Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

The economy continued to perform well in Slovenia in the early part of this year. Initial figures for industrial production (up 9.3% year-on-year in February) and turnover in industry show economic growth to have remained high, but there are some signs of slowing in the current rates. Production of capital goods picked up in the early part of the year, with growth in inventories of the same recording the largest increase. New orders in the first two months of the year were above the average for the final quarter of 2006, having fallen in February on both the domestic and foreign markets. The indicators of economic sentiment also remain optimistic and above the long-term average, the most notable difference from the same period last year being confidence in the construction sector, where the largest increase in the value of work performed is coming in the civil engineering segment.

Trends on the labour market are in line with the high economic growth. The persons in employment continue to increase, while the number of unemployed is constantly declining. Employment at companies is growing, and rising even faster in the small business sector. The registered unemployment rate stood at just 8.4% in February, down 2 percentage points on a year earlier. Growth in labour costs remains moderate, with February's slight decline in gross wages in the majority of sectors primarily reflecting the fewer working days in that month.

Inflation stood at 2.9% in April. It was up from March's year-on-year inflation figure of 2.6%, primarily as a result of seasonal rises in prices of unprocessed food. The other main categories in the HICP and the movement of estimated core inflation point to slower price growth, as in the previous month.

The widening of the current account deficit is the result of growth in outward factor income and transfers, while the deficit in merchandise trade is also widening and the surplus in trade in services is declining. The deficit in merchandise trade with euro area members is widening, while the surplus in trade with non-EU countries is increasing. The competitiveness indicators are continuing to display the trends of recent months: the real effective exchange rate as measured by consumer prices and producer prices appreciated, while the exchange rate as measured by unit labour costs depreciated as a result of low labour costs.

Portfolio investments were prevalent among financial investments by the private sector, the most prominent being high bank investments in euro area debt securities as a result of the release of money from the maturing Bank of Slovenia bills.

1 | International Environment

In April the IMF forecasted a continuation of relatively good global economic growth this year, down slightly from last year. The forecasts for global economic growth do not differ significantly from last year's autumn forecasts, remaining at 4.9% for this year. The estimate of last year's global economic growth was raised to 5.4% (compared with 5.1% last autumn) as a result of good growth in the final quarter. The main factor in this year's forecast of a slowdown in global economic growth compared with last year is the lower growth forecast for the USA, although growth in other major world economies is also forecasted to slow albeit slightly less notably. In April the IMF cut its forecast for this year's economic growth in the USA by 0.7 percentage points from last autumn to 2.2%. The cut in the IMF forecast primarily reflects the lower forecast for growth in investment in housing, which are partly compensated by the improvement in the trade forecast. Economic growth in the USA should gradually improve during the course of the year. Consensus also cut its April forecast for economic growth in the USA to 2.3% from March's 2.4%, as a result of a cut in the forecast in corporate investment. The IMF's April forecast for this year's economic growth in the euro area was raised to 2.3% from last autumn's 2.0%. The April forecast still entails a slowdown in growth from last year's rate of 2.7%, primarily as a result of the tightening of monetary

policy and a lowering of the forecast contribution of net trade to GDP growth. Consensus also raised this year's economic growth forecast for the euro area from 2.3% in March to 2.4% in April, as a result of improved forecasts for growth in industrial production in Germany.

The ECB and the Federal Reserve left their key interest rates unchanged in April. The key interest rate in the USA remained at 5.25% in April, the Federal Reserve's open market committee not having met in the month. Following the release of the minutes from March's meeting, expectations of a possible rise in interest rates this year have increased, owing to the increasing concerns over inflation shown by Federal Reserve representatives. The ECB left its key interest rate unchanged in April at 3.75%. Following the meeting there were increased expectations on the financial markets of the next rise in interest rates coming at June's meeting.

The euro continued to appreciate against the dollar in the first half of April. The main factors in the appreciation were the expectations of further rises in the ECB's interest rates, and the slightly weaker economic indicators in the USA. The figures for the real estate market, consumer confidence, factory orders and business confidence in the service sector in particular were worse than anticipated. In addition, trade relations between the USA and China sharpened slightly.

Inflation was higher in March in both the euro area and the USA, as a result of the rise in energy prices. March's inflation rate in the euro area of 1.9% year-on-year was equal to the core inflation rate. March's rise in annual inflation of 0.1 percentage points was primarily the result of the rise in oil prices. Core inflation remained un-

der the influence of the rise in VAT in Germany, but core inflation is also increasing in the majority of other member-states. Inflation in the USA rose again in March to reach 2.8% year-on-year, but the markets were favourable surprised by the decline in core inflation, which slightly eased fears about inflationary pressures.

Oil prices remained relatively high in the first half of April. Despite the resolution of the tensions between Iran and the UK at the beginning of the month, the price of a barrel of Brent crude remained close to USD 69 in the first half of April. Oil prices were encouraged to persist at their relatively high levels primarily by the decline in stocks of oil in the USA. The decline in stocks is exceeding oil traders' expectations, and is currently happening approximately one month before the start of the summer driving season, which entails more holiday journeys and higher demand for petrol in the USA. In addition, in the middle of April the IEA released its estimate of the current very low level of pumping by Opec members. The Iranian nuclear question again came to the fore, while there were elections in Nigeria in the second half of April, which led to increased political tensions there. Growth in prices of non-precious metals picked up, which brought an increase in the index of commodities prices other than oil prices.

2 | Economic Activity and Labour Market

Industrial production again recorded high growth in the first two months of the year. Year-on-year growth in industrial production stood at 9.3% in both January and February. At 0.72%, the current rate of growth remained high in February, but had slowed slightly down from the last few months of last year. All categories of manufactured goods recorded positive growth as in January also in February. The largest average year-on-year growth in the first two months of the year was recorded by production of capital goods, and the current rates of growth present a similar picture. On average over the first two months of the year the largest growth was recorded by the production of wood and wood products, the production of other non-metallic mineral products and the production of chemicals, chemical products and manmade fibres. The electricity, gas and water supply sector recorded negative year-on-year growth rates over the same period. Sales revenues from manufactured goods recorded year-on-year growth of 8.9% on average in January and February. The greatest contribution came from the sales revenues of the intermediate goods. The stock of industrial products recorded a year-on-year increase of 4.9% in February.

Activity in the construction sector remained favourable in the first two months of the year. Sales revenues in the retail sector continued to present a posi-

tive picture in February. The tourism sector continued to record good results in the first quarter. February's real year-on-year increase of 31% in work performed in the construction sector mainly reflects the significant increase in civil engineering work (77.3%), while the year-on-year increase in the construction of buildings was similar to that in the preceding few months at 11%. The current rate of growth in the two construction categories has continued the trend from the end of last year, and expectations for this year thus remain favourable in the construction sector. Sales revenues in the retail sector were good in both January and February. The current monthly rate of growth in revenues stood at 0.35% in February. The first quarter of this year also brought encouraging results in tourism, the number of foreign visitors to Slovenia rising by 7% year-on-year in February, and the number of overnight stays by 4%. The largest increases in sales revenues from services in January were recorded by land transport, travel and tourism, and miscellaneous business services. The main factor in the latter was the sharp year-on-year increase in technical consultancy. Year-on-year growth in revenues in the hotels and catering sector declined to 5.9% in January.

The indicators of confidence and economic sentiment remain high. The seasonally adjusted indicator of economic sentiment improved in April, primarily as a result of the manufacturing confidence indicator and the services confidence indicator. In April all three indicators

were up 2 percentage points compared to March. Since this April, the services confidence indicator has been included in the calculation of the economic sentiment indicator alongside the construction confidence indicator. The indicator of economic sentiment was up 8 percentage points from last April, and, as in March, was a good 13 percentage points above its long-term average. April's manufacturing confidence indicator was up 5 percentage points year-on-year, and was a very high 17 percentage points above its long-term average. The construction confidence indicator increased by 24 percentage points over the same period, making it 26 percentage points higher than its long-term average. Expectations regarding future trends in the construction sector thus remain favourable. April's retail trade confidence indicator, which now covers companies' feelings about sales, projected sales and inventories of merchandise, was up 1 percentage point from the previous month, and 3 percentage points from a year earlier. More pessimistic forecasts for the financial standing of households in the coming 12 months caused an April's seasonally adjusted consumer confidence indicator fall of 2 percentage points on March.

Year-on-year growth in the average gross monthly wage was lower in February than in January, primarily as a result of the lower number of working days. Year-on-year growth in the average gross wage averaged 5.6% in the first two months of the year, or 3.3% in real terms. The average gross wage in almost all sectors

was lower in February than in January, the exceptions being financial intermediation and, to a lesser extent, transport. The highest year-on-year increases in gross wages on average over the first two months of the year were recorded by the sectors of financial intermediation (8.9%), trade and motor vehicle repair (7.9%), transport, warehousing and communications (7.4%), and construction (7.4%).

There was a year-on-year increase in the workforce in employment in February, while the registered unemployment rate fell. The workforce in employment was up 0.4% in February from the previous month, and up 3.4% year-on-year. The seasonally adjusted number of registered unemployed was down 1% in February from the previous month. The registered unemployment rate fell by 0.3 percentage points in February to 8.4%, down 2 percentage points from the same month last year.

The nominal effective euro exchange rate as measured against a basket of foreign currencies in the first quarter of this year was unchanged from the end of last year. The increase in the nominal effective euro exchange rate of 0.1% in February and 0.2% in March entirely compensated for January's decline of 0.3%. The main factors in March's appreciation were the rise of 1.3% against the dollar and the rise of 1.8% against the pound sterling. The trend of a strengthening euro continued on world financial markets in the first half of April. The euro gained 1.6% against the dollar, and 1.4% against the Swiss franc, and the nominal effective ex-

change rate as measured against the basket of foreign currencies is therefore expected to have appreciated by between 0.3 and 0.4 percentage points in April. Further strengthening of the euro on world markets that is not tracked as appropriate by productivity growth could have adverse consequences for the euro area competitiveness, and thus the competitiveness of the Slovenian economy.

* Domestic currency was the tolar until the end of 2006, then the euro.

** Owing to a change in statistics, labour costs are now calculated merely on the basis of gross wages in manufacturing.

Price competitiveness as measured by consumer prices deteriorated by 0.9% in March. Consumer prices rose by 1% in March, more than outweighing the deflation in the preceding two months. With domestic prices rising faster than the basket of foreign prices and the nominal effective euro exchange rate appreciating, price competi-

* Unit labour costs divided by nominal eff. exchange rate. Growth index denotes competitiveness growth (+)/(-) change in index denotes increase/decrease in competitiveness.

tiveness as measured by consumer prices deteriorated by just under 1 percentage point. The longer-term competitiveness indicators also deteriorated. The year-on-year appreciation in the real effective exchange rate as measured by consumer prices rose from 1.8% in February to 2.1% in March. The main factor in the deterioration of the longer-term indicator of competitiveness was the appreciation of the nominal effective exchange rate, which accounted for three-quarters, with one-quarter coming from domestic prices growing faster than foreign prices.

The deterioration in price competitiveness as measured by producer prices slowed in March. Competitiveness deteriorated by 0.4% in March, or just over one-third of the average monthly appreciation of the real effective exchange rate in the preceding two months. The high producer price index in January and February was probably the result one-off price adjustments, with producer prices rising by just 0.3% in March. More than one-half of the deterioration in price competitiveness came from the rise in the nominal effective euro exchange rate. Price competitiveness as measured by producer prices deteriorated by 3.4% year-on-year in the first quarter overall.

Price competitiveness as measured by unit labour costs recorded a seasonal improvement of 5.6% in February. With growth in output remaining high in the early months of this year, and labour productivity suitably high, the main factor in the improvement in price competitiveness was February's decline in wages paid in manufacturing, by just over 5% year-on-year.

is slowing, as it was in March. Year-on-year growth in prices of services stood at 3.9% in April, thus continuing the gradual decline in these prices following the sharp one-off rises in December and January. A very similar dynamic has been observed in recent months in prices of manufactured goods other than energy prices: year-on-year growth again turned negative in March in line with the 12-month moving average trend, while in April it fell further to -0.5%. The increase in the HICP in April was primarily the result of the sharp and at least partly seasonal rise in prices of fresh food, year-on-year growth in which rose from 5.9% in March to 10.9%, and was thus the main factor in the increase in year-on-year growth in food prices to 6.1%. The rise in prices of fresh vegetables between March and April accounted for about 0.24 percentage points of the overall index, while fresh fruit accounted for 0.11 percentage points.

Despite April's inflation being higher than March's, estimated core inflation actually fell from 2.1% to 1.9%. This was not surprising, given that April's rise in inflation was almost exclusively a result of rises in energy prices and seasonal food prices. Estimated core inflation, which rose relatively sharply in December and January, thus fell for the third consecutive month. Given its exceptionally low rate one year ago, however, means that estimated core inflation still remains higher than its 12-monthly average of 1.7%, indicating that its rise compared with a year earlier is somewhat longer-lasting.

Year-on-year growth in prices of manufactured goods on the domestic market stood at 5% in March. Average year-on-year growth was similar to February's 5.1%, when for the first time in a year it rose significantly above

3 | Price Developments

Monthly inflation as measured by the HICP stood at 1.1% in April, while year-on-year inflation stood at 2.9%. Year-on-year inflation was higher than in March, when it stood at 2.6%, and higher than the 12-monthly average of 2.6%. However, a more detailed analysis shows that price growth in the main categories of inflation

its 12-month moving average rate, which now stands at 3.1%. The main pressures on prices of manufactured goods on the domestic market in February and March came from the rise in energy prices as a result of the rising oil prices and electricity prices, while commodities prices also continue to record relatively high growth. In addition, there was slightly stronger growth in prices of capital goods in the first three months of the year on the domestic market, although significantly less than on foreign market. Consumer goods continued to show contrasting trends: growth in prices of consumer durables has been gradually increasing for one year, and reached 7.2% year-on-year in March, while prices of non-durables continue to decline, particularly in recent months, falling by 0.9% in March. Overall year-on-year growth in prices of consumer goods stood at 1.8% in March, which coincides with its 12-monthly moving average rate. Year-on-year growth on the foreign market has been increasingly subdued in the last six months. Together with the rise in energy prices on the domestic market this contributed towards year-on-year growth in prices of manufactured goods in February and March to be higher on the domestic market than on the foreign market, which entails a change from the second half of 2006.

The aggregate level of prices of goods and services for final consumption in Slovenia was 75% of the EU25 average in 2004 and 2005. According to Eurostat figures, this was down 1 percentage point from 2003, while the level of prices of goods and services for individual consumption by households, which includes non-

tradable services provided by the government and not-for-profit institutions, fell from 74% to 73% over the same period. In comparison with the EU25, in Slovenia in 2005 prices of services were significantly lower, by 30%, while prices of semi-durables and goods purchased periodically were relatively high, just 4% lower than the EU25 average.

4 | Balance of Payments

The deterioration in the current account continued at the beginning of this year. A current account deficit of EUR 162 million was recorded in February, just one-fifth less than the seasonally-influenced record deficit in December, and one-half more than the deficit recorded in the same month last year. This took the cumulative current account deficit for the last 12 months up by just under EUR 100 million to EUR 851 million, or 2.8% of estimated GDP. The main factors in the widening of the current account deficit in the first two months of the year were the wider deficit in merchandise trade and the net deficit in factor income and transfers.

The trend of a slowdown in the current rate of growth in merchandise trade that began in the final quarter of last year continued in February, on the import side in particular. The annualised current rate of growth in merchandise exports stood at 14.7% in February, while

MARKET SHARES OF SELECTED COUNTRIES IN EURO AREA INTRA EU(25) TRADE AND GROWTH IN THE PERIOD 2001-2006

the rate for imports fell from 20% in January to 14.8%. Merchandise exports amounted to EUR 1,467 million in February, up 16.5% on the same month last year, while imports were up 15.2% at EUR 1,588 million. The result of these movements in merchandise trade was a deficit of EUR 121 million, which took the cumulative deficit in the first two months of the year to EUR 202 million.

Slovenia only has a deficit in merchandise trade with EU member-states, the euro area countries in particular. Since Slovenia joined the EU, merchandise trade has shown two contrasting trends. The deficit in merchandise trade with euro area countries is widening, but the surplus in trade with countries outside the euro area is increasing. The total deficit in merchandise trade increased by EUR 0.6 billion between 2003 and 2006 to EUR 1.5

MARKET SHARES OF SELECTED COUNTRIES IN EURO AREA INTRA EU(25) TRADE AND GROWTH IN THE PERIOD 2001-2006

billion. The deficit with the euro area more than doubled to EUR 3.5 billion, while the trade surplus with countries outside the euro area increased merely by just over one-third to EUR 2 billion.

The widening of the deficit in merchandise trade does not yet entail any decrease in the competitiveness of the Slovenian economy on the markets of these countries.

Slovenia's market share in euro area countries has been growing since it joined the EU. Slovenia's share of the euro area's total merchandise imports from the EU25 rose by 53% between 2001 and 2006, to 0.68%. Among Slovenia's most important euro area trade partners, there were rises of 28% in its market shares in Austria and Germany, just fewer than 10% in Italy, and 4.5% in France. A major factor in the rapid growth in Slovenia's market share, particularly since 2004, has been the high growth in output and exports by the automotive industry. Additional factors in 2006 were the good economic climate and growth in demand from euro area countries.

The rise in Slovenia's market share in euro area countries was slightly slower than in some of the other countries that joined the EU at the same time. The largest rises in market share among these countries in the last five years were recorded by Slovakia (more than 100%), Poland and the Czech Republic (each more than 80%), while Hungary recorded the lowest (33%). The market shares of Slovakia, the Czech Republic and Poland grew at faster than average pace before these countries joined the EU, this being a form of real conver-

gence and a deepening of economic trade with the euro area. The dynamics in the market shares have been slightly different since the aforementioned countries joined. In the two years since EU enlargement, the market shares of Poland, Slovakia and Slovenia have grown an average of just over 40%, while that of the Czech Republic has risen by just under one-third. Hungary has recorded the smallest increase in its market share in the period since joining the EU.

With growth in merchandise exports solid, the high growth in the deficit in merchandise trade with the euro area can be explained by the change in the breakdown of net merchandise trade in terms of purpose of use. The largest increase in the period under observation was recorded by net imports of intermediate goods, which rose from EUR 0.8 billion to EUR 1.7 billion. Given the degree to which Slovenian exports depend on imports, part of this increase can be attributed to the increase in merchandise exports to countries outside the euro area, both the new EU member-states, and the countries of the former Yugoslavia and former Soviet Union, Russia in particular.

A significant portion of the increase in the deficit in merchandise trade with the euro area can be attributed to price factors. The most important of these were commodities prices, oil prices and prices of refined petroleum products on world markets. Euro prices for a barrel of oil more than doubled between 2003 and 2006, with the value of oil imports rising from EUR 0.6 billion in 2003 to EUR 1.3 billion in 2006. More than 65% of Slovenia's total imports of oil and refined petroleum products in value terms came from the euro area, Italy in particular, and this has been a major factor in the increase in the deficit in merchandise trade with the euro area during this period.

Exports of services were down just under 5% year-on-year in February, while imports were up just over 10%. The result of these movements was slower growth in the surplus in services, which was up just EUR 5 million year-on-year to EUR 136 million, which did not suffice to cover the deficit in merchandise trade over the same period. The largest increase on the revenues side was recorded by revenues from other business services

COMPONENTS OF CURRENT ACCOUNT

(83%), within which the largest increases were recorded by trade intermediation services (92%), and miscellaneous business and technical services. On the expenditure side, since the second half of last year the largest increases have been recorded by financial services and by expenditure on construction and assembly work in Slovenia.

Despite good growth in merchandise trade, growth in revenues from transport has been only just over half of that in expenditure on transport in the early part of the year. Expenditure on transport was up just over 18% year-on-year in the first two months of the year. With expenditure growing faster than revenues, the transport surplus has stagnated at the level recorded in the same period last year of EUR 70 million. Results in the tourism sector are slightly worse. Revenues from tourism were down 23% year-on-year overall in the first two months of the year, while expenditure on tourism was down 4.5%. The result of these movements was a year-on-year decline of more than one-third in the tourism surplus to EUR 77 million. The decline in growth in revenues from services, particularly in the transport and tourism sectors, has also been a factor in the widening of the current account deficit this year.

There was a net outflow of EUR 78 million in factor income in the first two months of the year. With capital income growing slowly, primarily as a result of a decline of just over one-third in revenues from investments in foreign securities, the net deficit in factor income increased by just over 21%. As on the revenue side, out-

flows of income from investments in domestic securities were relatively low, and were merely just over one-third of those recorded in the same period last year. Outflows of income from investments in equity were up one-quarter, with outward interest payments recording the largest increase of just fewer than 50% as a result of the rise in interest rates. There was a net deficit in transfers of EUR 74 million, just a fraction less than that of net factor income. The largest increase was in official outward transfers to the EU budget, primarily as a result of payments into the EU budget from gross national income.

In the financial account, financial investments continued to record rapid growth in February, while there was a significant slowdown in growth in liabilities. In its transactions with non-residents, the private sector recorded a net outflow of EUR 828 million in February, taking its outflow in the first two months of the year to EUR 2,865 million. By contrast, the government sector recorded a net inflow of EUR 185 million in its transactions with the rest of the world during this period.

Portfolio investments have been prevalent among the private sector's financial investments this year, but all other forms of investment are growing as well to a lesser extent. Outward portfolio investments were a high EUR 1,720 million in the first two months of the year,

Source: Bank of Slovenia

banks accounting for 82% of these. The investments by banks were directed almost entirely into debt securities. Companies and other financial institutions invested EUR 303 million into foreign securities during the same period, a year-on-year increase of 65%. Companies and other financial institutions pursue a higher-risk investment strategy, with foreign equities prevalent in their investments.

Outward FDI is also recording high growth this year, via the financing of subsidiaries in particular, and to a lesser extent via equity. Investments in equity accounted for just 22% of the EUR 231 million in FDI in the first two months of the year, with financing via trade credits and loans to affiliates accounting for a larger proportion. Debt financing of subsidiaries abroad began to increase sharply last year, when it reached one-third of the total flow of FDI. The financing of unrelated companies in the rest of the world is also growing, and was up just over one-third on the same period last year. Companies maintained their level of financing of the rest of the world via trade credits, while the use of loans was mostly left to domestic banks.

The private sector recorded financial inflows of EUR 200 million in the first two months of the year, merely just under 5% of the total inflows in 2006, and significantly less than the simultaneous outward investments. February's inflow of EUR 560 million (liabilities to non-resident actually fell by EUR 360 million in January) was primarily the result of trade credits received from abroad, which have displayed a rising trend since 2006,

and a renewed increase in non-residents' deposits at domestic banks. Banks made net repayments of foreign loans in February. Companies, leasing companies in particular, are continuing to expand their loans taken from abroad, but are meeting the majority of their financing needs at domestic banks.

Portfolio investments by non-residents amounted to EUR 289 million in the first two months of the year, a year-on-year increase of 100%, the majority going into government bonds. A mere 20% of this investment was directed into the private sector. FDI into the private sector was approximately equal to portfolio investment at EUR 61 million, with non-residents increasing their equity holdings by EUR 102 million; the difference can be attributed to a decline in the financing of subsidiaries during this period.

The gross external debt increased by a further EUR 2.5 billion in the first two months of the year to EUR 26.4 billion. The increase in the private sector's liabilities to non-residents and the portfolio investments by non-residents in government securities accounted for just a minority of this increase. The largest increase in the debt came from the Bank of Slovenia's debt, which following the introduction of the euro now includes the Bank of Slovenia's position against the Eurosystem. This stood at EUR 2.8 billion at the end of February. Gross external claims increased less than gross external debt in the first two months of the year, by 1.5 billion. The difference of 1 billion EUR contributed to increase of net external debt, which stood at 4.3 billion EUR at the end of February.

5 | Public Finance

The general government deficit stood at 1.4% of GDP in 2006 according to the ESA95 methodology, with the general government debt equivalent to 27.8% of GDP at the end of the year. The figures for 2005 were also revised when the 2006 figures were released. The general government deficit in 2005 was thus increased by 0.1 GDP percentage points to 1.5% of GDP, and the general government debt was increased by 0.4 GDP percent-

age points to 28.4% of GDP. Revenues in 2006 declined by 0.8 GDP percentage points from the previous year to stand at 44.8% of GDP, while expenditure declined by 0.7 GDP percentage points to 46.3% of GDP.

The general government deficit according to the national cashflow method, which includes the state budget, the Pension and Disability Insurance Institute, the Health Insurance Institute and the municipal budgets, stood at EUR 247 million in 2006, or 0.8% of GDP. The state budget and municipal budgets recorded deficits of EUR 232 million and EUR 30 million respectively, while the Pension and Disability Insurance Institute's budget was in balance. The Health Insurance Institute recorded a surplus of EUR 15 million. The public finance position according to the national methodology was in deficit in the first quarter (EUR 130 million), in surplus between April and November (EUR 153 million), and in deficit in December (EUR 270 million), partly as a result of seasonal factors. In January there were surpluses of EUR 101 million in the state budget and EUR 5 million at the Health Insurance Institute, while the Pension and Disability Insurance Institute recorded a deficit of EUR 3 million.

Growth in general government revenues in 2006 outstripped growth in general government expenditure. General government revenues were up 8.2% in 2006, 0.6 percentage points more than the increase in general government expenditure.

General government revenues amounted to 43.6% of

GDP in 2006, down 0.2 GDP percentage points from 2005. Tax revenues, which account for more than 90% of all general government revenues, rose by 8.1% in 2006. Of the major types of tax revenue, social security contributions increased by 6.1%, VAT revenues by 7.1%, and personal income tax revenues by 8.8%. Of these, the largest surge towards the end of the year was recorded by VAT revenues, which recorded year-on-year growth of 3.6% in the first half of the year, 4.3% in the third quarter and 15.5% in the final quarter. This dynamic growth was to a great extent associated with the pace of economic growth. Of the other revenues, the largest increase of 58.6% was recorded by revenues from corporate income tax, which stood at EUR 943 million. This increase was primarily the result of changes in legislation, and the associated high tax settlements. Of the tax revenues, only revenues from payroll tax and labour tax were lower in 2006 than in 2005, by 10.1%, as a result of the gradual abolition of taxes on paid wages.

General government expenditure in 2006 was the same in terms of GDP (44.4%) as in 2005. The largest increase among the major expenditures last year was recorded by expenditure on goods and services, while the smallest was recorded by wages and other public sector employee expenditure. Expenditure on goods and services stood at EUR 2,116 million, up EUR 221 million on 2005, an increase of 11.8%. Wages and other employee expenditure rose by 3.7% in 2006 to EUR 2,658 million. Transfers to individuals and to households, which remain the largest category on the expenditure side, accounting for approximately 40% of all expenditure, were 5.8% higher than in 2005, with pension expenditure rising by 6.0%. Growth in expenditure on the unemployed gradually slowed during 2006. The year-on-year rate was 13.9% in the first quarter, but expenditure in the final quarter of last year was almost 5% less than in the same period of 2005. This change was in line with the decline in the number of unemployed from the second quarter of 2006 on.

In the first quarter of 2007 payments from the state budget into the EU budget (EUR 100 million) exceeded payments in the other direction (EUR 87 million), making a net payment of EUR 13 million from

the state budget into the EU budget. During this period most of the payments into the state budget were from funds for implementing the CAP and internal market policy, while the outward payments were from gross national income.

On the financing side, the government continues to restructure from foreign to domestic borrowing. In the context of a deficit of EUR 247 million and a decline of EUR 46 million in capital holdings, the government sector recorded net borrowing of EUR 359 million in 2006, while increasing its bank balances by EUR 158 million. In its borrowing it recorded net borrowing of EUR 492 million in Slovenia, but made a net repayment of EUR 134 million in the rest of the world.

6 | Banking

Growth in total assets continues to decline. March's increase in total assets of EUR 39.8 million was significantly smaller than usual. The large decrease in loans to banks brought by the decline in short-term loans was partly the result of maturing long-term deposits at the Bank of Slovenia. Banks used these to compensate for the withdrawal of deposits, and to finance the purchase of securities (up EUR 168 million). Banks are continuing to restructure their assets as a result of maturing Bank of Slovenia bills. It is thought that the decrease in cash (of EUR 127.4 million) is the result of the banking system's declining need for cash compared with the first two months after the introduction of the euro. The trend of declining liabilities to foreign banks is continuing.

Lending to non-banking sectors remained intensive in March, although year-on-year growth declined slightly to 26.4%. The further increase in loans to non-banking sectors is primarily the result of the high increase in household loans. Growth in loans to non-banking sectors at foreign banks continues to decline. The ratio of loans to non-banking sectors to total assets continues to increase, rising by 1.6 percentage points in March to 61.9%. Year-on-year growth in corporate loans in March remained higher than the average for 2006 at 27.1%. The

spread between Slovenian interest rates and euro area interest rates on new corporate loans of up to EUR 1 million widened by 0.4 percentage points in the first two months of 2007, while the spread on corporate loans of more than EUR 1 million was negligible in February. Despite the relatively high increase in household loans (EUR 140 million), a basis effect meant that year-on-year growth in these loans declined by almost 1 percentage point. The growth in household loans indicates that foreign banks are acting significantly more aggressively in lending to households, although their total assets are growing significantly more slowly than those of domestic banks. The spread between Slovenian interest rates and euro area interest rates on new housing loans widened to 1.4 percentage points in February.

There was a decrease in deposits in March, and liabilities to foreign banks continued to decline. March's decrease in deposits was the result of a decline in government deposits (down EUR 214.4 million) and deposits by foreign banks (down EUR 155.6 million). The

Source: monthly bank figures

decline in government deposits was the result of the redemption of old bonds¹ during the issue of the 11-year Slovenian eurobonds in the amount of EUR 1 billion at the end of March. The proportion of deposits by non-banking sectors accounted for by short-term deposits is increasing, while the proportion accounted for by long-term deposits is declining. Interest rates on short-term deposits were still 0.5 percentage points lower in Slovenia than in the euro area in February, while those on long-term deposits were 0.3 percentage points higher.

The banking system generated a profit of EUR 130 million in the first quarter of 2007, almost one-third of last year's total. The proportion of gross income accounted for by non-interest income rose by 2.7 percentage points to 43.3%, as a result of increased profits from trading, which almost doubled in March. Year-on-year growth in operating costs declined. Impairment and provisioning costs increased significantly in March, partly as a result of quarterly adjustments. Growth in the banking system's profits declined in March as a result of a basis effect from the changeover to the IFRS, but remained relatively high at 29.1%.

7 | Domestic Financial Markets

The yield curve on Slovenian government securities in March showed no significant change from the previous month, other than a rise on shorter maturities. By contrast, yields on German bonds rose all along the yield curve. The spread between yields on Slovenian and German government bonds declined to 10 basis points. With returns on world stock markets still negative, and investors thus more averse to risk, yields on bonds were negative in the early part of March. Following a turnaround on the stock markets and a rise in the ECB's key interest rate to 3.75%, and given the continuing announcement of solid economic results in the eurozone, yields on government bonds turned positive in the second half of March. The poorer responsiveness in the domestic yield curve is a consequence of the low liquidity of the

¹ The Ministry of Finance redeemed RS38, RS49, RS53, RS 57 and RS62 bonds in March.

domestic bond market, and is also connected with the switch towards foreign securities by domestic investors. In March the government held an auction to redeem certain bonds in connection with the issue of the 11-year bonds in the amount of EUR 1 billion on the EuroMTS market (MTS Slovenia).

The market capitalisation of bonds on the Ljubljana stock exchange increased by just EUR 22 million in March. The creation of the MTS Slovenia market on the single European market means that the government is expected to be less active in the domestic bond market. Given the monthly increase of barely 0.08% in the BIO (an annual decline of 1.7%), March's increase in the market capitalisation of bonds was primarily the result of the ongoing listing of bank bonds from private placements already conducted (EUR 9 million of Probanka bonds and EUR 12 million of Factor banka bonds), an indicator of

banks' desire for greater transparency in price formation. The maturity of Banka Celje bonds brought a decline of approximately EUR 10 million in the market capitalisation of bonds. Bank bonds continue to account for approximately 14% of the total capitalisation of the listed bonds. Turnover on the TUVL market amounted to just over EUR 40 million in March, to 18% of total turnover on the exchange (including block trades). Turnover in bonds on the official market and the semi-official market remained modest at just under EUR 11 million.

At just over EUR 730 million, the market capitalisation of shares in March more than regained the value it had lost in February, and was equivalent to 44.2% of GDP, the highest figure to date. This increase was primarily the result of the monthly increase of 8.7% in the SBI20 (an annual increase of 73.3%), partly in connection with M&A activity (Istrabenz took over Droga Kolinska, Sava strengthened its holding in Abanka), development on other world markets, solid corporate results and forecasts, and exaggerated expectations of high returns on the part of small investors. As a result the P/E ratio for shares in the prime market increased to 30.7 (compared with an average of 24.1 in 2006). March's turnover of EUR 144 million (excluding block trades) was considerably higher compared with 2006 (the turnover in the first quarter of 2007 was already more than half of the total turnover in 2006). Turnover in prime market shares accounted for just over 65% of this.

The proportion of market capitalisation on the Ljubljana stock exchange accounted for by non-residents

increased to 5.3% in March (compared with 4.2% in February 2006). With non-residents increasingly involved, the domestic regulated capital market is becoming more responsive to developments on foreign markets. At EUR 25.8 million, net purchases by non-residents in March were significantly less than in previous months.² The reason was the decline in non-residents' demand for government securities issued on the domestic capital market, which was replaced with foreign investors' high demand for government bonds issued on the MTS Slovenia market. Shares accounted for more than 90% of the net purchases of domestic securities by non-residents. Austrian investors were the most active in purchasing shares with higher market capitalisations and better liquidity.

Residents' demand for foreign securities, bonds in particular, was high in February at EUR 630 million, albeit significantly less than in January. Net purchases of foreign securities in the first two months of the year were already equivalent to over 80% of the total net purchases in 2006. As a result of the release of money from Bank of Slovenia bills, banks continued to purchase euro area government bonds (83% of total net purchases of foreign bonds). The sector of other financial intermediaries (mutual funds) accounted for 62% of investments in shares (EUR 56 million), while there were also heavy investments made directly by households (almost EUR 18 million). Investments in the stock markets of the former Yugoslavia were prevalent in the regional breakdown

with 31% of the total, while the euro area and the USA were also important markets.

The assets of domestic mutual funds increased by EUR 104 million in March to EUR 2,241 million. The increase was the result of a net inflow of EUR 44 million (EUR 39 million of which was into equity funds), and a weighted monthly return of almost 3% (an annual return of 30%). The net inflow in the first quarter was equivalent to almost the whole of the net inflow in 2006. March's positive returns were the result of returns on the domestic capital market and on other world capital markets. The demand for mutual funds with an investment strategy focusing on Balkan markets continued to increase, these markets having achieved a monthly return of more than 12%, and they accounted for 60% of March's net inflows.

² Includes transactions on both the official market and the non-regulated market, and also transactions between non-residents.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the “Latest actual” column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procuration and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procuration, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

Table 1.1.: Monetary Aggregates

The data for aggregate M1 (column 1) has been changed in march 2007 for the reference period December 2004 to December 2006.

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB.

According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A penalty rate is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – "Euribor®" – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R,

which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

2.4: Monetary Financial Institutions Interest Rates

Data from May 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Ljubljana Stock Exchange (Tables 2.6 to 2.8)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.6: The Ljubljana Stock Exchange: Turnover by Market Segment and Type of Securities

Shares – investment fund shares are not included.

IF – investment fund shares.

Turnover is measured with a single counting.

Table 2.7: The Ljubljana Stock Exchange: Market Capitalisation and Turnover Ratio

Market capitalisation by market segment and by type of securities is calculated as the sum of the market capitalisation of individual securities. Market capitalisation of an individual security is calculated as the product of the number of listed securities and the market price at the end of the period.

Turnover ratio is calculated as turnover in a period divided by market capitalisation at the end of period.

Short-term securities are not included in calculations of market capitalisation and turnover ratio.

Table 2.8.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

- SBI – Slovenian Stock Exchange Index (value of index on 31.12.1992 = 1000)
- BIO – Bond Index
- SBI, BIO – value of SBI and BIO at the end of period
- dT – change of index value by points
- d% – change of index value in percentage
- Min, Max – minimum and maximum value of index in a period

Exchange rates (Tables 2.9.1–2.9.2)

Table 2.9.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

As of 1 January 1999, with the introduction of the European Monetary Union, the European currency unit (XEU) was replaced by the euro (EUR) at an exchange rate of 1:1. Fixed exchange rates between the euro and the national currencies of the EMU member states (valid from 1 January 2001):

1EUR =	40.33990	BEF
=	1.95583	DEM
=	340.75000	GRD
=	166.38600	ESP
=	6.55957	FRF
=	0.78756	IEP
=	1936.27000	ITL
=	40.33990	LUF
=	2.20371	NLG
=	13.76030	ATS
=	200.48200	PTE
=	5.94573	FIM

Due to the introduction of the euro in January 2002, the exchange rates of some members of EMU currencies (ATS, FRF, DEM, ITL) have been replaced by the exchange rates of some EU accession countries (CZK, HUF, PLN, SKK).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.9.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Payment systems (Tables 2.10 to 2.15)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 2.10: TARGET and Giro Clearing transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

Note 3: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

Table 2.11 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.12 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Data refer to payment transactions and money withdrawals at POS terminals in Slovenia.

Table 2.13 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.14 Credit and Debit Transfers

A paper-based payment order is a standardised payment instrument related to a credit transfer, in which the payer submits an order on a paper-based form. It means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing. A special form of paper-based payment order is the so-called special payment order, which is issued by a creditor to be paid by the debtor. The special payment order is presented by the debtor at the bank, which then debits his transaction account and transfers the amount to the account of the creditor. The special payment order was developed by the Bank of Slovenia in 1997.

A non-paper-based payment order is an electronic payment order related to a credit transfer, which the customer of the bank submits to his bank on electronic storage media.

A standing order is an instruction from a customer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Direct debit is a preauthorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. Direct debit is initiated by the payee. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.15: Network of Commercial Banks

Note 1: In the number of head offices, two banks with licenses for operation pursuant to the Constitutional Law only are included (Kreditna Banka Maribor d.d. and Ljubljanska Banka d.d. Ljubljana).

Note 2: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000. Data up to the year 2000 are presented according to the Standard Classification of Territorial Units – Statistical Regions of the Republic of Slovenia, 1 January 1999. The Surveying and Mapping Institute of Slovenia has produced a map of Slovenia with new municipality borders and statistical regions.

Note 3: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION**Balance of Payments****General notes**

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data for transactions are converted from the original currencies to EUR using the daily Bank of Slovenia exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions for **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for **quarterly data** are published with the release of:

- the following monthly data;
- the data for the following quarter;

- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies between data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data regarding trade in goods. Since 1 May 2004, the source of data for trade in goods between Slovenia and EU Member States is Intrastat reporting. The source of data for trade in goods with other countries is the single administrative document (SAD).
 - **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
 - report on account balances at domestic banks – PPV (until 31 December 2005),
 - report on account balances abroad – C (until 31 December 2006),
 - report on transactions through accounts at domestic banks – PPT,
 - report on transactions through accounts abroad – C.
- All banks which conduct international payment transactions and all residents with open accounts abroad are responsible for reporting. The resident issuer/beneficiary of the payment is responsible for forwarding data regarding the type of transaction.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the source for portfolio investments (debt and equity securities) and financial instruments since 2004.
 - **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the source for portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
 - **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source for data on loans of all sectors until 2005; since 2006 they are only the source for the non-banking sector. Registration was obligatory for all financial credits and long-term commercial credits; since 1997, data is also available from the same source regarding the purpose of direct payments of foreign lenders with whom the obligations of domestic borrowers to other non-residents are settled.
 - **Reports on monetary financial institutions (PORFI)** are the source for data regarding loans and cash and banking sector deposits since 2006.
 - **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banking, since 2007.
 - **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term commercial credits since 2002.
 - **Reports on investments (SN)** are the source for reinvested earnings of direct investments.
 - **Accounting data of the Bank of Slovenia (R3)**
 - **Accounting data of banks (KNB)**
 - **Estimates and other sources**
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category),
 - estimate of expenditures for travel abroad including excessive purchases of goods,
 - estimate of payments from abroad to Slovene migrant workers,
 - estimate of Italian pensions (UMAR) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households,
 - estimate of labour income (SURS),
 - data regarding pensions paid to non-residents (ZPIZ),
 - survey regarding the write-downs of debt from trade in goods and services abroad,
 - budget data regarding the transfers of the government sector between the Republic of Slovenia and the EU.

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reporting for trade with EU Member States.

Adjustments of CIF/FOB – data regarding import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (for an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods imported without customs declarations and for which data are available from ITRS or reports of duty free

shops and consignment warehouses. Since 1 May 2004, coverage adjustments also include as an estimate data on imports of motor vehicles from EU by natural persons not covered in Intrastat System.

Services

Transport

The source of records for transportation services is the ITRS.

Travel

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings of foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Construction services

The source of data is the ITRS. All construction undertakings are recorded under construction services.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item.

Income

Labour income – Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources for labour income from the work of Slovene residents abroad. ITRS remains the source for labour income – expenditures. Since 2002, labour income is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data regarding the reinvestment of earnings in the current year are estimated (from a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes, paid in the current month). The estimate is replaced by actual data only when these data are available. Until 2003, the source for income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2005, the source for income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source for income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates. From 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data).

Capital and financial account

Capital account

Capital transfers

Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. Data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad.

Financial account

Direct investment

Direct investment is recorded on the basis of reported payments through domestic banks and data from customs declarations. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included

in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment.

Since 2001, there is a break in the data series in the category "Direct Investments – Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2002, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments – Other Capital" also includes short-term commercial credits between affiliated companies.

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 equity securities not having the characteristics described in the note on direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment of each separate sector is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards.

Financial instruments

Since 2004, these types of transactions are included in VRP and KDD sources.

Other investments

Short-term commercial credits

Until 2002, short-term commercial credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term commercial credits)]}
- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term commercial credits)]}

Since 2002, short-term commercial credits are included based on SKV reports. Short-term commercial credits between affiliated companies are included in direct investments.

Loans and long-term commercial credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Currency and deposits

The foreign currency of residents is estimated based on the following formula:

deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (since 2002).

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for the years 2006 and 2007 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2003 to 2005 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2007, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2007 shall take into consideration the new three year average (2004 to 2006).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity. The data for 2006 are provisional.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the balance of payments financial account. However, there are differences with a few items and data sources as follows:

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR),
- short-term commercial credits with non-residents (SKV), and
- reports on accounts abroad (C).

The source for the balance of payments is the International Transaction Reporting System (ITRS); this category reports on loans granted to or received from non-residents and reports on short-term commercial credits to non-residents.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are valued at book value according to accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt.

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise).

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003.

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial instruments

Since 2003, the data are included in VRP and KDD sources.

Trade credits and loans

The source for short-term trade credits is reports of enterprises on the stock of external assets and liabilities (form SKV).

Sources for long-term trade credits and loans are credit registration forms and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments, those being the accounting data of commercial banks (KNB), the account balances of banks in original currencies (PPV), the account balances abroad of companies (C) and the accounts of the Bank of Slovenia (R3).

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other

sectors, where contractual joint ventures are shown in the investment position. The source for this item is JV reports.

The International Investment Position includes data of the Bank for International Settlements (BIS) regarding deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial instruments are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). The net external debt position is equal to gross external assets deducted from by gross external debt in debt instruments. In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given time, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity for debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is the result of Slovenia's inclusion in the EMU.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Table 4.1: General Government Non-financial and Financial Accounts (ESA 95)

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data of general government non-financial accounts are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data of financial accounts are prepared by the Bank of Slovenia.

Table 4.2: General Government Revenues and Expenditures

Note 1: The data of the current and previous year are revised monthly until the data on the previous year have become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.3: General Government Lending, Repayments and Financing

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year have become final.

Table 4.4: Debt of the Republic of Slovenia

The Republic of Slovenia is defined as a legal person. The data from tables 5.1, 5.2 and 5.3 originate in the Bulletin of Government Finance published by the Ministry of Finance.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.4)

Tables 5.1 to 5.4. show the balance of transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

The general principle of valuation at the current market price as at the cut-off date applies to the balances of financial assets and liabilities. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Write-down of financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year):
- bills and other short-term debt securities;
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 2/2002) and is in line with the classification of activities NACE Rev.1 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 3 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, hunting and forestry
- B Fishing
- C Mining and quarrying
- D Manufacturing
- E Electricity, gas and water supply
- F Construction
- G Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods
- H Hotels and restaurants
- I Transport, storage and communications
- J Financial intermediation
- K Real estate, rental and business activities
- L Public administration and defence; compulsory social security
- M Education
- N Health and social work
- O Other community, social and personal service activities
- P Activities of private households as employers and undifferentiated production activities of private households

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: www.stat.si.

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics (Tables 6.1 to 6.8)

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 1995.

Tables 6.5 and 6.6: Industrial Production Index and Productivity Index in Industry

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production. Indices on industrial production are provisional from February 2004 on.

The productivity index is defined as the ratio between the industrial production index and the index of persons in employment.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2006 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1-ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Effective exchange rate - nominal/real

The growth of the index value represents the growth of the value of domestic currency and vice versa. In the index of the real effective exchange rate, measured through the cost of labour per unit, the cost of labour is calculated based on gross salary only due to a change of statistical data source.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products (intermediate goods, capital goods and consumer goods), as well as by main divisions of activities.

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.2 Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
	2.3 Monetary statistics
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
1.5. Selected Assets of Other Monetary Financial Institutions by Sector	2.6 MFI holdings of securities, breakdown
1.6. Selected Obligations of Other Monetary Financial Institutions by Sector or	2.5 Deposits held with MFIs, breakdown
1.4. Balance Sheet of Other Monetary Financial Institutions	
2.2. Interbank Money Market Rates and Indexation Clause	4.6 Money market interest rates
2.3. European Central Bank Interest Rates	1.2 Key ECB interest rates
2.8. The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Ind	4.8 Stock market indices
2.9.2a. European Central Bank exchange rates - Average Rates	8.2 Bilateral exchange rates
3.2. balance of payments, capital and financial account	7.1 Balance of payments
3.5. Trade in goods by countries	7.5 Trade in goods
3.6. International Investment Position of Slovenia; assets, liabilities	7.4 International investment position (including international reserves)
3.7. International Investment Position by countries; assets, liabilities	7.3 Geographical breakdown of the balance of payments and international investment position
3.12. International reserves	7.1.8. Reserve assets
4.1. General Government Non-financial and Financial Accounts (ESA 95)	6.1 Revenue, expenditure and deficit/surplus
	6.2 Debt
	6.3 Change in debt
6.1. Expenditure on gross domestic product	5.2.1. GDP and expenditure components

Addendum:				
Population	26 (Q4/06)			http://www.stat.si/eng/tema_demografsko_prebivalstvo.asp

* The period to which data to be released relate is shown in parentheses. NLT stands for no-later-than.

Financial and external sector data (except Merchandise trade) are first disseminated on the Bank of Slovenia Internet website, and later in the Bank of Slovenia Monthly Bulletin. Advance Release Calendar is updated monthly and published on the Bank of Slovenia Internet website - <http://www.bsi.si/iskalniki/pregled-financnih-podatkov-en-vsebina.asp?Vsebinald=4931&Mapald=87>.

¹ The data on interest rates are published by the Bank of Slovenia and Ministry of Finance separately.

² Data are disseminated daily on Bank of Slovenia Internet website - Financial Data/ Bank of Slovenia exchange rates and on Archive of financial data. Links are given in column Additional data.

Note: "Special Data Dissemination Standard" - SDDS is a special standard for statistical data dissemination established by the International Monetary Fund in 1996. Relevant information on the standard are available on - <http://dsbb.imf.org/Applications/web/sddshome/#introduction>. Data for Slovenia are published on - <http://www.bsi.si/imf/>.
