

MONTHLYREPORTONBANKPERFORMANCE

NOVEMBER 2021

EVROSISTEM COMMENTARY IN BRIEF

Household lending continued in September, as in previous months, driven primarily by housing loans. Corporate lending remains weak, although lending to non-financial corporations in September of this year was slightly larger than in the same month last year. The NPE ratio in September remained unchanged from the previous month, but the decline in the share of the credit portfolio classed in the stage with increased credit risk has slowed in recent months. Pre-tax profit was relatively high, but was driven primarily by the net release of impairments and provisions. It remains the case, as has been highlighted for some time now, that had the ratio of net impairments and provisions to gross income been at its long-term average, the pre-tax profit of the Slovenian banking system would be just a third of that actually recorded. The future sustainability of profit generated in this way remains questionable. The banking system is maintaining a good capital position and liquidity position. The total capital ratio is slightly below the euro area average, while the CET1 ratio is above the euro area average. The liquidity indicators also remain high, despite a slight decline in September.

The banking system's balance sheet total declined by EUR 316.4 million in September to end the month at EUR 47.5 billion, up 9.1% in year-on-year terms. The main decline on the funding side was in liabilities to banks and the Eurosystem, while the increase in deposits by the non-banking sector was smaller than in previous months. On the investment side, the main declines were in the most liquid forms of asset and holdings of securities, while the net increase in loans to the non-banking sector was slightly larger than this year's monthly average.

Loans to the non-banking sector increased by EUR 81.8 million, a tenth more than the average monthly increase over the first eight months of the year. Year-on-year growth in loans stood at 2.8% in September, and remained comparable to the previous month. The largest contribution to the increase came from household loans (EUR 66.9 million), followed by loans to non-residents (EUR 32.5 million), loans to non-financial corporations (EUR 29.8 million) and loans to other financial institutions (EUR 11.5 million), while loans to the government sector declined (by EUR 57.9 million).

Since re-entering positive territory at the end of the first quarter of this year, year-on-year growth in household loans has been gradually increasing, and had reached 3.2% by September. The increase in growth in household loans has primarily been driven by housing loans, year-on-year growth in which reached 8.1% in September. The stock of housing loans increased by EUR 63.7 million in September, while this year's average monthly increase in housing loans (EUR 48.7 million) is more than double last year's (EUR 22.3 million). The stock of consumer loans continued to contract in September (by EUR 11.1 million), and was down 6.2% in year-on-year growth in consumer loans is thus mainly attributable to repayments of loans from the past, when consumer lending was abnormally high. Other household loans increased by EUR 14.2 million. Year-on-year growth in loans to non-financial corporations is low but positive in the amount of 0.6%, and September's net increase amounted to EUR 29.8 million.

NPEs continued to increase in September in the same portfolio segments as previous months, while the overall NPE ratio remained unchanged from August at 1.3%. The NPE ratio in accommodation and food service activities reached 12.6%, while the NPE ratio in the consumer loans portfolio remained at 3.7%, even as the stock of NPEs increased. Thanks to a decline in other sectors in the non-financial corporations portfolio and in the housing loans portfolio, the NPE ratios in the non-financial corporations portfolio and the household portfolio are continuing to decline.

This year's decline in the share of the credit portfolio classed in the stage with increased credit risk (Stage 2) has slowed in recent months. After increasing temporarily in August, the share classed as Stage 2 returned to 5.4% in September. A similar fluctuation was evident in the non-financial corporations portfolio, where the share classed as Stage 2 stood at 10.4% in September. The shares remain high in accommodation and food service activities (particularly in accommodation activities), and in arts, enterta-inment and recreation, while the share in wholesale and retail trade is also rising. A pronounced trend of decline in the share classed as Stage 2 was evident in manufacturing, the figure reaching 11.6% in September. In parallel with the reclassification of exposures from Stage 2 to Stage 1, this year has also seen a decline in coverage of Stage 2 by impairments and provisions, from 5.1% at the end of 2020 to 4.6% in September. Coverage of Stage 3 remained at a similar level to its December figure, at 55.1%.

On the funding side of the balance sheet, deposits by the non-banking sector increased by EUR 50 million in September, but their year-on-year growth slowed slightly to 9.3%. The increase in deposits was driven primarily by deposits by non-financial corporations (EUR 60.5 million), while household deposits declined for the second consecutive month (by EUR 34 million). Year-on-year growth in deposits by non-financial corporations (10.5%) and households (9.3%) continues to strongly exceed pre-epidemic rates (for example, the rates stood at 2.0% and 7.3% respectively last February).

Pre-tax profit over the first nine months of the year amounted to EUR 372 million, while pre-tax ROE stood at 10.2%. Pre-tax profit remained down on the same period last year (by 10.5%), which is attributable to the large increase in profit caused by the one-off effect of the merger of two banks in September of last year. With gross income and net income falling, the high profit was driven by the net release of impairments and provisions at the majority of banks.

Net interest income is continuing to decline, although its contraction on the same period last year is slowing: its total over the first nine months of the year was down 3.5% in year-on-year terms, driven by the positive growth in loans in recent months. The net interest margin is declining, and stood at 1.43% in September for the preceding 12 months. Net non-interest income is down a third on the same period last year, primarily on account of the aforementioned merger of two banks last year. Excluding this effect, net non-interest income would be slightly up on last year. Growth in net fees and commission remains relatively high (14.7%), and comparable to previous months. Operating costs remain comparable to the same period last year. Gross income and net income remain down on last year, on account of the aforementioned effect; excluding it, they would be comparable to the same period last year. The net release of impairments and provisions amounted to EUR 48 million at system level, compared with a net increase of EUR 109 million in the same period last year. Had the ratio of net impairments and provisions to the balance sheet total been at its long-term average, pre-tax ROE would have been no more than just over a third of the realised figure. Amid the decline in net interest and the stagnation in income, it should be noted that the relatively high profit is not sustainable, and will be difficult to maintain at this level.

The total capital ratio on a consolidated basis stood at 18.5% at the end of the second quarter of this year, below the euro area average, while the common equity Tier 1 capital ratio was higher than the euro area average at 17.0%. The liquidity coverage ratio (LCR) stood at 327% in September, down on the previous month as the monthly increase in net liquidity outflows slightly outpaced the increase in the liquidity buffer. Despite the decline, the LCR remains well above its regulatory requirement (of 100%). Despite a slight decline, the ratio of primarily liquidity to the balance sheet total remained high, at 23.1%.

Notes: * Loans to non-banking sector not held for trading comprise "Loans and other financial assets at amortised cost" (from A.VI of the "Methodology for compiling the recapitulation of the statement of financial position", the category of "Loans (and other financial assets) designated for measurement at fair value through other comprehensive income" (from A.V) and the category of "Loans (and other financial assets) designated for measurement at fair value through other comprehensive income" (from A.V) and the category of "Loans (and other financial assets) measured at fair value through other comprehensive income" (from A.V) and the category of "Loans (and other financial assets) measured at fair value through other comprehensive income".

** Financial assets / securities on the asset side comprise total financial assets from A.II, including loans held for trading, while equilies and debt securities other than loans are captured from other categories of financial asset (A.III, A.V and A.V).

***Total financial liabilities measured at amortized cost in 2008 also include banks' liabilities to the central bank.

**** Includes subordinated debt until 31 December 2017. Under the IFRS 9 methodology, the item of "subordinated debt" is abolished, and these liabilities are included under liabilities to banks.

Source: Bank of Slovenia.

¹The bank performance data in this publication is based on the banks' own book figures, which differ in methodological terms from the published statistics. The data on loans also differs because the data in this publication includes loans to non-residents, applies the net principle (amounts are minus value adjustments), and does not include non-marketable securities.

Note: Balance sheet exposures of banks, savings banks and branches are shown. They also include loans granted to foreigners. Loans under moratoria are loans in which banks have granted borrowers a deferral of payment of obligations under a credit agreement, regardless of whether the moratorium has already expired or not.

EVROSISTEM
