year, at EUR 269 million.

The government recorded new borrowing of EUR 1.5 billion in September because of the larger deficit and the pre-financing of certain liabilities maturing in 2010. For this purpose government issued a 15-year bond (RS 66), with a coupon paying a fixed rate of 4.625% of the nominal value once a year. The new bond issue brought an increase in the gross external debt to EUR 40.1 billion. September also saw an increase in gross external claims (to EUR 30.2 billion), although less than the increase in liabilities, which meant that the net external debt increased by EUR 0.1 billion to EUR 9.9 billion.

## 5 | Public Finance

The general government deficit deepened again in August, but the year-on-year increases have been less pronounced since the summer months. The deficit in the consolidated general government position over the first eight months of the year amounted to EUR 1.16 billion, a significant deterioration compared with the same period last year (a surplus of EUR 443 million). The increase in the deficit has slowed since June. Growth in revenues declined significantly in the first half of the year in particular, but the adverse trends have been seen since the final quarter of last year. Expenditure over the first eight months of the year was up 10% in year-on-year

terms, while revenues were down 6.5%. The consolidated general government deficit derives mostly from the state budget, and deepened further in September according to the available figures. The state budget deficit over the first nine months of the year widened to EUR 1.18 billion (having stood at EUR 1.03 billion over the first eight months of the year), while the Health Insurance Institute recorded a deficit of EUR 87 million. Local government recorded a deficit of EUR 51 million over the first eight months of the year. The general government deficit over the 12 months to August stood at EUR 1.7 billion or 4.8% of GDP. The state budget for 2010 and 2011 was passed in November, and forecasts respective deficits of 5% and 4.1% of GDP.

**Consolidated general government revenues in the first eight months of the year were down 6.5% in year-on-year terms. Payments of taxes and contributions, which account for 90% of revenues, were down 7.5% in year-on-year terms over the first ten months of the year.** The decline in revenues from collected taxes is a reflection of the decline in economic growth that impacted the corporate sector and the labour market, and,

via these, consumer purchasing power. The decline is most evident in corporate income tax, payments of which over the first ten months of the year were approximately half of those in same period last year. Prepayments of this tax have amounted to just over EUR 60 million in recent months. Payments of personal income tax over the first ten months of the year were down 4% in year-on-year terms, while taxes of goods and services were also down 4%. Most notable in the latter was the fall in VAT revenues, which were down 11% in year-on-year terms over the first ten months of the year, a similar decline to that recorded in the previous months. Developments on the labour market are being reflected in the continuing year-on-year decline in growth in social contributions (although the rate remains positive), as the number of employees continues to fall, and year-on-year growth in wages is also lower than last year. The breakdown of the contributions is also changing more than in previous years: employers and employees are accounting for a lesser share in contributions collection, while self-employed and other contributors are accounting for a larger share.

Source: Ministry of finance, except: \*\* PPA, Report on classified general government revenues and coverage (B-2); Bank of Slovenia calculations.

**General government expenditure over the first eight months of the year was up a tenth, primarily as a result of the introduction of a new wage system and the financing of other legally adopted obligations.** Expenditure on wages over this period was up EUR 300 million or 13% in year-on-year terms. Growth in public sector wages was over 11% in the first half of the year, primarily as a result of the introduction of the first half of the measures to eliminate wage discrepancies, but has slowed in the remainder of the year as a result of base effects and budget saving measures. It will average around 7% over the year. Investment expenditure and transfers over the

first eight months of the year were up around EUR 100 million or 15%. The state budget is cutting investment expenditure this year, but is increasing budgetary transfers to local government in particular, which has increased its investment spending this year. Growth in pension expenditure over the first nine months of the year stood at 9%. In line with legislation there will be no November pension adjustment, which will help to slow growth in pensions for the rest of the year. In September the number of pensioners was up 1.8% in year-on-year terms, while the number of old-age pensioners was up 3.4%, partly in connection with the situation on the labour

**Box: Excessive deficit and growth in general government debt in the majority of EU Member States**

The financial and economic crisis has had a profound impact on public finances. The general government deficit in the euro area had already risen to 2.0% of GDP in 2008 (compared with 0.6% of GDP in 2007), and the latest European Commission forecasts point to a significant increase in the deficit this year, to 6.4% of GDP. The trends are similar throughout the EU as a whole, where this year's deficit is forecast at 6.9% of GDP (compared with 2.3% of GDP last year). The European Commission cites the action of automatic stabilisers, discretionary measures to support the economy and a much sharper-than-normal response in revenues to the decline in economic activity as the reasons for this deterioration. The deficit in the euro area is expected to widen in 2010 and 2011, to 6.9% of GDP and 6.5% of GDP respectively, primarily as a result of cyclical effects, while that in the EU as a whole is expected to be even higher. The largest deficits between 2009 and 2011, of more than 10% of GDP, are expected in Ireland and Greece, and outside the euro area in Latvia and the UK. At the same time government debt and implicit liabilities, primarily in the form of guarantees related to the financial turmoil, are rising significantly. The general government debt is expected to rise to 78.2% of GDP and then to 88.2% of GDP in 2011 in the euro area (compared with 69.3% in 2008), and to 73% of GDP and 83.7% of GDP in the EU as a whole. In addition to the financing of the primary deficits, under the conditions of low economic growth there is also a significant "snowball effect" contribution to the rise in debt. The latter is seen in the impact of the gap between interest rates and economic growth on the size of the debt as a proportion of GDP.

The European Commission is forecasting a general government deficit of 6.3% of GDP in Slovenia this year, rising to around 7% of GDP in 2010 and 2011. The general government debt is expected to increase to around 35% of GDP this year, and to 48% of GDP in the next two years.

The majority of euro area countries, including Slovenia, will thus transgress the reference value of 3% of GDP for the general government deficit this year, and will be subject to the excessive deficit procedure. Some countries were already in the excessive deficit procedure in the first half of the year, and in October the European Commission adopted an excessive deficit report about another nine countries, among them Slovenia. The procedure is thus being undergone by 20 EU Member States. The European Commission drew up recommendations for these nine countries in November, and a deadline for rectifying the excessive deficit. Slovenia is expected to rectify the excessive deficit as soon as possible, but by 2013 at the latest. The European Commission recommends Slovenia to take fiscal consolidation measures in 2010, as planned in the state budget act, to reduce the deficit by an average of 0.75 GDP percentage points between 2010 and 2013, and to set out measures to rectify the excessive deficit. The European Commission again warned of the impact of an ageing population on the sustainability of public

finances. In Slovenia this risk is significantly above the EU average. The European Commission's proposal is to be approved by EU finance ministers at the December summit.

market. This is continuing to lead to higher payments to the unemployed and on social transfers, which is also being seen in an increase in the proportion of budget expenditure that they account for to around 4% (compared with 2.5% last year). Interest payments on loans and issued securities over the first eight months of the year amounted to EUR 301 million, compared with a figure of EUR 335 million over the whole of last year. They will be even higher next year, as interest begins to be paid on the bonds issued this year. As a result of the slowdown in year-on-year growth in public sector wages and pensions, year-on-year growth in general government expenditure is expected to decline in the final quarter.

**This year's large borrowing is earmarked for financing the higher deficit, repaying maturing liabilities and pre-financing certain liabilities maturing in 2010.**

General government borrowing over the first eight months of the year amounted to EUR 3.4 billion, and in September the government issued its third bond this year, with a nominal value of EUR 1.5 billion. The government repaid debt in the amount of EUR 823 million during the first eight months of the year, and thus net borrowing over the period amounted to EUR 2.56 billion. EUR 1.16 billion was earmarked for financing the deficit in expenditure relative to revenues, EUR 1.23 billion for increasing balances in bank accounts, and EUR 174 million for financing the deficit in the account of financial claims and investments, primarily as a result of May's capital injection of EUR 160 million into SID banka. Spreads on 10-year government bonds over the German equivalent have mostly declined in recent months, and are approaching the pre-crisis level. This includes the 10-year Slovenian government bond, the spread on which stood at 52 basis points above equivalent German bond in the first half of November (compared with 49 points last July).

# 6 | Banking System\*

The banking system's total assets declined by EUR 478 million in October. The main factors in the decline in total assets were the repayments of EUR 0.42 billion made to banks in the rest of the world, and the decline of EUR 120 million in deposits by non-banking sectors. On the asset side the decline was most evident in a decline of EUR 0.39 billion in claims against banks. The stock of loans to non-banking sectors again stagnated in October. October saw this year's fourth monthly decline in total assets, after March, June and August.

The banking system's stock of loans to non-financial corporations declined in October. Lending to households was relatively solid. Year-on-year growth in lending to non-banking sectors declined to 2% in October, loans recording a net increase in the minimal amount of EUR 1.6 million. Loans to non-banking sectors increased by EUR 297 million over the first ten months of the year.

The stock of loans to non-financial corporations recorded a net decline of EUR 110 million in October, and a net decline of EUR 144 million over the first ten months of the year. Year-on-year growth in loans to non-financial corporations was barely positive at 0.4%. Corporates made net repayments to the large domestic banks under majority domestic ownership and the banks under majority foreign

ownership, but had net borrowings from the small domestic banks.

October's net increase of EUR 56 million in household loans was again greater than this year's monthly average. The increase in household loans resulted from long-term loans, while the stock of short-term loans declined in October. The banks under majority foreign ownership accounted for 60% of the net increase in household loans.

Banks again made net debt repayments to banks in the rest of the world in October. A decline in government deposits at banks led to a decline in deposits by non-banking sectors. The banks under majority foreign ownership accounted for EUR 248 million of Octo-

\* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

ber's net decline of EUR 416 million in liabilities to banks in the rest of the world, and the large domestic banks for EUR 172 million. The stock of liabilities to foreign banks at the end of October was down just under a quarter on a year earlier. Banks made cumulative net debt repay-

ments in the rest of the world of EUR 3.3 billion over the first ten months of this year. The proportion of total balance sheet liabilities accounted for by liabilities to foreign banks declined by 10 percentage points in the last year to 25%.

The main factor in October's decline of EUR 120 million in deposits by non-banking sectors was the government sector, which reduced its bank deposits by EUR 81 million. Bank funding by means of household deposits continues to stand out: household deposits declined in October, and the cumulative increase in this funding was less than half that in the same period of last year and the previous year.

**Impairment and provisioning costs are shaping pre-tax profit, which was down 40% on last year's figure.** Banks created EUR 319 million more impairments and EUR 215 million more provisions than in the same period last year. However, October's net impairment and provisioning costs were slightly less than in the previous

months. Growth in net interest remains negative, while the interest margin is down 0.2 percentage points on last year's figure at close to 2%. Net non-interest income was up 17.5%, as a result of gains of EUR 47 million on financial assets and liabilities held for trading, banks having realised a loss on this trading in the same period last year. Operating costs have been down slightly on last year's figure since the summer. The banking system's ROE was down more than 7 percentage points on the same period last year at 6.9%.

## 7 | Domestic Financial Markets

The yields on Slovenian and German long-term loans government securities declined slightly in October, to 3.86% and 3.21% respectively, the spread thus narrowing to 65 basis points. The positive atmosphere on the markets was helped by the release of solid economic results in early October, but market participants showed less appetite for risk towards the end of the month, which led to falls in stock market indices: the DJ EuroStoxx for Western Europe fell by 4.6%, and the S&P in the US fell by 2.0%. By 17 November the former had fallen a further 2.8%, while the latter had risen by 0.6%.

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 0.7% in October. Two corpo-

rate bonds and one bank bond were delisted, while Petrol bonds were listed for stock market trading (with a nominal value of EUR 50 million). The volume of trading in bonds was modest at EUR 5 million.

A rise in share prices brought an increase of 1.3% in the market capitalisation of shares on the Ljubljana Stock Exchange in October. The SBI 20 rose by 1.9%, and had gained an additional 1.1% by 17 November. The volume of trading in shares was slightly higher than in the previous months of this year. The P/E ratio reached 25. A successful capital injection of EUR 14 million was made into Zavarovalnica Maribor with the aim of ensuring capital adequacy in its general insurance segment.

The proportion of the market capitalisation of shares

on the Ljubljana Stock Exchange accounted for by non-residents is increasing slightly, and rose to 7.4% in October. Non-residents made net purchases of EUR 12.8 million in Slovenian shares, and EUR 2.5 million in bonds from Slovenian issuers. The largest net purchases of Slovenian shares were made by residents of Austria, the US and Croatia, while residents of Denmark made the largest net sales. Government bonds attracted the greatest demand among debt securities. The majority of net purchases were made by residents of Germany, followed by residents of Luxembourg and Austria. Residents of the UK made net sales of RS65 and RS66 bonds.

In the context of net inflows of EUR 12 million, the assets of domestic mutual funds rose by just 0.2% in October to EUR 1,810 million, as the average unit price declined by 0.8%. The largest net inflows were into equity funds, at EUR 10.9 million, while balanced funds and bond funds each recorded net inflows of EUR 1 million. Money-market funds and other funds recorded small net outflows. The largest net inflows (EUR 14.6 million) into domestic mutual funds again came from the insurance sector, followed by households (EUR 2.6 million), while the corporate sector recorded net outflows of EUR 3.8 million from mutual funds. The relative proportion of liquid assets<sup>5</sup> remained almost unchanged at 12.3%. Over the last two months domestic mutual funds have reduced their investments in euro area markets,

and slightly increased their investments in the Balkans and the BRIC<sup>6</sup> countries. The Macedonian stock market index rose by 12.8% in October, and had gained an additional 11.1% by 17 November. The Croatian and Serbian indices fell by 2.4% in October, and had fallen by a further 3.1% and 1.4% respectively by 17 November.

<sup>5</sup> Liquid assets include cash, deposits, money-market instruments and government bonds.

<sup>6</sup> Brazil, Russia, India and China.

# IV. NOTES ON METHODOLOGY

## General notes

### Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

### Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

## Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

## 1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

### Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

### Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

#### Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

#### Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

### Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

### Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

### Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procuration, internal affairs.

### Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

### Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

### Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

### Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procuration, internal affairs is also included here.

## Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

### Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

### Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

### Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%
2	1.3.	liabilities/ 4		Liabilities/ Deposits/ Domestic sectors/ Other MFIs/ Foreign currency	100%	100%	-
3	1.3.	liabilities/ 8		Liabilities/ Deposits/ Domestic sectors/ General government/ Foreign currency	74%	72%	82%
4	1.3.	liabilities/ 15		Liabilities/ Securities issued/ Foreign currency	92%	89%	100%

### Table 1.4.: Balance Sheet of other Monetary Financial Institutions

The table summarizes data on assets and liabilities of other Monetary Financial Institutions, i.e. banks, savings banks, savings and loans undertakings and money market funds, at the end of the month.

Detailed survey of assets and liabilities of the monetary financial institutions is in the tables 1.5. and 1.6.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
5	1.4.	liabilities/ 7		Obligations to domestic sectors/ Obligations to non-MFIs/ Deposits in foreign currency	88%	88%	90%

### Table 1.5.: Selected claims of other Monetary Financial Institutions by sectors

The table shows claims from loans and debt securities of the Other Monetary Financial Institutions (from the table 1.4) broken down by domestic/foreign sectors, type of loans and domestic/foreign currency.

**Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments**

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

**2. FINANCIAL MARKETS AND PAYMENT SYSTEMS**
**Interest rates (tables 2.1–2.4)**
**Table 2.1: Bank of Slovenia Interest Rates**

*Lombard loan:* Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

*Interest rate on banks' obligatory reserves:* 1 percent per year since October 1991.

*The overnight-deposit interest rate* is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

*Long-term deposit* at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

*Tolar bills* are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

*Foreign currency bills* are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

*A penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

*Interest rates* for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

**Table 2.2: Interbank Money Market Rates and Indexation Clause**
**Interbank market**
**SIONIA/SITIBOR**

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

**EONIA/EURIBOR**

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

## Indexation clauses

### TOM

The toler indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

### Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

## Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

**Main refinancing operations** are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

## Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

## 2.4: Monetary Financial Institutions Interest Rates

### Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

**Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.**

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

**Outstanding amounts** are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

**New business** is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

**The annual percentage rate of charge (APRC)** is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

**Weighting method:** The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

\* Households = sole proprietorships + individuals + non-profit institutions serving households

\*\*APRC data includes households without sole proprietorships and without non-profit institutions serving households

*Note 1:* For this instrument category, new business and outstanding amounts coincide.

*Note 2:* For this instrument category, households and non-financial corporations are merged and shown under the household sector.

## **Ljubljana Stock Exchange (Tables 2.6 to 2.8)**

### **General**

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

### **Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities**

Shares – investment fund shares are not included.

IF – investment fund shares.

Turnover is measured with a single counting.

### **Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio**

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed

securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

### **Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index**

- SBI – Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO – Bond Index
- SBI, BIO – value of SBI and BIO at the end of period
- dT – change of index value by points
- d% – change of index value in percentage
- Min, Max – minimum and maximum value of index in a period

## **Exchange rates (Tables 2.9.1–2.9.2)**

### **Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006**

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.  
The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

### **Table 2.9.2: European Central Bank exchange rates**

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).  
The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

## **Payment systems (Tables 2.10 to 2.16)**

### **General**

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

**Table 2.10: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions**

*Note 1:* On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

*Note 2:* SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

*Note 3:* Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

*Note 4:* As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

*Note 5:* Gross value is the total value of all payment orders executed in the payment system.

*Note 6:* Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

**Table 2.11 Payment Cards**

*Note 1: Credit card:* A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

*Note 2: Debit card:* A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

*Note 3: Cards issued abroad:* Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

*Note 4: Volume and value of transactions abroad:* Use of cards issued in Slovenia for payments abroad.

**Number of payment cards in circulation:** Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

**Number and value of payments refer** to the use of payment cards in each quarter/year.

**Domestic card:** Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

**Licence card:** Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

**Bank card:** Payment card issued by banks.

**Retailer card:** Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

**Personal card:** Payment card issued to a natural person (family cards included).

**Business card:** Payment card issued to a legal entity.

**Table 2.12 Other Payment Instruments and Innovative Payment Schemes**

*Note 1:* Data refer to the end of each quarter.

*Note 2:* Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

### Table 2.13 Electronic Banking

*Note 1:* Only debt transactions are included.

### Table 2.14 Credit Transfers

A **paper-based order** is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

**Special payment order** is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A **non-paper-based credit transfer** is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A **standing order** is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

**Direct credit** is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

### Table 2.15 Debit Transfers and Simply book-entry

**Direct debit** is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A **special money order** is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

### Table 2.16: Network of Commercial Banks

*Note 1:* Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

*Note 2:* Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

## 3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

### Balance of Payments

#### General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

#### Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

## Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

## Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
  - report on account balances at domestic banks – PPV (until 31 December 2004),
  - report on account balances abroad – C (until 31 December 2006),
  - report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
  - report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.
- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Accounting data of the Bank of Slovenia**

- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

- **Estimates and other sources**
  - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
  - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
  - estimate of Italian pensions (UMAR) until the end of 1998,
  - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
  - estimate of labour income (SURS),
  - data on pensions paid to non-residents (ZPIZ),
  - survey on the write-downs of debt from trade in goods and services abroad,
  - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
  - estimate of cash transactions on tourism and labour income (from 2007 onwards).

## **Current account**

### **Goods**

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

**Adjustments of CIF/FOB** – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

**Coverage adjustments** - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

### **Services**

#### **Transport**

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

#### **Travel - methodology until 2004**

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

#### **Travel - methodology since 2005 onwards**

**Main data sources** to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,

- Other,
- Same- day travelers,
- Transit travelers.

**Main data source** to estimate the **import** of travel is SURS's survey TU\_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU\_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

#### **Construction services**

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

#### **Insurance services**

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

#### **Government services**

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad.

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

## **Income**

**Labour income - receipts.** Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

**Labour income - expenditures.** ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

**Capital income -** Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

#### **Current transfers**

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data).

## **Capital and financial account**

### **Capital account**

#### **Capital transfers**

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad.

### **Financial account**

#### **Direct investment**

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

#### **Portfolio investment**

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

#### **Financial derivatives**

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

### **Other investments**

#### **Short-term trade credits**

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]}
- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]}

Since 2002, short-term commercial credits are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

#### **Loans and long-term trade credits**

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

#### **Currency and deposits**

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

#### International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

### Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

### Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

\* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)

- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)
- March 2007 (EUR 1000.0 million)
- February 2008 (EUR 1000.0 million)
- February 2009 (EUR 1000.0 million)
- March 2009 (EUR 1500.0 million)
- September 2009 (EUR 1500.0 million)

**Note 4:** For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading “Direct investments”, while other commercial credits are included in “Other investments/trade credits”.

**Note 5:** Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

**Note 6:** Use of IMF credit (assumed upon membership in January 1993).

**Note 7:** Reserve assets of the Bank of Slovenia. Following Slovenia’s entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: “The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area” (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

**Note 8:** The data on reinvested earnings for 2009 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2006 to 2008 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2010, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2009 shall take into consideration the new three year average (2007 to 2009).

**Note 9:** From 2001 onwards, there is a time series break in the categories “Direct investment” and “Loans”. From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the “Direct investment” category; before that they were included under the heading “Loans”. Since 2002, the category “Direct investments” also includes short-term trade credits between affiliated enterprises.

**Note 10:** Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

**Note 11:** In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

### **Tables 3.3 and 3.4: Current account and capital and financial account by countries**

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

### **Table 3.5.: Trade in goods by countries**

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2009 are provisional.

## **International Investment Position of Slovenia**

### **General notes**

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

### **Revision policy**

See note “Revision policy” in the section “Balance of Payments”.

### Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

### Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment-other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

### Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1-3.4] /Capital and financial account/Portofolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

### Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank.

### Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Sources for long-term trade credits and loans are credit registration forms (until 2006 forms KR, from 2007 onwards forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

### Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source

for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

### **Table 3.6: International Investment Position of Slovenia**

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo',
- data on foreign ownership of real estate in Slovenia.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: [http://www.bsi.si/iskalniki/ecb\\_en.asp?Mapald=714](http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714).

### **Table 3.7: International Investment Position by countries**

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

## **Gross External Debt**

### **General notes**

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

### **Revision policy**

See note "Revision policy" in the section "Balance of Payments".

### **Data sources**

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial instruments are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

### **Tables 3.8 and 3.9: Net External Debt**

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

### **Tables 3.10 and 3.11: Gross External Debt**

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

## **International reserves**

### **Table 3.12.: International reserves**

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

## 4. PUBLIC FINANCE

### General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

### General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

### Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

**EDP debt** is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

### Tables 4.2 and 4.3: Non-financial Account of the General Government sector

**Fiscal burden** is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

**Intermediate consumption** consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

### Tables 4.4 and 4.5: Financial Account of the General Government sector

**Change in EDP debt** is a difference between the current and preceding EDP debt figure.

**Deficit-debt adjustment (DDA)** is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

**Other liabilities** consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

**Other flows** are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

**Borrowing requirement** consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

### Table 4.6: Revenues and Expenditures of the General Government

*Note 1:* The data of the current and previous year are revised monthly until the data on the previous year become final.

*Note 2:* Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

*Note 3:* Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

#### **Tables 4.7: Lending, Repayments and Financing of the General Government**

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

*Note 1:* The data of the current and previous year are revised monthly until the data on the previous year become final.

#### **Table 4.8: Central budget debt**

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

## **5. FINANCIAL ACCOUNTS**

### **Financial accounts (Tables 5.1 to 5.6)**

**Tables 5.1, 5.2, 5.4 and 5.5** show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

**Tables 5.3 and 5.6** present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

### **Financial instruments in financial accounts**

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

## 6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

### General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities

- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
  
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site:  
[http://www.stat.si/skd\\_nace\\_2008.asp](http://www.stat.si/skd_nace_2008.asp) (in Slovene).

### General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

## Non-financial accounts and general economic statistics (Tables 6.1 to 6.8)

### Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

### Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

### Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.  
From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

### Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2008 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

### Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

### Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

*Note 1:* From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

**Table 6.12: Unemployment by Labour Force Survey (ILO)**

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

**Table 6.13: Average Wages and Salaries**

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1-ZAP/M)). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

**Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators**

Nominal effective exchange rate, ECB EER-41 group of currencies (AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CZ, EE, HU, LV, LT, PL, BG, RO, NZ, DZ, AR, BR, HR, IN, ID, IL, MY, MX, MA, PH, RU, ZA, TW, TH, TR, IS, CL, VE) - Euro area 16 against Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs deflated, ECB EER-21 group of currencies and Euro area 16 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO) against Slovenian tolar (until 31.12.2006) from 01.01.2007 against Euro.

The growth of the index value represents decrease of competitiveness.

*Note 1:* Data shown every three months of the year are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia:  
<http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

**Tables 6.15 and 6.16: Consumer Price Index**

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

**Tables 6.17 and 6.18: Industrial Producer Price Index**

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

## Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

<b>Tables in Monthly Bulletin of the Bank of Slovenia</b>	<b>Tables in Monthly Bulletin of the ECB</b>
