Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

Summary

After a year and a half of recession, economic activity in the euro area increased by 0.3% in the second quarter over the previous one, while survey indicators suggest a continuing moderate recovery in the third quarter. Despite the improving situation in the closer international environment, the slowdown in the contraction in economic activity in Slovenia to 0.3% was mostly the result of a temporary increase in domestic demand. Purchases of consumer durables increased sharply before the rise in VAT, housing investment increased slightly, and there was also a slowdown in de-stocking. Total exports declined in quarterly terms, and value-added in manufacturing kept contracting. Despite the increase in certain components of consumption, nominal merchandise imports declined again, taking the cumulative 12-month current account surplus to 5.7% of GDP in June. There were no additional shocks on the labour market in the first half of the year, the workforce in employment having recorded a seasonal increase, while real wages continued to fall. The economic sentiment indicator in August remained up on a year earlier, but July's decline in turnover in retail trade, which coincided with the introduction of a VAT rise, might indicate a greater correlation in the movement of domestic consumption and consumer purchasing power in the second half of this year.

After the rise in VAT rates in July, inflation as measured by the HICP fell to 2.2% in August as a result of lower prices of energy and unprocessed food. Core inflation has now exceeded the euro area average, but only because of higher duties necessary for stabilising the public finances. The increase in the tax burden is also the largest factor in inflation. Inflation during the first seven months of the year would have stood at 1.4% had duties remained unchanged, but the actual figure was 2.3%. Inflationary expectations nevertheless remain low, as domestic consumption is expected to decline further.

The fiscal position deteriorated in the first half of the year. The consolidated general government deficit widened as a result of a decline in revenues in all major tax categories caused by the situation on the labour market, deteriorating corporate performance, and legislative changes to corporate income tax. Despite consolidation measures, expenditure is only declining slowly, with increases in interest payments as the main factor hindering the decline.

The majority of trends in the banking system's balance sheets remain similar to the two previous months. Loans to the non-banking sector are continuing to decline, most notably loans to non-financial corporations and consumer loans to households. After sharp deleveraging in previous months, net loan repayments to foreign banks were low in June, at EUR 8 million, although the banks reduced their wholesale funding by reducing issued debt securities. After declining for three months, household deposits at banks recorded a renewed increase of EUR 20 million in June. Deposits by the non-banking sector nevertheless declined, as a result of withdrawals of government deposits. The banks' impairment and provisioning costs during the first half of the year were up 10% on the same period last year. The banking system's pre-tax loss amounted to EUR 242.7 million. Alongside the increase in impairment and provisioning costs, another factor in the decline in performance was the decline in the banks' net interest income, which was partly the result of reduced lending activity and partly the result of higher funding costs.

1

International Environment

In the second quarter, economic performance of the euro area was slightly stronger than expected, particularly in Germany, France and Portugal. The figures for economic activity in the euro area were mostly favourable in May and June, and the PMIs and confidence indicators increased further in the period to August. Alongside the monetary policy stance of the Fed and the ECB – the latter introduced forward guidance in July –, this brought a rise in the euro against the US dollar, while oil prices also rose.

Economic developments

Economic activity in the euro area increased in the second quarter, while the forecasts remained unchanged. Quarterly growth stood at 0.3%, while the year-on-year decline in GDP slowed to 0.7%. In quarterly terms, activity increased in Germany and France, while growth was even stronger in Portugal. Spain, Italy and the Netherlands remained in recession, although the decline was less than in the first quarter, as did Greece and Cyprus, where the year-on-year decline remained large. There was no significant change in the forecasts for economic growth in the euro area. Consensus and the IMF forecast in August and July respectively that GDP in the euro area would decline by 0.6% this year, and would increase by 0.9% next year. In September the ECB reduced its forecast for the contraction in GDP this year by 0.2 percentage points to 0.4%, while expecting growth of 1% in 2014. IMF expects global GDP to increase by 3.1% this year, as in 2012, and by 3.8% next year.

In May and June, economic activity indicators in the euro area were relatively favourable. Industrial production declined slightly in monthly terms in May, but increased by 0.7% in June, most notably in the category of consumer durables. The year-on-year rate of growth was positive for the first time since October 2011, at 0.3%. The amount of construction put in place increased in monthly terms for the third consecutive month in June,

although it remained down in year-on-year terms, by 3.0%. After increasing in May, turnover in the retail sector was down 0.5% in monthly terms and 0.9% in year-on-year terms in June. The unfavourable situation on the labour market remained a major factor in the low household consumption in the euro area.

The economic sentiment indicators and the PMIs in the euro area increased again in August. The euro area's economic sentiment indicator improved in August for the fourth consecutive month, and was up in year-on-year terms for the third consecutive month. Confidence is gradually increasing in all segments of the private sector other than construction, while consumer confidence is also continuing to improve. The aggregate PMI for the

euro area increased sharply in August, as growth in services and in manufacturing was high. Despite the stronger signs of economic recovery, the unemployment rate remains above 12%. Unemployment in the euro area stood at more than 19.2 million in July, and remained highest among the young, particularly in the periphery countries.

The economic situation in the majority of Slovenia's most important trading partners was encouraging in the second quarter. GDP in Germany rose by 0.7% in quarterly terms; the largest contribution coming from domestic consumption, investment in particular. Imports increased, but exports increased even more. Economic activity in France rose by 0.5% as a result of final household consumption, while investment declined slightly. GDP fell by 0.2% in Italy, and rose by 0.2% in Austria. In August Consensus again reduced its forecasts for economic growth in Russia, to 2.3% for this year and 2.9% for next year. Croatia is expected to remain in recession this year. GDP is forecast to decline by 0.7% this year, and to increase by 0.9% next year.

Commodity prices and euro exchange rate

The euro rose against the US dollar in July and August, prices of metals and Brent crude rose as well. In July the ECB expanded its non-standard measures to include forward guidance.¹ Its key interest rate remained unchanged at 0.5% in August. Slight improvement in economic results and better corporate performance in the euro area, and the monetary policy stance of the Fed and the ECB brought a rise in the euro against the US dollar. The euro rose by 1.8% overall against the US dollar in August, and was up more than 7% in year-on-year terms. The aforementioned factors, the crises in Egypt and Syria, and disruptions to oil supply in Libya brought renewed rises in the US dollar price of Brent crude. A barrel averaged USD 111 in August, up 2.9% on July. Metals price rose significantly in monthly terms, while food prices continued to fall.

¹ For more, see <http://www.ecb.europa.eu/press/key/date/2013/html/sp130806.en.html>.

2 | Economic Activity

The contraction in economic activity slowed in the second quarter, although the changes in the breakdown of value-added were not favourable from the point of view of export potential. As a result of increased consumption before the rise in VAT, the year-on-year decline in overall value-added in private sector services slowed significantly, but at the same time there was a deterioration in the situation in manufacturing, where value-added has been declining in quarterly terms for two years now. Due to contraction in public expenditure and thus in public services, their contribution to the decline in GDP has been increasing. Although the confidence indicators remained favourable in August, and the survey indicators of factors limiting production do not yet suggest further deterioration in the economic situation in the third quarter, July's decline in turnover in retail trade could indicate a decline in consumption after the VAT rise.

Economic sentiment

Economic sentiment remained stable in August, and higher than a year earlier. The confidence indicator in manufacturing reached one of its highest levels of the last year and a half in August. Firms remain relatively optimistic regarding output in the next three months, while the indicators of current demand were more favourable than in June and the indicators of demand expectations were unchanged. There has been a sharp reduction in pessimism in the construction sector this year. The confidence indicator reached its highest level since the outbreak of the crisis. The employment expectations indicator is becoming more favourable, while firms are also more optimistic about demand. Demand indicators also increased in the private sector services other than trade. Confidence in the retail sector continues to fluctuate as the assessment of current sales was down sharply on July. Consumer confidence remains lower than before the announcement of new consolidation measures this April.

For the third quarter, survey data of factors limiting production do not suggest further deterioration in the economic situation. Insufficient demand remains the main limiting factor in all segments of the private sector, but the proportion of firms facing this limiting factor did not change significantly from the second quarter. The exception is construction, where the proportion of firms facing this limiting factor fell below 40% in August for the first time since January 2009. There was also no significant change in the proportion of firms facing financing difficulties with the positive exception of manufacturing, where the share of firms facing past-due liabilities declined to 19%, the lowest figure since 2009. The uncer

tainty related to the economic situation also declined in the manufacturing sector in the third quarter.

Aggregate demand²

The year-on-year contraction in domestic consumption slowed in the second quarter, albeit probably temporarily. The main factors in this were a strong base effect, and the quarterly increase in gross investment and in purchases of consumer durables brought by the increase in consumption before the VAT rise. The main factor in the increase of 3% in gross investment was a slowdown in destocking, while investment in residential construction also increased slightly. Household purchases of consumer durables were up more than 7% on the first quarter. Total domestic consumption was down 3.4% in year-on-year terms, compared with almost 8% in the previous quarter. Of the main aggregates, only the contraction in final government consumption increased. The contraction in gross fixed capital formation slowed to 3%. The contraction in construction investment slowed to just under 12%, while year-on-year growth in investment in machinery and equipment remained high despite a quarterly decline. As a result of the high import component in investment and the consumption of consumer durables, merchandise imports were also up slightly in year-on-year terms, which reduced the contribution to the change in GDP made by net trade to 1.5 percentage points despite solid year-on-year export growth.

GDP

In the second quarter, quarterly developments in value-added were better in the majority of sectors, with the exception of industry. The quarterly decline in GDP slowed to 0.3%, taking the year-on-year decline to 1.7%. The current decline in value-added in private sector services slowed as a result of weak growth in wholesale and retail trade, transportation and storage, and ac-

commodation and food service activities, and continuing recovery in the information and communication sector. Activity in public services continued to decline, in line with the reduction in public expenditure. Developments in industry are becoming much more unfavourable. According to audited national accounts figures, value-added in manufacturing has been declining in quarterly terms for

² With September's release of national accounts, the regular revision was made, which brought changes to the quarterly and even more to the annual figures. As a result of the change in the quarterly rates, the pass-through of the negative dynamic in GDP from 2012 into 2013 is now estimated to have been slightly smaller. The changes in the annual figures were significant for 2012 in particular. GDP declined by 2.5% last year, and not 2.3% as previously announced. Among the main components of consumption, there were notable changes in final household consumption (which declined by 4.8% compared with the previous figure of 2.9%), while the decline in gross fixed capital formation was revised from 9.3% to 8.2%. At the same time there was a revision in the estimates of growth in value-added, which were significant for the majority of sectors: the largest revisions were for construction (-6.8%, previously -11.6%), information and communication (-0.4%, previously -2.7%) and manufacturing (-2.9%, previously -0.9%). For 2011, the largest change in components of consumption was in gross fixed capital formation (-5.5%, previously -8.1%), while the largest change in value-added was in financial and insurance activities (-4.7%, previously -2.8%).

two years now, and a decline in output is now evident in the majority of segments. Activity in the energy sector also declined in the second quarter of this year. The quarterly decline in value-added in industry thus reached 1.4%. The year-on-year decline in activity slowed in the majority of sectors. The exceptions were financial and insurance activities, where the decline exceeded 7%, and public services, where value-added was down 2% in year-on-year terms.

Monthly indicators of activity

The changes in industrial production were small in May and June. Industrial production declined by 1% in May, and increased by the same amount in the following month. It continued to gradually decline in year-on-year terms, the rate standing at -1.5% in June. According to turnover figures, the main factors were declines in the production of intermediate goods and capital goods, demand for which weakened in the last two months on the domestic market, on the euro area market and on the market outside the euro area. A larger decline in overall production was prevented by an increase in production of consumer non-durables, demand for which increased on the euro area market. Growth in production of the latter category was driven primarily by rapid growth in the pharmaceutical industry. Developments in industry in the second quarter were less favourable than in the euro area overall.

Only a small number of the major manufacturing segments recorded an increase in output in the first half of the year, while many of them are continuing to face sharp contractions in output. It is primarily the pharmaceutical industry that is preventing the deepening of the contraction in total manufacturing output. After recording high growth in the first quarter, production of computer, electronic and optical products began to decline in year-on-year terms, while output in the metal and electricity industries also declined slightly. In recent months the situation has improved in the manufacture of non-metallic mineral products, which could be related to a slight increase in activity in construction, while there was also an increase in the repair and assembly of machinery and equipment. At the same time the domestic automotive industry remains in crisis as a result of weak demand for

cars in Europe and the relative age of the models produced. The wood processing industry also remains in crisis.

June's monthly growth in nominal turnover was high in all segments of private sector services other than trade. Total turnover was up more than 4% on May. Growth was highest in professional, scientific and technical activities, where it approached 8%. As a result of the relatively favourable current developments this year, year-on-year growth in total turnover in services other than

trade also turned positive in June. The rate reached 2.5%, all segments of services recording a year-on-year increase in turnover. Growth was highest in administrative and support service activities, at almost 16%. The latter accounts for more than 7% of total value-added in private sector services other than trade.

After increasing in the second quarter, sales in retail trade declined significantly in July. Turnover in retail trade excluding motor vehicles was down more than 3% on June, while the decline in turnover in the trade and

Notes: Data are working days adjusted.

* Volume of industrial production. ** Real value of construction put in place. *** Excluding trade and financial services. + Nominal turnover.

++: 3-month moving average compared to the corresponding average 3 months earlier. Data are seasonally and working days adjusted (except for construction where data are seasonally adjusted).

repair of motor vehicles amounted to almost a tenth. Growth in turnover in the second quarter was probably the result primarily of increased purchases before the VAT rise. The year-on-year decline in sales in retail trade excluding motor vehicles deepened to more than 6% in July. After sales increased by almost a fifth in June, turnover in the trade and repair of motor vehicles was unchanged in year-on-year terms in July.

Construction activity increased sharply in June, while the chances of stabilising the construction sector later in the year have increased slightly as a result of public infrastructure works. The total amount of construction put in place was up just over a tenth on May, as a result of an increase in non-residential construction and civil engineering work. The year-on-year contraction in construction activity slowed to just under 3%, as civil engineering work recorded a year-on-year increase and the decline in construction of buildings slowed. According to the available public finance figures, public construction investment declined in the first six months of the year, but the unfreezing of disbursements of EU funds and measures to speed up their expenditure should accelerate work on public infrastructure. At the same time the number of building permits issued in the second quarter was up more than 20% in year-on-year terms for the third consecutive quarter, while there was also a strong increase in the corresponding floor area.

3 | Labour Market

The seasonal fall in the number of registered unemployed ended in July. Nevertheless, previous developments were positive as the registered unemployment rate fell to 12.8% in the first half of the year, while the surveyed unemployment rate fell to 10.3%. In the first half of the year, the workforce in employment rose in the majority of activities as well. The number of new hires was larger than in previous years, which neutralised the increased inflow of first-time jobseekers and those whose temporary employment ended. Nominal wages have continued to stagnate in the private sector, while declining in year-on-year terms in the public sector. The developments on the labour market in the first half of the year reveal that there were no major adverse shocks comparable to last year's.

Unemployment and workforce in employment

The number of registered unemployed recorded a seasonal fall in the first half of the year, but began to rise in July, reaching approximately 117,000 by the end of the month. The number of registered unemployed had declined by around 7,000 since the end of January, approximately 2,000 less than last year, but comparable to 2011. Year-on-year growth in the number

of registered unemployed had declined to 9.6% by the end of July, albeit primarily as a result of the high base. The registered unemployment rate fell to 12.8% by the end of June in line with seasonal developments, while there were similar developments in the surveyed unemployment rate, which in the second quarter was down almost 1 percentage point on the first quarter at 10.3%.

New hires remain the main factor in the fall in unemployment, while outflows from unemployment for reasons other than employment have declined. New hires accounted for most deregistrations in July; the figure was approximately 1,200 more than in previous years. This was not attributable to self-employment, as the register data does not show any major increase in self-employment, while in addition the number of people included in active employment policy measures was roughly the same as last year. The number of outflows for reasons other than employment also fell. The number of deregistrations for reason of retirement has been falling all year, and as expected is approaching the level from

Selected inflows to and outflows from registered unemployment

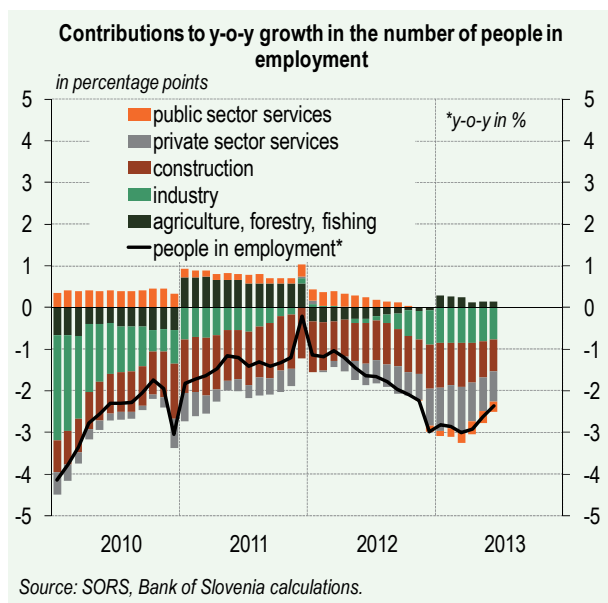

Source: Employment service of Slovenia, Bank of Slovenia calculations.

before the end of 2010, when fear of pension reform prompted many older workers to wait for retirement as unemployed. These flows on the labour market are for the moment not suggesting a significant slowdown in hiring as seen in the same period last year. Of those

newly registering as unemployed during the first seven months of the year, there was a notable increase in the number of first-time jobseekers, which was up around 2,000 on previous years. The number of those newly registering as unemployed because their temporary employment ended was also higher than in previous years. Year-on-year growth in the latter has slowed in the last three months, not as a result of falling numbers but as a result of the high base from last year. In light of legislation in force as of April that is reducing the differences between temporary and permanent employment, it is likely to be a matter of the expiry of temporary employment contracts concluded before the change in law.

The workforce in employment has been rising in monthly terms since February, with the seasonal recovery present in the majority of activities. The workforce in employment was still down 2.4% in year-on-year terms, although this year there was a monthly rise in the employment in May and June instead of stagnation or decline of last year. This rise was mostly the result of growth in the private sector. The year-on-year decline in the workforce in employment remains largest in the construction sector, although employment has been increasing in monthly terms since March, and the growth was the strongest recorded in the last four years. In June it was up almost 7% on February. In private sector services, the transportation and storage sector and the administrative and support service activities sector recorded high monthly employment growth during the same period. The

workforce in employment in manufacturing stagnated in the first half of the year, the year-on-year decline slowing to 3.3% by June. The workforce in employment also increased in monthly terms in the public services, although it remained down just over 1% in year-on-year terms.

Wage developments

The average nominal wage is continuing to fall in year-on-year terms. The average wage was down almost 2% on May, and by just under 0.5% in year-on-year terms. The year-on-year decline was smaller than in the previous months of this year, the effect of the June 2012 wage reduction in the public sector having dropped out in June. Wages in public services were nevertheless down almost 1% in year-on-year terms in June. Wages in the private sector were unchanged overall. The largest rise was in manufacturing, at just over 2%, while the largest falls were in mining and quarrying (almost 5%), in arts, entertainment and recreation, and in professional, scientific and technical activities. In addition to nominal wages, the workforce in employment also declined in year-on-year terms in the public sector, as a result of which the nominal wage bill was down just under 3% in year-on-year terms in June. The same decline in the nominal wage bill in the private sector was almost entirely the result of the year-on-year fall in employment.

4 | Price Developments

Year-on-year inflation as measured by the HICP stood at 2.2% in August, down 0.6 percentage points on July. The main factors in the fall in inflation were the year-on-year falls in energy prices as a result of a base effect and in prices of unprocessed food. The slowdown in the year-on-year fall in prices of non-energy industrial goods and the year-on-year growth in services prices raised core inflation. This has now overtaken the euro area average, primarily as a result of consolidation measures.

Headline inflation and structure of inflation

Year-on-year inflation as measured by the HICP stood at 2.2% in August, down 0.6 percentage points on July, year-on-year growth in energy prices recording the largest decline. Year-on-year growth in energy prices was down 3.6 percentage points on July at 0.7%, reducing their contribution to inflation by 0.5 percentage points to 0.1 percentage points. This was primarily the result of a base effect, the government having tracked the movement of oil prices on global markets by adjusting excise duties so that fuel prices in August were unchanged, although they remained higher than the July

average. Gas prices also fell. Despite the rises in prices of meat and fruit, the pronounced fall in prices of vegetables brought a decline of 1.7 percentage points in year-on-year growth in prices of unprocessed food to 8.6%. By contrast, year-on-year growth in prices of processed food increased by 0.5 percentage points to 3.8%, largely as a result of a base effect. The year-on-year fall in prices of non-energy industrial goods slowed again, by 0.2 percentage points to 0.8%. This was primarily the result of a rise in prices of sports equipment and prices of clothing and footwear. The slight increase in year-on-year growth in services prices was largely the result of rises in prices of telephone and internet services and in prices of

Note: Figures may not sum up to official figures due to rounding.

hotel accommodation. Despite the fall, year-on-year inflation remains above the euro area average, which stood at 1.3% according to initial figures.

Core inflation and inflationary trends

Core inflation is higher than the euro area average, despite weaker domestic demand. July's rise in VAT caused even the narrowest core inflation indicator to jump above the euro area average. Year-on-year growth in the HICP excluding energy, food, alcohol and tobacco stood at 1.5% in August, 0.4 percentage points higher than the euro area average. Core inflation as measured by the HICP excluding energy and unprocessed food also rose, by 0.2 percentage points to 2.0%, while core inflation as measured by the HICP excluding energy remained unchanged at 2.5%. Core inflation remains subject to measures related to fiscal consolidation. Nevertheless, higher rises in prices of final products by providers are not expected, as consumer purchasing power will continue to fall.

Taxes' impact on inflation

Taxes are again raising inflation this year. The contribution made by taxes increased until the end of 2012, then fell slightly in the first half of this year as a result of base effects. The contribution to inflation made by direct taxes nevertheless remained high this year. Year-on-year inflation as measured by the HICP in June exceeded growth in the HICP at constant tax rates by 0.6 percentage points. This means that inflation would have stood at 1.6% in June were taxes and levies to have remained unchanged. The difference largely comes from the effects of the rise in excise duties on refined petroleum products and tobacco, certain tax rises last year, and the introduction of a tax on financial services. This difference will be even larger in the second half of the year as a result of the VAT rise in July.

Producer prices on the domestic market

Year-on-year growth in industrial producer prices on the domestic market declined slightly in the second quarter. It averaged 0.3% over the quarter, down 0.8 percentage points on the previous quarter. Year-on-year growth in commodity prices declined sharply, from a

Source: Eurostat, Bank of Slovenia calculations.

Source: Eurostat, SURS, Bank of Slovenia calculations.

Source: SORS, Bank of Slovenia calculations.

quarterly average of 1.7% to -0.3%, primarily as a result of a sharp year-on-year fall in prices in the manufacture of basic metals. Similarly, average year-on-year growth in prices in the manufacture of consumer durables declined by 0.8 percentage points during the quarter to -0.2%. The main factors in this were the year-on-year fall in prices in the manufacture of furniture and lower year-on-year growth in prices in other manufacturing. Prices in the manufacture of consumer durables have been falling in year-on-year terms since this March, following the decline in domestic demand. Average year-on-year growth in prices of capital goods also declined during the quarter. By contrast, average year-on-year growth in prices in the production of energy and fuels increased by 1.3 percentage points during the quarter to 0.5%. The increase in year-on-year growth in prices in the manufacture of consumer non-durables was negligible.

5 | Selected Competitiveness Indicators

Slovenia's price and cost competitiveness relative to countries outside the euro area has deteriorated this year due to stronger euro. Price competitiveness against euro area countries has been deteriorating because of Slovenia's higher inflation, while cost competitiveness has continued to improve as a result of the more favourable developments in domestic labour costs.

Nominal harmonised competitiveness indicator

Slovenia's competitiveness as measured by the nominal harmonised indicator against countries outside the euro area deteriorated in the second quarter and in the early part of the third quarter. The euro rose sharply in the first two months of the third quarter relative to most major global currencies. Slovenia's nominal harmonised competitiveness indicator recorded a year-on-year appreciation of 5.6% in July, the highest value of the last four years. The corresponding indicator for the euro area also increased, by 2 percentage points more than the Slovenian indicator in July. The smaller year-on-year appreciation in the Slovenian indicator was the result of the euro's more favourable movements against the Croa-

tian kuna and other currencies that have a higher weight in Slovenia's indicator.

Real harmonised competitiveness indicators

Slovenia's price competitiveness deteriorated against euro area countries and against countries outside the euro area in the second quarter and the early part of the third quarter. The year-on-year appreciation in the price competitiveness indicator as measured by the HICP/CPI deflator against 40 countries outside the euro area reached 5% in July, while the appreciation in the euro area's overall indicator was just under 6%. The appreciation was primarily the result of the rise in the euro, while the differences in inflation were minimal. Slovenia's price competitiveness against euro area countries has continued to deteriorate as a result of sharper growth in domestic prices, in which fiscal consolidation measures were a major factor.

Slovenia's cost competitiveness has continued to improve against the euro area, while against countries outside the euro area its improvement has been limited by the rise in the euro. In the first quarter, nominal unit labour costs (ULCs) in the total economy in Slovenia were down 0.5% on the basis of figures adjusted for the season and the number of working days, while the corresponding figure in the euro area overall rose by just under 2%. The year-on-year depreciation in the cost competitiveness indicator against euro area countries thus increased to 3%. The year-on-year depreciation in the cost competitiveness indicator against 20 countries outside the euro area slowed to just over 2% in the first quarter, as a result of the year-on-year appreciation in the nominal indicator due to stronger euro.

6 | Public Finances

The year-on-year increase in the consolidated general government deficit in the first half of the year was the result of a decline in revenues, which were adversely affected by the economic situation. Expenditure also declined, but by significantly less due to increasing interest expenditure. The latter will grow further, the state budget debt having increased by EUR 2.5 billion in the first half of the year. The required yield on 11-year government bonds averaged around 6.5% during the summer months. The government is drawing up further fiscal consolidation measures in its preparation of the state budgets for the next two years.

Consolidated general government revenues and expenditure

The consolidated general government deficit widened in year-on-year terms in the first half of the year, to reach 4.3% of GDP in the 12 months to June. The general government deficit during the first half of the year amounted to EUR 1,236 million, EUR 383 million wider in year-on-year terms. The main factor in the widening deficit was a decline in revenues. The increase was mainly in

the state budget deficit: the other sub-sectors recorded a more favourable position. According to the available figures, the consolidated general government position improved in year-on-year terms in July. The state budget deficit narrowed by EUR 59 million in year-on-year terms, while the Health Insurance Institute's (HII) deficit was also narrower than a year earlier. The HII recorded a deficit of EUR 40 million during the first seven months of the year, EUR 29 million less in year-on-year terms. Local government recorded a surplus of EUR 49 million during the first half of the year, up EUR 24 million in year-on-year terms. The increase in the local government surplus was primarily the result of a reduction in investment expenditure.

Note: *All bond issues disbursed on domestic market are counted under domestic borrowing, despite of the residency of buyers.

Consolidated general government revenues have been declining in year-on-year terms as a result of the adverse economic developments and also as a result of legislative changes in corporate income taxation made last year. Revenues during the first six months of the year were down EUR 416 million or 5.7% in year-on-year terms. Tax revenues recorded an even larger decline. These developments were a reflection of the situation on the labour market, where the wage bill is continuing to decline in year-on-year terms, as a result of which household consumption is also falling. As a result of claims for higher tax allowances and the simultaneous cut in the tax rate, settlements of corporate income tax for last year have sharply reduced revenues from this source. Revenues in other major tax categories, such as personal income tax, social security contributions and VAT, are also falling, as are excise duty revenues, despite a rise in excise duty rates. The standard and reduced VAT rates were raised in July, as a result of which VAT revenues are expected to increase slightly in the second half of the year. The Ministry of Finance is expecting an increase in VAT revenues of EUR 250 million on an an-

nual basis. Non-tax revenues and capital revenues were up in year-on-year terms in the first half of the year, while revenues from the EU budget were down.

Consolidated general government expenditure in the first half of the year was down 0.4% in year-on-year terms. Despite measures to reduce expenditure, interest expenditure is increasing, while pension payments are also up. Expenditure declined by EUR 33 million in year-on-year terms. Many categories of expenditure have continued to decline on the basis of the measures adopted. The most notable is expenditure on wages, where measures have reduced the average wage, and the number of employees is also falling in year-on-year terms. Expenditure on goods and services and expenditure on certain transfers to individuals and households, which are still subject to the Fiscal Balance Act, were also down in year-on-year terms in the first half of the year. Despite the measures, there were year-on-year increases in expenditure on interest (by EUR 101 million) and pension payments (by EUR 56 million). The total number of pensioners has increased this year, rising by

3.4% in year-on-year terms in the first seven months of the year, while the number of old-age pensioners rose by 4.7%. There was a year-on-year increase of EUR 2.5 billion in the state budget debt to EUR 19.4 billion in the first half of the year, or 55.3% of estimated GDP.

Financing of the consolidated position

Net borrowing amounted to EUR 2.5 billion in the first half of the year. Borrowing amounted to EUR 4.3 billion, while debt repayments amounted to EUR 1.8 billion, the majority of the debt falling due this year having now been repaid. The majority of this year's borrowing was undertaken via May's issue of 5- and 10-year dollar-denominated bonds in the amount of EUR 2.7 billion. In addition, there was an issue of 18-month treasury bills in April in the amount of EUR 1.1 billion. The remaining borrowing relates to treasury bills of shorter maturities and to loans. The government increased its placements in bank accounts by EUR 1.1 billion during this period.

The required yield on 11-year Slovenian government bonds remains high. It averaged around 6.5% in August, having remained at a similar level for three consecutive months. The rating agency S&P confirmed Slovenia's sovereign credit rating (at A-) at the end of July, and maintained its outlook at stable.

Preparation of draft state budgets for 2014 and 2015

The state budget deficit is forecast to narrow in 2014 and 2015. The government has drafted its budget amendments for 2014 and its budget for 2015. According to these plans, the state budget deficit is forecast at 3% of GDP in 2014, and is expected to narrow further to 2.5% of GDP in 2015. The government is to present its new package of fiscal consolidation measures by 25 September 2013.

Spreads on 10-year government bonds as compared to Germany

Sources: Bloomberg, Bank of Slovenia calculations.

Note: Spread is calculated as a difference between yield of 10-year government bond and the yield of reference German bond on a daily basis and is used as a measure of country's credit risk. *In the picture, SLOREP 09/24 is used after 1. January 2013.

7 | Current Account

The increase in the current account surplus accelerated sharply in the second quarter, primarily as a result of the continued contraction in import demand. Merchandise trade accounted for just over a third of the current account surplus in the first half of the year, while the surplus of trade in services increased and the combined deficit in factor income and transfers narrowed. The current account surplus over the 12 months to June amounted to EUR 2.0 billion or 5.7% of GDP, compared with a surplus of just under 1% of GDP a year earlier.

Merchandise trade

The monthly rates of growth in merchandise trade have fluctuated sharply this year. Export growth has remained positive overall, while imports continued to decline. Year-on-year growth in nominal exports increased from 0.7% in the first quarter to 1.7% in the second quarter, while the decline in imports slowed from 4.7% to 3.3%. The merchandise trade surplus increased from EUR 150 million to EUR 235 million.

The year-on-year change in the merchandise trade position amounted to almost EUR 600 million. A merchandise trade deficit of EUR 194 million having been recorded in the first half of last year, while there was a surplus of EUR 385 million³ in the same period this year. Coverage of merchandise imports by exports was up just over 6 percentage points at 100.8%.

The improvement in the economic situation brought a year-on-year increase in exports to EU markets in the second quarter, the first such increase in a year. Previously the refocusing towards markets outside the EU had mitigated the decline in output as the EU and the euro area in particular saw recessionary developments. According to SORS figures, growth in merchandise exports to EU Member States reached 2.4% in the second

quarter. As industrial production recovered, the largest increase was in exports of intermediate goods, while exports of consumer goods were also up, but exports of capital goods declined again in year-on-year terms, in line with the continuing year-on-year decline in investment in the EU. Growth in exports to non-EU countries slowed from just under 8% in the first quarter to merely 1.8% in the second quarter. The slowdown was the result of a sharp decline in exports of capital goods, while the changes in year-on-year growth in exports of consumer goods and intermediate goods were relatively small.

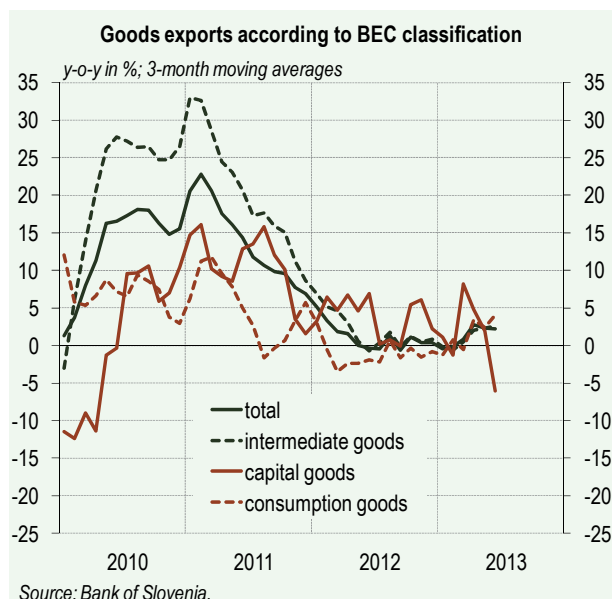

³ According to SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix), the merchandise trade deficit during the first half of the year amounted to EUR 332 million. The merchandise trade deficit with the EU27 amounted to EUR 931 million, while there was a surplus of EUR 600 million in merchandise trade with non-EU countries.

According to SORS figures, merchandise imports in the first half of the year declined merely by around 0.5% in year-on-year terms. The small decline compared with the movement in industrial production and the decline in purchasing power was the result of increased investment and purchases of consumer durables before this July's VAT rise. Growth in imports of capital goods from non-EU countries was high even in the first quarter, in connection with increased investment in the energy sector, while imports of consumer goods from non-EU countries increased sharply in the second quarter. Imports of intermediate goods continued to decline, in line with the decline in industrial production.

Trade in services

Year-on-year growth in exports of services has slowed in recent months, while the contraction in imports has increased, thereby increasing the surplus of trade in services. Year-on-year growth in exports of services stood at 5.4% in the second quarter, down 1.5 percentage points on the first quarter. The year-on-year contraction in imports of services increased from 0.6% to 2.1%. Imports of services were down 1.4% in the first half of the year, while exports were up 6.1%. The surplus of trade in services in the first half of the year was up EUR 164 million in year-on-year terms at EUR 1,026 million, or 6.0% of GDP.

The breakdown of the surplus of trade in services is changing rapidly this year. Despite the weak nominal growth in merchandise trade, trade in transport services is declining. Imports in the first half of the year were down 2.8% in year-on-year terms, while exports were down 3.6%. The surplus of trade in transport services declined by EUR 14 million in year-on-year terms to EUR 308 million. Trade in travel services is also declining. Imports of travel services declined by 4.3% in year-on-year terms while exports declined by 1.9%, reducing the surplus by EUR 6 million in year-on-year terms to EUR 629 million. Other services are becoming increasingly important to the generation of the surplus of trade in services. Exports of foreign trade intermediation services have grown fastest in the last two years, their surplus of trade reaching EUR 180 million during the first six months of this year, more than the surplus in these services over the whole of last

year. The surplus of trade in construction services is also increasing, and in the first half of the year was up a fifth at EUR 66 million.

Factor income and current transfers

The deficit in factor income in the first half of the year halved in year-on-year terms to EUR 153 million. Since the outbreak of the crisis the number of Slovenian nationals working in the rest of the world has increased, while the number of foreign nationals working in Slovenia has declined. As a result of faster growth on the receipt side, the surplus in labour income was up EUR 66 million in year-on-year terms at EUR 223 million. The deficit in capital income narrowed by EUR 95 million at the same time to EUR 375 million. The deficit in factor income dur-

ing the 12 months to June narrowed to EUR 392 million or 1.1% of GDP, having stood at 1.8% of GDP a year earlier.

Net outflows of income from FDI made the largest contribution to the deficit in capital income, although they are diminishing. Net outflows of income from FDI accounted for just under EUR 200 million of the deficit in capital income. These notably included paid dividends and distributed profits in the amount of EUR 147 million, which were down EUR 61 million in year-on-year terms. The decline in the value of FDI slowed sharply in the first half of the year, from EUR 212 million to EUR 83 million for outward investments by Slovenian residents, and from EUR 161 million to EUR 53 million for inward investments by non-residents. Another major factor in the year-on-year narrowing of the deficit in capital income was the year-on-year decline of EUR 40 million in net payments of loan interest to the rest of the world to EUR 75 million. As a result of the increase in government financing via issues of securities on foreign markets under high interest rates, the net outflow of income from securities increased by EUR 35 million in year-on-year terms to EUR 102 million.

Despite a small surplus in the second quarter, the current transfers position in the first half of the year was worse than last year. Current transfers recorded a net inflow of EUR 3 million in the second quarter. The net inflow was the result of government transfers, which mostly comprised funds from the EU budget for the implementation of the common agricultural and fisheries policies, regional development funds and funds from the European Social Fund. Private transfers recorded a net outflow of EUR 53 million. The deficit in current transfers in the first half of the year amounted to EUR 77 million, compared with a small surplus during the same period last year.

8

Capital and Financial Account

June's net outflow of funds to the rest of the world from the private sector was merely just under a half of the previous month's net outflow at EUR 374 million. The main factors were outflows from an increase in investments in foreign securities and a decline in non-residents' investments in domestic securities. The government sector recorded a net outflow of EUR 308 million in June as a result of an increase in claims (primarily from a derivative on dollar bonds) and a decline in liabilities, while the central bank recorded a net inflow of EUR 272 million from an increase in liabilities. The net external debt declined by EUR 371 million in June to stand at EUR 12.8 billion or 36.7% of GDP at the end of the month.

Private sector's claims

The largest factor in June's increase of EUR 102 million in the private sector's claims against the rest of the world was the net outflow of EUR 125 million from investments in foreign securities. Claims from trade credits increased by EUR 70 million, while the banks reduced their deposits in the rest of the world by EUR 215 million, and FDI also declined. Loans to the rest

of the world remained almost unchanged. The private sector increased its claims by EUR 1.8 billion in the first six months of the year, 92% more than in the same period last year.

Private sector's liabilities

The private sector's liabilities to the rest of the world declined by EUR 272 million in June, primarily as a result of a decline of EUR 254 million in non-residents' investments in domestic securities. Domestic corporates recorded a net decline of EUR 77 million in liabilities from foreign loans, but borrowed EUR 64 million on the basis of trade credits. The private sector's liabilities declined EUR 705 million in the first half of the year, and were down 43% on a year earlier.

External debt

The net external debt declined by EUR 1.5 billion in the first half of the year to stand at EUR 12.8 billion at the end of June. The general government sector's net external debt declined by EUR 507 million in June (largely as a result of government bonds), while other sectors (primarily non-bank financial corporations) reduced their net external debt by EUR 222 million, as the banking sector's net external debt rose by merely EUR 42 million. The gross external debt declined by EUR 555 million in June to end the month at EUR 40.4 billion.

9 | Banking System*

June's above-average contraction in total assets was the result of the withdrawal of government deposits and a decline in issued debt securities. The banks discontinued their repayments of debt to banks in the rest of the world. After three consecutive months of decline, the fall in household deposits came to an end. As a result of the decline in funding, the banks reduced their investments in securities and loans to banks and the non-banking sector. The contraction was most notable in loans to non-financial corporations. The banks recorded a loss during the first half of the year.

Total assets

The banking system's total assets declined by EUR 1,050 million in June to EUR 44.9 billion. The figure was down 8.8% on a year earlier. The decline in total assets was the result of the withdrawal of government deposits and a decline in issued debt securities. As funding has declined, the banks have adjusted on the investment side by reducing loans to banks, investments in securities and loans to non-financial corporations.

Investment activity

The stock of loans to banks recorded an above-average contraction in June. The banks reduced their loans to banks by EUR 419 million, the largest reduction this year, primarily as a result of short-term loans to foreign banks.

The contraction in lending activity to the non-banking sector continued in June. The stock of these loans was down EUR 227 million, driven primarily by a contraction in loans to non-financial corporations. The stock of loans to other sectors also declined, with the exception of OFIs. Loans to the non-financial sector were down 9.6% on the same period last year.

* This section uses data from the banks that report to the Bank of Slovenia in accordance with the Guidelines for implementing the regulation on reporting by monetary financial institutions. Because of methodological differences, these figures differ from the published statistics.

The contraction in loans to non-financial corporations (NFCs) strengthened again in June. After the creation of impairments and provisions, the stock of loans to NFCs was down EUR 196 million, while the year-on-year contraction deepened to 13.1%. All the bank groups recorded a contraction in June, the large domestic banks recording the largest decline of EUR 91 million, while the decline at the banks under majority foreign ownership was also above-average, at EUR 87 million. The contraction in loans was partly the result of the creation of impairments and provisions, which is also bringing a deterioration in bank performance. The largest increases in the year-on-year contraction in loans to NFCs, each of 0.5%, were recorded by the banks under majority foreign ownership (taking the contraction to 11%) and the small domestic banks (7.9%). The largest year-on-year contraction in loans to NFCs was still at the large domestic banks, at 15.3%.

The contraction in the stock of loans to households in June was slightly smaller than in the previous month. The stock of these loans declined by EUR 20 million, and was down 3.1% in year-on-year terms. The main factors in June's contraction were the large domestic banks and, to a lesser extent, the banks under majority foreign ownership, while the small domestic banks and savings banks increased their stock of loans to households for the fourth consecutive month, by EUR 5.4 million on this occasion. The year-on-year contraction at this bank group slowed to 4% in June, compared with 4.2% at

the large domestic banks and 3.1% at the banks under majority foreign ownership. After declining for two months, housing loans increased by EUR 17 million in June, which mitigated the contraction in the stock of housing loans in the first half of the year, which amounted to EUR 11 million. Year-on-year growth remained positive, at 0.3%. The lengthy economic crisis and the deterioration in the general standard of living are resulting in a further contraction in consumer loans. These were down EUR 9 million in June, taking the decline during the first six months of the year to EUR 97 million; the year-on-year contraction stood at 8.5%.

The banking system's investments in financial assets in the form of securities declined by EUR 460 million in June, the largest decline in the last four years. This was partly the result of the maturing of 18-month Slovenian treasury bills, while the banks also adjusted to the decline in funding by selling securities. As a result of the simultaneous contraction in total assets, the proportion of total assets accounted for by securities remained relatively unchanged, at 15.5% in June.

Funding

The stock of wholesale funding declined in June as a result of a decline in the stock of issued debt securities. This was down EUR 322 million, as a result of the partial prepayment of bonds by one of the banks. On this occasion debt repayments to foreign banks were not a factor in the decline in wholesale funding, liabilities to foreign banks having declined merely by just under EUR 8 million in June.

June's decline in deposits by the non-banking sector was primarily the result of withdrawals of EUR 440 million in government deposits. Year-on-year growth in deposits by the non-banking sector thus declined by 2 percentage points to 1.5%. Of the different bank groups, the banks under majority foreign ownership recorded the largest decline in government deposits. After declining for three consecutive months, household deposits increased in June, while the decline in deposits in other segments was small.

After three consecutive months of decline, the decline in household deposits came to an end in June.

compared with last June, as a result of a base effect. Impairment and provisioning costs in the first half of the year were up 10% on the same period last year at EUR 467 million. The banks used 81% of their gross income to cover impairment and provisioning costs. Operating costs were down 6% in year-on-year terms. The banking system recorded a pre-tax loss of EUR 242.7 million during the first half of the year.

The stock of household deposits was up EUR 20 million in June, but was nevertheless down 3.1% in year-on-year terms. The banks under majority foreign ownership recorded the largest increase in deposits, a reflection of their modified funding strategy, which emphasises the importance of primary funding and a reduction in funding via parent banks. Deposits declined at the large domestic banks, but increased at the small domestic banks, primarily as a result of an increase in deposits at savings banks. Year-on-year growth was positive at the banks under majority foreign ownership and at the small domestic banks and savings banks, at 7.4% and 6.6% respectively. The large domestic banks are facing negative year-on-year growth in household deposits; the decline stood at 8.3% in June, which was nevertheless a third less than the decline in total assets.

Banking system's operating result

The banks' pre-tax loss more than doubled in June.

The year-on-year decline in net interest remained the same as in the previous month at 21%. Interest income was down 24% in year-on-year terms, as a result of the contraction in lending activity and growth in impairments, while interest expenses were down 27%, as a result of the more favourable cost structure of funding, in addition to the decline in borrowing. The banking system's gross income in June was down 29.6% in year-on-year terms, the decline having stood at just 17% in May. The main factor was a decline of 42% in net non-interest income

10

Financial Markets

The SBI TOP rose by 2.9% in July, when the volume of trading amounted to EUR 28.2 million. The volume of trading in bonds was above-average, primarily as a result of trading in Probanka and Zavarovalnica Triglav bonds. The positive mood on the international financial markets saw residents make net purchases of foreign shares and bonds. Non-residents made net sales of Slovenian bonds and net purchases of Slovenian shares, partly as a result of the injection of capital into Pozavarovalnica Sava by Croatia Osiguranje. Despite net withdrawals, the domestic mutual funds' assets under management increased to EUR 1,819 million as a result of a rise in the average unit price.

Developments on the Ljubljana Stock Exchange

The SBI TOP rose by 2.9% in July to 634 points, taking the year-on-year change to +23.2%, the highest figure in the last few years. Share prices of listed companies not included in the SBI TOP recorded a higher monthly rise than the index, as a result of which the market capitalisation of shares on the Ljubljana Stock Exchange increased by 5.7% to EUR 5,078 million. The volume of trading in shares was very low in June, for which reason July's increase of 29.2% to EUR 28.2 mil-

lion came as no surprise. The most heavily traded shares were Krka, Telekom Slovenije and Petrol. Despite it being summer, when volume is usually lower, this increased demand from investors for shares in listed companies can be attributed to the low value of listed companies and speculation about the sale of certain companies. The Gorenje Group and Japan's Panasonic concluded a long-term strategic partnership, within the framework of which the latter will inject EUR 10 million of capital into Gorenje at a price of EUR 4.31 per share, thereby acquiring an interest of 13% in the firm. The announcement of the commercial and capital tie-up raised Gorenje's share price by 9.5% in July, and it ended the month 6.5% above the announced capital increase price. The dividend yield on the prime market stood at 4.1% at the end of July.

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 0.3% in July, while the volume of trading in bonds was up 90.1%, primarily as a result of increased trading in 10th-issue Probanka bonds and 2nd-issue Zavarovalnica Triglav bonds. Probanka d.d. undertook activity to prepay its PRB10 bonds at 68% of nominal value with the aim of improving capital adequacy. The difference between the bond's purchase price and the nominal value constitutes income for the issuer, and thus has an indirect impact in improving is capital adequacy ratio. There was also above-average trading in 2nd-issue Zavarovalnica Triglav bonds, partly as a result of the Triglav Group's one-notch upgrade from BBB+ to A- and its stable outlook from rat-

ing agency S&P. Mercator d.d. issued 5-month commercial paper with a total nominal value of EUR 6.5 million at an interest rate of 4.92%. Tušmobil d.o.o. issued 2-year bonds with a nominal value of EUR 5 million and a coupon rate of 6.5% for the purpose of repaying debt to Telekom Slovenije.

Inward investments by non-residents

Non-residents made net sales of EUR 59.5 million in Slovenian bonds and net purchases of EUR 39.6 million in Slovenian shares. Residents of Belgium and Luxembourg swapped roles compared with the previous month: residents of Belgium were the largest net purchasers of Slovenian bonds (EUR 87.2 million), while residents of Luxembourg were the largest net sellers (EUR 117.2 million). The latter made net purchases of the newly issued Tušmobil bonds and the Mercator 5-month commercial paper, which is evidence that there is interest on the part of non-residents in investing in the commercial paper of Slovenian firms. The main purchasers of Slovenian shares were residents of Croatia, primarily as a result of the capital injection of EUR 18.7 million by Croatia Osiguranje into Pozavarovalnica Sava d.d., the former thereby becoming the latter's second-largest shareholder with an interest of 9%. Residents of the USA also recorded relatively high net investments, at EUR 8 million, having made net purchases of Slovenian blue-chips such as Krka, Mercator and Telekom Slovenije. The proportion of the market capitalisation of the Ljubljana Stock Ex-

change accounted for by non-residents rose to 14.5% in July, the highest figure in at least the last five years.

Outward investments by residents

Slovenian residents made net purchases of EUR 54.5 million in foreign equities and net purchases of EUR 11.6 million in foreign debt securities in July. The announcement of good corporate results by European and American firms in the first half of the year convinced investors to make more substantial investments in shares. Households primarily made net purchases of American corporate shares, their purchases of EUR 24.1 million accounting for almost half of the total net investment. Households financed their purchases of foreign shares via net sales of bonds and mutual fund units. The next largest net purchasers were other financial intermediaries, whose net purchases of EUR 15.2 million primarily comprised corporate shares from the euro area. Non-financial corporations also recognised an opportunity to purchase shares in foreign firms, making net purchases of EUR 6.3 million after a long period of avoiding such purchases. The banks were the sole net purchasers of foreign bonds in July, their net purchases of EUR 40.2 million relating almost entirely to euro area bonds. Insurance corporations and pension funds were rare net sellers of bonds on this occasion, in the amount of EUR 20 million. Their net sales primarily related to euro area bonds.

Domestic mutual funds

Net withdrawals from the mutual funds continued in July, and amounted to EUR 2.6 million. The mutual funds' assets under management nevertheless increased to EUR 1,819 million, as a result of a rise of 1.7% in the average unit price. Market participants that made net purchases of foreign equity and bond investments in July recorded net sales of mutual fund units. This was an indication of the loss of confidence in the search for higher-yielding investments while acceptable risk is maintained in the mutual funds. Market participants that have their own management companies, among them insurance corporations and banks, are placing less and less money with mutual funds, and are more frequently opting for independent investments on the domestic and foreign capital markets. The largest net sales were recorded by non-financial corporations, at EUR 1.2 million, while insurance corporations, banks and households also recorded net sales. Given the need to provide net withdrawals, mutual fund operators reduced the proportion of the domestic mutual funds' assets held as liquid assets⁴ to 9.9%, the lowest figure for the last two years.

⁴ Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary. The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical

documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Note 1: With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) pre-

sents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	Title	share of euro

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds
General

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term. Short-term ones include all instruments of monetary market with original maturity of one year or less. Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities. Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund. Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up. Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests. Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives. Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred

interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The **repo interest rate** for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The **overnight-deposit interest rate** is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A **penalty rate** is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “**Euribor®**” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia

and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF. The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion »shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions.«

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

“Loans to households for other purposes” include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT and from January 2007 in EUR, by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. “credit institutions”) apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18 (amended by Regulation ECB/2009/7), which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies

fies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 101 interest rate indicators with the corresponding volumes are collected, of which 87 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. APRC is calculated in accordance with the provisions of Articles 22 and 23 of the Consumer Credit Act. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Exchange rates (Tables 2.6.1–2.6.2)

Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.6.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008, the conversion rate for the Slovak koruna as of 1 January 2009 and the conversion rate for the Estonian kroon as of 1 January 2011.

Payment systems (Tables 2.7 to 2.13)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system. As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system. As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.8 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with

foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.9 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.10 Electronic Banking

Note 1: Only credit transfers debited from payers' accounts are included.

Note 2: Payments by Bank of Slovenia as payment service provider for non-MFI subjects are also included from 2011 on.

Table 2.11 Credit Transfers

A **paper-based order** is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

A **special payment order** is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A **non-paper-based credit transfer** is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A **standing order** is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.12 Debit Transfers

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

Note 1: A special money order was used until the end of 2009. Special money order was a standardised paper-based debit instrument used to remit money to the named payee. A special money order was issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.13: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000. Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

- Revisions in monthly data are published with the release of:
 - the following month's data;
 - the corresponding quarterly data;
 - the corresponding revised quarterly data;
 - the international investment position and external debt data for the corresponding year; and
 - the revised international investment position and external debt data for the corresponding year.
- Revisions in quarterly data are published with the release of:
 - the following month's data;
 - the data on the following quarter;
 - the international investment position and external debt data for the corresponding year; and
 - the revised international investment position and external debt data for the corresponding year
- Revisions for the annual balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

The external trade statistics (Statistical Office of the Republic of Slovenia) is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the **Intrastat reporting**. The source of data on trade in goods with other countries is the single administrative document (**Extrastat reporting**).

Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):

- report on account balances at domestic banks – PPV (until 31 December 2004),
- report on account balances abroad – C (until 31 December 2006),
- report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
- report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST) are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.

Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD) are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.

Reports on purchased/sold foreign debt securities without domestic brokers (DVP) are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.

Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR) are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obta-

ined the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.

Reports on monetary financial institutions (PORFI) are the source for data on loans, cash and deposits of the banking sector since 2005.

Reports on credits received and granted and deposits with non-residents (KRD) are the source for data regarding loans and deposit of all sectors, except banks, since 2007.

Reports on short-term receivables and liabilities from operations with non-residents (SKV) are the source for short-term trade credits and advances since 2002.

Reports on investments (SN) are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.

Report on Modern Payment Instruments (SPI) for data on acquisition of fuel by nonresident transport operators at Slovene petrol stations settled via payment cards of foreign issuers from 2008 onwards.

Accounting data of the Bank of Slovenia

Accounting data of banks (KNB)

Budget data on the transactions of government sector between the Republic of Slovenia and EU (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (from 2007 onwards). For banks this data source was used until 2010 (in 2011 it was replaced by PORFI), for government sector this data source was used until 2012 (in 2013 it was replaced by direct reportinf of the Ministry of Finance).

Estimates and other sources

- estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
- estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
- estimate of Italian pensions (IMAD) until the end of 1998,
- estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
- estimate of labour income (SORS),
- data on pensions paid to non-residents (ZPIZ),
- survey on the write-downs of debt from trade in goods and services abroad,
- estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
- estimate of cash transactions on tourism and labour income (from 2007 onwards),
- quarterly data on consumption of foreign embassies in Slovenia (SORS, from 2008 onwards),
- migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
- households' transfers (SORS, from 2008 onwards),
- assets acquired directly by tenders and programmes of EU (SORS, from 2008 onwards),
- data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards),
- data on purchases/sales of real-estate in Croatia (Croatian National Bank, from 2008 onwards),
- data on direct investment of Slovene households in the form of real estate abroad (main data source Household Budget Survey, SORS)
- data on purchases/sales of emission allowances between residents and nonresidents (Slovenian Environment Agency, from 2008 onwards until 2011, From 2012 onwards data is collected by BST monthly report).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad. The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists. Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SORS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists; three-year's survey -last conducted in 2009)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SORS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SORS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SORS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SORS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows and inflows (data provided by foreign central banks) and transfers of households (SORS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SORS, Annual survey on investment in tangible assets). Cross border transactions in emission allowances are included in capital account (as purchases and sales of non-produced non-financial assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards). From 2007 onwards, data on foreign direct investments of households in the form of real estate are included.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From the same year data on Slovenian residents' purchases/sales of real-estate in Croatia are included (data source is Croatian National Bank).

Since 2001, there is a break in the data series in the category »Direct Investments - Other Capital«. Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category »Other Investments«. Since 2002, the category »Direct Investments - Other Capital« also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart). For financial derivatives of banks from 2011 onwards the data source is PORFI and for financial derivatives of the government from 2013 onwards the source is the reporting of the Ministry of Finance.

Other investments**Short-term trade credits**

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]}
- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]}

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1988 – 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in “Other sectors”.

Note 2: For 1988 through 1990, “Statistical errors” include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the “Other changes” category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to “Liabilities to government”.

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)
- October 2012 (USD 2250.0 million)
- April 2013 (USD 3500.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)
- January 2011, RS69 (EUR 1000.0 million)
- March 2011, RS70 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading “Direct investments”, while other commercial credits are included in “Other investments/trade credits”.

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: “The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area” (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2013 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2010 to 2012 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2014, the estimate will be replaced with actual data on reinvestment of earnings for 2013; the estimate for 2014 shall take into consideration the new three year average (2011 to 2013).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". From 2005 onwards loans of banking sectors are not included. Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From 2007 data on foreign direct investment of households in the form of real estate are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment-other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portofolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN). From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart). For financial derivatives of banks from 2011 onwards the data source is PORFI and for financial derivatives of the government from 2013 onwards the source is the reporting of the Ministry of Finance.

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items. From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available. From 2007 onwards, the level of foreign currency holdings of domestic household sector equals the level that was reached at the end of the year 2006 (2.948,6 EUR million), when Slovenia joined the European Monetary Union.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on direct investment of Slovenian households. From 2007 onwards only estimation of the value of real estate direct investment abroad by Slovenian household sector is included,
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government

during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities, financial derivatives and monetary gold are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table »Net External Debt«, data are sorted by sectors, maturities and instruments; in the table »International Investment Position«, data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers. From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community. ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data. Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia. The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Note 4: On 1 October 2011, the Tax Administration of the Republic of Slovenia (DURS) introduced new information system and due to that, large number of recorded data on the tax and social security contribution revenues remained on unallocated fund accounts, while totals for those two categories were unaffected. We are publishing the data where certain categories of taxes and social security contributions were estimated by the Ministry of finance. The funds are expected to be correctly allocated already next month. Source: <http://www.mf.gov.si>

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors. Net financial assets present difference between financial assets and liabilities (stocks). Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances. Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken

and associated with such transactions. Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on

the production of industrial products. From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Note 1: In 2013, the Statistical Office of Republic of Slovenia stopped publishing data on industrial new orders.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries. Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1–ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper »Calcu-

lations of harmonised competitiveness indicators», on the Web site of Bank of Slovenia: <http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
