Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolars, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolars by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

In the second quarter, economic activity in the euro area was down 0.2% over previous quarter, the rates again varying substantially from country to country. Given the uncertainties surrounding the outcome of the debt crisis, the persistently high spreads on the periphery countries' debt and the poor economic outlook, the ECB cut its key interest rate to 0.75% in July. The Consensus forecasts for this year's GDP growth in the euro area continue to indicate a weak recession, while the forecasts have been revised significantly downwards for 2013, when very low growth is expected. Compared to July, the euro rose slightly against the dollar in August, but was down 13.5% in year-on-year terms on average during the month. This, alongside the developments on global markets, is further contributing to rises in euro prices of oil and food.

As the international situation deteriorated, economic activity in Slovenia in the second quarter was down 1.0% in quarterly terms. The year-on-year decline in GDP stood at 3.2%. In addition to the accelerated decline in domestic consumption, in the second quarter real exports fell slightly for the first time since 2009. A more significant decline in exports was prevented by solid economic growth in Germany and Austria, and the redirection of manufacturing to markets outside the EU. The high positive contribution made by net trade was again the result of weak domestic consumption. In addition to a decline in labour costs and limited access to financing, this is increasingly related to accelerated fiscal consolidation. All segments of private sector activities recorded a slowdown, the construction sector having remained in crisis while the situation in manufacturing and in wholesale and retail trade also deteriorated. In light of the continuing decline in the confidence indicators, the economic situation is expected to remain unfavourable for the rest of the year.

Nominal wages fell sharply in June, while the fall in employment also deepened towards the end of the second quarter. As a result of austerity measures, there was a reduction of wages in the public sector. In addition, there was also a fall in nominal wages in the private sector. As employment in the private sector fell, partly as a result of the deteriorating situation in the manufacturing sector, the fall in the real wage bill deepened. The cost adjustment of the economy to the lower level of activity in the crisis thereby strengthened. Despite the deteriorating situation, the registered unemployment rate fell slightly in June to reach 11.5%. After two months of low figures, the number of notified vacancies rose again in July.

Year-on-year inflation as measured by the HICP was up 0.5 percentage points in August and stood at 3.1%. The rise in recent months has been mainly due to a rise in some duties, rises in seasonal food and international oil prices, and depreciation of the euro. The overall contribution of food and energy prices to inflation has reached 2.6 percentage points. Year-on-year growth in the HICP excluding energy, food, alcohol and tobacco was up 0.3 percentage points in August and stood at 0.8%. Core inflation indicators have continued to reflect the decline in consumer purchasing power, which is curbing the pass-through of external inflationary factors along production and sales chains to the final consumer.

The current account surplus is increasing as a result of weak domestic consumption and favourable growth in exports of services. The disbursement of European funds is gradually improving in efficiency. The deficit in factor income is continuing to widen as a result of an increase in expenses from FDI and interest on past borrowing. A current account surplus of EUR 345 million was recorded in the second quarter, taking the cumulative surplus over the 12 months to June to 0.6% of GDP.

In year-on-year terms, the general government deficit has narrowed in recent months. The trend of declining expenditure on investment and on most transfers has continued, while expenditure on wages and on goods and services has also declined. Revenues are also down slightly in year-on-year terms as a result of the adverse economic situation. Deficit financing and debt repayment has primarily been pursued this year via short-term borrowing from domestic banks and via reductions in deposits. With downgradings of Slovenia's long-term sovereign debt, the yield-to-maturity on Slovenian bonds rose to average 6.9% in August. The financial effects of May's Fiscal Balance Act will become more evident from the middle of the year.

The banking system's total assets declined by EUR 310 million in June to EUR 48.8 billion. The main factor on the funding side was a decline in the stock of subordinated liabilities and debt securities. On the investment side there were declines in the stock of debt securities, short-term claims against foreign banks and loans to the non-banking sector. The crunch in lending to the non-banking sector and the non-financial corporations sector accelerated, while growth in loans to households was slightly negative for the second consecutive month. The banks recorded a pre-tax profit of EUR 17 million in the first half of the year. Although gross income was up on the same period last year, its positive impact on the operating result was almost entirely negated by a renewed increase in impairment and provisioning costs. They recorded an above-average increase in June, and the total in the first half of this year was up 43% on the same period last year.

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 0.4% in June, and by 3.3% in July. The market capitalisation of shares fell by 3.1% in June 2012, and by 1.7% in July. The SBI TOP, Slovenia's stock market index, fell by 2.6% in June and by 1.1% in July, taking the respective year-on-year changes to -30.0% and -29.2%. The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents averaged 12.8% in June and July. The domestic mutual funds' assets under management increased to EUR 1,847 million in July, primarily as a result of an overall rise of 1.6% in the average unit price in June and July, and net inflows of EUR 0.8 million in July.

1

International Environment

Economic activity in the euro area in the second quarter was down on the first quarter, with the forecasts for this year continuing to point to a mild recession. The economic situation and expectations in the US remain more favourable. GDP in the euro area in the second quarter was down 0.2% in quarterly terms, the rates of growth again varying greatly from country to country. Growth in Germany in the second quarter stood at 0.3%, while the French economy stagnated, and Italy and Spain remained in recession. Forecasts for this year's economic growth in the euro area have been stable in recent months. Consensus is forecasting a 0.5% contraction in economic activity this year, and growth of just 0.3% in 2013. The uncertainties related to the sustainability of fiscal consolidation remain among the major risks to growth. In the second quarter, GDP in the US was up 0.4% in quarterly terms. Gross investment, net trade and final household consumption all increased, the last by 0.4%. Government spending is continuing to fall. Consensus's August forecast for this year's economic growth in the US was 2.2%, and growth is expected to remain at a similar level in 2013.

The latest industrial production and retail figures confirm the differences in the forecasts and the current economic situation between the euro area and the US. Industrial production in the euro area remains weak. In the second quarter it was down 0.5% on the first quarter, and down 2.4% in year-on-year terms. All categories of production were down in year-on-year terms. The largest decline of 4% was recorded by the production of intermediate goods. Industrial production in the US was up in monthly terms for the fourth consecutive month, taking the year-on-year rate of growth to 4.4% in July. The production of business equipment increased by

12.3%, which indicates an expansion in production capacity. Differences also remained between the euro area and the US in activity in the retail trade sector. In the second quarter, retail sector's volume turnover in the euro area was down 0.6% in quarterly terms, and down 1.4% in year-on-year terms. In July, volume retail sales in the US were up 2.7% in year-on-year terms.

In August, unemployment in the euro area remained high, and the economic sentiment declined further. The economic sentiment indicator for the euro area issued by the European Commission declined for the fifth consecutive month in August. Confidence was down in all segments of private sector activities and among consumers for the second consecutive month. The aggregate PMI also points to a deterioration in the economic situation. According to the preliminary figures, in August it was below 50, the marker between an expansion and a decline in economic activity, for the seventh consecutive month. In July, the unemployment rate in the euro area was unchanged at 11.3%. The average unemployment rate continues to conceal large differences between individual countries, having risen sharply in the periphery countries during the crisis. The consumer confidence indicator in the US has been stable in recent months, albeit somewhat lower than at the beginning of the year. The unemployment rate in the US rose by 0.1 percentage points in July to 8.3%.

Inflation in the euro area rose to 2.6% in August, and fell to 1.4% in the US in July. Inflation in the euro area had remained unchanged at 2.4% in July. The biggest rise of 6.1% was recorded by energy prices. Core inflation as measured by the HICP excluding energy and unprocessed food prices stood at 1.9% in July, up 0.1 percentage points on June. Inflation in the US in August was down 0.2 percentage points on July as a result of a fall in energy prices. Energy prices were down 5.0% in year-on-year terms in July. Core inflation as measured by CPI excluding energy and food prices also fell slightly, reaching 2.1% in July.

The price of a barrel of Brent crude rose sharply in July and August, while there was also a notable rise in food prices. The price of a barrel of Brent crude averaged USD 113.3 in August, up USD 10.2 on July. The main factors affecting oil prices in the last two months have been the tensions in the Middle East, forecasts of high demand by the International Energy Agency (IEA) and the decline in American stocks. Drought brought rises in food prices in July and August. In August they were up 16% on average compared with the beginning of the year.

The ECB cut its key interest rate, while the Fed has not announced any new stimulus measures in the last two months. The euro ended its current fall against the dollar in August. The euro averaged USD 1.24 in August, up just under 1% on July. The year-on-

year depreciation in the euro nevertheless remained significant, at 13.5% in August. The relatively low value of the euro is primarily the result of the uncertainty surrounding the resolution of the debt crisis in the euro area periphery countries. The ECB cut its key interest rate by 0.25 percentage points in July to 0.75%. There was no change in the Federal Reserve's monetary policy stance in July and August, the key interest rate remaining at the interval between 0.00% and 0.25%. Certain emerging countries, including China and Brazil, have also cut their key interest rates recently because of the weaker economic situation.

was reflected in a decline in value-added in the manufacturing sector, where conditions have been deteriorating since the final quarter of last year. GDP was down 1% on a quarterly basis, and 3.2% in year-on-year terms.

In the second quarter, the year-on-year contraction in domestic consumption accelerated, which further increased net trade contribution to the change in GDP, despite weak exports. Domestic consumption was down 6.8% in year-on-year terms, just under 5 percentage points more than in the first quarter. After recording relatively high growth in 2011, final household consumption was down 3.0% in year-on-year terms in the second quarter. Prior indication of these developments came from the decline in volume turnover in retail trade, the accelerating fall in employment and the real wage bill, coupled by the decline in consumer confidence. More intensive fiscal consolidation brought a deeper decline in final government consumption, which was down 2.0% in year-on-year terms. The contraction in investment continued, again largely as a result of the negative changes in inventories as a corporate response to the ongoing decline in orders. Changes in inventories contributed 2.9 percentage points to the decline in GDP. The positive contribution made by net trade to the change in GDP increased to 3.4 percentage points, but was entirely the result of a 5.4% contraction in imports. Total exports also declined slightly, although growth in exports of services remained favourable at 2.5%.

2 Economic Activity, Labour Market and Competitiveness

Economic activity

As the economic situation in the international environment deteriorated and the crisis in domestic consumption deepened, the fall in economic activity in Slovenia in the second quarter was among the largest in the EU. Households sharply reduced final consumption and so did the government with accelerated fiscal consolidation. Activity declined in all segments of private sector activities. The decline in foreign demand

The year-on-year decline in value-added in all segments of the private sector is an indication of the spread of the crisis to the entire economy. The sole exception was public services, where value-added has continued to gradually increase as a result of the rise in employment, which is not fiscally sustainable at the current wage levels. As investment contracts, the crisis in the construction sector has continued, partly as a result of further collapses of major construction companies. Value-added in the sector was down 10.9% in year-on-year terms. As a result of the mounting debt crisis and the decline in confidence in the euro area, value-added also declined in the manufacturing sector, by 2.2% in year-on-year terms.

The revision of the national accounts brought significant changes in the quarterly GDP growth rates for past quarters. The contraction in economic activity in the final quarter of last year was 0.5 percentage points larger than the previously reported figure, while GDP stagnated in the first quarter of this year (compared with the original figure of growth of 0.2%). These developments are more consistent with the majority of the previously released monthly indicators of activity.

There were also significant changes in the annual national accounts figures, particularly for 2011. The latest national accounts reveal a 0.6% increase in GDP last year, 0.8 percentage points more than previously estimated. The main source of the revision was final

household consumption, which was up 1% last year, the previous estimate having indicated a decline. There was a slightly smaller revision in the contraction in gross fixed capital formation. There were also changes to the figures on the output side. Growth in value-added in the manufacturing sector was just under 1 percentage point higher than previously estimated at 3.4%. The contraction in construction was also revised to be 9 percentage points smaller, but it nevertheless exceeded 10%. The situation in financial intermediation was worse than originally estimated. The decline in value-added was 2.8%, compared with the previous estimate of 0.5%.

Quarterly growth in industrial production strengthened slightly in the second quarter, but only as a result of increased output in the energy sector. It stood at 1%, up 0.2 percentage points on the previous quarter. The main factors were a pass-through effect caused by the high monthly growth in March, and a 2.9% rise in output in June. Quarterly growth in output in the energy sector increased from 3.5% to just below 5%, while output in the manufacturing sector slowed from just over 1% to 0.4%.

According to figures adjusted for the number of working days, industrial production in the second quarter was up just under 1% in year-on-year terms, again as a result of high growth in the energy sector. In light of these figures, output in the manufacturing sector was down 0.5%. Given the smaller number of working

days, total industrial production was down 0.8% according to the original figures, as a result of a decline of more than 2% in the manufacturing sector. The deterioration in the situation in the manufacturing sector was the result of a decline in confidence and demand in the European economy, in addition to the contraction in domestic consumption.

Given the weak economic activity in the EU, the manufacturing sector is gradually redirecting towards markets outside the euro area and the EU. Merchandise exports to non-EU countries in the second quarter of this year were up again, by more than 6% in year-

on-year terms. Of the major markets outside the EU, Russia and Serbia recorded particularly high growth. Exports to the EU27 were down 3.5%, primarily as a result of a significant decline in exports to France and Italy. A similar picture is presented by volume turnover in industry, which stagnated in year-on-year terms in the euro area in the second quarter, but increased by more than 5% in markets outside the euro area. These trends are already being reflected in the breakdown of merchandise trade: markets outside the EU accounted for 33% of total merchandise exports in the second quarter, up 2.5 percentage points in year-on-year terms.

Notes: Differences from official numbers are due to rounding. Data are unadjusted for seasonal and working days effects.

* Volume of industrial production. ** Real value of construction put in place. *** Old methodology.

Of the major segments of manufacturing, only the manufacture of machinery and equipment n.e.c., the manufacture of computer, electronic and optical products and the manufacture of fabricated metals recorded an increase in production in the first half of the year.¹ According to original figures, the highest growth was recorded by the manufacture of machinery and equipment n.e.c., which in the first half of the year was up more than 7% in year-on-year terms. According to the figures for volume turnover in industry, the increase was the result of demand for capital goods on markets outside the EU. Of the major segments of manufacturing,

the largest decline in production in the first half of the year was recorded by the manufacture of motor vehicles, at 8.5%. This was the result of a contraction in the car market in the EU, where the number of new car registrations in the first half of the year was down just under 7% in year-on-year terms. Among the most important markets, the decline was most pronounced in France and Italy.

Activity in the construction sector in the second quarter of this year was down sharply in quarterly terms, despite a monthly increase in June. After recording positive growth in the first quarter, the amount of construction put in place declined by more than 18% in the second quarter, the largest quarterly decline since the outbreak of the crisis in late 2008. All segments of construction recorded a decline in activity, but the most pronounced decline was in the construction of residential buildings, which was down just under 40%. Total activity in the construction sector in June was up around 7% on May, as the rates of growth continued to fluctuate sharply.

The year-on-year contraction in construction activity has been gradually slowing over the last year. According to original figures, it stood at just under 16% in the second quarter, having stood at more than 30% in the second quarter of last year. While the slowdown in the year-on-year contraction since the third quarter of last year has partly been the result of positive monthly rates

¹ Includes 11 sectors with the largest share of total value-added in manufacturing according to the figures for 2011. Their combined share of value-added in manufacturing was more than 70% in that year. For reason of data confidentiality the SORS does not publish time series for the manufacture of basic pharmaceutical products and pharmaceutical preparations.

Nominal turnover in private sector services excluding trade

Source: SORS, Bank of Slovenia calculations.

of growth, the additional slowdown in the contraction in the second quarter of this year was merely the result of the very low base.

The outlook in the construction sector remains poor. The total number of building permits and corresponding floor area of buildings in the second quarter were up in quarterly terms, but the year-on-year decline remained around 30%. The year-on-year decline in the value of new contracts has gradually slowed this year, but still stood at 9% in the second quarter. Demand in the construction sector remains weak, in light of the survey indicators of total and expected orders.

In the second quarter, total nominal turnover in private sector services other than trade was down in year-on-year terms, as a result of lower foreign and, in particular, domestic demand. For the first time since 2009, nominal turnover in services primarily dependent on foreign demand was down in year-on-year terms. Turnover in transportation and storage services was down just under 1%. Since 2010, their year-on-year growth has slowed in line with the decline in growth in manufacturing. Turnover in other services primarily dependent on domestic demand has been declining for some time. The largest year-on-year declines in turnover were recorded by professional, scientific and technical activities and by administrative and support service activities. The most notable was advertising and market research services, where turnover was down more than a fifth in the second

Volume turnover in trade

Source: SORS, Bank of Slovenia calculations.

quarter.

Volume turnover in the retail sector and in trade in motor vehicles in the second quarter was down on the first quarter. Volume turnover in both segments of trade declined in July as well. Volume turnover in the retail sector was down just under 4% in quarterly terms, and down more than 2% in year-on-year terms. The year-on-year decline was mitigated by year-on-year growth in volume turnover in trade in motor fuels, which stood at just under 9%. This was just under half the rate recorded in the previous three quarters, volume turnover in this segment in the second quarter having declined by almost 8% in quarterly terms. Volume turnover in the retail sector in July was down slightly less than 1% on June, and down almost 2% in year-on-year terms. These developments are in line with the decline in household consumption during this period, which is an indication of the decline in consumer purchasing power as a result of the adverse situation on the labour market. In the second quarter, the adverse economic situation also brought a quarterly decline in volume turnover in the trade and repair of motor vehicles, by more than 1%. The year-on-year decline deepened to more than 5%. Their volume turnover also declined slightly in July.

Confidence in the economy is deteriorating. The service sector and the retail sector recorded the largest overall declines in confidence in July and August. The largest decline in July was in the retail confidence indicator, as a

result of a decline in the sales indicator, which nevertheless fluctuates sharply. August's largest decline was in the service confidence indicator, primarily as a result of lower demand. There was also a decline in manufacturing confidence, as a result of lower expected output, lower total orders and lower export orders. The consumer confi-

dence indicator has stabilised at a much lower level than at the beginning of the year, while in August consumers were less pessimistic regarding the level of unemployment in the next 12 months. Confidence in the construction sector remains the lowest among all sectors, despite an improvement.

Labour market

The number of registered unemployed at the beginning of the summer was still smaller than at the same time last year. There were 106,896 people registered as unemployed at the end of July, down 0.6% in year-on-year terms. July saw a monthly increase in the number of unemployed for the first time since January, the number of people newly registering as unemployed exceeding the deregistrations by almost 1,300. Alongside seasonal factors, the main factors were an increase in the number of people newly registering as unemployed as a result of bankruptcies, and also new registrations as a result of the expiry of temporary employment contracts. The latter have increased as a result of the increase in temporary

Notes: * Sections of NACE Rev. 2 classification. ** CPI deflator.

employment. About 7,500 people deregistered from unemployment in July, slightly more than last year, and approximately the same as in July 2010. Of these, 4,000 entered employment, almost as many as in July 2011. Deregistrations as a result of retirement and stricter control of breaches of regulations also remain high.

The fall in the registered unemployment rate slowed sharply in June. The registered unemployment rate was down 0.1 percentage points in June at 11.5%. The harmonised unemployment rate is stagnating, and stood at 8.2% in June. The increased inflow into unemployment in July and the deterioration in the economic situation suggest a rise in the unemployment rate later in the year.

An increase in the number of notified vacancies in July brought an end to the sharp fall seen in the second quarter. There were almost 15,400 notified vacancies in July, approximately the same as in July in the last two years. This brought an end to the sharp falls in both current and year-on-year terms in the number of vacancies seen between April and June, when the average number was almost 4,000 less. There were more than 4,000 new hires in July, 0.5% more than in last July. The sharp fall in the number of vacancies between April and June was only partly accompanied by a fall in the number of new hires: new hires during those three months were down only around 1,000.

The year-on-year decline in the workforce in employment accelerated in May and June. The workforce in employment was down 1.5% in year-on-year terms in May, and down 1.6% in June, the largest year-on-year decrease this year. This decrease was the result of layoffs in the private sector, where the workforce in employment was down 2.4% in year-on-year terms in June. The largest fall (11.6%) was recorded by the construction sector, followed by agriculture (5.5%) and real estate activities (3.1%). The workforce in employment also began to decrease in year-on-year terms in the manufacturing sector, by 0.5% in May and by 0.4% in June. Employment in the public sector continued to increase, but at a slightly slower rate than in the first half of the year. The workforce in employment in the public sector was up 1.1% in year-on-year terms in June, as a result of rises of 2.5% in em-

Total wage bill and average monthly gross wage per employee

*The wage bill is calculated as the product of the average gross wage for employees of legal persons who received pay and the total number of employees of legal persons.

Source: SORS, Bank of Slovenia calculations.

ployment in the health and social work sector and 1.7% in employment in the education sector. Employment in public administration was down 0.9% in year-on-year terms.

Nominal wages in the public sector fell in June as a result of the measures set out in the Fiscal Balance Act (ZUJF). Public sector wages were down 3.1% in current terms, and down 3.4% in year-on-year terms. Wage discrepancies were eliminated in parallel with an 8% cut in wages. Wages were down by 4.4% in current terms in the education sector, by 3.0% in public administration and defence, by 2.5% in arts, entertainment and recreation, and by just 1.7% in health and social work.

The average nominal gross wage in the private sector also fell in June. Year-on-year growth having slowed in the previous months, nominal wages were down 0.5% overall. The main factors were the year-on-year falls in nominal gross wages of 6.6% in construction and 2.7% in professional, scientific and technical activities. The average nominal gross wage per employee stood at EUR 1,501 at the end of June, down 1.3% in year-on-year terms.

The nominal wage bill was down in June. June's wage bill was down 2.4% in year-on-year terms in the private sector, and down just 2.3% in the public sector despite significant wage cuts. The main reason for the large decline in the private sector wage bill was job losses, while the cuts in public sector wages were partly offset by the increase in employment.

Selected competitiveness indicators

The depreciation in Slovenia's nominal harmonised competitiveness indicator accelerated, as a result of the euro's fall against other major currencies. The indicator depreciated by an average of 0.7% in year-on-year terms between January and July, and by 1.8% in July alone. The depreciation in the main euro area trading partners during the first seven months of the year ranged between 1.3% and 2.4%. The variation is the result of the structure of each country's foreign trade, which is reflected in the composition of the competitiveness indicator. This year the euro has depreciated sharply in year-on-year terms against the currencies of China, Japan, the US and the UK, which have much lower weighting in the

**Nominal harmonized competitiveness indicator
(40 countries and the rest of euro area)**

Source: ECB.

Exchange rates

Source: ECB; Bank of Slovenia calculations.

indicators for Slovenia and Austria than in the indicators for Germany, Italy and France. During the same period the euro appreciated in year-on-year terms against the Hungarian forint, the Polish zloty and the Czech koruna, which are weighted more heavily in the indicators for Slovenia and Austria. The euro is continuing to rise in year-on-year terms against the Croatian kuna, and also rose against the Turkish lira during the first five months of this year. The two currencies are major components of the indicator for Slovenia.

As a result of the less favourable developments in the nominal competitiveness indicator and the higher inflation in recent months, price competitiveness in Slovenia is improving at a slower pace than in most

of the main euro area trading partners. The price competitiveness indicator as measured by the HICP/CPI deflators fell by an average of 1.2% in year-on-year terms between January and July, approximately the same as in Italy and Austria. Competitiveness in Germany and France is improving faster, primarily as a result of favourable movements in the euro exchange rate against their trading partners. The majority of euro area countries also saw a year-on-year decline in the price competitiveness indicator as measured by the GDP deflator in the first quarter. As a result of differences in the movement of the composite exchange rate, the decline in the indicator for Slovenia was slightly smaller than in the main euro area trading partners.

Slovenia's cost competitiveness as measured by unit labour costs in the total economy also improved in the first quarter of this year. The harmonised cost competitiveness indicator fell by 1.4% in year-on-year terms, which is at the level of the average for the euro area and slightly more than in Germany and France. The faster improvement in cost competitiveness relative to these countries and to Austria, where the indicator has appreciated this year, was the result of lower growth in nominal labour costs.

3 | Price Developments

Year-on-year inflation as measured by the HICP stood at 3.1% in August, up 0.5 percentage points from July. The largest increase was recorded in the year-on-year growth in energy prices, while year-on-year growth in services prices and prices of non-energy industrial goods also increased. Year-on-year growth in energy prices rose by 2.9 percentage points to 10.7% with the sharp rise in oil prices on global markets passing through to high year-on-year growth in prices of motor and liquid fuels as excise duties remained unchanged. Growth in prices of motor fuels also partly reflects the effects of July's introduction of a carbon tax. Year-on-year growth in prices of non-energy industrial goods increased

in August, partly as a result of smaller seasonal discounts on clothing and footwear compared to last August. Year-on-year growth in services prices increased by 0.3 percentage points to 1.0%. This was primarily due to higher prices and lower discounts at kindergartens, which led to a rise in prices of preschool education and social care. Prices of car insurance and package holidays also rose. Year-on-year growth in food prices declined by 0.4 percentage points to 4.9%, which was mostly the result of a decline in year-on-year growth in processed food prices while the year-on-year growth in prices of unprocessed food slightly increased. The average inflation rate in the euro area stood at 2.6% according to initial figures, thereby remaining below the inflation rate in Slovenia.

Core inflation indicators rose in August, but nevertheless remained well below the euro area average. Year-on-year growth in the HICP excluding energy, food, alcohol and tobacco was 0.8% in August, up 0.3 percentage points from July. Core inflation excluding energy and core inflation excluding energy and unprocessed food also rose, to 1.9% and 1.5% respectively. The rise in the core inflation indicators was partly the result of local government measures in the area of public services, which is in contrast with the adverse situation on the labour market and the weak consumer purchasing power.

In line with the normal seasonal changes, prices of clothing and footwear in Slovenia fell in July compared to June, but nevertheless increased in com-

parison to July last year. The harmonised index of consumer prices in July was down 0.8 percentage points on June. The main factors in the rise in year-on-year inflation by 0.2 percentage points to 2.6% were prices of fruit and vegetables, the rise in excise duties on tobacco, and prices of motor fuels. There was a sharp rise in prices of processed food in July, largely as a result of an early increase in excise duties on tobacco. Prices of fruit and vegetables also jumped, significantly raising year-on-year growth in prices of unprocessed food. The contribution made to year-on-year inflation by food prices rose by 0.4 percentage points to 1.2 percentage points, the highest among all components, as the contribution made by energy prices fell by 0.1 percentage points to 1.1 percentage points. As global oil prices rose and a tax on carbon dioxide emissions was introduced for motor fuels, year-on-year growth in prices of motor fuels and solid fuels increased in July, while year-on-year growth in other energy prices declined. Year-on-year growth in services prices declined by 0.3 percentage points in July, despite a rise in health insurance prices.

Year-on-year growth in industrial producer prices on the domestic market rose slightly, but remains lower than this year's average. Year-on-year growth in industrial producer prices on the domestic market increased by 0.1 percentage points in July to 0.9%. The increase was primarily the result of an increase in year-on-year growth in prices of consumer non-durables. Year-on-year growth

Source: SORS, Bank of Slovenia calculations.

in prices in the manufacture of food products in July was up 0.4 percentage points on June at 2.2%. Year-on-year growth in commodity prices remained unchanged, while the year-on-year fall in prices in the manufacture of fabricated metals continued to deepen and growth in prices in the manufacture of computer, electronic and optical equipment increased. Year-on-year growth in prices in other categories (energy, consumer durables and capital goods) declined. Growth in prices of industrial goods remained low in July, which given the fall in import prices in the second quarter gives no indication of any inflationary pressures. However, it should be noted that the figures have not yet captured the impact of the most recent rise

in food prices on global markets, which could be reflected in a rise in producer prices and final consumer prices in the coming months.

4

Balance of Payments

Current account

The contraction in domestic import demand has been a major factor in the current account surplus. Having recorded a virtually balanced position in the first quarter, the current account recorded a surplus of EUR 345 million in the second quarter. Alongside a narrower merchandise trade deficit and a larger surplus in services, current transfers were also a factor in the current account surplus in the second quarter. The current account surplus over the 12 months to June amounted to EUR 213 million or 0.6% of GDP, compared with a balanced position a year earlier.

After a trend of decline in merchandise trade between February and May, exports were unchanged in June while imports increased slightly. The annualised trend rate of quarterly growth in exports stood at 3.0% in the first quarter, but had declined to -1.9% by the second

Source: Bank of Slovenia.

Source: Bank of Slovenia.

quarter. The decline was even sharper on the import side, the rate slowing from 0.2% in the first quarter to -8.8% in the second quarter. The gap by which trend growth in imports trails growth in exports widened further in the second quarter relative to the first quarter, reaching 7 percentage points.

Year-on-year growth in merchandise trade is also declining, primarily as a result of a contraction in imports. Merchandise imports in the second quarter were down 3.5% in year-on-year terms at EUR 5,508 million, while merchandise exports were up 0.1% at EUR

Source: Bank of Slovenia.

² According to SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix to the bulletin), the merchandise trade deficit during the first six months of the year amounted to EUR 513 million. The merchandise trade deficit with EU Member States amounted to EUR 1,014 million, while a surplus of EUR 501 million was recorded in merchandise trade with non-EU countries.

5,494 million. As a result the merchandise trade deficit narrowed from EUR 200 million in the first quarter to EUR 14 million in the second quarter.

The merchandise trade deficit in first half of the year was down more than a half in year-on-year terms. The cumulative deficit in the first six months of the year was down EUR 232 million in year-on-year terms at EUR 215 million.² Coverage of merchandise imports by exports was up 2 percentage points on the same period last year at 98.1%.

As a result of the debt crisis, merchandise exports to the EU are declining, while growth in exports to non-EU countries has remained at a relatively high level. Exports of intermediate goods to EU Member States in the first half of the year were up just 0.2% in year-on-year terms, while exports to non-EU countries were up 7.1%.

The difference was narrower for exports of capital goods (3.0% compared with 6.1%), but there was a large difference in exports of consumer goods, exports to EU Member States having declined by 5.4% while exports to non-EU countries increased by the same amount. Total exports to the EU have been declining in year-on-year terms since March. Without the growth in exports to markets outside the EU, the decline in domestic industrial production and thus in economic activity would have been even more pronounced this year.

There was a pronounced decline in imports in the second quarter. Imports of all categories of goods declined: consumer goods by 10.2%, capital goods by 6.5% and intermediate goods by 2.1%. The deterioration in the economic situation and the high level of uncertainty on the labour market led to a decline in final domestic de-

Source: Bank of Slovenia.

mand from households, and thus a year-on-year decline in imports of consumer goods. The slowdown in merchandise exports and the decline in sales of manufactured goods on the domestic market contributed to a year-on-year decline in imports of capital goods and intermediate goods.

In the second quarter, the surplus of trade in services widened again. Year-on-year growth in exports of services stood at 5.2%, down just 0.2 percentage points on the first quarter. The year-on-year decline in imports of services slowed from 3.9% to 1.4%. Imports of services in the first six months of this year totalled EUR 1.5 billion, down 2.6% in year-on-year terms, while exports of services were up 5.3% at EUR 2.4 billion. The surplus of trade in services in the first half of the year was up EUR 159 million in year-on-year terms at EUR 874 million, or 4.9% of GDP.

Growth in exports of transport services remains favourable. In the first half of the year, exports of transport services were up 3.5% in year-on-year terms, double the growth in merchandise exports during the same period. Imports of transport services recorded a larger year-on-year decline than merchandise imports, at 5.4%. The result was a year-on-year increase of EUR 42 million in the surplus of trade in transport services to EUR 320 million.

Year-on-year growth in exports of travel services increased to around 8% in May and June, while imports

of travel services were down sharply in year-on-year terms. Exports of travel services in the first half of the year were up 5.6% in year-on-year terms, which given the increase of 5.6% in the number of foreign visitors means that their average spending was unchanged. The year-on-year decline in spending on travel by domestic consumers has deepened this year as a result of the decline in purchasing power. Imports of travel services in the first half of the year were down 11.6% in year-on-year terms. The result was a year-on-year increase of EUR 80 million in the surplus of trade in travel services to EUR 644 million.

The deficit in trade in other services is narrowing. The deficit in other services (excluding transport and travel) in the first half of the year narrowed by EUR 37 million in year-on-year terms to EUR 90 million. There was an overall surplus of EUR 125 million in construction services and foreign trade intermediation services, and a deficit of EUR 215 million in all other services. The most notable deficits were recorded by intellectual property services and by other business and technical services, at EUR 86 million and EUR 68 million respectively.

The deficit in factor income in the first half of the year widened by EUR 106 million in year-on-year terms to EUR 335 million. With faster growth in receipts, the surplus in labour income was up EUR 28 million in year-on-year terms at EUR 116 million. At the same time the deficit in capital income widened by EUR 134 million to EUR

450 million. The largest contribution to the deficit in capital income came from the net outflow of EUR 286 million in income from FDI, of which reinvested and undistributed profits accounted for EUR 54 million. The main factors in the year-on-year widening of the deficit in capital income, alongside FDI, were net interest payments to the rest of the world and net payments on investments in securities. Net interest payments to the rest of the world amounted to EUR 113 million in the first half of the year, up EUR 19 million in year-on-year terms. Interest payments to the rest of the world are expected to increase further in the coming months as a result of downgradings and higher required yields. Receipts and expenditure on investments in securities were down just over a fifth on average in year-on-year terms. The net outflow of income from securities in the first half of the year was up just EUR 4 million in year-on-year terms at EUR 52 million. The deficit in factor income during the 12 months to June widened to EUR 657 million or 1.8% of GDP, having stood at 1.6% of GDP a year earlier.

The position in current transfers improved sharply again in June. Current transfers recorded an inflow of EUR 63 million in June. The net inflows were the result of government transfers, private transfers having recorded a net outflow of EUR 14 million. The cumulative position in current transfers over the first six months of the year was a surplus of EUR 15 million, significantly less than the figure of EUR 88 million in the same period last year. The majority of government transfers comprised funds from

the EU budget for the implementation of the common agricultural and fisheries policy, regional development funds and funds from the European Social Fund.

Capital and financial account

The private sector's net financial outflow during the first half of the year amounted to EUR 2.2 billion, approximately the same as in the first half of last year. There was a larger decline in liabilities relative to last year, while the increase in claims was weaker. The domestic commercial banks have continued to reduce their liabilities to the rest of the world, while the main factor in the increase in claims has been an outflow of household holdings of currency and deposits in the rest of the world.

The private sector's liabilities to the rest of the world declined by EUR 1.2 billion in the first half of the year, EUR 0.7 billion more than in the same period last year. The banks made the largest contribution to the decline in liabilities in both years. They made long-term loan repayments of EUR 852 million in the first half of the year, slightly more than in the same period last year. After declining in the first half of last year, short-term loans increased slightly this year. Foreign loans to domestic banks measured over the previous 12 months have steadily declined for two consecutive years, the annual decline averaging EUR 1.2 billion. The banks' liabilities from debt securities and from currency and deposits have been declining at increasing pace at the same time. While last year's decline in the latter was al-

most entirely the result of a decline in currency and short-term deposits, this year the largest decline has been in long-term deposits.

In contrast to the banking sector, the corporate and household sectors' liabilities to the rest of the world have continued to increase. The increase in liabilities in the first six months of the year was primarily the result of trade credits and FDI. Foreign loans to the non-bank sector declined in the first half of this year, having increased in the same period last year. Liabilities from foreign loans to corporates measured over the previous 12 months have been increasing since last March; the increase in short-term loans over the 12 months to this June was the same as the decline in long-term loans.

The main factor in this year's increase in the private sector's claims against the rest of the world has been an increase in household holdings of currency and deposits. These increased by EUR 781 million in the first half of the year, as the private sector's total claims increased by EUR 938 million. The increase in claims from household holdings of currency and deposits

Source: Bank of Slovenia.

in the first half of this year was three times higher than in the same period last year. The non-banking sector also increased its claims from trade credits and securities in the first six months of the year, by slightly less than in the first half of last year in both cases. After increasing in the first half of last year, the non-banking sector's loans to the

Signs: inflows or increases in liabilities (+), outflows or increases in claims (-).

rest of the world declined this year. Bank loans to the rest of the world have also continued to decline, in particular long-term loans, which have been declining for three consecutive years as measured over the previous 12 months. The banks also reduced their claims from investments in debt securities and instruments in the first half of this year, having increased them in the same period last year. By contrast, the domestic banks have sharply increased their holdings of currency and deposits in the rest of the world as a result of their participation in LTROs at the ECB.

The net external debt increased by EUR 909 million in the first half of the year to stand at EUR 14.2 billion at the end of June. All sectors other than the central bank, whose net external debt increased by EUR 2.5 billion, reduced their net debt. The central bank's net external debt increase was primarily due to increased gross liabilities to the Eurosystem as a result of the participation in LTROs at the ECB. The banks' gross liabilities fell by EUR 1.6 billion at the same time, to which long-term loans made the largest contribution, while there was also a sharp decline in their liabilities from long-term bonds and deposits. The total gross external debt has increased by EUR 429 million this year. Gross claims have declined by EUR 480 million at the same time.

5

Public Finance

The consolidated general government position has been improving in year-on-year terms since March. The general government deficit in the first half of the year narrowed by EUR 69 million in year-on-year terms, partly as a result of the measures introduced by the ZUJF. The deficit in the first half of the year amounted to EUR 854 million; its year-on-year narrowing was primarily a reflection of a smaller state budget deficit (which narrowed by EUR 53 million). The latter also narrowed in year-on-year terms in July, taking the total deficit over the first seven months of the year to EUR 969 million, EUR 143 million less than in the same period last year. One factor in the improvement was the measures introduced by the ZUJF, which entered into force at the end of May. The state budget deficit during the first seven months of the year reached 90% of the planned in the revised budget for this year. The Health Insurance Institute (HII) recorded a deficit of EUR 68 million during the first seven months of the year, compared with EUR 40 million in the same period last year. This year's wider deficit was primarily the result of the deferral of some payments from the end of last year. The HII's financial plan is foreseeing a deficit of EUR 20 million, which will be covered from its own funds. In addition, expenditure of

EUR 30 million will be deferred to 2013. This is expected to be covered by the surplus generated by the effects of the ZUJF. Local government recorded a surplus of EUR 25 million in the first half of the year, similar to the same period last year.

General government revenues in the first half of the year were down in year-on-year terms as a result of the adverse economic situation, most notably tax revenues. Even after July's increased revenues, excise duties in particular, tax revenues in the first seven months of the year were still slightly down in year-on-year terms. Revenues during the first six months of the year were down EUR 97 million in year-on-year terms, partly as a result of the timing of payments of excise duties on energy. A portion of June's excise duties were paid in July (the 30-day payment deadline fell on a Saturday). Revenues were therefore higher in July, according to the figures for the realisation of the state budget. The largest year-on-year decline in tax revenues was recorded by corporate income tax. The cut in the tax rate to 18% in 2012 and the increase in the allowances

for investment and R&D have put additional downward pressure on corporate income tax revenues. Transfers from the EU budget during the first seven months of the year were up on the same period last year.

General government expenditure in the first half of the year was down 2% in year-on-year terms, most categories of expenditure recording a decline. The year-on-year decline in expenditure in the first half of the year amounted to EUR 167 million, although interest payments were up EUR 94 million. More expenditure was earmarked for payments into the EU budget. The other categories of expenditure were reduced. The most notable reduction was in investment expenditure and transfers, which have displayed a downward trend for three consecutive years now. Transfers to individuals and households also recorded a significant decline, most likely as a result of the entry into force of the Exercise of Rights to Public Funds Act at the beginning of this year. Practically all categories of these transfers are declining, pensions having recorded the largest decline in absolute terms. Pensions account for almost two-thirds of such

expenditure, and the main factor in the year-on-year decline in the first half of the year was the deferral of the payment of the annual bonus to pensioners to July. The money earmarked for pensions during the first seven months of the year was also down in year-on-year terms as a result of the cut in the bonus made by the ZUJF. The number of old age pensioners has continued to increase rapidly, rising by 3.7% in the first seven months of the year, while the total number of pensioners rose by 2.4%. Expenditure on wages and on goods and services also declined. In expenditure on wages there was less money earmarked for the payment of bonuses. The ZUJF introduced a reduction in wage grades in June, which has led to lower expenditure despite the simultaneous elimination of wage discrepancies.

New consolidated general government borrowing amounted to slightly less than EUR 1.2 billion in the first half of the year, and was primarily undertaken via treasury bills of varying maturities. Money deposited in accounts was also reduced by more than EUR 900 million. The proceeds were primarily earmarked for financing the deficit in the balance of revenue and expenditure in the amount of EUR 854 million and the repayment of debt in the amount of EUR 1,190 million. Under the financing programme treasury bill issues amounted to EUR 154 million in July; the nominal annual interest rate on the subscribed bills was slightly higher than at the previous auction. The interest rate on 6-month treasury bills, which

Spreads on 10-year government bonds as compared to Germany

Note: Spread is calculated as a difference between yield of 10-year government bond and the yield of reference German bond on a daily basis and is used as a measure of country's credit risk. *In the picture, SLOREP 01/21 is used after 11. January 2011.

account for the majority of new borrowing, stood at 2.5%, compared with 1.45% in May's auction.

The required yield on 9-year Slovenian government bonds has also increased in recent months. It averaged around 6.9% in August. The spread over the German benchmark bond was approximately 550 basis points in August, significantly higher than in July (516 basis points) and in the first half of the year (around 400 basis points). After falling in the early part of the year, the spreads on Slovenian bonds have primarily risen since March. The spreads on Italian and Spanish bonds have moved similarly. The main rating agencies downgraded Slovenia's long-term sovereign debt in August as a result

of the problems facing Slovenian banks, which are in need of additional capital increases, the political uncertainties, and the adverse macroeconomic situation.

6

Banking System*

The banking system's total assets declined for the third consecutive month in June, by EUR 310 million.

Year-on-year growth in total assets stood at -2.1% in June, again down on the previous month. The main factors in the contraction in total assets on the funding side were a decline in the stock of subordinated liabilities and a decline in the stock of debt securities. The stock of debt securities also declined on the investment side, while there were also declines in current claims against foreign banks and in loans to the non-banking sector.

The stock of loans to the non-banking sector declined by EUR 171 million in June. The large domestic banks accounted for two-thirds of this year's largest decline in loans to the non-banking sector, but the other two bank groups also recorded a decline in the stock. Year-on-year growth in loans to the non-banking sector stood at -5.2% in June, the lowest rate this year, but the pace of lending varied greatly between the bank groups. The large domestic banks recorded the lowest year-on-year growth in lending to the non-banking sector in June, at -8.3%, followed by the small domestic banks (-2.6%), and then the banks under majority foreign ownership (-0.8%). Although most sectors recorded a decline in the stock of loans in June, non-financial corporations continued to see the largest crunch in lending.

The stock of loans to non-financial corporations (NFCs) declined by EUR 154 million in June. All the bank groups recorded a decline, but the large domestic banks accounted for half of the total. The pace of lending to NFCs slowed in June: year-on-year growth in loans to NFCs was down 0.6 percentage points at -8.2%. Although the large domestic banks still recorded the most negative year-on-year growth in loans to NFCs (-9.4%), the banks

under majority foreign ownership recorded the largest decline in the rate in June, by 1.2 percentage points to -6.2%.

Lending to households continued to decline in June. As the stock of loans to households declined by EUR 27 million, year-on-year growth in such loans was negative for the second consecutive month, having declined by 0.7 percentage points to -1.0%. All the bank groups saw a slowdown in growth, which was most pronounced at the banks under majority foreign ownership. Year-on-year growth in consumer loans in June was more negative than in the previous month, while growth in housing loans is also continuing to decline.

The banking system recorded net borrowing in the rest of the world of EUR 71 million in June. The large domestic banks were the main borrowers. Although the process of repaying debt to foreign banks ended in June, the banks repaid a total of more than EUR 1.1 billion in debt to foreign banks in the first half of this year. The banks under majority foreign ownership recorded the largest debt repayment at foreign banks in the first half of the year, at EUR 792 million.

Deposits by the non-banking sector increased by a modest EUR 46 million in June, but year-on-year growth in deposits by the non-banking sector nevertheless declined to -1%. Government deposits were the main factor in June's positive increase. Household deposits have con-

* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

tinued to record positive year-on-year growth, although the stock was again down slightly in June.

The domestic banks reduced their liabilities from debt securities by EUR 494 million in the first half of the year, of which EUR 134 million was in June. Subordinated liabilities declined by EUR 347 million in June.

The banks recorded a pre-tax profit of EUR 17 million in the first half of the year. Despite net interest recording year-on-year growth of -9.4%, the banking system's gross income in the first six months of this year was up 10.6% on the same period last year. This was driven by an increase in non-interest income, whose positive impact on the operating result was almost entirely negated by a renewed increase in impairment and provisioning costs. They recorded an above-average increase in June to total EUR 423 million in the first half of the year, up 43% on the same period last year. The banks thus used more than half of their gross income to cover impairment and provisioning costs.

7

Financial Markets

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 0.4% in June, and by 3.3% in July. Factor banka bonds were listed for trading on the Ljubljana Stock Exchange in June, with a nominal issue value of EUR 6.5 million and a coupon rate of 6.5%. Trading in SZ55, TZ138 and DZ44 treasury bills also began in June and July. Volume in June was double that in the previous month, then declined by almost a third in July. Slovenska odškodninska družba 2nd-issue bonds accounted for almost a quarter of the volume of trading in bonds in the first half of the year, and for almost all of the volume in July. The proportion of total stock exchange volume accounted for by bonds stood at 23% in both June and July.

The market capitalisation of shares on the Ljubljana Stock Exchange fell by 3.1% in June, and by 1.7% in July. Having increased by a modest 0.9% in June, the volume of trading in shares declined by almost a third in July. July's decline was partly caused by the delisting of Maksima Invest from the entry market as a result of the initiation of bankruptcy proceedings against the company. The volume of trading in shares amounted to EUR 23.7 million or 76.5% of total stock market volume in June, and to EUR 16.1 million or 76.4% of total volume in July. Trad-

ing in Krka shares accounted for more than a half of total volume in the first seven months of the year, at EUR 83.8 million. The second and third most heavily traded shares were Mercator and Petrol, which together accounted for a fifth of total volume in shares in the first half of the year. The largest fall in share price on the prime and standard markets during the last six months was recorded by Istrabenz at 81.9%, followed by Abanka at 68.8% and Sava at 48.3%. The dividend yield on the prime market stood at 4.8% at the end of July. The SBI TOP has continued to fall. The index fell by 2.6% in June and by 1.1% in July, taking the respective year-on-year changes to -30.0% and -29.2%. The SBI TOP ended July at 515.

Having been rather poor in May, the mood on the financial markets improved slightly in June and July. Almost all of the major global stock market indices rose in these two months, primarily as a result of the election results in Greece, the EU decision to support the Spanish banking sector, and the cut in the ECB's key interest rate to 0.75%. Concerns over further developments in Spain are nevertheless still having a significant impact on the mood. The majority of the major global stock market indices rose by between 1% and 6% in June and July. The year-on-year changes in global stock markets and Balkan stock markets nevertheless remained negative. The sole exception was the S&P 500 in the US, which recorded a year-on-year change of +6.7% in July.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents averaged 12.8% in June and July. Non-residents' net purchases of Slovenian shares were almost the same in June and July, at EUR 9.8 million and EUR 9.7 million respectively. At EUR 10.5 million, trading in Krka shares accounted for the majority of volume in June and July, the main net purchases being made by Croatian residents. Non-residents made net purchases of EUR 22.6 million in Slovenian bonds in June, and net sales of EUR 12.5 million in July. The three newly issued treasury bills were the most heavily traded debt securities in June and July, with a total volume of EUR 87.2 million. Residents of Luxembourg were the largest net purchasers of bonds in both June and July, making total net purchases of EUR 141.5 million.

Residents made net purchases of EUR 24.2 million in shares in foreign issuers in June, and net sales of EUR 6.2 million in July. They also made EUR 36 million of net purchases in foreign bonds in June, and net sales of EUR 245.3 million in July. These were the largest net sales of foreign bonds this year. The majority of net purchases of equities in June were made by banks, in the amount of EUR 17.6 million, while the most prominent issuer was the Belgrade subsidiary of Nova Ljubljanska banka. The largest net sales of foreign shares were made by insurance corporations and pension funds in June, and by banks and households in July. The insurance corporations and pension funds sector was the

Net Slovenian investments abroad

Source: Bank of Slovenia.

main net investor in foreign bonds in June (EUR 136.1 million) and July (EUR 6.9 million), while the banking sector was the main net seller of bonds, having sold a total of EUR 323.2 million in foreign debt securities in June and July. The main net sales comprised bonds issued in the euro area.

The domestic mutual funds' assets under management increased to EUR 1,847 million in July, primarily as a result of a rise of 1.6% overall in the average unit price in June and July, and net inflows of EUR 0.8 million in July. In July the net inflows recorded by the non-bank mutual funds (EUR 3.4 million) were larger than the net withdrawals from the mutual funds under majority bank ownership (EUR 2.6 million) for the first time since April 2011. Investors in balanced funds made total net

Net inflows into mutual funds

Source: Securities Market Agency, Bank of Slovenia.

withdrawals of EUR 9.5 million in June and July. Bond funds and money-market funds recorded net inflows of EUR 5.6 million and EUR 4 million respectively. As in 2011, investors displayed a notable lack of confidence in the capital market in the first half of the year, and consequently switched from higher-risk equity and balanced funds to safer bond and money-market funds. The household sector made net withdrawals of EUR 12.1 million in June and July, while the insurance corporations and pension funds sector recorded net inflows of almost the same amount. Non-financial corporations made total net withdrawals of EUR 4.4 million in June and July. The proportion of the domestic mutual funds' assets accounted for by liquid assets³ declined to 10.8% in July.

³ Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.
The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procuration and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procuration, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procuration, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Note 1: With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds

General

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another.

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available.

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolars and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolars vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Exchange rates (Tables 2.6.1–2.6.2)

Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994. The Polish złoty was denominated on 1 January 1995 at the exchange rate of 1 new złoty for 10,000 old złotys.

Table 2.6.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

Payment systems (Tables 2.7 to 2.13)

General

Data prior to 2007 are published in tolars; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolars). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.8 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.9 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.10 Electronic Banking

Note 1: Only credit transfers debited from payers' accounts are included.

Note 2: Payments by Bank of Slovenia as payment service provider for non-MFI subjects are also included from 2011 on.

Table 2.11 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.12 Debit Transfers

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

Note 1: **A special money order was used until the end of 2009.** Special money order was a standardised paper-based debit instrument used to remit money to the named payee. A special money order was issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.13: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

· **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Exstrastat reporting).

· **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**

- report on account balances at domestic banks – PPV (until 31 December 2004),
- report on account balances abroad – C (until 31 December 2006),
- report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
- report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivates since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Report on Modern Payment Instruments (SPI)** for data on acquisition of fuel by nonresident transport operators at Slovene petrol stations settled via payment cards of foreign issuers from 2008 onwards.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

- **Estimates and other sources**

- estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
- estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
- estimate of Italian pensions (IMAD) until the end of 1998,
- estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
- estimate of labour income (SORS),
- data on pensions paid to non-residents (ZPIZ),
- survey on the write-downs of debt from trade in goods and services abroad,
- estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
- estimate of cash transactions on tourism and labour income (from 2007 onwards),
- quarterly data on consumption of foreign embassies in Slovenia (SORS, from 2008 onwards),
- migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
- households' transfers (SORS, from 2008 onwards),
- assets acquired directly by tenders and programmes of EU (SORS, from 2008 onwards),
- data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards),
- data on purchases/sales of real-estate in Croatia (Croatian National Bank, from 2008 onwards),
- data on direct investment of Slovene households in the form of real estate abroad (main data source Household Budget Survey, SORS)
- data on purchases/sales of emission allowances between residents and nonresidents (Slovenian Environment Agency, from 2008 onwards until 2011, From 2012 onwards data is collected by BST monthly report).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is

equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolars from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolars to non-residents abroad.

The data on sales of tolars to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SORS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2009)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SORS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government

services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SORS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SORS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SORS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SORS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SORS, Annual survey on investment in tangible assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From 2007 onwards, data on foreign direct investments of households in the form of real estate are included.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From the same year data on Slovenian residents' purchases/sales of real-estate in Croatia are included (data source is Croatian National Bank).

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR

currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)
- January 2011, RS69 (EUR 1000.0 million)
- March 2011, RS70 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2012 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2009 to 2011 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2013, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2013 shall take into consideration the new three year average (2010 to 2012).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or

more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From 2007 data on foreign direct investment of households in the form of real estate are included. Claims on and liabilities to affiliated enterprises are included in the category "Direct investment-other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portofolio investment.) From 2007 data on equity shares bellow 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivates

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available. From 2007 onwards, the level of foreign currency holdings of domestic household sector equals the level that was reached

at the end of the year 2006 (2.948,6 EUR million), when Slovenia joined the European Monetary Union. Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on direct investment of Slovenian households. From 2007 onwards only estimation of the value of real estate direct investment abroad by Slovenian household sector is included,
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za suksesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities, financial derivates and monetary gold are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given date, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolars; from 2007, data are published in euros.
Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.
The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Note 4: On 1 October 2011, the Tax Administration of the Republic of Slovenia (DURS) introduced new information system and due to that, large number of recorded data on the tax and social security contribution revenues remained on unallocated fund accounts, while totals for those two categories were unaffected. We are publishing the data where certain categories of taxes and social security contributions were estimated by the Ministry of finance. The funds are expected to be correctly allocated already next month. Source: <http://www.mf.gov.si>

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2(Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4(International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site:
http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolars; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1-ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: until 31.12.2006 Slovenian tolar, from 01.01.2007 Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia:
<http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products , as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
